**A Field Book for Civil Engineers.** By Professor Daniel Carhart, Western University of Pennsylvania.

**Thucydides. Book III.** (College Series of Greek Authors.) Edited by Professor Charles Forster Smith, Vanderbilt University.

The dates assigned to several of these books are, of course, somewhat uncertain. Neither author nor publishers can prevent delay in all cases.

## GINN & COMPANY, Publishers,

**BOSTON, NEW YORK, CHICAGO, LONDON.**

## *Educational.*

**Cayuga Lake Military Academy,** AURORA, N. Y.
Advantages: A well-disciplined school, experienced teachers. Location near Cornell University. Term begins Sept. 14, 1893. For illustrated circular, address
Col. C. J. WRIGHT, B.S., A.M., } Principals.
or ALFRED K. McALPINE, A.M., }

**Alma** THE LEADING CANADIAN COLLEGE FOR YOUNG WOMEN, ST. THOMAS, ONTARIO.
5 Graduating Courses. 20 Professors. 200 Students. 60-pp. Illustrated Catalogue.
Address Principal AUSTIN, A.M.

**THE CLAVERACK COLLEGE**
AND HUDSON RIVER INSTITUTE
FOR BOYS AND GIRLS, will open its 40th year Sept. 18. For Catalogues, address
Rev. A. H. FLACK, A.M., Prest., Claverack, N. Y.

**ASHLEY HALL** Home School for 20 young ladies. Ten miles from Boston.
Music, Art, Languages. Thorough preparation for college. Miss WHITTEMORE, Principal,
Montvale, Mass.

## *Educational.*

**RIVERVIEW ACADEMY,** POUGHKEEPSIE, N. Y.
58TH YEAR. Prepares thoroughly for College, the Government, Academies, and Business. Military organization. BISBEE & AMEN, Principals.

**CHELTENHAM MILITARY ACADEMY**
OGONTZ (NEAR PHILADELPHIA), PA. Represented by its graduates in Harvard, Yale, Princeton, Cornell, Amherst, University of Pa., Lafayette, and West Point. (Trinity and Lehigh Universities added for '93-94.)
JOHN CALVIN RICE, Principal

**MICHIGAN MILITARY ACADEMY.** The West Point of the West. Seventeenth year. Beautiful location and healthful climate. No School in the country offers better advantages. Send for illustrated catalogue. COLONEL J. SUMNER ROGERS, Supt., Orchard Lake, Michigan.

**LAKE ERIE SEMINARY**
FOR YOUNG WOMEN,
PAINESVILLE, OHIO.
Early application necessary for September, 1893.

## *Educational.*

*COLLEGE OF PHYSICIANS AND SURGEONS, CHICAGO, ILL.*

Winter term begins September 18, 1893. Course of study covers four years; for Bachelors of Arts and Sciences, three years. Preliminary examination required in English, Physics, Mathematics, and Latin. Fees, $100 a year. Laboratory equipment for students unequalled.
For announcement and further information, address
Dr. BAYARD HOLMES, Secretary,
Venetian Building, Chicago, Ill.

**THE YOUNG LADIES' SEMINARY,**
FREEHOLD, N. J. Admits to Smith, Wellesley, and Vassar on certificate. Graduates from the Seminary Course. Preparatory Class, Art and Music. Home care. Miss EUNICE D. SEWALL, Prin.

**The Misses Ely's School for Girls,**
RIVERSIDE DRIVE,
85th and 86th Sts., New York.

**Bingham School (for Boys), Asheville, N. C.**
**1793** Established in 1793. **1893**
201st Session begins Sept. 1, 1893. Maj. R. BINGHAM, Supt.

## *Teachers, etc.*

*A YOUNG LADY WHO IS JUST* finishing at the Art Students' League and the Cooper Institute in New York a several years' course (which has always been pursued with a view to teaching) in Drawing, Painting in Oils, Water Colors, and on China, and the Normal Course (Prang's), seeks a position in a large school, or in a city or town where she would have charge of the art instruction in a number of schools. Evidences of efficiency furnished. Address Miss ETTA ANNE DREWS, care of the Baker & Taylor Co., 740 Broadway, New York.

*WANTED—A LADY OF EXPERI-* ence, competent to instruct two young ladies who left school in general knowledge, in conversation and deportment. The family will reside in Chicago till November, and expect to travel in California next winter. Full references required. Address E. A. M., 567 Dearborn Ave., Chicago, Ill.

*A LADY WOULD LIKE THE CARE* of young ladies or misses, either in their own homes or travelling, through the summer. She has a North German maid whom she will wish to keep with her, who can both speak and teach German. Terms reasonable. References exchanged. Address
HIRAM ORCUTT, 3 Somerset St., Boston, Mass.

*LATE INSTRUCTOR IN YALE UNI-* versity, who has very complimentary testimonials from its officers and others, wants to teach miscellaneous branches. He has had an experience of more than ten years in teaching young men and young women. Address Post-Office Box 1675, New Haven, Ct.

*CHICAGO—TUTOR.—A HARVARD* Graduate of experience will prepare boys who may be in Chicago during the summer for the fall examinations to college. Address Mr. H. B. LEARNED, 245 W. Polk St. (care Hull House), Chicago, Ill., or Mr. FRANK BOLLES, Secretary of Harvard University, Cambridge, Mass.

*A LADY OF EXPERIENCE WITH* boys wishes to take two into her family, and will give them personal care. Steam and electric cars within three minutes' walk, making Boston schools available. Fine air and country sports. Refers to leading Boston teachers. Address E. M. P., Brookline, Mass.

*A YOUNG MAN (AMERICAN, 19* years' residence abroad) would like to secure pupils in French during the summer months; or would tutor for entrance to a scientific school. No objection to travel. Highest possible references. Address R. N., *Nation* office.

*ENGLISH.—I prepare men to pass the* admission examinations in Rhetoric and English Literature required by Harvard, Yale, and all other New England colleges. Systematic training in English Composition. WALTER SMITH, 12 Weld Hall, Cambridge, Mass.

*WANTED—A POSITION IN PHI-* losophy, by a graduate and Fellow of the Univ. of Wis., and Ph.D. from Göttingen, Ger. References. Address J. H. POWERS, 5 Rue de la Plaine, Geneva, Switzerland.

*A RETIRED ARMY OFFICER, A.M.* Princeton, LL.B. Columbia, desires a position in a college or high-grade school, preferably as instructor in military drill. Address "RETIRED OFFICER," *Nation* office.

*AN INSTRUCTOR IN PHYSICS IN* one of the foremost Western Universities (A.B. Harvard, Ph.D. Germany) desires a change. Also tutorship, beginning June 1. Willing to travel. Address
Dr. X. B., care *Nation*.

*A STUDENT OF THE JOHNS HOP-* kins University wishes to secure a position to teach Chemistry and Physics during the coming session. Several years' experience in teaching. Address
FRANK SUTER, A.M., Alexandria, Virginia.

[*Teachers, etc., continued on page v.*]

# The Nation.

NEW YORK, THURSDAY, JULY 6, 1893.

## The Week.

THE proclamation of the President convening Congress in extra session a little over a month hence, meets with universal approval. The new Congress ought to have assembled when the new President was inaugurated, just as all the Legislatures which were chosen on the day of the Presidential election began the discharge of their duties simultaneously with the incoming of the new Governors. Nevertheless, as things have turned out, it will undoubtedly be easier to secure right action on the financial question in August than it might have been in April, and the object-lessons which both our own country and India have furnished during the past four months were perhaps necessary to cure the victims of the silver craze. Meanwhile, the friends of sound money, without distinction of party, should devote all their efforts towards creating a public sentiment which will tolerate no more "fooling" with our financial system. What is needed is the repeal of the Sherman Act, without a substitution in its place of something else nearly as bad in the way of a "temporary expedient," as was done three years ago. One such experience as we have had with "temporary expedients" ought to suffice. We are glad to observe that the New York *Tribune* has seen light on this question. Not long ago it expressed doubt whether the "naked repeal" of the Sherman Act would be "for the best interests of the country," and whether the Republicans in Congress ought to help a Democratic President to bring it about. On Saturday, however, it changed its position and said: "The repeal of the act with which Senator Sherman's name is unfortunately associated is imperatively demanded. *It should be repealed unconditionally.*"

---

A good part of the soreness of Republicans over the present politico-financial situation is no doubt due to the remorseful consciousness that they threw away in 1890 a great opportunity for leadership and party success. When Speaker Reed was moving heaven and earth to "hang up" the Free-Coinage Bill in committee, and keep it at all hazards from going to a Presidential veto, he was really dooming his party to defeat. It is easy enough to see now that if he and the party leaders had boldly thrown down the gauntlet to the free-silver men, and had hailed the chance of a strong veto and a defiant campaign on the issue of honest money, they would have driven the halting Democrats into alliance with the silverites and into inevitable defeat. The Republican party seemed almost predestined for such a work as that; and if the old clear moral sense had not gone out of it, it is inconceivable that it would not have seized the opportunity of doing it. But the long years of jobbing and bargaining over the tariff and of seeking power through shrewd intrigue had done their fatal work, and so, instead of a bold and resolute attitude in which would have been safety and triumph, the best wisdom of the party could agree upon nothing better than that miserable dangling between the devil and the deep sea known as the Sherman Law. The chance for leadership which Republican cowardice and oversmartness threw away was seized by Mr. Cleveland in his letter to the Reform Club in February, 1891, pronouncing against free coinage. By that he not only saved his party from going to everlasting smash, but also put himself virtually at the head of the sound-money Republicans. They were forced to approve his course then, and they will be forced to vote in favor of his recommendations when Congress meets.

---

"Unwise" the President calls the Sherman Law in his proclamation. Immoral he might have called it, on the strength of confessions made by Congressman Walker of Massachusetts, who, in Saturday's *Tribune*, unblushingly unfolds a tale of political baseness almost unparalleled. He was a member of the conference committee which finally concocted the Sherman Law, and he admits that the Republicans were guilty of the most shameless betrayal of their constituents and their convictions. All but Jones were convinced, he now says, that, "aside from political considerations," the Sherman Law was "the most stupendous financial folly sane men ever engaged in." Of their conduct in engaging in it, nevertheless, he says, "The moralist may condemn this state of things as he will," and goes on to show how "the average Congressman justifies himself." The time has been when a Republican Congressman, especially from Massachusetts, would know if he was publicly putting the brand of infamy upon himself. Mr. Walker seems to be cheerfully unconscious of his own disgrace, of which he is himself the historian. His frank narrative of the degradation and danger involved in all such cowardly compromises as the Sherman Law may, however, help, as an awful warning, to save us from any more such debauchery of the conscience by Congressmen who now confess that they were willing to bring the country to the verge of financial ruin for "political considerations."

---

It is no wonder that Senator Sherman has protested against giving his name to the Silver Law of 1890, which is now the most roundly and universally cursed measure of recent history. Yet there is a poetic fitness in having that law go into the books bearing the name of the man whose fatal turn for trimming in politics was finally carried over into finance. If this last effort of his constructive genius as a financier serves to eclipse the reputation gained by his earlier achievements, he has only himself to thank for it. If there is any sphere of politics in which "tricking short-cuts and little fallacious facilities" are absolutely deadly, both to the general well-being and to the repute of the man guilty of them, it is the sphere of financial legislation. How dangerously versatile Mr. Sherman has been in such matters is forcibly shown by a writer in the last *Journal of Political Economy*, who collates the three different and conflicting reasons given by the Ohio Senator in public debate for the dropping of the silver dollar in the Coinage Act of 1873. On March 30, 1876, he said it was dropped "simply because it is inconvenient in size and form for ordinary coinage and ordinary business." Less than a month later, on April 25, he gave as the reason that the silver dollar, in 1873, "was worth more than a dollar in gold," and "there was no use then in issuing it." Still later, in 1892, he said that it had been omitted because "it had practically been obsolete for a long period of years."

---

With the spread of the money stringency, the New York banks have been confronted with fresh problems of policy, and their method of meeting such problems has furnished further and very important precedents for the financial future. Last week the money troubles, which had hitherto centred in the mercantile trade, descended suddenly on Wall Street. The currency movement to the West had indeed virtually ceased the week before, but the relief thus gained was offset by the "tying-up" of local funds. The 1st of July is one of the great "disbursement days" in corporation finance. It has been estimated that the interest and dividend payments due in this country in July aggregate not less than $100,000,000. Of this the greater part is payable in New York, and the holding of such money subject to draft temporarily withdraws much of that amount from the money market. The Federal Treasury wisely anticipated by nearly two weeks the payment of Government bond interest, and numerous wealthy corporations have followed its example. But in the strained condition of the market, and with scores of private lenders holding back for exorbitant rates, the relief was felt but slowly. On Thursday the strain became so violent as to threaten imminent disaster. Stock-market prices fell, and money rose to the exceptional rate of 73 per cent. Hitherto the city banks have properly held aloof from free accommodation to the security market;

for, of all things, speculation for a rise, in such a situation, is most to be avoided. But the possibility of demoralizing failures was too dangerous an alternative, and five of the strongest banks accordingly, having increased their resources through the use of Clearing-house certificates, appeared on Thursday as free lenders of money on the Stock Exchange. The effect was instantaneous. Money rates broke at once, and the stock market returned to equilibrium. The action, though almost unprecedented, was wise and timely, and probably averted serious trouble.

---

It has been observed that the $3,000,000 thus loaned for the banks was put out almost at the day's highest rate, and this has evoked some criticism. A moment's consideration will, however, show the wisdom of that policy. Had the bankers offered this sum at 6 per cent., there was a chance that most of it would be snapped up by brokers anxious to enter on new ventures. But no such broker would pay 50 or 60 per cent. for his accommodation. The people who borrowed this money at the abnormal rate demanded were necessarily people whose present needs were very pressing, and the rate was a fair measure of their emergency. Nor was the moral effect of the bank experiment lost by the high rate, for money promptly fell again to 6 per cent., and the critical strain of the day was over.

---

The immunity of London during the present generation from so critical a money stringency as has existed in New York in the past week is explained by the soundness of the English currency system. The trouble throughout this country has been aggravated by two causes: first, the actual hoarding of money by local capitalists fearful of a lapse to a silver basis; and, second, our inability to get relief from abroad, owing to a similar distrust on the part of foreign capitalists. A month ago, when the Australian banks went down, London was threatened with precisely such a crisis. It found relief in drawing instantly, and to enormous amounts, on Paris. London's credit being high, the accommodation was readily granted. Our situation has been such that, with sterling exchange far below the gold-importing point, we could not get the requisite gold in England. In other words, this week's experience is only a continuance, in a highly intensified form, of the symptoms reflected ever since the passage of our Law of 1890, through the withdrawal of foreign capital from this country.

---

We think the Colorado mine-owners will have a fine time of it cutting off the world's supply of silver. They may shut down if they choose, but Mexico will hardly go out of the business at the very moment when dangerous competitors shut up shop. Indeed, Mexican despatches show that the Mexican mines and mints are prepared to keep right on at the old stand, having all the facilities requisite for supplying any number of new customers. There is no sentiment about the Mexicans in this matter, as they have to pay for more than half of their foreign purchases by silver exports, and the bigger the foreign demand the better they will be suited and the more new mines they will open. Further than this, the outraged Colorado men who propose to bring the world to its senses by letting it see if it can get on without their silver, ought to reflect that their action, if really serious and persisted in, would furnish just the chance the country is aching for to get rid of the accumulation in the Treasury. There are stored up about 150,000,000 ounces, or three years' product, and it would be the easiest thing in the world to let that dribble out upon the market while the angry miners were taking a rest.

---

The Treasury has turned the corner of the fiscal year with a nominal surplus of about $2,000,000. We call this surplus a nominal one for two reasons. If the Treasury operations on the score of the National Bank Deposit and Redemption Fund were reckoned in, as they should be in strictness, the surplus would be turned into a deficit of $4,000,000, as the outlay on that account was $6,000,000 more than the income. Secretary Carlisle, however, has adhered to Mr. Foster's form of statement, leaving this account out altogether, and so making an apparent surplus. The other reason why the surplus is rather nominal than real is, that the appropriations have not been paid as provided by law. This is another imitation of the practice of the late Administration, made necessary by lack of funds, the only difference being that Mr. Carlisle has made no secret of his embarrassments and has not prevaricated about his enforced retrenchments, as Secretary Foster did. The customs revenue turned out to be $6,000,000 larger than the estimates, but the internal revenue $5,000,000 smaller. The fiscal year closed with the gold reserve at $95,485,413, and the net cash balance at $26,976,877. These figures show that the country will be forced to the virtue of economy for some time to come.

---

In the published records of failures for the first half of this disastrous year, the most remarkable feature is the large percentage of assets to liabilities. The number of individual failures during the six months of 1893 exceeds the record of any corresponding period since the resumption of specie payments. The amount of liabilities also breaks the record, surpassing by $56,000,000 the total of 1884, in which the business panic was similarly concentrated in the early spring and summer months. But the percentage of assets to liabilities, which reached 56 in 1884, and only 48 in 1890, rose to 61 this year—a proportion, we believe, quite without precedent. From the most obvious point of view, this is a highly reassuring fact. It proves beyond question that there has been no general rottenness in business enterprises, and that the trouble was not aggravated by universally inflated values. Indeed, one of the most impressive facts in this year's business collapse has been the generally reasonable level of prices at which the break began. In a few cases, such as the industrial stocks on our own market and some of Chicago's local securities, there had been reckless expansion; but in the great majority of commodities and investments no such process had taken place. In stocks, indeed, the June collapse followed a long season of liquidation; in wheat, the manipulators for the rise had in effect been already beaten before the money stringency. As these facts testify to the unparalleled severity of the money "squeeze," so they furnish promise of a recovery more speedy than is apt to follow panic. Not less significant is the fact that out of the 284 failures running up to $100,000 or more, 79 were those of banks and bankers alone, and 49 confined to three trades already paralyzed by dulness and overproduction—lumber, leather and shoes, and iron and steel. In the dry-goods business proper only six failures of any note have been recorded, with total liabilities barely exceeding a million and a half.

---

Trade journals are noting the fact that the price of wool is the lowest in its history. In fact, one of them says: "Medium wools have reached free-trade prices, and fine wools are getting there." The causes of this condition of the wool market are given by the paper in question as lack of mercantile confidence, monetary stringency, apprehension of tariff legislation, and the backward spring. But no tariff legislation can do any worse than make wool free, and if it is already at "free-trade prices," despite McKinley, what is there to be afraid of? It looks as if the farmers could not be terrified by a prospect worse than the worst. It is conceivable, though, that a lot more dire might yet be theirs. If McKinley were to have his way and get higher duties on wool, it might sink even below free-trade prices.

---

Surveyor Lyon has followed Appraiser Cooper's example and refused to give the Custom-house Commission any information about the workings of his office, basing his refusal upon technical objections to the Commission's legal standing. This is a most short-sighted policy, even from a partisan point of view. Only a little while ago the party organs were inviting the Commission to "come on," asserting that there was "nothing to conceal" and that "everything would

be thrown open." After all that, it will have a bad effect to see chief of division after chief of division run away at the first fire and act like an accused person who refuses to incriminate himself or speak at all except by advice of counsel. One of the requests made of Surveyor Lyon was directed to the "qualifications" of the men in his division. We suspect it was this inquiry which aroused his grave doubts about the legality of the Commission. From his standpoint, we admit, if there is no law against compelling him to exhibit the absurd incompetence of his subordinates, after the fashion of the Appraiser's office, there ought to be one in short order.

---

Gov. Flower's address at the alumni dinner of St. Lawrence University last week was a frank approval of education. He boldly admitted that he believed in it, provided it did not "encourage socialism and anarchy, undermine patriotism, and bring republican institutions into scorn." Moreover, he was in favor of the scholar in politics. He wanted the graduating class to "be good citizens," to "take an interest in public affairs," although not to be "impatient of attaining the millennium." Even while the Governor was speaking, a lot of college men in Albany were taking him at his word and showing their interest in public affairs. The particular affair to which they addressed themselves was the scandalous manner in which the Governor of this State had allowed the civil-service laws to be violated or evaded. They discovered that over 100 persons were holding office illegally, and that a great number of arbitrary transfers had been made from the competitive to the non-competitive schedules. Is it being impatient of the millennium to call for the enforcement of the law? And will the Governor tell us in his next address whether it is education or something else that brings republican institutions into scorn in the way pointed out by the Civil-Service Reform League?

---

One of the worst blunders committed by President Harrison was his abuse of the appointing power by the conferring of office upon editors. We greatly regret that Mr. Cleveland has imitated Mr. Harrison's pernicious example. He has already appointed a large number of editors to office, and the list grows longer every week. While there has been no single nomination so important as that of Whitelaw Reid for Minister to France or Murat Halstead to Russia, there have been many of the same grade as those of John C. New for Consul-General at London and Ellis H. Roberts for Assistant United States Treasurer. The editors of such leading Democratic organs in their respective States as the Indianapolis *Sentinel* in Indiana, the Montgomery *Advertiser* in Alabama, the Detroit *Free Press* in Michigan, and the St. Paul *Globe* in Minnesota have been thus rewarded with rich "plums," while a host of less conspicuous editors have been given minor places; four out of eight consulates in one recent list going into the offices of the Graham (Va.) *Headlight*, the Columbus (O.) *Westvolk*, the Plainfield (N. Y.) *Press*, and the Louisville (Ky.) *Truth*. If there were any ground for believing that the editors thus picked out were "the fittest men," it would not be so bad, but no evidence to this effect is offered, while some of Cleveland's appointments have been quite as ridiculous as any of Harrison's.

---

Complaints about the mail service during the past four months have been far fewer than during the corresponding period after the change of Administration in either 1889 or 1885. The reason is that the railway mail service is now under the Civil-Service Law, as it was not in 1885, nor in 1889 until after Mr. Harrison had suspended Cleveland's order to that effect long enough to allow a host of changes for political reasons. Formerly the service was demoralized by the turning out of old and trained men to make room for new and ignorant ones, who must learn at the expense of the public convenience. Under the new régime no changes are made except for cause, and the work goes on as smoothly as in any well-regulated business establishment.

---

The several official accounts of the loss of the *Victoria* are now before the public, and seem to leave no doubt that the disaster was due to a blunder of Vice-Admiral Tryon's. Capt. Bourke's testimony is almost decisive on this point, as he represents the Admiral as having agreed that the distance between the two divisions should be eight cables instead of six, and yet as having, for some unexplained reason, given the order for six, and left it so even after being remonstrated with by the staff commander. One can understand something of the feelings which drove a brave officer to the determination to go to the bottom with his ship and men rather than to try to escape from the effects of his own carelessness. The official account also explains what has hitherto seemed unaccountable, namely, Admiral Tryon's refusal to accept aid, and actually ordering the other ships not to send out boats. It seems that all the water-tight doors were closed before the collision, when it was seen to be inevitable, and it was reported to the Admiral that "all was tight."

---

The success of the Belgians in wresting universal suffrage from the fears of the ruling classes seems to have inspired the Austrian workingmen to labor for a similar result in a similar way. The suffrage in Austria is now given to all who pay a minimum of five florins in direct taxes. To make it universal is now the avowed object of the leaders of the workingman's party, who, three weeks after the May Day demonstrations in the Prater, issued a sort of appeal to the country, and particularly to the laboring classes, on the subject. The design is to foment an agitation which will have assumed huge proportions by the time Parliament meets in the fall, when, it is hoped, the course of events in Brussels may be repeated in Vienna. Every few weeks inflammatory pamphlets and proclamations are to be distributed broadcast, and the workingmen's newspapers are to have "Universal Suffrage" printed on them in large type. Great meetings are also to be held — in fact, are already being held, as on June 13 at Reichenberg, when 15,000 workingmen passed resolutions in favor of the right of suffrage for every man and woman over twenty years of age. Gatherings of Socialists have also been held at Budapest, at Prague, and elsewhere, at which motions in favor of universal suffrage were enthusiastically voted. It would be rash to assume that the methods which were triumphant in Belgium will be equally so in Austria, yet there seems to be every promise of a vigorous attempt to put them to the proof.

---

The propriety of the use of real names in works of fiction was lately under discussion in Paris, on occasion of the report that Edmond de Goncourt was about to dramatize his novel published a dozen years ago and entitled 'La Faustin.' He received a letter from a certain M. Faustin warning him against giving that name to a play, and threatening him with legal proceedings in case he did. The author replied that he had not yet written the play, and did not know that he ever should write it, but that he should not be deterred by the threat of a law-suit from using the name of the heroine of his novel. He protested that if such claims as that of M. Faustin were to be allowed to be valid, writers would be compelled to go back to the practice of the morality plays, and name their characters Chastity, Diligence, Good-Sense, and the like. It was, in fact, the contention of one French writer some years ago that such a method should be observed so far as to omit the names of the hero and heroine of all novels, simply designating them the Lover and the Beloved. The law of the matter was laid down by the Tribunal of the Seine in February, 1882, in a suit brought against Zola, in which the Court decided that an author could be held liable for the use of a particular name in a work of fiction only when such use tended to "render odious or ridiculous" the person or persons who bore it. Under this decision it is difficult to see how M. Faustin could recover damages, even if he should yet have to endure seeing his name in great letters on the bill-boards.

### *THE GREAT "CONSPIRACY."*

MUCH of the talk of the silverites during the last twenty years not only discredited the national intelligence, but the human mind itself. Their account of the divinely appointed place of silver in human society, their ascription to it of human virtues—such as fidelity, local attachment, and sympathy with poverty and misfortune—and, above all, their contention that 15 to 1 was the ratio between it and gold appointed by the Creator in the interest of permanent bimetallism, have been a sore trial for those who cared not simply for the intellectual reputation of the American people, but for the fair fame of democracy as a rational system of government. The conversion of silver into a fetish and an object of half-worship seemed an exploit better fitted for the denizens of the African forests than for the "heirs of all the ages" who know and utter and argue freely under the American flag.

But we doubt whether even these earlier aberrations were, on the whole, as queer as the latest one, which makes the fall of silver and its demonetization by the leading nations of the world the result of a "conspiracy" against silver and bimetallism. "Conspiracy" has been until now a term applied to small knots or combinations of men compelled by their weakness to rely on secrecy for the accomplishment of their designs. A public conspiracy, or a conspiracy of such numbers as to make secrecy impossible, or, in short, a conspiracy of the majority against the minority, has hitherto been considered a contradiction in terms. But the silver-men have introduced the practice of treating everybody who differs from them as a "conspirator," even if the term should thus be made to cover the whole human race except the few thousands in this country and Europe who are afflicted with the bimetallic or silver delusion. All the more highly civilized nations of the earth, including the democratic ones, such as England, France, Italy, Holland, Switzerland, and Belgium, and the more monarchical, such as Germany and Austria, have for nearly twenty years been slowly discarding silver as a standard of value, owing to the great increase in its production; the chief use of money being, in their estimation, the supply of a measure of value for commodities and contracts. This has been done with the utmost publicity, after much discussion, by men who have devoted their lives to the study of financial questions, and with absolute calm.

Furious monometallists are, we think, as little known in the leading European countries as passionate or hysterical bankers or dry-goods men are here. Questions of currency are discussed there as business simply, and signs of enthusiasm about a metal would injure the credit of a business man. Consequently there has been no more popular excitement over the question of the standard of value in England, France, or Germany than over the standard of time. The question is left to experts, with the general understanding that Government is not to supply people with money, but with a legal-tender as nearly stable as a measure of value as the nature of the materials within our reach for such purposes will permit. No European monometallist has appeared to announce that gold is a perfectly stable standard which never has risen or fallen, and never will rise or fall in relation to other commodities, or to pretend that he knows of anything of the kind "on God's footstool," as Jerry Simpson would say. The provision of a perfect measure of value, which will under no circumstances expand or contract, is, like the squaring of the circle and the discovery of perpetual motion, left to charlatans and visionaries. What rational business men do is to search for the nearest approach to such a standard which the constitution of the globe and the nature of the human mind will permit; but they carry on the search without emotion of any description, just as if they were working at a mathematical problem.

Under these circumstances, the theory that the scientists and business men of the Old World who are engaged in the search for the standard, and have discarded silver after full examination, and the two or three hundred millions of people who know what they are about and approve of their labors, are engaged in a "conspiracy" against Jones, and Bland, and Peffer, and Simpson, and Warner, and the like, and the numerous voters in the Southern and Western States who would like more money, helps more and more to bring us into disrepute as an honest business people. The irrationality of our talk, in fact, does us nearly as much damage as the confusion of our currency. When 200,000,000 are accused of conspiring to cheat 1,000 through hatred of a white metal, far from wishing to trade with them, they want to lock them up and send for a doctor. When a United States Senator says—

> "The suspension of silver coinage in India shows, in the first place, that the millionaires and money sharks of the Old World are in copartnership with the money-lenders and monopolists of Wall Street, and that there is a combined effort on the part of the wealthy and influential elements of the Old and New World to grind the poor classes down to the lowest notch."

no sane person likes to argue with him, or lend him money, or invite him to his house, or consult him about anything whatever. It is true that it is Peffer of Kansas who talks in this way, and we know Peffer, but foreign investors do not. They think he fairly represents the American Senate, and they resolve to get their capital away from under him and his kind.

The term "silver lunacy," has been treated as a term of vituperation, but it is nothing of the kind. It is strictly descriptive. It denotes a wave of popular hallucination, such as in past ages usually arose in the field of religion and dealt with the supernatural, or expended itself on the infidels or the witches or the Jews. Had we alone had to deal with it, there is no knowing into what slough it would have plunged us before passing away. Happily, some power over the object of the superstition remained in the hands of the sane portion of mankind in other countries. The Latin Union, England, and now India had the fortunes of the idol more or less in their hands, and have, mercifully for us, used their power to rip him open and exhibit his fraudulent insides to his dupes.

### *CIVIC DUTY.*

MR. JAMES BRYCE, in an article on the "Teaching of Civic Duty" in the July *Forum*, points out with characteristic clearness and accuracy some of the chief reasons why popular government in this country and elsewhere is so often misgovernment. He divides patriotism into two kinds, one which concerns itself with services and sacrifices to protect one's fatherland against external enemies, and the other with devotion to all that can subserve its inner welfare. The latter, or "home side of patriotism, this sober and quiet sense of what a man owes to the community into which he is born, and which he helps to govern," has been found, Mr. Bryce truly says, specially hard to maintain in modern times and in large countries. In regard to our large cities, and especially the city of New York, nothing is more notable than the almost total lack of this home patriotism. Our citizens are capable of working themselves into a fury of Jingo patriotism over some trifling international incident, like that of a row among drunken sailors in the streets of Valparaiso, or like the unthinking hullaballoo over a proposal to annex Hawaii, but they bear with complete indifference the constant scandal of an ignorant and corrupt municipal administration which brings disgrace upon the name of popular government the world over.

So, too, in regard to State and national affairs. The low estate to which our legislative bodies have sunk is spoken of almost universally with contempt and ridicule, but seldom with any sign of consciousness that their condition is a reflection upon our capacity for self-government, which injures the good name of the nation more seriously than any international question that has arisen for many years, or is likely to arise for many more, is capable of doing. All this is due to the absence of the "home side of patriotism," among our people, the lack of that habit of civic duty which Mr. Bryce defines as the willingness "to take trouble, personal and even tedious trouble, for the well governing of every public community one belongs to, be it a township or parish, a ward or a city, or the nation as a whole." The chief reason for this lack is that nearly everybody is so much absorbed in the pursuit of wealth that he is not willing to give any

time or thought to public affairs. It makes little impression upon the merchants and professional men of this city to call their attention to the ignorance, extravagance, and corruption of the government under which they are living; they admit the facts, but decline to make any personal effort towards removing or even lessening the evils. "We have no time for politics," they say. "Things are disgracefully bad, undoubtedly, but they have always been so, and you can't make them any better by calling attention to them." As for a sense of patriotic obligation as American citizens to make the city government intelligent, economical, and thus beneficial to the whole people, the citizens who feel that deeply enough to have their conduct influenced by it are hard to find.

One excuse heard very often is that, with our large ignorant foreign population, nothing better is possible. The answer to that is that there is not a large city in the United States in which the native-born element, representing its intelligence and property, is not in a majority if it be united. The trouble is that this element, by dividing into two nearly equal portions under party names which have no meaning in local affairs, completely nullify their own power. This is brought about again by the lack of that habit of civic duty which Mr. Bryce defines as striving to know what is best for one's country or community as a whole, placing that above party feeling, or class feeling, or any other sectional passion or motive. The real foe of good government is not ignorance, but the indolence and partisan blindness of the intelligence of the community. Every man who has given the subject close observation is forced to that conclusion very early in his investigations. Mr. Bryce's words on this point are well worth quoting:

"It is common to talk of ignorance as the chief peril of democracies. That it is a peril no one denies, and we are all, I hope, agreed that it has become more than ever the duty of the State to insist not only on a more penetrating and stimulative instruction, but upon the inclusion of the elements of constitutional knowledge among the subjects to be taught in the higher standards of our schools. Democracy has, however, another foe not less pernicious. This is indolence. Indifference to public affairs shows itself not merely in a neglect to study them, and fit one's self to give a judicious vote, but in the apathy which does not care to give a vote when the time arrives. It is a serious evil already in some countries—serious in London, very serious in Italy; serious enough in the United States (not, indeed, at Presidential, but at city and other local elections) for some reformer to have proposed to punish with a fine the citizen who neglects to vote, as in some old Greek city the law proclaimed penalties against the citizen who in a sedition stood aloof, taking neither one side nor the other. For, unhappily, it is the respectable, well-meaning, easy-going citizen, as well as the merely ignorant citizen, who is apt to be listless. Those who have their private ends to serve, their axes to grind and logs to roll, are not indolent. Private interest spurs them on, and if the so-called 'good citizen,' who has no desire or aim except that good government which benefits him no more than every one else, does not bestir himself, the public funds may become the plunder, and the public interests the sport, of unscrupulous adventurers."

In this and many other American cities, this stage was reached years ago. The result is that in most of them popular government exists only in name, and that a class of politicians have been bred who have made the business of plundering cities a profession in which not only are great fortunes accumulated swiftly, but their accumulation, even when visible to the public which is robbed to supply them, excites no especial attention. It is surely time that a comprehensive plan for the propagation of correct ideas in home patriotism or civic duty was started in every city in the land.

---

### *THE GERMAN PARLIAMENT.*

CHANCELLOR CAPRIVI, since he took office in 1890, has been confronted with the same parliamentary problems which Bismarck had to face between 1881 and 1887. The Government has had to be carried on without a governmental majority, and Caprivi, like Bismarck, has attempted to do this by a series of bargains with one or another group of the heterogeneous Opposition.

In 1887 Bismarck obtained a good majority, but in 1890 he lost it again, and at once opened new negotiations with the Ultramontanes. While these were in progress the young Emperor discharged him and put Caprivi in his place. It was in every respect a change of persons without change of policy: in internal as in external affairs Caprivi followed almost slavishly in Bismarck's footsteps, but with less clearness of aim and much less consistency. He took up the negotiations with the Ultramontanes, and succeeded for a time in purchasing their support. Bismarck had so wisely husbanded his concessions to that party that something was still left to compromise on—just enough to carry Caprivi through two of the following three years. Then it became necessary to offer the Clericals something positive, and the Government introduced in the Prussian Diet a primary-education bill, which practically substituted confessional for secular schools. This bill might perhaps have been carried, against the opposition of all shades of Liberals, by Conservative, Clerical, and Polish votes, but the outcry throughout the kingdom so alarmed the Emperor and his Chancellor that the bill was withdrawn. The Ultramontanes turned promptly against the Government, and in the decisive votes on the late Army Bill the party was almost solidly arrayed in opposition.

Caprivi had indeed other strings to his bow, but they were weak ones. Slight concessions were made to the Poles in administrative and church matters, and were gratefully received; but the Poles had only sixteen votes. More important was the attempted conciliation of the free-trade Liberals. In 1891 and 1892 commercial treaties were negotiated with a number of Germany's neighbors, which reduced the tariff on grain, and thus largely nullified the protection given to the agrarian interest. The German Liberal party welcomed this change of policy; but its radical wing, under the leadership of Eugene Richter, refused, in accordance with its unbroken tradition, to render any aid to the Government in return. Only a few of the more recent recruits—those who had seceded from the National Liberal party on the tariff issue—emancipated themselves from Richter's domination and voted for the Army Bill. The net gain which Caprivi derived from his commercial treaties was therefore slight. On the other hand, those treaties offended a large section of the Conservatives, and made them lukewarm in their allegiance to the Government.

After the defeat of the Army Bill, Caprivi, still following in Bismarck's track, attempted to secure a more docile Reichstag by a dissolution and an appeal to the patriotism of the Empire. But, as the old adage has it, when two persons do the same thing it is not the same thing. Bismarck was backed in 1887 by the old Emperor and Moltke and his own triumphant past. Germany's allies were held well in hand, and the wires of European diplomacy were skilfully pulled to play upon the fears of the German electors. Caprivi's position in the electoral campaign which has just closed was in every respect weaker. William II.'s name is not one to conjure with; military opinion is understood to be divided on the expediency of many of the proposed changes in the army; the utterances of Germany's allies have been maliciously optimistic as regards the chance of a prolonged European peace; and Caprivi's own brief career has convinced every one of his honesty and good intentions, but no one of his ability. Under the circumstances it is rather surprising that the elections have resulted so favorably for him. Aided by a split in the Clerical party, and in the secondary ballots by the consternation felt at the Social Democratic gains, the Government appears to have secured a slight majority, not necessarily for the proposed law, but for some increase of the army. But this majority is a very composite one, with little suggestion of stability. The Conservatives and National Liberals have made gains, but have not obtained a majority of the seats; and the next Army Bill will be carried by the aid of free-trade Liberals, dissentient Clericals, Anti-Semites, and Poles. This is not a majority on which the Government can count for other purposes, and it is not easy to see how a stable majority is to be constructed.

It is not impossible that the free-traders who left the National Liberal party in 1879, and who have now abandoned the German Liberals, may again swing back into the National Liberal party. But even then the Conservatives and Moderate Liberals would not be in the majority; nor could they, under existing conditions, act in harmony. The tariff question, which Caprivi's commercial treaties have brought to the front again, makes this impossible; for even if Caprivi were willing to go fur-

ther in breaking down the protective system, he could not carry the Conservatives with him. As long as Bismarck was at the helm, the Conservatives were an absolutely reliable governmental party. They followed him through years of liberal and anti-clerical legislation; they gave their votes for the destruction of feudal jurisdictions and for the free migration of the laboring classes, for the complete emancipation of the Jews, and for civil marriage. They followed him with the same dismay with which the English Tories often followed Disraeli, but they followed *quand même* because he was their leader as well as the chosen representative of the Crown. But the Conservatives feel no such allegiance to Caprivi. They do not see now why they should not compel the Government to follow them. They have been educated, during the past few years, to the *do ut des* view of politics. They are not likely to support the Government unless it becomes again frankly and thoroughly protectionist—and that will alienate a section of the Moderate Liberals.

It seems certain, therefore, that Caprivi, or any other Chancellor whom the Emperor may put in his place, will be forced to make terms with the Ultramontanes, and that during the next few years German parliamentary politics will be dominated by a Conservative-Clerical alliance. This outlook is a discouraging one. It means the continued supremacy of protectionism, and it may well mean reactionary legislation in many directions. The anti-Semitic wing of the Conservative party will demand laws against usury and stock-exchange gambling, which the Clericals will gladly support, and, as against the secular schools, orthodox Lutherans and Roman Catholics will readily join hands again.

Against such a coalition the Liberals, Radicals, and Social Democrats will be found united in opposition, but in this opposition there will be negative harmony only. It is not the sort of opposition which, even in a strictly parliamentary monarchy, could conceivably become a governmental party. As the lines are now drawn in the Reichstag, the increase of the Social Democratic vote is unimportant. It means simply the shifting of votes from one opposition party to another. Richter and his friends, who have lost more than the Social Democrats have gained, have always been as *intransigeant* as Liebknecht and his associates. The chief difference between the two parties is this: that the Social Democrats have a positive programme, while the Richter Radicals have never been anything but a party of pure negation.

## JOHN DICKINSON AND THE PENNSYLVANIA CONSTITUTION OF 1776.

BROOKLYN, July 1, 1893.

IT has been the fashion of our historical writers, first introduced by Bancroft, to treat the conduct of John Dickinson in relation to the Pennsylvania Constitution of 1776 as that of an "irreconcilable." If their judgment be accepted, he continued to worship the old royal charter long after it had been replaced by a republican and democratic Constitution; refused the oath of allegiance, resigned his commission, and withdrew from the State, rather than give free institutions even tacit support. In proof of this view, little evidence has been given; to that which has been available I can now add what I trust will cause a stay of judgment, if not a reversal of it.

The Constitution of 1776 was prepared under conditions and circumstances which made opposition to it almost certain. In 1776, the controlling party of the Assembly was a coalition formed of the Quaker-German-commercial interests, led by John Dickinson. In the face of this conservative majority, the Opposition or "popular" minority were unable successfully to fight, and they therefore withdrew or seceded, leaving the Assembly without a quorum, and thus not able to act. Then, trumpeting forth that the legal authority would not take the steps necessary for the support of the Continental Congress and the war, they gathered with others in what they called a "provincial conference," and not merely passed several laws, but issued a call for a convention to frame a Constitution. Without a quorum to vote measures, without an executive (for the King's Governor had withdrawn), and with the "Associators" or militia (who were naturally almost wholly enlisted from the "popular" party) refusing to obey their orders, the Assembly was powerless to prevent this Convention from assembling. And though the majority of the people (if we take the recent vote of the whole province for Assemblymen as evidencing the public opinion) refused to vote for delegates, the Convention met, framed a Constitution, and, without giving either Assembly or people a chance to consider the plan, declared it established, required an oath of allegiance to it, and ordered a new Assembly elected under it.

On this the conservatives split into two camps. A large section refused either to stand for or to vote at this election, while the remainder, under Dickinson, though refusing to acknowledge the legality of this Government, held that the collapse of the legal Assembly left them no alternative but resigning all share in the Government, or endeavoring to gain possession of the new Assembly. They accordingly offered themselves as candidates, and, in spite of this split, secured seats enough to make them a formidable minority, and emboldened Dickinson to formulate a demand for a new Convention. Refused this, the minority played the same tactics before employed by the popular party, of withdrawing from the Assembly; and only the stress of war and the pressure of the Continental Congress induced enough of the conservatives to attend to give it a quorum and enable it to act. Dickinson himself resigned and withdrew from the State, though more from other motives than on account of his disapproval of these proceedings.

This outline of events hardly proves him an "irreconcilable," and some recently discovered evidence goes to show that Dickinson was quite ready, not merely to aid in forming a new Constitution, but even to accept that of the Convention, if it was amended so as to be equally fair to all parties in the State. For many years there has been in the possession of the Library Company of Philadelphia a rare broadside, entitled 'An Essay of a Declaration of Rights,' of which ninety-six copies were secretly printed for the use of members of the Convention of 1776. In examining this recently, I found that it had MS. notes and corrections which special familiarity with Dickinson's handwriting enabled me at once to fix upon him as the annotater. How he obtained this secret draft of the Convention, it is difficult to say; but it gives us some important light on his objections, not to the illegality of the drafting body, but to the draft itself, and serves as an index finger to mark certain points of friction between the two parties. Thus, in the second clause, the following change is made:

| ESSAY. | DICKINSON'S MS. |
|---|---|
| Nor can any Man be justly deprived or abridged of any Civil Right as a Citizen on account of his peculiar Mode of Religious Worship. | Nor can any Man *who acknowledges the Being of a God*, be justly deprived or abridged of any Civil Right as a Citizen on account of his *religious sentiments* or Mode of religious Worship. |

More curious still, in the light of his recent experience with majorities and minorities, is his change in the fifth clause:

| ESSAY. | DICKINSON'S MS. |
|---|---|
| That Government is or ought to be instituted for the common Benefit, Protection and Security of the People, Nation or Community, and that a Majority of the Community hath an indubitable, unalienable, and indefeasible Right to reform, alter or abolish it in such a Manner as shall be by that Majority judged most conducive to the Public Weal. | That Government is or ought to be instituted for the common Benefit, Protection and Security of the People, Nation or Community, and that the Community hath an indubitable, unalienable and indefeasible Right to reform, alter or abolish, Government in such a Manner as shall be by that *Community* judged most conducive to the Public Weal. |

There are several other amendments not so obvious in their import, besides many merely verbal changes. One more is of interest, however, as apparently intended to make the clause slightly more favorable to the Penn proprietors:

| ESSAY. | DICKINSON'S MS. |
|---|---|
| That all Men have a natural inherent Right of Emigration from one State to any other that will receive them, or for the Forming a new State in vacant or purchased Countries, whenever they find that thereby they may promote their own Happiness. | That all Men have a natural inherent Right to Emigrate from one State to any other that will receive them, or to Form a new State in vacant Countries or such Countries as they can purchase whenever they find that thereby they may promote their own Happiness. |

What makes the changes of real importance, however, is the fact that all these amendments were accepted by the Convention, and embodied in the Declaration of Rights as finally adopted, indicating that, directly or indirectly, Dickinson had a shaping hand in the work of the Convention.*

From this preliminary paper, it is interesting to turn to a copy of the Constitution as adopted, which is crowded with Dickinson's notes, to see how far the acceptance of his amendments had removed his dislike of the compact. After Clause III. he inserts:

"That all persons professing the Christian Religion [illegible] honestly scrupulous of taking an oath, ought not to be obliged by any Law to take an oath in order to be admitted into any offices, or to be examined as a witness in any cause or in any Court."

All who have studied the partisan and shameful abuse of test-laws in Pennsylvania will ap-

*Lest it should be concluded that Dickinson merely noted on this copy the changes made by the Convention in the draft, it should be stated that a number of the alterations on his copy were not made in the final instrument.

preciate the effect this clause would have had in defeating the "popular" party had it been adopted. That Dickinson was hardly prepared, however, to do without oaths is indicated by a further clause:

"That no other Oath, Affirmation, Test, or Qualification ought to be required on or in order to admission into any Office of Trust or profit, than an Oath of Allegiance to this State, an oath of Office, and a Declaration of a Belief in the Christian Religion exclusive of the articles disputed between the several sects thereof."

An even more important clause was one which he substitutes for the fourth:

| CONSTITUTION AS ADOPTED. | DICKINSON'S CHANGE. |
|---|---|
| That all power being originally inherent in and consequently derived from the people, therefore all officers of Government, whether legislative or executive, are their trustees and servants, and at all times accountable. | That all power being originally inherent in the people, therefore all officers of Government, whether legislative, executive or judicial are their trustees and servants, and at all times accountable to them; and whenever the ends of Government are perverted and manifestly endangered by any magistrate or a treacherous combination of several, or whenever a Government shall be found inadequate to the purposes for which it was framed, the People have a Right and ought to establish a new form or reform the old Government in such manner as shall by the Community be judged most conducive to the public Weal. |

That this hardly indicates a fixed determination to cling to the old charter is obvious.

Still further proofs exist, besides these two documents, to prove that Dickinson was willing to see a new Constitution for Pennsylvania framed. On July 18, or but three days after the Convention met, and long before it had begun constitution-making, a pamphlet entitled 'An Essay of a Frame of Government for Pennsylvania' was published in Philadelphia. It does not purport to be a complete instrument, but it outlines a new Constitution, and was clearly intended as a working basis for the Convention. Yet this pamphlet was written by John Dickinson, who "deserted his State in the hour of its most deadly peril rather than surrender an antiquated and undemocratic charter."

One more piece of evidence on his position exists in an almost unknown broadside, being "instructions" for the Representatives of Philadelphia, drafted by Dickinson, and adopted by a mass-meeting held just before the new Assembly met. As it was almost his last act in Pennsylvania politics, until recalled to assume the Governorship, five years later, it probably represents his final opinion:

"We require of you, therefore, to propose to the Assembly, as soon as it is convened, to make such alterations and amendment in the constitution formed by the late Convention as are necessary to render it a safe, rational and consistent frame of government, and we require your particular attention to the following instructions relative to that important business.

"You are to be careful to adopt such parts of the constitution formed by the late Convention as secure to the people annual elections, suitable division and rotation of offices, liberty of conscience, freedom of the press, and trial by juries.

"You are to use your endeavours to divide the supreme legislative power in such a manner as shall produce wise, just, and well digested counsels, and thus secure the State from the fatal influence of hasty, incorrect, passionate and prejudiced determinations."

PAUL LEICESTER FORD.

## CARDUCCI AND HIS CRITICS.

BOLOGNA, June 16, 1893.

DURING the last fifteen years, no Italian writer has occupied the attention of the public, the pen of friendly and of hostile critics, as has and still does Giosuè Carducci; and even as I write he is engaged in a pitched battle with the sentimental opponents of war, who, alas! cry, Peace, peace! where there is no peace. Four separate poems were the fruits of the poet's hardly earned vacation in the Alps last summer—"La Bicocca," "Piedmont," "Cadore," "La Guerra." As a motto for this last poem, he took a sentence from the works of Carlo Cattaneo in which the natural history of war (not its apology) is given, and later quoted a letter of Alberto Mario, whose political writings Carducci is now editing with a preface, in which he will sum up and probably criticise the doctrines of the Federal Republicans. These quotations irritated the nerves of the peace-at-any-price school, and Napoleon Colajani (who, by the way, would be the first to shoulder his musket and climb to the summit of Castrogiovanni if the French from Biserta should invade the island sacred to the Vespers) attacked the poet with all the fierceness of the modern champions of peace. Fair play so far; but when he calls Carducci the "Poeta Cesarea," this striking below the belt is unworthy of the Sicilian patriot who has done and is doing so much for the purification of Italy morally and politically. I should not refer to this stupid accusation were it not repeated in Mr. Frank Sewall's excellent essay, "Giosuè Carducci and the Hellenic Reaction in Italy," prefixed to his recent American translation of the Poems.

"Without a formal coronation, Carducci occupies the position of poet-laureate of Italy," says Mr. Sewall. Quite other is Carducci's position. He refused to commemorate Cialdini because that general ordered "the fratricidal shot"

"Onde Aspromonte è infame";

and, on being asked by the democrat Ettore Ferrari, Italy's great sculptor, to write an ode or dedication for the album presented to Queen Margaret for the silver wedding, answered: "Why? When have I ever written to order?" and remained working hard as ever at Bologna throughout the senseless official jubilations. It is this independence that irritates the "Puritans" of all creeds and classes. The fine and exhaustive study of the political poetry of Giosuè Carducci by Prof. Domenico Zanichelli,* brother of the publishers of his works, sets in their true light the poet's opinions and aims, Italian to the core. Italian glory is his pride, Italian shame his cross. Hence, from 1860 to 1870, all his poems are revolutionary, but in none does he instigate his countrymen to upset monarchy and inaugurate a republic. Like Crispi, his one surviving Benjamin, he deems that "monarchy unites, a republic would separate us"; and Italian unity is the cornerstone of his creed. Hence his worship of Mazzini, "greatest after Dante." For his commemoration of the apostle of Italian unity at his death he was suspended by Messer Bonghi for eight months from his chair and stipend. Garibaldi has an entire volume of poems, which will live for ever.

From Aspromonte to Mentana, thence to the breach in Porta Pia, King, court, ministers, generals, quondam "revolutionists calmed down" are anathematized impartially by Carducci. When the servile municipality of Florence abolishes the commemoration of the heroes who fell at Curtatone and decrees funeral rites for the anniversary of the death of Charles Albert, the poet flagellates Tuscany entire. The sonnets during the Dante centenary seem inspired by the Ghibelline himself, especially the second, ending:

"Su, ribelli e spergiuri, a Roma, a Roma!"

During Mentana we have "Meminisse horret," the miserere in which Dante and Macchiavelli in Santa Croce tell harder truths to Italy than even they spoke in life. In "Heu pudor," after the tobacco jobbery, when loftiest personages and the vulgar herd were implicated, Vanni Fucci is held up as a model to the "puny, bastard pilferers of modern Italy." Still more scathing the satire when official Italy sat silent under Napoleon's insults to the King, and Rouher's *jamais* was left unchallenged. When Giovanni, the fourth of the Cairoli, dies of his wounds received at Villa Glori (Mentana), the poet vows to break his lyre on the gravestone of the dead. But all these poems, if revolutionary, are not republican: their alpha and omega is, "To Rome! to Rome!" When that goal was attained, when monarchy was compelled to choose between the "sacrilegious act" and abdication, when reluctantly the "devoted son of the Holy Father" ordered the breach in Porta Pia, when Rome was proclaimed capital of United Italy, the fiery invectives ceased, but no hymn of triumph heralded the entry into the Quirinal.

"*L'art pour l'art*" is not for our poet, neither revolution for revolution. There is a long pause; then we have the "Ripresa" in 1873, and at last in 1877 the "Odi Barbare," wherein no politics intrude. True, in 1879, after the attempt of Passanante on the King's life, which called forth indignant protests from Alberto Mario and the entire Republican party (the assassin's insanity being proved only later), we have the famous ode to the Queen, very tedious, very erudite, but quite other than "fulsome." Merely as a Queen, I doubt if a poem would have been dedicated to her; but Margaret is the daughter of the Duke of Genoa, the warrior prince who died in his prime. As such, she has two odes dedicated to her—just two too many is the utmost one can say. But neither is dictated by a courtier's pen, for flattery is an element unknown to Giosuè Carducci, as witness his discourse five years ago here in Bologna commemorating the eighth anniversary of the Bolognese University in presence of the King and Queen whose grandfather, father, and uncle had condemned to perpetual exile and to "ignominious death that great son of our fathers, Giuseppe Mazzini."

In his exposition of Carducci's crusade against "the lie enthroned in the Vatican," Mr. Sewall has excelled all Carducci's critics because he has seized the underlying thought and conviction that permeates the utterances of the poet; namely, that Christianity (or, as he puts it deftly, the *habit of Christianity*) imposed on the Italians has ever been antagonistic to the ancient national instinct, both religious and civil, and that the time has come to speak frankly, to act courageously—to say: "This surface life is false; these gorgeous processions and spectacles, these joyous festivals and picturesque rites, this sacrificial and vicarious theory of worship," are not religion, are not morality. Away with these mummeries and baubles; down with these airless, sunless tem-

* 'Studi Politici e Storici di Domenico Zanichelli: Le Poesie Politiche di Giosuè Carducci.' Bologna, 1893.

ples, these charnel-houses. Disperse this army of priests and friars, monks and nuns, sounding to heaven the cruel oppressor's praise, while God, and King, and Fatherland denying. Protestants, and American Puritans especially, will be less shocked at this treatment of Christianity so called "as a mere passing episode in the life of a nation," when they retrace the phases of Catholicism in Italy, where the Bible is still an unknown book, still forbidden (by the way, after Dante, it is the best-thumbed volume in Carducci's library).

The problems that troubled Dante are not those of his worshipper; neither, it seems to us, does any question of other worlds or immortality of the mortal individual torment him. Every now and then there comes a poetical allusion to a question or wonderment anent the "After."

"Superstito ai fati è Amor"

—Love outlives the fates—he exclaims, bidding the gods, "when justice and liberty shall possess the earth, to bring the glad tidings to his grave," when, in virtue of that love surviving death, he shall "hear their voices, and the ashes of the *vate* who on earth believed in and foretold the triumph of right and goodness will exult." Again, in "Innanzi," which should be read with the poem in which Carducci tells of his one only dead boy "Dante"; of his brother taken young; of his mother, idolized in life, never absent from his heart in death—of them "that thought, shipwrecked, again draws breath, and cries to heaven: O night, O winter, say, what are the dead doing down there in their graves?" It is the love lost, not the fear, that troubles him, and soon he says, in snow-deep winter: "Birds that homeless wander, peck at the darkened window, souls of the lost ones returning, they watch me and call me to them. Shortly, O dear ones, shortly! (Heart, tame thy restless rebelling!) Down to your silence, down to your peaceful shades, will I come."

Catholicism is dead, though its skeleton is kept above ground, as in the hideous stinking cemetery of the Capuchins in Palermo. "The rebellion that moved from the cloister," led by Savonarola, Luther, Calvin, "shattered the fetters that bound human thought," but the new religious faith has not yet dawned. This it is that creates "the aching void," tempers the enjoyment of sunshine, beauty, sensuous delights. The sun may "never set for the gods of Greece"; they may "still sleep in ancient woods, in flowers and mountain streams and the eternal seas," but they do not answer the lofty hope that cries, "O when shall labor be happy, and faithful love secure from harm? When shall a mighty nation of freemen say in the face of the sun, 'Shine no more on the idle ease and the selfish wars of tyrants, but on the pious justice of labor?'" The poems entitled "Carnival," most exquisitely rendered by Mr. Sewall, show how deeply this problem affects the poet. But in Carducci's prose and poetry not a shadow of sentimentalism, not a morbid line is found. His remedy lies in work and in research after truth. This is the age of destruction, of clearing away all the rubbish, dust, and débris of long centuries of superstition, ignorance, violence, and fraud.

"Or distruggiam. Dei Secoli
Lo strato è sul pensiero:
O pochi e forti, all' opera,
Che nei profundi è il vero."

In his translation Mr. Sewall is not as happy as usual:

"Now we destroy. Of the ages
The highway is built upon thinking:
O few and strong, to the work!
For truth's at the bottom."

The fundamental idea is: Let us destroy. The stratum (refuse) of ages weighs upon or has overcrusted thought: few but strong, to the task (of removing the ruins)! For truth lies beneath in the deepest depths (*profundi*).

I make no attempt to versify. Translation is an art that Americans possess in a most enviable degree; and if Mr. Sewall follow up his little book with other translations of poetry and prose, he will do good service to America, and to Italy also, in making known her "greatest" (*sommo*). If only another "few" worked as does Carducci, the excavations would go on speedily. Never does he miss a lesson at the University save when at Rome on educational business or to record his vote in the Senate. While his past works, which will fill twenty volumes, are going through the press, he is preparing new ones—just now a collection of 'Rime Antiche Italiane'—songs of all provinces before Dante's time, beginning with Pier delle Vigne and the Emperor Frederick. Hard as he works, he certainly is not "ashamed of human delights and human comforts, and refuses none of the paths that lead to these." First of all he has a delightful home, for wife "a perfect woman nobly planned"; then he adores his grandchildren. Bice (see Mr. Sewall's translation of "My Daughter's Marriage," xxxi.) was

"born when over my poor roof did pass
Hope like a homeless, wandering nightingale."

Elvira (the grandmother's name) and Giosuè, the eldest, are both studious, and when time passes without a sight of them Carducci will dash off to Leghorn and "bring them home"; but the studies go on, and Elvira has to give daily account of her progress in Latin, which does not prevent her being one of the healthiest and jolliest of young mortals. Then in the holiday, when lectures, Senate, printers' devils are left behind, the poet rushes to the Alps, and there revels in nature, setting himself no special task, working or not as the spirit moves him—and it never fails to move him. Will Mr. Sewall not translate last autumn's inspiration on "Cadore"? Not to Titian does Cadore owe her greatest glory, but to her braves who defied the German Army during the league of Cambray, thus saving Venice; and again to Pietro Calvi, who, in 1848, led the forlorn hope, lived conspiring and leading expeditions against the Austrians, till, the companion of Orsini in the dungeons of Mantua, he was shot to death at Belfiore, a republican hero and martyr.

This year, if the muse does not suggest some aerial flight, a soberer theme is to be "thought out" during the autumn holiday. Carducci is set on writing the history of the Italian Renaissance between 1789 and 1870—Italy's political, artistic, literary reawakening—to show how Italian thought has evolved and formed itself. This will be a most valuable contribution to the story of modern Italy, for, saving Foscolo's lectures on literature and the scattered monographs on revolutionary attempts, we have no key to the inner life which transformed the seven provinces of struggling slaves into the one independent and united Nation.

## CONSULAR INVOICES.

To the Editor of The Nation:

Sir: Permit me to offer a few considerations in confirmation of your recent article entitled "Our Consular System," touching that portion of our tariff regulations which requires that every importation of foreign goods beyond a nominal value must be accompanied by an invoice bearing the certificate of the consular officer nearest to the place where the goods were purchased. As you correctly observe, the consular certificate is useless, because to be of value it would need to be the consul's certification that the goods shipped were identical with those billed, and this he could determine only after an examination of the goods. Such an examination is impracticable for many reasons. Sometimes, indeed, the goods are bought in places where no consular agent is resident, and then the only feasible way is to send the invoices by post to the nearest consul, to be returned after the consular seal has been attached. But even if a consul should examine the goods at the time of sale and before they were packed, it would still be of little or no benefit, for he could not control the handling of them from that time until they were shipped, during which interval his certificate might be rendered invalid; and this seems to be understood at our custom-houses, for the American importer is himself required to take oath to the correctness of the invoices presented by him, and not unreasonably, because what is really desired is a bona-fide invoice for the goods actually delivered to the custom-house. But this would seem to render the previous consular certification a work of supererogation.

You did not exaggerate the trouble and vexation caused the foreign dealer by this regulation. The several copies required of the invoice must be made out upon special blanks furnished at the consulate, and they must therefore be sent for from time to time, and not too infrequently, because the forms are liable to be changed, and if an old one has been used, the three or four copies must be made over again. Information must also be secured as to the charges for packing and shipping, insurance, etc., before the invoice can be completed, and the forwarders must be communicated with in order to learn the name of the ship by which the proposed shipment is to be made, and the date of her sailing. This last requirement is often the cause of much embarrassment in the case of large shipments, because foreign dealers, with the very limited space at their command, as compared with American merchants, are necessarily anxious to get the goods out of the way, and their detention even for the time required to communicate with the shipping agents in Liverpool, for example, has sometimes been found so inconvenient as to result in the adoption of the expedient of sending the cases to a storage warehouse until the necessary information could be obtained, thus involving both trouble and expense. Finally, the foreign merchant must make a personal visit, or send a properly qualified clerk, to the consular office to swear to the invoice, and thus lose several hours, probably, of valuable time. It is not to be wondered at, therefore, that complaint is general and persistent among business men abroad at these burdensome regulations.

In estimating the average cost of each set of invoices at $5, you were probably much below the actual expenditure. The direct consular fees of 10s. 6d. and 2s. 6d. amount to about $3.25 for each separate invoice; and when it is remembered that the numerous distinctions of our tariff law of necessity require these invoices to be made out with unusual and excessive detail, and take into account the cost involved because of the reasons set forth above, it is probable that the total for last year's invoices would be nearer

five million than two million dollars as stated. That the American purchaser must ultimately pay all of this tax I think incontrovertible. Why should the foreigner pay it any more than he now pays the cost of packing or shipping, or any other expense involved in the removal of the goods which a customer has purchased? He would be short-sighted if he did, and if he pretended to do so, he would certainly have every inducement to recoup himself. But I could point to one Eastern importer whose dealings abroad have occupied a period of more than a dozen years, and have extended beyond Great Britain to France and Germany, and, to some extent, to Belgium, Holland, and the Scandinavian countries, and whose experience has been that in not a single case has the foreign merchant failed to charge upon the bill for the goods purchased the full amount of the consular fees for the certified invoices. So unquestioned has been this practice, not only in England but also on the Continent, that it may be considered sure proof that it is generally adhered to, and I believe it will be found, consequently, that the 345,007 consular invoices of the last fiscal year cost the United States importers a direct tax of about one and one-quarter million dollars.

Reverting briefly to the question whether it is good policy to attempt to support our consuls by this indirect tax laid upon a special class of citizens in the shape of fees, it may be contended that it has the objection of being a very unequal method of payment, for whereas the fees collected in some consular districts are very great in total amount, in other places they are barely sufficient to make up a respectable salary. Moreover, the temptation is always before our consuls to degrade their office and become mere collectors of fees. The fact, furthermore, that these fees for certifying to invoices are the personal perquisites of our consuls is well known abroad and unfavorably commented upon; and this, together with the tampering with the sacredness of an oath, which is manifestly involved in every certification by a consul to the correctness of an invoice of whose integrity of contents he cannot by any possibility be assured, is serving to bring our consular offices into contempt.

June 20, 1893.

## ENGLISH COÖPERATION IN THE PHILLIPS BROOKS HOUSE.

To the Editor of The Nation:

Sir: The meeting held yesterday at Westminster Abbey "to consider the advisability of an English contribution to the American Memorial to the late Right Reverend Phillips Brooks, D.D.," was called to order at five o'clock by the Dean of Westminster. The excessive heat had made the Jerusalem Chamber, where it was to have been held, almost uninhabitable, so that the Dean and Archdeacon Farrar transferred it to the College Hall, a larger room near at hand, where the Lower House of Convocation meets. This was fortunate in every respect, because the meeting was larger than could conveniently have bestowed itself in the Jerusalem Chamber. There were upwards of sixty in attendance.

These, however, represented only a fraction of those who supported the movement, and the first feature in the proceedings was the reading of an exceedingly interesting collection of letters favoring the movement, and coming from Oxford, Cambridge, Glasgow, and elsewhere. The Bishop of Ripon (Boyd-Carpenter) telegraphed at the last moment that he was detained and could not reach London until six, and regretted that he could not "in person express the homage which he desired to pay to the memory of one so greatly gifted and so single-hearted." In much the same vein were couched letters from the Bishops of London (Temple), Winchester (Thorold), Rochester (Davidson), the Dean of Winchester (Kitchin), and Lord Playfair, who was in charge of a bill in the House of Lords while the meeting was in progress. The Master of Trinity (Butler) desired "to pay honor to the really great name of Dr. Phillips Brooks." The Bishop of Durham (Westcott) wrote that no one ever impressed him more by genial vigor and generosity of spirit; and Dr. Fairbairn, Principal of Mansfield College, Oxford, spoke of Bishop Brooks as "a Bishop of the Church Catholic" whose services "made us all his debtors," and added: "However great he may have been as a preacher, he was still greater as a man, and his contribution in this respect to our modern ideal of religion was at once his noblest exposition and his apologetic for Christianity." Others belonging to Dr. Fairbairn's communion wrote in the same spirit from the Free Church College in Glasgow and the Glasgow Cathedral. These were Profs. A. B. Bruce and G. A. Smith and the Rev. G. S. Burns; the Rev. D. Macleod also wrote of his "great admiration for the noble American Bishop."

Recognition equally strong came from such laymen as Judge Thomas Hughes, the Earl of Meath, and J. M. Ludlow (a firm friend of Frederic Maurice), who was present at the meeting. Then such representative clergymen of the English Church as the Vicar of Kirkby Lonsdale (Llewellyn Davies) and the Rev. B. H. Alford of St. Luke's, Margaret Street, wrote very warmly, the latter saying: "There could not be a more appropriate place for the holding of such a meeting. I shall never forget one in the adjacent Chapter House, when America, in the person of Mr. Lowell, paid a tribute to the worth of Dean Stanley; now the admirers of the late Dean have the opportunity of doing the same by one of his best transatlantic friends." There were letters of similar purport from the Rev. Profs. Ryle, Kirkpatrick, and Mayor of Cambridge, the last of whom said that he had often read Phillips Brooks's sermons to the poor as well as to the cultivated, and he added: "They appeal to the better feelings of all."

The Bishop of Peterborough (Creighton) wrote with a very full knowledge of the special circumstances of Harvard University, and this gave a peculiar interest to his letter. After regretting that he should be out of England at the time of the meeting, he said:

"My slight knowledge of Boston gave me a very high opinion of the value of the work done by the late Bishop of Massachusetts, and my personal acquaintance with him filled me with respect for his character. My connection with Harvard College enables me to judge of the usefulness of the proposed memorial, and I shall be very glad to be associated with so excellent a scheme. Please announce me as warmly sympathizing with it."

Those who were present at the Harvard 250th anniversary in 1886 will not be surprised at these words, as they will remember the insight into the history and usefulness of Harvard College shown by the Bishop of Peterborough, who represented John Harvard's College of Emmanuel upon that occasion. A similarly sympathetic appreciation of Phillips Brooks and of Phillips Brooks House came from the Rev. Prof. Sanday, whose Bampton Lectures have just closed so impressively at Oxford. Prof. Sanday wrote:

"It was a memorable day to me when I heard Dr. Brooks preach in St. Mary's one of the most striking sermons that I have heard there. He seemed to me to combine in a degree which I have never known surpassed vigor and originality of thought with natural and unforced eloquence. I have upon my shelves several volumes which I feel sure will never lose their value for the English-speaking peoples. But these represented only a part, and not the most important part, of the activity of their author. He was without doubt one of the most prominent of the public men and Church leaders of his day. And if his fame has been in part overshadowed by that of others who were in no sense his superiors, it was, I believe, because he was cut off on the threshold of what promised to be his greatest usefulness. I cannot help expressing my pleasure that such a man should be commemorated in the way which is proposed. Harvard stands in the van of the movement with which Dr. Phillips Brooks was so closely identified for coöperation between men of different religious opinions, and the House founded in his memory will be its most appropriate centre. I greatly hope that the influence which radiates from thence may extend to the Old World as well as through the New."

During the reading of this last letter, Mr. Bryce came in, having snatched a few minutes from the debate in committee upon the Home-Rule Bill in order to testify in person to the great worth of Phillips Brooks. In a most eloquent speech, which has been much appreciated by the English public, Mr. Bryce substantially said:

"It is now 110 years since the greatest of her colonies, the great nation now called the United States of America, was politically lost to Great Britain, and for many years a feeling of resentment and animosity prevailed between the two branches of the same people. For two or three generations, the memories of the great struggle continued to exist and led to frequent friction. But at last the old ties of race and religion, literature, manners, and customs began to reassert their power, and it was realized that underlying the ostensible hostility there was a deep affection which no passing troubles could efface. Since then there had appeared at intervals men who had won respect and admiration on both sides of the Atlantic. Such men among Englishmen were Matthew Arnold and Dean Stanley, such a man on the other side of the Atlantic was Bishop Phillips Brooks."

The speech was constantly accompanied by marks of appreciation and applause from the audience. After this introduction Mr. Bryce moved: "That this meeting, recognizing in the movement for establishing Phillips Brooks House at Harvard University a result of the widespread influence, large sympathies, and active efforts of the late Bishop of Massachusetts, desires to send an English contribution in furtherance of that object." Speaking to the above resolution, Mr. Bryce gave a lucid account of the unsectarian attitude successfully taken up by Harvard, which finally took its present shape under the lead of Bishop Brooks. He referred to the frequent participation of America in tributes to great Englishmen, and urged that it was only fitting that Englishmen should join with those in America who were seeking to commemorate the most generous and enduring qualities of a great American. Having said this, the speaker sat down, and was shortly claimed by his duties in the House of Commons.

Meanwhile the Rev. Prof. Cheyne, who had come from Oxford to be present at the meeting, rose to second the resolution. He felt the greater pleasure in doing so because he could represent not his own feelings only, but also those of the late Prof. Hatch, at whose house he had met Dr. Brooks. He spoke much in the vein in which Prof. Sanday had written of the desirability of a similar

coöperation of divergent Christian sects in England. American leaders could dare more than was possible for Englishmen in such matters. He spoke of the great hopefulness shown by Dr. Brooks, and paid the highest tribute to the eloquence of the sermon at St. Mary's referred to in Prof. Sanday's letter. Mr. J. G. Fitch of the Education Office also supported the motion, speaking of his great personal debt to the friendship of Dr. Brooks, who was the greatest spiritual force he had ever encountered. Archdeacon Farrar, who originally suggested the meeting and signed the call for it, then said, in supporting the resolution, that he never had known any man who struck him more than Bishop Brooks as a beautiful exemplification of Christian character, or who had a larger measure of hopefulness with reference to the destinies of the individual and of the nation. He was sure that a contribution from Englishmen towards a memorial of one whom the Americans so greatly loved would be another of those links which were tending more and more to bind them with their kith and kin beyond the sea. He spoke of the widespread grief upon the death of Phillips Brooks, comparing it with the national sense of loss upon the assassination of President Lincoln, and recalled with pleasure the generous contribution of Americans towards memorials in the Abbey and in St. Margaret's, Westminster.

In putting the resolution, which was unanimously carried, the Dean of Westminster confirmed the testimony last given by Archdeacon Farrar. He could not help thinking there was something very appropriate in that meeting, held as it was in a chamber built five centuries ago, long before the discovery of that land in which the late Bishop lived and labored. Americans had a special link of home association attaching to what still remained of the Old England which their expatriated ancestors left for the New World. Almost the last occasion on which they saw and heard the late Phillips Brooks at Westminster was when, a few months since, he spent an evening with the voluntary choir, and delivered one of his characteristic addresses. In publishing at the end of the meeting the lists of the American, the English, and the London Committees, with a subscription paper appended, the present writer took occasion to mention that the voluntary choir of Westminster Abbey had met a few days before and contributed £5, through their precentor, to the fund for establishing Phillips Brooks House. Contributions were announced from many sources, and a list of the London Committee of Sympathizers.

Yours very truly, LOUIS DYER.

LONDON, June 17, 1893.

## THE SUNDAY LAW OF THE CHEROKEES.

TO THE EDITOR OF THE NATION:

SIR: In the general hubbub about the Chicago Sunday opening of the Exposition, it may interest your enlightened white readers to know how their civilized red neighbors have legislated concerning this much-controverted subject of Sabbath observance.

While recently examining the laws of the Cherokee Nation in a case which came before me for judicial determination, I happened to find the appended statute. Whether it was copied from some other Sunday law which has escaped my notice, I do not know; but if it is original with the Cherokees, as I believe it to be, I have no hesitation in saying that they have framed the most philosophical Sunday law that has yet been enacted. Observe its wonderful clearness, simplicity, and statesmanlike discrimination. Note how it refrains from prescribing a form or manner of observance, and from dictating to or interfering with the individual conscience; how it philosophically recognizes the fact that rest as well as work is a necessity, a condition to the well-being of mankind, and sets apart one-seventh portion of time for the general repose of society; how it also recognizes the constitutional authority of the Government as being limited to securing for the body politic merely abstention from labor; how it makes that period simply conform with the day of most general religious observance; how it excepts "works of necessity and charity," and how it is content with securing for all classes of persons "*a day of rest within the limits of the Cherokee Nation.*"

A sceptical friend suggests that this statute was "probably drawn by some missionary." Perhaps it was; but if so, I wish that Congress and our State Legislatures would employ that missionary at any cost to draw our laws for us in unmistakable terms and intelligible language.—Respectfully, etc., etc.,

CHARLES C. NOTT.

"The seventh portion of time, beginning and ending with Sunday, the first day of the week, shall be a day of rest within the limits of the Cherokee Nation; and every merchant, mechanic, artisan, or other person, who shall keep open his store, warehouse, shop, workhouse, or other place of business, or shall engage on Sunday in any manner of work, labor, or business, except only works of necessity and charity, shall be deemed guilty of a misdemeanor, and, upon conviction thereof before any court of competent jurisdiction, be fined in any sum not exceeding fifty dollars, for each and every such offence, at the discretion of the court." (Revised Laws of the Cherokee Nation, 1874, p. 145, §74.)

## PREPARATION FOR COLLEGE IN THE CLASSICS.

TO THE EDITOR OF THE NATION:

SIR: If the writer of the note on Mr. Moore's translation of the 'De Oratore' meant only school-teachers by the word "pedagogue," he may have been convinced by Mr. Sherman's admirable comments in your last issue, and by his conclusion that higher powers are chiefly to blame for the extreme limitation in the number of classical authors read in our schools. Yet if he is an Eastern man, he should know that at Harvard the requirements, both in Greek and in Latin, are almost exactly what Mr. Sherman desires. In elementary Greek and Latin the candidate must be able to translate at sight simple prose and to answer questions on the usual forms and constructions of the language. In advanced Greek and Latin it is true that the authors are limited to Homer, Herodotus, Virgil, and Cicero, but here again the requirement is translation *at sight*, and the field of selection within these authors is not limited to certain books. But perhaps your reviewer, knowing all this, knew also that, even in many schools which prepare boys primarily for Harvard, the instruction in classics is confined to the "traditional books," and that the number of schools in which there is reading outside of these authors may be counted on the fingers of one hand. For such limitation there seems to be no reason save in the choice of the school-teachers. In New York State, however, from which Mr. Sherman writes, the teachers certainly have their defence in the facts that, for the Regents' examinations, there is practically no requirement in Greek or Latin at sight, and that the passages set are always taken from a very limited number of specified authors.—Yours sincerely, MERCURY.

## A SLIP OF PROF. McMASTER'S.

TO THE EDITOR OF THE NATION:

SIR: Baedeker's 'United States,' just published, is an important work, for among American guide-books it is almost the first written wholly in the interest of the tourist. The historical sketch of the country, which is usual in books of this series, was intrusted to Mr. J. B. McMaster of the University of Pennsylvania, who makes this astounding statement on p. xliii: "McClellan began his Peninsular campaign against Richmond, was out-generalled by Lee, and, in the second battle of Bull Run, suffered so crushing a defeat that Lee ventured to cross the Potomac." The gross injustice of imposing upon McClellan responsibility for Pope's defeat (McClellan not having been allowed to take part in the battle) should be pointed out; especially as the book is for the use of foreigners who may derive from it all their knowledge of American history.

G. H. F.

PHILADELPHIA, June 27, 1893.

## COLOR-SENSE IN WOMEN.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent "X." inquires how the comparative freedom of women from color-blindness can be reconciled with the supposed inferiority of the sex. The satirist might reply that any superiority of color-sense in women is amply accounted for by her greater interest in ribbons and gowns; by way of reconcilement he might add that masculine proclivities are indicated by the finer sense of taste which man possesses. It is, however, to the psychologist that "X." appeals, and his answer may prove scarcely more satisfactory to her. Throughout the animal series the male varies more than the female, and this bears on the subject in two ways: in the first place the male is more brightly colored, which would carry with it a greater interest in color in the female—the peahen doubtless appreciates color better than the peacock; in the second place, the greater variability of the male holds, of course, for mental traits. Women are seldom color-blind and are never great painters. C.

GARRISON, N. Y., June 27, 1893.

## WHY NOT "TYPESCRIPT"?

TO THE EDITOR OF THE NATION:

SIR: While writing to a publisher yesterday, to advise him concerning a typewritten document which I had expressed to him, I half apolcgetically used the word "typescript." On second thought I feel almost sorry for that half apology; might we not couple "typescript" with "typewriting," on the familiar model of "manuscript" and "handwriting" (nay, more, adopt TS. as a counterpart of MS.)?

We lack some such word. A wholly Greek compound would doubtless be preferable; but all the possibilities of τύπος+γράφειν are already "pre-occupied" (as Dr. Murray would say); and, as to that, we have far worse hybrids in current use. A. ESTOCLET.

PHILADELPHIA, PA.

# Notes.

A NEW 'Life of Sam Houston,' by Alfred M. Williams, editor of the Providence *Journal*, is in the press of Houghton, Mifflin & Co.

Mr. William Winter will publish, through Macmillan & Co., his 'Life and Art of Edwin Booth,' which will not form part of the series known as "Shadows of the Stage."

Lady Burton's Life of her husband, the late Sir Richard Burton, will shortly be issued by D. Appleton & Co., with illustrations and maps.

Ginn & Co. announce for the present month 'The Psychic Factors of Civilization,' by Lester F. Ward.

A bequest of Darwin's in aid of the compilation of an index to the names and authorities of all known flowering plants and their countries has now borne fruit. Sir Joseph Hooker assumed the direction of such a work, "of supreme importance to students of systematic and geographical botany, and to horticulturists," which has been executed by B. D. Jackson under the title, 'Index Kewensis.' Part i., a quarto of 728 pages, is just leaving the Clarendon Press. Part ii. is well advanced, and the fourth and final part may be expected in the course of next year. It is issued to subscribers at eight guineas (two guineas the part), through Henry Frowde, Amen Corner, London, E. C.

G. P. Putnam's Sons have issued a popular edition, in good style, of Irving's condensation of his 'Life and Voyages of Christopher Columbus,' and have illustrated it with a great diversity of facsimiles of ancient prints and portraits and in other ways.

We have received Part i. of 'The Book of the Fair,' by Hubert Howe Bancroft, published in Chicago and San Francisco by the Bancroft Co. It forms a small folio of 40 pages, and the text begins with a survey of previous world's fairs, followed by a summary of the wonderful growth of Chicago. A good many irrelevant illustrations are mingled with those we might properly look for, and Mr. Bancroft's grandiloquence is freely expended in handsome typography. We cannot yet speak of the real value of this ambitious undertaking.

The title of the centre-table volume 'Gems of Colorado Scenery' (Denver: Frank S. Thayer) is no misnomer. The views are mostly picturesque, but some relate to manners and customs, industries, triumphs of engineering—like the Pike's Peak Railway or the Union Pacific "Loop" near Georgetown—the aborigines and their cliff dwellings, cowboys, coyotes, etc. The plates are good specimens of process-relief printing in varied tints. Their general attractiveness is not enhanced, to our eye, by encroachments on the margin with clever vignettes, one of which is decidedly repellent, as it shows a "road agent" "holding up" a coach.

It speaks ill for the conductors of the *Religious Herald* of Hartford, Conn., that, in presenting to their subscribers a "souvenir of fifty years' publication of the paper," they did not intimate that the gift was no novelty. In fact, their 'Picturesque Chicago and Guide to the World's Fair' is but the Baltimore publication we dispraised last week, with some differences in the illustrations. The grotesque error we pointed out, which derived the design of the ornate palace known as the New York State Building from the Van Rensselaer mansion, is retained, and emphasized by a picture of the State Building as it really is.

One can but be struck with the literary graces and the entire candor of 'Where to Go Abroad,' a guide to the watering-places and health-resorts of Europe, the Mediterranean, even of India and Bermuda (London: Adam & Charles Black; New York: Macmillan). The editor is A. R. Hope Moncrieff, and his assistants have been men of acknowledged cultivation and experience. The book seems one of the best of its kind. The Balearic Isles, which our correspondent at Palma is revealing in their exceptional loveliness, claim here but ten lines, and are evidently but little more frequented by tourists and invalids than at the time of George Sand's visit with Chopin.

Mr. Moncrieff has purposely avoided such recommendation of springs and waters as belongs to the physician. This task has been essayed by Dr. Thomas Linn in 'The Health Resorts of Europe,' a medical guide to mineral springs, climatic, mountain and seaside health resorts, milk, whey, grape, earth, mud, sand, and air cures (Appletons). Dr. T. M. Coan, who furnishes an introduction, speaks highly of Dr. Linn's competency, and we may well trust his assurance in view of his own extensive studies in the same line, especially in France, of which our columns have borne witness.

In the sense that all roads lead to Rome, all streets in Rome lead to the Pincio. It is the one spot in the Eternal City to which the thoughts of the average traveller will perhaps oftenest return—whether as in its winter garb, with the leaves off the plane trees and the white frost lying below on the Borghese gardens and afar on Monte Mario and the Janiculum, or as in summer, the band playing amid crowds from all nations, the sun setting over St. Peter's. One drawback which has hitherto been felt by some need no longer continue—a sense of painful ignorance regarding the lives and actions of so many of the men whose busts range along the terraces and are nestled among the palms and ilexes. An admirable little handbook has reached us published by Bertero, Rome, from the pen of Signor Giacomo Cortesi, 'The Silent Company of the Pincio.' It gives us the biography of the 169 great men of Italy whose busts are in the Pincian gardens. Moreover, apart from the locality, it is an easy introductory handbook to Italian history, ancient and modern. The "great and most disinterested help" of two Irish residents in Rome, Miss Tolerton and Miss Creeth, is acknowledged by the author.

A few months ago we called attention to the discontinuing of *L'Alighieri*, the Italian monthly periodical devoted to the study of Dante, and to the foundation of the new *Rivista Critica e Bibliografica della Letteratura Dantesca*, a somewhat uninviting leaflet. The latter has now suspended publication, and the publisher of the former (Olschki, Venice) announces a new periodical, the *Giornale Dantesco*, under the direction of Count Passerini, previously the editor of the *Rivista*. The new journal, which is published each month, has been promised the able assistance of Carducci, Scartazzini, and other well-known writers. The subscription price for countries outside of Italy is 22 lire.

New, also, and probably of much more value, is the *Rassegna Bibliografica della Letteratura Italiana*, published at Pisa under the thoroughly competent editorship of Prof. D'Ancona. The four numbers already received—136 large octavo pages, beautifully printed—represent the highest grade of Italian scholarship, and it is evident that if the venture becomes a permanent financial success, few students of Italian can afford to be without the compactly written summaries it furnishes of recent works dealing with Italian literature of all periods. The price of subscription is 7 lire for countries outside of Italy.

The Director-General of Italian Statistics gives notice of a forthcoming volume on the history and present condition of each Italian library.

We have received from the compiler, Mr. Aksel G. S. Josephson, Upsala, the first three parts of 'Avhandlingar ock Program, etc.'—a list of dissertations and programmes published at Swedish and Finnish colleges and universities in the years 1855–1890. The arrangement is by authors, and the break is in the midst of the letter M. Mr. Josephson has also put forth a little essay towards a bibliography of Swedish dramaturgical literature.

Dr. Max von Wolff's 'Lorenzo Valla, sein Leben und seine Werke' (Berlin: Seemann) is a typical specimen of German foresight and industry. The writings of the Italian humanists of the fifteenth century are rare, and biographical and critical literature concerning them certainly not rich. In regard to Valla, the father of modern criticism in so far as the Renaissance made modern criticism, this has been so especially the case that one reads with eagerness even an uninspired *brochure* like this, which gives nothing more than a summary of Valla's chief works and a brief account of his life. Ambitious Dr. Wolff's essay is in attempting to fill a gap by sheer force of industry; it fails, as so much German work does, through its lack of appreciation of the really vital qualities of literature. Of what use are new biographies and new commentaries unless they enter fully into the life of the period they treat, and present it to us vividly as an organic whole, seen from a single point of view?

An anonymous writer in the *Nuova Antologia* for June 1, a man, begins a series of articles on the World's Fair with a very sympathetic account of the Women's Building ("Il palazzo delle donne a Chicago"). Noticeable in the history of it is his omission to speak of its humble forerunner, the Women's Building at Philadelphia in 1876; and noticeable in the moral he draws is his dread of what may come of woman's asserting a perfect independence of man. This writer would deny her nothing in respect of the higher education, and would allow the freest scope to genius; but his fears are for the average woman and the average home. It would perhaps surprise him to learn that there are some Americans who hope there will never be another Women's Building, and who ground their belief that there will not be on the rapid effacement of sex distinctions along lines educational, industrial, and political in every State of the Union, and the growing perception that everything which pertains to mankind has an equal interest, with equal duties and responsibilities, for women and for men.

The Aspinwall family cuts a large figure in the *New England Historical and Genealogical Register* for July, having a whole article to itself, besides appearing among the English wills in Mr. Waters's "Genealogical Gleanings." Here, too, we find the will of the father of George Burrough, a victim of the Salem witchcraft, that of James Goffe, brother of the regicide, and many still more important to pedigree-hunters—Breedon, Sedgwick, Coggeshall, Fouldger, Frothingham, Willoughby, Maverick, Scudder, Lippincott, De Peister, etc.

One can but welcome the revival of interest in historic studies which has led to the founding of the *Virginia Magazine of History and Biography*, a quarterly organ of the Vir-

ginia Historical Society at Richmond. This Society has just acquired new quarters and can boast a membership of 700 members. Being in the possession of many valuable MSS., and anticipating the gift of many more, it begins in the *Magazine* to publish this historical material and such other as may be found in libraries or in private hands. The Society reaches out still further in its designs, and will strive to transcribe and publish all the records in the British State Paper Office relating to the colonial history of Virginia. The first number of the *Magazine* is richly filled with the diary of Capt. John Davis of the Pennsylvania Line (May 26, 1781, to January 11, 1782), under Wayne; a first instalment of the letters of Col. William Fitzhugh, from May 15, 1679, in the library of Harvard College; proclamations of Nathaniel Bacon in 1676; a speech of Sir Wm. Berkeley, 1651; a list of Virginians in the Revolutionary navy; and the first of a series of abstracts of Virginia land patents in the office of the Register of the Land Office at Richmond, made and annotated biographically by Prof. W. G. Stanard. A sharp review of the late Douglas Campbell's 'Puritans in Holland' completes the number.

The development of the fine arts in the United States is the theme, treated pertinently to the Columbian Exposition, by Robert Koehler in *Die Kunst für Alle* of May 1 and 15 and June 1, 1893. There is an abundance of portraits and pictorial examples.

*Sun and Shade* for May has its usual quota and variety of photogravure plates, of which the clear portrait of the caravel *Santa Maria* at anchor in the North River is perhaps the most worthy of mention. The *Blake* is shown at full length in conjunction with her, but not in the same view.

It has just been decided in Convocation at Oxford that the University shall bear the cost of the repairs referred to in our issue of March 2 as already in process on the spire of St. Mary's Church. At the same time the choice of a design was committed to a delegacy of nine. This, it may be hoped, means the triumph of Prof. Case in his single-handed fight against the possible defacement which, in the name of restoration, has threatened the graceful beauty of the church, whose aisles still seem to the foreign visitor to be full of the spell of Newman's eloquent periods and of Matthew Arnold's no less exquisite allusion to his early preaching there. The champion of the preservation of the University church's purity of design has presented his case in a pamphlet of demy-quarto size, which will be of permanent value to lovers of the English Gothic. It is abundantly illustrated by reproductions from ancient maps and drawings, and contains, besides the history of the steeple and its pinnacles, gathered from all available documentary evidence, a discussion of the subject of Decorated Gothic in the light of a comparison with the cathedrals of Salisbury, Lichfield, and Peterborough. The pamphlet is poetically entitled 'St. Mary's Clusters,' and is published by Parker, familiarly known by his useful series of books on Gothic architecture.

— One opens the monthly magazines for July with the natural expectation of finding more or less in them about Chicago and the World's Fair. In none is this expectation disappointed. In *Scribner's*, Mr. Gibson's "Foreground and Vista at the Fair" is the first of a "group" of artists' impressions—a semi-serial which begins just as that on the poor in great cities ends, and helps to swell the serial matter to one-half the prose contents of the number. Mr. Gibson confines his impressions strictly to the artificially natural elements of beauty in the White City, which he represents in somewhat startling language "as a realization supplanting or exalting the ideal, which has hitherto not always been to the credit of heaven, . . . of the 'Heavenly City,' the 'New Jerusalem,' with gates of gold and pearl, which in one questionable shape or another hovers in the hopeful, faithful fancy of so many of the sons of Adam." Less climax-capping in its effect is Mr. Upton's account of the "Musical Societies of the United States and their Representation at the World's Fair," which, after all, has little to do with the subject indicated by the second part of its title. The most interesting article in a number that follows close on the exciting athletic contests which now appropriately mark the close of the college year, is that in which Robert Grant sketches, in the "Impressions of a Philosopher," the topsy-turvy and athletics-mad college world in which a middle-aged graduate, with an odd mixture of pride and shame, finds his son a notorious person.

—The anticipated Western note is also not absent from *Harper's*, in which Julian Ralph apologizes for an important omission in an earlier paper on Chicago. It seems that Chicago had impressed him as being a concentrate of all the "hustling" spirit of the West, an amalgam of all the sterling qualities of life and business except those into which entered the foreign element of leisure. His first conception, however, erred in taking account only of the male element, whereas it is "Chicago's Gentler Side" that alleviates the inordinate haste of the men from "a well-spring of repose." The frivolously fashionable set of Chicago is a minimum, it appears, and it is the rich and stylish set that not only lead reforms without number, but interest themselves deeply in books and art, and are personally entertaining and unconventional companions. Whether Chicago women, as a whole, are really different from those of New York or Berlin, we have, however, yet to learn. Much more distinct in portraiture and vivid in human interest is Mr. R. H. Davis's account of three English race meetings—the rowdy Derby, for costermongers and Americans; genteel Ascot, primarily for the elect; and less straight-laced Henley, for the whole boating community.

—The article on "Color in the Court of Honor at the Fair," which holds the first place in the *Century* for July, is like others of the class we have mentioned in that it deliberately excludes the deeper human interests which the Fair must necessarily excite. The author does not quite go to Mr. Gibson's extreme, presenting his subject to us as a mere earthly pageant, "in which the elements of beauty are not only infinite in number, but, as a rule, national in character." The main note of the magazine, at least so far as the non-fictitious articles go, is that of protest against Mr. Boutkine's defence some months ago of the treatment by Russia of her Jewish subjects. Mr. Joseph Jacobs, Secretary of the Russo-Jewish Committee in London, and well known there and here as a critic and the author of 'Studies in Jewish Statistics,' opens the attack in a manly fashion, giving chapter and verse for the facts on which he bases his refutation. A single point he brings forward is novel enough, and sufficiently illustrative of the new element which the science of statistics is bringing into almost all kinds of discussion, to be worth referring to here. The statistics he has collected show that "if Russia had been as tolerant to her Jewish subjects as the rest of Europe, she might have had some two hundred Jewish celebrities during the past two centuries, including three or four of the calibre of Heinrich Heine or Lord Beaconsfield." Mr. Kennan follows with a renewed demonstration of the fact that what may be very good for the Czar and the Russian Government may be very bad for the Russian people at large. Other interesting articles are not lacking. Miss Preston analyzes Thomas Hardy's art and its culmination in 'Tess of the D'Urbervilles,' regretting the presence of so marked a *Tendenz*, and condemning him for wantonly spoiling a great interpretation of woman's character by a ghastly and insufficient conclusion. Salvini contributes a new portion of his Autobiography, covering the years 1861–68; the most interesting incidents concern Victor Emanuel. Mr. Aldrich writes pleasantly on bits of Portsmouth history and legend, Mr. Gosse on Sarah Siddons, whose portrait by Gainsborough forms the frontispiece to the number, and Mrs. Oliphant on Jonathan Swift.

—The fifty thousand dollars just given to the Boston Public Library by William C. Todd forms a unique and admirable endowment. By the terms of the gift the interest of the fund is to be all annually expended for *newspapers*, to be kept in a suitable apartment in the new building, where all, citizens and strangers, can "enter freely and read." This new departure is by no means new to Mr. Todd. He began an experiment in this direction a dozen years ago in Newburyport, Mass., where he had been wont to spend much of his time, though his legal residence was Atkinson, N. H. At first he gave $300 a year to furnish newspapers in a room provided by the city. After watching for years the success of his venture, he became satisfied that he was doing good to a far greater number than by aiding libraries where he saw books with their leaves uncut for generations. So he made his Newburyport bounty a perpetuity by a fund of ten thousand dollars. Mr. Todd's munificence is unconditional, save that "in the selection of newspapers no distinction shall be made in favor of any religious sect or political party." We wish he had insisted on two distinctions—in favor of two classes of papers, namely, those printed in the most readable type and those which show the toughest paper. For want of the first condition some readers will spoil their eyes. Mr. Todd has suffered so much as to his own eyesight that it is strange he did not think of this danger. Still worse than illegible types is perishable paper. Fragility of material makes the daily issues of the press more and more like the morning cloud and early dew—"the perfume and suppliance of a minute." So crying had this evil become, that the Massachusetts Historical Society long ago proposed to require copies of such newspapers as they received to be printed on perdurable paper. It was the pride of that Society to possess 453 volumes of eighteenth-century journals. They feared that their surviving relics of the present century would be still fewer, as so many of them turn to dust themselves when one shakes the dust off them. Mr. Todd's gift adds something of credibility to Bacon's dictum: "Certainly the best works, and of greatest merit for the public, have proceeded from the unmarried or childless men; which both in affection and means have married and endowed the public."

—In the University Church of St. Mary's was given on June 4 the last of Prof. Sanday's Bampton Lectures on the "Early History and Origin of the Doctrine of Biblical Inspi-

ration." In February last the lecturer opened by sketching the view taken of the New Testament by the early Church. Then followed four lectures upon the Old and two upon the New Testament. The last lecture was devoted to a retrospect, and to a presentation of such results as may be derived from a comparison of the traditional and inductive theories of inspiration. By the inductive theory, the critical view was of course designated—the one which takes its point of departure from the consideration of the individual attitudes or states of consciousness of the various writers concerned. The inspiration implied by the critical theory was, Prof. Sanday contended, quite as real and quite as fundamental as that involved in the traditional view. Moreover, it is possible to trace the links by which the generally accepted ideas of fifty years ago have passed into the modern and strictly scientific shape given to the doctrine of inspiration that is prevailing to-day. In this the measure of inspiration is not solely the consciousness of the persons inspired. We must add proofs of a higher Providence at work in the Bible which led to the committal of prophetic utterances to writing, and made occasional letters of Apostles a basis for Christian theology. Among these proofs also is the course of Messianic prophecy, and "that ordering of things by which certain books or parts of books are capable of application by analogy in senses which did not originally belong to them." There are passages in the Gospels showing supreme insight into the principles of revelation. In other passages the current view is allowed to pass unchallenged. Apart from any deeper and more strictly theological explanation of these last, it may be maintained that there is in revelation a law of parsimony by which what is suited to the capacity of any given age is alone revealed to it. "I have yet many things to say unto you, but ye cannot bear them now." This was the lecturer's text, and he reënforced it at this point by urging that we must expect to find some analogy between the method of God and of Christ in revelation and in the ordinary government of the world. Here he expressed a hope that Bishop Butler's argument from Analogy might continue to be the basis of English theology. Some insisted that it is a worthless argument and can prove nothing; the lecturer preferred to say that it was not an ambitious argument, and as such he valued it for the humility of mind which it implied. It would never commend itself to either sect of those who demanded "all or nothing." Those who insisted upon having all were in the position of driving a straight furrow from one end of creation to the other, heedless of what delicate growths and interlacing plants were buried and bruised under their ploughshare.

—In a discussion of certain papers recently read at a meeting of the Japan Society in London Mr. Okoshi declared that at present in Japan a wife may believe any religion she pleases, though before the abolition of the feudal system she was bound to adopt the religion of her husband. In former times a Japanese woman's property consisted only of what we should call her paraphernalia—that is, her hair-ornaments and mirrors. Now she may hold real property and solely dispose of it. She may own in her own name stocks and all kinds of securities, and, if she is left a widow, she may manage even her husband's property until one of her sons attains his majority. Mr. Okoshi further states that many Government appointments are now open to women. A paper read last April by Mr. D. Goh, on "The Family Relations in Japan," had contained the statement that there was no check to divorce except the family council. But Mr. Okoshi, replying to this, declared that, as the law now stands, if one of the parties considered the ground of the divorce unfair, he or she could appeal to the courts, which would grant the divorce only on justifiable grounds. An interesting conjecture is what influence will Japan's example have upon China. Prof. R. K. Douglas, in a lecture on "Modern Society in China," quoted in the *London and China Telegraph* of May 15, says that at present no trace of the dawn of a better day appears on the horizon of China. Woman is still regarded there as a chattel which in times of adversity may be disposed of by sale in the markets.

—Among the few linguists who have devoted special attention to the principal language of Northwestern and Central India, the Hindî, we regret to notice the death, on the 18th of May, of one of the most eminent, Mr. Frederic S. Growse of the Indian Civil Service. Mr. Growse, originally of Bildestone, Suffolk, was educated at Oxford, where he gained a scholarship in 1856. His Indian career extended from 1861 till about two years ago, when he retired, to end his days at Haslemere, in Surrey. In 1880 appeared his 'Mathura: A District Memoir,' which was followed, in 1884, by his 'Bulandshahr; or, Sketches of an Indian District, Social, Historical, and Architectural.' Both of these monographs approximate closely to ideal models of their kind. While they evince a mastery of their subjects, their tone, with respect to the natives of India, bespeaks a philanthropist—a characteristic somewhat infrequent in the writings of Englishmen when treating of their Oriental fellow-subjects. But more especially noticeable, especially to those who chiefly value literature, is Mr. Growse's English version of the 'Râmâyana' of Tulsîdâs, published in 1883. Throughout a very considerable part of India no work rivals this poem, an epic, in popular esteem. Though it dates only little more than three centuries back, what with its dialectal peculiarities, its archaisms, and its poetic licenses, it is admired mainly on pious trust by all except learned Hindus. Much on a level with such Hindus, however, was Mr. Growse, as regarded ability to solve its riddles. Nothing previously translated from the Hindî is to be compared with it in importance; and merely to say that Mr. Growse, in teaching Tulsîdâs to speak English, entitled himself to credit for skill and fidelity of a high order, is to acknowledge his merits but inadequately.

## ROBERT LOWE, LORD SHERBROOKE.

*Life and Letters of the Right Honourable Robert Lowe*, Viscount Sherbrooke, G.C.B., D.C.L., etc., with a Memoir of Sir John Coape Sherbrooke, G.C.B., sometime Governor-General of Canada. By A. Patchett Martin. In two volumes. With portraits. Longmans, Green & Co. Pp. xvi, 411; and x, 612.

"In an age in which even the wisest and the noblest apparently deemed it their duty to burn incense on the altar of Democracy, Robert Lowe held fast to the old gods, the old creed, the old ritual. He was an aristocrat to the core—in no class signification, but in the solid and substantial sense that he believed in government by the best, and utterly disbelieved in the sagacity or superior wisdom of the crowd."

Such were the words of a London journal in an obituary of Robert Lowe, as we must still call him, for, as Macaulay says posterity has refused to call Bacon Lord Verulam, so the contemporaries of Robert Lowe will always refuse to call him Lord Sherbrooke. The obituary hits the mark. The interest of Lowe's character and career lies in this, that, being a thorough Liberal, he was a resolute opponent of democracy. A thorough Liberal he was in the old sense of the term. He heartily loved liberty and light. He paid unstinted homage to free government. He cared nothing for orthodox opinions or established systems. He clung to nothing merely because it was old. He was not only no friend to abuses, but a vehement reformer in every field on which he acted—administrative, economical, or educational—a reformer so vehement that he incurred the hatred of Conservatives, and was by them branded as a dangerous radical. An aristocrat of intellect he was, as the obituary says, and perhaps in an excessive degree; but for the aristocracy of birth he felt no respect, and if he accepted a peerage, it was with reluctance, and, as he had no children, simply as a life seat in Parliament. Yet he opposed to the death that which he took to be the principle of democracy, that every creature in human form has a natural right, and, irrespective of any qualification, a claim, to the exercise of political power. He denied that ignorance and incompetence a million times multiplied make wisdom. He contended that, in the distribution of the suffrage, the thing to be considered was not the gratification of the claimant, but the effect on the character of the governing assembly. These positions, then fast becoming obsolete, he maintained with extraordinary force of logic, fervor of eloquence, and pungency of sarcasm. That he was defeated, and that the triumphal car of democracy rolled over him, does not deprive his figure of historic interest or make us the less beholden to Mr. Patchett Martin for the industry and fairness which he has shown in the composition of this biography, whose only defect is its bulk, which may lead to a demand for a reduced version. Lowe's character has been so much misunderstood that his biographer felt it necessary in doing him justice to go into the fullest detail.

Lowe came into the world weighted with a disadvantage which only the strongest heart and brain could have overcome. He was a perfect albino. The total absence of coloring matter in his eyes made vision most painful to him. In addition to this, he had to contend with a malformation of the eye; one eye, in fact, was altogether unavailable. Albinism was in one respect a greater drawback to Lowe than blindness was to Fawcett. Fawcett's blindness excited pity, and to it he really owed his first election to Parliament; whereas Lowe's albinism rather excited ridicule and made him a butt at school. The shrinking of the eye from light gave a look of weakness to a head and face which were so far from being really weak that they were likened by an affectionate pupil to those of a Greek god. A fragment of autobiography, which every one who reads it will wish had been continued, describes the boy's struggles at Winchester, a school the authorities of which evidently walked in the ancient paths, treating the boys after the fashion of the monkish Middle Ages, mewing them up all day, giving them no breakfast till ten o'clock, and then their dinner at one. From Winchester Lowe joyfully passed to Oxford, where, notwithstanding his infirmity, he took a first-class in classics, a second in mathematics (which it was said would have been a first if he had not rubbed out with his nose the figures and diagrams which he wrote with his hand), highly distinguished himself

as a speaker in the debating club called the Union, and at the same time rowed in the University boat. He was passionately fond of study, made himself not only a good classic but a good Hebraist, and though in public he sometimes condescended to disparage classical education, in times of leisure he read classics all day long.

He married a handsome woman with some money; and an excellent wife and real helpmet she was to him. She used to say whatever she thought—a habit which was perilous in London society and made her a mark for the archers. But she was really a woman of sense as well as of spirit. A story about the pair was current in a version which implied that Lowe despised his wife's intellect. But the true version is here given by one who was present. Lowe, in his slashing way, was criticising the Anglican marriage service, which he said was full of nonsense, making the man say to the woman, "With all my worldly goods I thee endow." "Now," he said to his wife, "when we were married, I had no worldly goods to endow you with." "Ah! but then, Robert, there were your brains." "Well, all the world knows I did not endow you with them." It was a mere joke, at which Mrs. Lowe laughed as heartily as the rest of the company.

Having taken pupils for some time at Oxford, and having tried in vain to get a professorship, Lowe took to law, though he felt he would be at a great disadvantage from his inability to see the faces of the jurors and witnesses, or even to deal readily with his own brief. Medical men threatened him with loss of sight in seven years. He thought that in seven years he might make a modest competence at a colonial bar. He went accordingly to Australia, and got a good though not the leading practice there. Among his clients was a castaway son of a high family in England, who had been sent out as a convict and had committed a murder. The murderer was taken redhanded, and Lowe could devise no plea but that of insanity or "uncontrollable impulse," which he worked with much philosophic ingenuity, but which was overruled by the unphilosophical English judge. Mr. and Mrs. Lowe took the little son and daughter of the murdered woman to their home, and brought them up at their own cost, a good deed for which, the son turning out badly, they were ill-rewarded. This is enough to prove that Lowe did not lack the milk of human kindness. He might make free of the weaknesses of humanity, but at heart he was no cynic. He had a sharp tongue, was, as has already been said, too much of an intellectual aristocrat, and was somewhat intolerant of fools.

Besides his practice at the bar, Lowe took an active part in Australian politics. He distinguished himself as a strenuous advocate for colonial self-government and an opponent of the squatter oligarchy, braving in the latter case the ire of the most powerful class in the community. For words spoken in the Legislature he was challenged to a duel, but in that case asserted his privilege. Another challenge he accepted, and went out to fight, but his adversary did not appear. How could he have managed to take aim? It was difficult to say what he could not do. Having afterwards, in his unquenchable thirst of self-improvement, learned bicyling, he was a bold bicyclist, and he would try the nerves of his friends by driving them with a pair of horses at a rattling pace through crowded streets.

Returning to England, Lowe became a writer on the *Times* and a politician. In 1856 he visited the United States and Canada. He was unfavorably impressed with American democracy, and, like Macaulay and others, came to the conclusion that it was enabled to live only because its peccant humors were drawn off by the abundance of land. He saw it at a bad moment, when the slave-owning oligarchy was still in power and the foreign mob dominated in New York. Of slavery he conceived a deep abhorrence. Chicago and its region made an immense impression on him. Of Canadian politics nothing is said, but Lowe thought that in case of war England would have at once to withdraw her army in order to prevent its being taken, and it seems that Lord Palmerston was of the same mind.

After Lowe's return came the battle with democracy. Lord Russell, a statesman of measurable capacity but immeasurable ambition, finding that the wind in his sails was dying away, and that other barques were getting the lead of him, bethought him of recurring to the original source of his reputation and proposing a further extension of the suffrage. He had tried it in 1854, but his bill, meeting with no encouragement, was withdrawn. In 1865, having become Prime Minister with Mr. Gladstone as his chief colleague, he again brought forward his measure and was defeated through a Liberal secession led by Lowe and nicknamed the Cave of Adullam. Lowe maintained that no man has an à-priori right to vote; that a man who could not raise himself by his industry and frugality to the position of a ten-pound householder (the existing qualification) was not fit for the exercise of political power; that the ability and character of the House of Commons would not be raised but lowered by the change, and that this was decisive of the question. The following passage shows the ground on which he stood and on which all Liberal opposition to universal suffrage must stand:

"When the Chancellor of the Exchequer said that the *onus probandi* lay with his adversary in this instance, he must have meant that anterior to the existence of society there was vested in every man some personal à-priori right which nobody had authority to touch. When Mr. Mill, in like manner, speaks of every citizen of a State having a perfect right to a share in its government, he appeals to some à-priori considerations, in accordance with which every man would be entitled, not only to be well governed, but to take part in governing himself. But where are those à-priori rights to be found? The answer to that question would lead me into a metaphysical inquiry which I shall not now pursue, contenting myself with saying that I see no proof of their existence, and that the use of the term arises by the use of a bungling metaphor, by which a term appropriate to the rights arising under civil society is transferred to moral considerations antecedent to it. Can those alleged rights form a ground on which a practical deliberative assembly like the House of Commons can arrive at a practical conclusion? If they do in reality exist, they are as much the property of the Australian savage and the Hottentot of the Cape as of the educated and refined Englishman. Those who uphold this doctrine must apply it to the lowest as well as to the highest grades of civilization, claiming for it the same universal, absolute, and unbending force as an axiom of pure mathematics. A man, according to the theory of which I am speaking, derives a right of this kind from God, and if society infringe it, he is entitled to resist that infraction. He is judge without appeal in a cause over which no human tribunal has jurisdiction; he is executioner as well as judge, and so this seemingly harmless dream puts the dagger into the hand of the assassin. Those abstract rights are constantly invoked for the destruction of society and the overthrow of government, but they never can be successfully invoked as a foundation on which society and government may securely rest."

Among the special points made by Lowe were the dangerous tendency of the working classes to combine in a class interest, and the increased control which railways and the telegraph had given to constituencies over their representatives. The speeches told amazingly, thunders of applause rolled round the Conservative benches, and the Russell-Gladstone Government fell. But what was the sequel? Mr. Disraeli, having got into power, brought forward a measure of suffrage extension even more sweeping than that of Lord Russell and Mr. Gladstone, his idea being that, while the intelligent mechanic would be a Liberal, the residuum, as the dregs of the people were euphemistically styled, would be Tory. This bill also Lowe opposed, and used the same arguments with equal force, but in vain. This time the Conservatives, instead of cheering, sat mute under party discipline, and voted for the bill. It was said that Lowe wept. It is certain that he gave free vent to his indignation. "I was told the other night," he said, "by the Honorable Member for Elgin Boroughs, that the fates and destiny had been too strong for me. I have no fear of them, sir; what has been too strong for me is the shabbiness, the meanness, and the littleness that here met together." He might, however, have drawn comfort, though rather of a dismal kind, from the reflection that if a body of English gentlemen, men of property and education, could thus, under the influence of party, vote against their declared and deepest convictions, the political world would hardly be much the worse for being handed over to American democrats or representatives of the British working class. The late Lord Derby, then Lord Stanley, a paragon of cultivated intelligence and heir to a very ancient earldom and a million of dollars a year, had most explicitly pledged himself that if the Russell-Gladstone Bill were thrown out, no similar measure should be brought in by his party. Yet as soon as the exigencies of party required him to break that pledge, the pledge was broken.

Prof. Jowett, in a "personal memoir" of Lord Sherbrooke appended to this Life, seems to agree with the Member for Elgin Boroughs in thinking that Lowe was vainly struggling against the current of destiny. But so far as the advance of democracy, or at least the extension of the suffrage, in England was concerned, Lowe could have given this a conclusive answer. Nothing is more certain than that the revival of the suffrage question was in the first instance the offspring of Lord Russell's personal ambition. There was no general demand for it, and when Lord Russell's first bill proved abortive and was withdrawn, hardly a murmur of regret was heard. It is equally certain that, after the defeat of his second bill, the country would have been perfectly content to see the subject drop if Mr. Disraeli had not been ambitious of settling the question, and settling it, as he thought, in the interest of his party, by the enfranchisement of the lowest class of voters. To personal ambition, therefore, or to party tactics, not to destiny or any other occult influence, is to be ascribed the progress of Parliamentary democracy in England; nor was Lowe, in opposing it, fighting against heaven or fate, but against powers of a far less august and less invincible kind.

Lowe afterwards came into a Liberal Cabinet and distinguished himself by his industry as an administrative improver and reformer. But he was resolute in rejecting what he thought sham reforms, and a keen dissector of the fallacies which underlay them. A certain Mr. Tupp having called his attention to some

papers and lectures on bimetallism, Lord Sherbrooke replies:

"I have read Mr. Gibbs, so need not trouble you, and I have had the advantage of a lecture from Mr. Cernuschi himself. I congratulate you on your discovery of the philosopher's stone. If *saying* that one metal *shall* be equal in value to another can make it equal, you are fairly entitled to claim to have discovered the secret of boundless riches. But why bimetallism only? Why not trimetallism, or quadrimetallism? It is as easy to *say* that copper is equal to gold as silver."

Disraeli's Reform Bill gave a member to the University of London, which did itself the honor of electing Lowe. Disraeli, afterwards, taunting Lowe with his supposed unpopularity, said that he had provided him with a seat, which he could not have found anywhere else in the country. It is justly remarked by Lowe's biographer that Disraeli could hardly have passed a severer judgment on his own measure than by saying that, after its enactment, there was only one constituency in the country by which such an intelligence as that of Lowe, united with such independence of mind and zeal in the public service, could hope to be elected.

Lowe was a most brilliant talker, and the flow of his wit was perfectly spontaneous. Those who listened to Macaulay, Sydney Smith, Sir David Dundas, Rogers, Hayward, or Bishop Wilberforce could not help feeling that they more or less talked for display, or at least with a consciousness that they were talking to appreciative hearers. But Lowe's mind gave out the electric spark to anybody who touched it, and he was just as likely to say a capital thing to you sitting alone with him in his study or by his side on the driving-box as when he was amidst a party of leaders of society and wits. Some of the sparks are preserved in these volumes, but they are few compared with those that have been lost in the night of oblivion.

## PIERCE'S LIFE OF SUMNER.—I.

*Memoirs and Letters of Charles Sumner.* By Edward L. Pierce. Vols. III., IV. Boston: Roberts Bros. 1893.

For these concluding volumes of Mr. Pierce's 'Life of Sumner' we have waited fifteen years, but the fulness of the text and the rich abundance of the notes account for the delay, which still we must regret because so many who admired Sumner's character and were devoted to his fortunes are already gone. With full admiration for Sumner, Mr. Pierce has written no panegyric, no apology. While the interpretation of his opinions and his conduct is always sympathetic, there is a good deal of honest difference from his political beliefs and of quiet reprehension of his conduct and his speech. There are constructions here that will excite indignant opposition; but that Mr. Pierce has endeavored to judge Sumner and his friends and enemies fairly does not admit of doubt. His style is simple, vigorous, and compact. The various summaries of events and estimates of individuals and the conclusions of important passages of history are written with peculiar force and skill.

In these volumes Mr. Pierce had a much larger subject than in the two volumes which appeared in 1877: there an ardent and aspiring youth, much travelled and with troops of friends, and finally the hero of a memorable Fourth of July oration; here one of the most conspicuous figures in the political anti-slavery resistance to pro-slavery aggression. The treatment of the two periods is not so disproportionate as at first appears, for the two final volumes contain 1,279 pages and the two first only 783. But it is still disproportionate, and if Mr. Pierce had made his book at one cast, the first volumes would have been much reduced. The last are truly biographical—historical only so far as was necessary to give the proper setting of the personal career. The arrangement of the matter in these is much better than in the former volumes. There the correspondence was massed at the end of one chapter after another. Here it is assimilated to the narrative, and is much less abundant, though much more important, than before. It is so good that we are always wishing that there might be more; for Sumner's letters have a directness and simplicity which his speeches and orations often lack.

But Mr. Pierce has done better than preserve the right proportions between biography and history. He has preserved the right proportion between Sumner and the other political champions of the anti-slavery cause. Wilson was so generous with Sumner always that Sumner's biographer could not be less than generous with him; but he is not less so with Giddings, with Charles Francis Adams, and with Chase. He has not found it necessary to depreciate others in order to make Sumner's height preëminent. He deals, indeed, very sternly with Conkling and Fish; and if Seward's friends do not take serious exception to his treatment of that statesman, we shall be much surprised. But they will find it very hard to break the force of Mr. Pierce's allegations. The contrast afforded by the subtlety of Seward's character and the simplicity of Sumner's could not have been more vivid if Mr. Pierce had kept it consciously in view.

The new instalment opens with a chapter on society in Boston as it was in 1845, when Sumner was thirty-four years old. The picture is well painted, but does not attract, because it is the picture of a society that was narrow, formal, self-conscious, pedantic, with much of that gravity which has been defined as "a mysterious carriage of the body invented to conceal the defects of the mind"; a society "despotic over individual thought, insisting on uniformities of belief in matters which were related to its interests, and frowning at novelties which struck at its prestige." This was the society, devoted to Winthrop and Webster, against which Sumner had to make his way. It is evident that he had much in common with it always, and that made it all the harder for him when it shut its doors on him. The courage which his break with it displayed must not be measured by his actual loss, which was not great, but by the exaggerated estimate of it which his sensibility insured.

Taking the lecture field in the winter of 1845-'46, Sumner awakened an interest and admiration that were to serve him well a little further on. A profound seriousness was the chief characteristic. Devoid of humor, the lack was less injurious than it would have been in a less serious time. His Phi Beta Kappa address at Cambridge won for him many golden opinions, and gave bonds for his increasing interest in philanthropic work. His lecture on "White Slavery in the Barbary States" was not such a far cry that its echoes did not reach the apologists for American slavery in their comfortable security. Immediately there were suggestions of ambition and self-seeking, and Dr. George Putnam wrote to him that they were in the air. Sumner's elaborate reply is a complete *apologia pro vita sua* as it appeared to him in 1848. His sincerity in disclaiming all political ambition cannot be impeached. His interest in the slavery question began, he wrote, in 1835, and the *Liberator* was the first paper for which he subscribed "when Wendell Phillips was still indifferent." But Phillips got on much faster when once he had begun. That the first political meeting which Sumner attended was in 1845 shows not only his disinclination to politics, but the feebleness of his anti-slavery convictions up to that time.

Mr. Pierce devotes an entire chapter to the prison-discipline debates in Tremont Temple in 1846-7. He does not exaggerate their importance, for they brought Sumner squarely into conflict with the conservatism of Boston; they planted many a root of bitterness along his path; they gave him his first taste of the joy of battle, which he found so sweet that the political arena took on a more inviting aspect than it had had before. His first political speech was also his first speech against slavery, November 4, 1845, in Faneuil Hall, where the "Conscience Whigs" had come together to protest against the admission of Texas as a slave State, Charles Francis Adams, the natural leader of the movement, being in the chair. With the beginning of the Mexican war in the ensuing spring, Sumner found himself engaged in a conflict with Mr. Winthrop as lively as any on the Rio Grande. It was a conflict which very greatly embittered the conservative mind of Boston against Sumner. Mr. Pierce has gone to the verge of an apology for him in his endeavor to do ample justice to his opponent. It was a stern indictment that he brought: "Through *you* they [the people of Boston] are made *to declare unjust and cowardly war, with superadded falsehood, in the cause of slavery.*" But that it was correctly drawn, the most conciliatory of Mr. Pierce's phrases does not in the least disguise. That Sumner could not understand why Mr. Winthrop should be personally aggrieved by his attack, and was himself much hurt by his anger, was a very characteristic circumstance. It marked his painful lack of humor and his extreme sensibility to the good opinion of his fellow-men. Without keeping this sensibility in mind it is impossible to appreciate the courage with which he invited animosities that were sure to bring him almost intolerable pain. So easily stung by censure and so happy in the approval of his fellow-men, it is greatly to his credit, as Mr. Pierce has written, "that he never swerved a hair's breadth from duty to win the praise or to escape the blame." One incident of his conflict with Winthrop was his nomination against him by the bolting Whigs. He refused the nomination, in serene unconsciousness that he was irretrievably committed to a political career.

Nothing was more significant of Sumner's standing while as yet he held no office than the way in which Giddings turned to him for sympathy and advice. Already in 1848 Sumner looked to the formation of a new party as the only anti-slavery hope. His hopes for the Free-Soil ticket of that year were absurd; nor less so was his forecast, after the election, of the future of the Democratic party. It was the successful party that first met its doom. Sumner as a Congressional candidate received only one-third as many votes as Winthrop, but his acceptance of the nomination was a surrender, not without qualms and scruples further on, of his resolve to take no political office. It was a wise surrender, for neither in literature nor in law could he have achieved anything commensurate with his political career. Routed in the open field, and impatient to make themselves felt in national legislation, the Free-Soilers resorted to a series of coalitions to se-

cure their end. One of these made Chase a Senator from Ohio and another made Sumner a Senator from Massachusetts. As a prelude to that event Mr. Pierce has an admirable chapter on the Compromise of 1850. It may be commended especially to those who are just discovering that really nothing was the matter with Webster's 7th of March speech. It was Sumner's speech against the compromise that made him the candidate of the Free-Soil and Democratic coalition. Those who would be very glad to have a fold of Sumner's mantle to cover the nakedness of their political shame assure us that here was "a deal" in which he was an active worker on his own behalf. Mr. Pierce's account of the whole matter is a piece of elaborate candor, and it leaves Sumner's part in it without a stain. He gave no pledges, he made no concessions, and he entered on the office an absolutely independent man.

This was in December, 1851, and it was not until August, 1852, that he made an opportunity to open his mind freely on the Fugitive-Slave Law. The delay was painful to his friends, but all misunderstandings vanished in the light of the accomplished speech. That and the speech entitled "The Crime against Kansas" and that entitled "The Barbarism of Slavery" were Sumner's three great speeches before the appeal to arms. They were conspicuously the speeches of a scholar in politics. The moral sentiment was always genuine, but the rhetoric was less than absolutely real, and their force was often broken by great shoals of quoted passages in which some pride of scholarship unquestionably mingled with the orator's resolve to fortify his case. But Sumner knew well that he was addressing not so much the Senate as the whole country, and the terrible indictments to which the Senate, for the most part, listened with real or feigned indifference, were read with passionate enthusiasm by thousands of anti-slavery people in the North, and added many to their ranks. The splendor of his most famous speeches has involved his average Senatorial work in an impenetrable shade for the more casual observer; but Mr. Pierce, without seeking to establish a foregone conclusion, brings ample evidence that his supreme efforts by no means exhausted his entire capacity. There was no changing aspect of the slavery question that escaped his vigilance, and, had he no other laurels than those won by his anti-slavery speech and action, his fame would be sufficiently assured. But Mr. Pierce's pages are convincing that no Senator had more conscience for the general legislative work or contributed more liberally to so much of it as was apart from his peculiar line. At the same time the feeling is not to be escaped that Sumner in the Senate was like the poet's star, and dwelt apart. His ways were not those of the other Senators nor his thoughts their thoughts. He was isolated by his character, his culture, and by the radical position he assumed at each succeeding stage of the long fight with slavery and the evils it entailed. His strength was that of the impassioned moralist, not that of the constitutional lawyer, or the adroit debater, or the parliamentary tactician. His appeal was much oftener to the Declaration of Independence than to the Constitution, which in each emergency was like the Mormon prophet's compass: "When I had taken it in my hand, it did turn whichever way I would." To say that nothing could be constitutional which was not right smacked of the pulpit, not of the Senate; but it marked the purely moral character of Sumner's anti-slavery position. It was this which loaded all the dice against him when the fatal throw was made.

Mr. Pierce has treated no other part of Sumner's life with so much elaboration as that pertaining to the assault on him by Preston Brooks. His object is to show that there was so much connivance in the act, and so much excuse and justification offered for it in the subsequent investigation, that Brooks must be regarded as merely the tool of the pro-slavery party. Sumner so regarded him, and never spoke of him unkindly. Both Sumner and his biographer are completely justified by the evidence adduced. Sumner's language was exasperating and his taste in parts deplorable; but Brooks cared for neither except so far as it served as an excuse for his brutality. It was well that some one should meet the pro-slavery Senators with a pride as lofty and a scorn as bitter as their own. It was their first vivid intimation that the day of compromise and concession was drawing to an end. It hastened the inevitable catastrophe. So did the barbarous assault, for it was the staple of Republican speeches in the campaign of 1856. Bleeding Sumner appealed to the Northern voter more powerfully than "bleeding Kansas." His absence from the Senate, barring a few vain attempts to renew his service, was extended through four years. Meantime his empty seat was not less eloquent than his voice had been before. He returned to find the compromising temper of his party growing steadily with the approach of victory. His "Barbarism of Slavery," delivered in June, 1860, appealed to the political abolitionists within the party lines and braced them for the fearful trial of their faith a few months further on, when the fool's motley of compromise was well-nigh the only wear.

Mr. Pierce has treated Sumner's sickness and convalescence as carefully as his fatal speech and the assault. It must be said that during much of his stay abroad Sumner subjected himself to a social strain that would have broken down the perfect health of any ordinary man. The horrible treatment which he suffered at the hands of Dr. Brown-Séquard, wholly peculiar to himself, may have assisted his recovery. Mr. Pierce is more sceptical than Sumner about this. It is certain that it induced the first attack of the disease, *angina pectoris*, to which he finally succumbed.

---

*Napoleon, Warrior and Ruler*, and the Military Supremacy of Revolutionary France. By William O'Connor Morris. G. P. Putnam's Sons. 1893. Pp. xvii, 433.

THIS is the latest volume in the "Heroes of the Nations" series. It would be strange indeed if any nation could permanently canonize the great destroyer of nations, and Mr. Morris rather mournfully admits that modern France loves neither Napoleon nor his family. Nevertheless, he regrets what he calls "the preponderance of defamation since the disastrous war of 1870-71." He admits Lanfrey's "clever fragment" to the privilege of examination, but characterizes the author as "the only libeller of Napoleon who has tried to rise to the level of history." Taine is accorded a primacy among "these slanderers," and is then summarily sentenced as a "minute philosopher of calumny." After this, it is not surprising to find that Mr. Morris approaches the great Corsican with reverence and admiration. He remarks in the preface that "the most trustworthy judgments" about Napoleon were formed by "the generation of writers which flourished between 1830 and 1860." As we go on, this phrase appears to mean that Mr. Morris will repeat the verdicts of Thiers's specious 'History of the Consulate and Empire,' a work which is the literary apotheosis of chauvinism. The judgment of scholarship has been recorded against the artful flatteries and patriotic misrepresentations of Thiers. Such a student and critic as Lanfrey may not be easily dismissed with a reference to the fluctuations of public opinion. Mr. Morris should at least remember that the hostility to the Bourbons in the middle of this century may have been no less pervasive in influence than the reaction against the Napoleonic legend in the days of Gambetta and Sedan.

Mr. Morris meets the "slanderers," Lanfrey and Taine, with what he calls the "simple answer of history." This is, in brief, that "Napoleon could never have risen to the heights he reached, could never have done the work he did, could never have acquired his prodigious authority and influence, had he been a monster of selfishness, of meanness, of lust, of wickedness." Undoubtedly this answer is too "simple" to be the complete and final reply of the muse. That men in whom selfishness and lustfulness were predominant qualities "*have* acquired prodigious authority and influence," is an undeniable fact, and their sins have not always found them out so speedily as did Napoleon's. Rodrigo Borgia died in Peter's chair. Catharine II. was one of the makers of the Russian empire. Talleyrand, more capable of momentary generosity than Napoleon, was also a far greater adept in duplicity, more coldly relentless, more despicable in meanness; and, at the Congress of Vienna, Talleyrand conquered the coalition that had overthrown Napoleon at Waterloo. Moreover, Mr. Morris gives no fair version of the indictment brought by Napoleon's enemies. That marvellous etching which Taine elaborated with such painstaking does not represent the great Corsican as only a "monster," as a mere compound of inhuman selfishness and debauchery. Perhaps the acid is sometimes too mordant. Napoleon was more than a mediæval captain of a free company, more even than a resurrected Cæsar Borgia; but Taine, after all, does not lose sight of the projectile power by which Napoleon was launched forth. It was the complex evolution of Jacobinism that made Napoleon possible, and that "red fool fury" is Taine's chief and ultimate enemy.

From Napoleon's Commentaries and Correspondence the author has sought to extract the secret of the Emperor's personality, and, indeed, the circumstances of composition and publication have rendered those works more interesting to the psychologist than to the historian. In the Commentaries is revealed Napoleon the warrior, and it is that character which has apparently fascinated Mr. Morris. He cannot withhold his admiration for the fact of splendid conquest, although he looks hesitatingly at the awful price paid for victory, at the blight cast by military supremacy upon both law and culture, at the inevitable reaction against changes wrought by autocratic violence. Of the various campaigns of the modern master of the art of war Mr. Morris has evidently been a careful and enthusiastic student. He has certainly produced a complete and orderly condensation of Napoleon's military and diplomatic policy. The current of the story runs both rapidly and clearly, and the pages of the volume are richly furnished with maps. It is a pity, however, that these maps should be so indistinct and chary of necessary detail. As illustrations of the text, there is

scarcely one of them that can compare with the maps in Mr. John C. Ropes's recent volume of lectures upon 'The First Napoleon.'

Such, then, were the purposes and equipment with which this rapid portraiture of Napoleon was attempted. The author sketches his outline liberally: "Napoleon was a universal genius; great as a ruler, greatest as a warrior." Down to the rupture of the peace with England in 1803, but little shade is thrown into the picture. Napoleon is treated as the saviour of France and the predestined hero of the Revolution, answering the despairing call of Sieyès for "a brain and a sword." After 1803 the scene changes, for Mr. Morris discerns a Napoleon spoiled by success. The Emperor is no longer "one of the ablest and most successful of rulers"; he has become "the uncontrolled despot, subjugating and bestriding the Continent," the enemy of the civilized world. Mr. Morris finds excuses for the murder of the Duc d'Enghien, and yet admits that the slaughtered Bourbon "sits heavily upon Napoleon's memory." After Austerlitz, Napoleon's rule became "a scheme of oppression leading to universal conquest." The Continental system and the daring plans at Tilsit for the subjugation of the world betray "no trace of the wisdom of Napoleon's youth"; they are "a reckless scheme of mere brute force." After a fitting reference to Napoleon's burglary in Spain, Mr. Morris exclaims: "Nemesis was waiting in grim repose for her victim; the Son of the Morning was ere long to fall." The utter failure of Napoleon's strategy and public policy during the Russian campaign is attributed to the natural decay of an absolute despot's powers and to the inherent weakness of a "despotism of the sword." "Prometheus," we are told, "in vain defies the word of Zeus; Genius contends in vain against supreme fact; the ministers of vengeance reach their victim." In Germany the reforms introduced with French supremacy were "more than effaced by the innumerable wrongs, iniquities, and miseries caused by it." In France the Senate and Legislature were "a mere herd of flatterers"; judicial independence was "weakened"; the ministers of Napoleon were only mechanical registers of the autocratic will; taxation was "oppressive" and levied "by illegitimate means." The conscription had stripped the country districts; the Continental System had ruined the coast towns from Hamburg to Marseilles. The people heard of the birth of Napoleon's son "with indifference"; they did not lament the Emperor's downfall. On the contrary, "raving multitudes" denounced and assailed him as he journeyed to Elba. Barring a few allusions to "Prometheus" and "the Son of the Morning," Mr. Morris has here repeated the accusations of those "slanderers" whom, at the outset, he rather ostentatiously repudiated. We read that Napoleon "had the despot's dislike of all that deals with man on his moral side or with the free growth of human ideas." "The insatiable conqueror" is no longer "the armed champion of the French Revolution," as he had been before 1803. He is now described as "the greatest of despots, mocking at truth when he calls himself 'the Messiah of a popular Gospel.'"

The average reader is likely to be puzzled if he tries to form a consistent idea of Napoleon from Mr. Morris's brilliant narrative. He will find no adequate reason why the patriotic general of the Republic should have shortly become the cold-blooded despot of the Empire. The author has dexterously interwoven the faint dispraise of Thiers and the deep damnation of Taine, but he has failed to blend the two views into a coherent whole. The year 1803 witnessed no change in the man Napoleon, although it may have witnessed a development in his public policy; but that evolution was the result of an altered opportunity, not of an altered character. The confusion in Mr. Morris's presentation is mainly due to failure to grasp, first, the relation of the Revolution to the army which the Revolution had created, and, second, the relation of the man Napoleon to the essence of the Revolution. In a moment of reconstruction, the army, always a despotic instrument, seemed to Cæsar and to Napoleon a proper organ of government; to Washington it was not so. Military supremacy, then as now, stifled the breath of democracy. Founded upon that military supremacy, the Napoleonic régime was the antithesis of the French Revolution. Napoleon himself, youth and man, an inspired soldier, inordinately ambitious, superbly intellectual, unimpressionable, pitilessly self-contained, and pitifully self-restricted, despised the democratic idea, and from the beginning hoped to overthrow it. When, in the hour of peril, some one advised him to call "the People to arms," he answered: "I have destroyed the Revolution, and how can I call on it?" This continuous quality of the real Napoleon Mr. Morris seems to see, but he obscures the vision of Napoleon's innermost personality with the superficial theory of a "dividing line" in the Emperor's public policy. He ventures once upon the amazing assertion that Napoleon "had a deep sense of the divine"—a riddle hard to read in connection with the man who could dismiss the horrors of the Beresina in this fashion: "After all, what has this cost me? Three hundred thousand men, among whom, indeed, were many Germans." Was it really an ideal of the divine to which this Titan sacrificed three millions of lives and uncounted treasure?

*The Emancipation of Women and its Probable Consequences.* By Adele Crepaz. With a letter to the authoress by the Right. Hon. W. E. Gladstone, M.P. London: Swan Sonnenschein & Co.; New York: Charles Scribner's Sons. 1893.

It is fortunate for the fame of the great Liberal leader that it is in no danger of being affected by the literary commendations which he is in the habit of dispensing so generously. In the present instance, he seems to us to have been peculiarly unfortunate, inasmuch as he not only has been excessive in the degree of his praise, but has selected as the special excellence of the book in question the very quality in which it is conspicuously deficient. "To save us from this danger [of rash action]," says Mr. Gladstone, "what we want is *thorough* treatment, and you have given it the most thorough treatment which I have yet seen applied to it." In point of fact, such merit as the book possesses lies entirely in the repetition of the familiar predictions as to the probable consequences of the opening of all fields of activity to women; the emotional efficacy of these predictions being occasionally rendered quite considerable by vivid and earnest presentation. Whatever force considerations such as these may properly exercise on our judgment, the mere reiteration of predictions can hardly lay claim to the character of a thorough discussion; and we are constrained to infer that what Mr. Gladstone had in mind was the evidences adduced by the authoress in the shape of facts of the present day as throwing light upon what we might expect in the coming time. But anything weaker and less able to stand examination than the portions of the book in which this is attempted has seldom come to our notice. Not only does the authoress commit the favorite error of the advocate of a cause—whether it be protection or bimetallism or the single tax—of pointing out evils and calmly assuming that they are due to the agency against which he is contending, and thus begging the question; not only does she contentedly infer *propter hoc* from *post hoc*, but it is impossible to understand considerable portions of her book without supposing that even from *ante hoc* follows *propter hoc*. For surely in Germany the emancipation ideas have, apart from certain very limited circles, not yet passed beyond the realm of speculation; and yet we are given a sad picture of the state of things there (pp. 91–96), as though they were a result of the movement for the higher education of women.

In the one case in which the best opportunity existed of studying the effect of altered ideals, the case of America, Frau Crepaz contents herself with the wildest and crudest assertions. Some idea of the value of her observations on this head may be obtained from the circumstance that the one statement concerning the relations between the sexes in America which she considers so important as to demand italics is that "It is well known that *the happiest marriages in America are those contracted between American men and German women*" (p. 26). After this, we need not be surprised when we are given to understand (pp. 77 and 78) that American mothers seldom take part in the education of their own children; or that "a marriage of reason is the only one she [the woman of the Northern States] thinks of." Along with this nonchalant dealing with broad generalities, goes naturally the most careless handling of specific facts, so that we find *Florence* Blackwell (p. 43) and Elizabeth *Anthony* Stanton (p. 13); while the few statistical statements made (*e. g.*, p. 28 and p. 84) are so vague as to be quite worthless. In short, as we said at the outset, if the book has any value, it is simply what it has in common with every warning that the emancipation of women may bring on evils greater than those that it cures; its reasoning is of too loose a texture to be of any assistance in the understanding of the question, and it totally fails to utilize such light as might be thrown upon it by the actual experience of America and England.

---

*The Great Book Collectors.* By Charles Isaac Elton and Mary Augusta Elton. London: Kegan Paul; New York: Charles Scribner's Sons. 1893.

Whether this volume is more entertaining or instructive may be an open question. It appeals in either case to a small class, and to others its learning will seem of little worth and its entertainment sparse. In truth, gossip, the chief source of amusement in book-lore, as in other fields, will not thrive within the narrow limits of two hundred pages, but demands such freedom as is found in the crowded leaves of many-volumed Dibdin. Yet the authors have, with much diligence, collected a store of information that to most book-lovers will be new or forgot, nor have they neglected to interweave abundance of quaint anecdotes. To us the earlier pages, devoted to collectors of manuscripts in the days before type, have most charm, perchance because most unfamiliar. Here we find an extremely early enunciation of the common law of property in books. St. Columba, having copied St. Finnen's Psalter without leave, King Diarmid decided against

him in the resulting suit, on the ground "that to every mother-book belongs the child-book, as to the cow belongs her calf." St. Columba, we may add, brought an appeal in the higher court of battle, where the decision was reversed by the defeat of Diarmid. We find a hint for the Library Association in the versified catalogue of the library at York, compiled by Alcuin. Let us have the A. L. A. Catalogue in verse—short metre with an alexandrine now and then for an uncondensable title; between New York and St. Louis it could easily be done. We have no space to linger over the books of Richard de Bury, Duke Humphrey, Petrarch, Poggio, and Corvinus, or those of Cotton, Harley, Bodley, Grolier, or Naudé. The last-named, for his time, had a very pretty notion of a public library. Here is the first rule of the Mazarin Library: "The library is to be open to all the world without the exception of any living soul; readers will be supplied chairs and writing-materials, and the attendants will fetch all books required in any language or department of learning, and will change them as often as is necessary."

The publisher has dressed the book, which is one of the series of "Books About Books," in pleasant type and rough-edged paper of dull surface. He has adorned it with several plates showing bindings and manuscripts, and four or five reproductions of excellent old portraits. Being of English make, the leaves of course start up when it is opened, like so many locks of Traddles's hair; and nothing less ponderous than the "International" will keep it open at a given place. There is an index.

---

*Histoire Générale du IV. siècle à nos jours.* Ouvrage publié sous la direction de MM. Ernest Lavisse et Alfred Rambaud. Tome I^er^: Les Origines. 395-1095. Paris: A. Colin & Cie. 1893. L. 8vo, pp. vi, 805.

CERTAINLY the Genius of universal history, now long domiciled in Germany, aweary of watching the deliberate, interminable progress of Oncken's 'Allgemeine Geschichte,' must have refreshed herself between *Lieferungen* by a trip to Paris. The volume above cited is the first of twelve wherein writers of repute, authorities concerning the several epochs, are to review the history of the more important peoples down to the present time. It takes up the tale, not with man before the mammoth, as the title might in these days seem to hint, but with the fourth century of our era. Doubtless many will find it an encouragement to have got so far before beginning.

M. Berthelot, who supplies more than a third of the volume, opens it with an account of the political and social condition of the Roman Empire and the German tribes at the time of the great invasion. From his hand, too, are the chapters on the various Germanic kingdoms, and the history of the Franks through the reign of Charles the Great down to the accession of Charles the Fat. The rise of the Capetians and the origin of the kingdom of France is described by MM. Langlois and Luchaire, while the development of Germany and the revival of the empire is treated by M. Charles Bayet, who has also written two valuable chapters on the Eastern Empire. M. Lavisse, in that nervous style which would make a less interesting subject attractive, sketches the evolution of the papal power. The history of Britain is by M. Bémont, that of the Slavs and other Eastern Europeans by M. Denis, while M. Maurice Wahl writes on Mohammedanism and the caliphates of the East and West.

It need hardly be said that the editors have planned the work wisely and skilfully, and have taken great care with the arrangement of the material which they have obtained. Their first thought has been for the proper presentation of the social organization, the changing character of the peoples. Wars and courts have everywhere taken the background. The chapters are judiciously subdivided and dates are freely given. Thus, with the use of titles in bold-faced type at the beginning of paragraphs which introduce a change of subject, the book is made handy for reference and pleasant to read. There are few notes, and these explanatory, but at the end of each chapter is a brief bibliography which names and comments upon the sources of the narrative and the principal books upon the period. Reference is also made to more detailed bibliographies where such exist. We note the omission of Hodgkin's 'Italy and her Invaders' from the scanty list of books upon the Ostrogoths and Lombards. Gibbon, too, is surely still worthy of mention.

The work promises to be honorable to French historiography. It is based upon the results of thorough research, and is expressed with all the lucidity and sense of proportion which we have grown used to call French. The volume itself is evidence of this spirit: the type is agreeable, the page well chosen; the book is large without being big, close-packed without being bulky. Some of the future volumes will be 'Feudal Europe and the Crusades,' 'The Hundred Years' War,' 'The Renaissance and Reform,' 'The Wars of Religion,' 'The Epoch of Louis XIV.,' etc. It is clear that later events are to be treated at greater length. While one volume suffices for 400 to 1100, 1100 to 1900 requires eleven. A just sense of proportion demands no less; and yet, looking at such trim chronological perspectives, where the centuries diminish in apparent extent like ties upon a railroad track, we sometimes wonder who shall make us really believe that more generations of men passed over the earth between the time of Augustus and the Norman Conquest than have been counted from the Conquest to this day; that years were as long under Clovis as under Cleveland, and ran no fewer to the fifth century than to the nineteenth.

The work will appear in *livraisons* of 80 to 100 pages (at one franc each), at the rate of two a month.

---

*The Birth and Development of Ornament.* By F. Edward Hulme, F.L.S., F.S.A. London: Swan Sonnenschein & Co.; New York: Macmillan. 1893.

ANY one who should look in Mr. Hulme's 'Birth and Development of Ornament' for a continuous thread of development, or for nice discrimination of styles or coherent analysis of any style, would be disappointed; but he would find an outline of the history of art, a good many interesting facts, apposite or inapposite, some exploded theories and statements, and some judicious criticism. Mr. Hulme's point of view is what is sometimes called insular—that is, his authorities are English, his ideas are English, and English examples take a larger share of attention than their relative importance demands. But he covers a wide range, and the artistic sense and knowledge which he has shown in his more technical books do not desert him here. The list of Landmarks of History which he has brought in at the end would be valuable if they were real landmarks; but the lack of perspective which characterizes the book is seen here also, and the items seem to be picked up at random. The building of the Parthenon, the Norman Conquest, and the beginning of St. Peter's are landmarks; the birth and death of Grinling Gibbons, the establishment of the Lowestoft potteries, and the death of Welby Pugin are not.

## *Teachers, etc.*

[*Continued from page iv.*]

*TUTORING during the summer vacation* to clear conditions on examinations for admission to college, or in less advanced work. H. H. BAKER (A.B., Harvard, 1891), Newton St., Brookline, Mass.

*THE CHAIR OF PURE MATHEMATICS*, State University of Nebraska, is vacant. Applicants should be qualified to take the full professorship. Address THE CHANCELLOR, Lincoln, Nebraska.

*HARVARD GRADUATE ('90) WOULD* tutor one or more boys during the vacation—anywhere. Address F. H. BROOKS, 52 Weld Hall, Cambridge, Mass.

*WANTED BY A YALE GRADUATE* —A position as Tutor for the summer. Apply to DERBY ROGERS, 14 West 12th St., New York.

*CHARLES W. STONE, Tutor for Harvard*, 68 Chestnut St., Boston.

## *School Agencies.*

*SEPTEMBER VACANCIES!—Teacher* of Science, City High School, $1,600; teacher Mathematics, same, $1,600; Military Drill and Gymnastics, $1,500; Science in Academy, $1,200; 2 Directors of Music, $1,200 and $1,500; Drawing and Commercial Branches in Episcopal boys' school, $700 and home. We are asked to recommend candidates for each of the above and many others. Address C. J. ALBERT, Manager, 211 Wabash Ave., Chicago.

*AMERICAN AND FOREIGN TEACHERS'* Agency supplies Professors, Teachers, Tutors, Governesses, etc., to Colleges, Schools, and Families. Apply to Mrs. M. J. YOUNG-FULTON, 23 Union Square, New York.

*THE FISK TEACHERS' AGENCIES*, 4 Ashburton Street, Boston, 371 Main Street, Hartford, 70 Fifth Avenue, N. Y., 106 Wabash Ave., Chicago, and 120½ South Spring Street, Los Angeles. Agency Manual free. EVERETT O. FISK & Co.

*THE NEW AMERICAN TEACHERS'* AGENCY.—Teachers seeking positions and those wishing a change at an increased salary, should address C. B. RUGGLES & Co. (Palace Hotel Building), Room C, 237 Vine Street, Cincinnati, O.

*AMERICAN AND FOREIGN Professors*, tutors, governesses, teachers, etc., supplied to colleges, schools, and families. MIRIAM COYRIERE, 150 5th Ave., cor. 20th St., N. Y.

*SCHERMERHORN'S TEACHERS'* Agency. Oldest and best known in the U. S. Established 1855. 3 East 14th St., N. Y.

*An Agency* is valuable in proportion to its influence. If it merely hears of vacancies and *that* is something, but if it tells you about them is asked to recommend a teacher and recommends you, that is more. Ours *Recommends*

# CROSBY'S VITALIZED PHOSPHITES.

*From the nerve-feeding principle of the ox brain and wheat germ.*

Is an essential Food to the Brain and Nerves. It contains nothing injurious. Formula on each label.

For relief of brain fatigue, nervous debility, dyspepsia, sleeplessness, and night sweats, it is invaluable.

For thirty years used by thousands of brain-workers with such success as a *curative* that now many take it before great mental effort as a *preventive* of mental and physical exhaustion.

This vital nutriment supplies elements to brain and nerves, the loss of which is often the only cause of disease.

Indorsed by leading physicians. Descriptive pamphlet free.
Druggists, or by mail, $1. Prepared only by the *F. Crosby Co.,*
Accept no substitute.
Each label has our signature. *56 West 25th St., New York.*

By PAUL CUSHING,

Author of "Cut by His Own Diamond," etc. 12mo, cloth, $1.00.

"An exceedingly clever story, with plenty of incident, a well-contrived plot, and a dozen or so of admirably drawn characters."—*Boston Beacon.*

**The Odd Women.**

By GEORGE GISSING, author of "Denzil Quarrier," "The Nether World," etc. 12mo, $1.00.

*By the same Author.*

**Denzil Quarrier.**

12mo, $1.00.

"Interesting on account of the artistic way in which the plot is unfolded."—*Philadelphia Public Ledger.*

**The Real Thing, and Other Stories.**

By HENRY JAMES, author of "The Lesson of the Master," etc. 12mo, $1.00.

**The Marplot.**

By SIDNEY R. LYSAGHT. 12mo, $1.00.

*Uniform with the 10-volume Edition of Jane Austen's Works.*

**The Novels and Poems of Charlotte, Emily, and Anne Brontë.**

In 12, 16mo volumes. With Portrait and 36 Illustrations in Photogravure, after drawings by H. S. GREIG. Price, $1.00 each. To be issued monthly.

Now Ready. Vols. 1 and 2. **JANE EYRE.** 2 Vols. $1.00 each.

Vols. 3 and 4. **SHIRLEY.** 2 vols., $1.00 each

Vols. 5 and 6. **VILETTE.** 2 vols., $1.00 each.

*** Also a Large-Paper Limited Edition on hand-made paper, at $3.00 per volume.

*Book Reviews, a Monthly Journal devoted to New and Current Publications. Price, 5 cents. Yearly Subscription, 50 cents.*

NEW YORK, THURSDAY, JULY 13, 1893.

## The Week.

SOMETHING over a million dollars in gold has been imported in driblets during the past week, picked up in three or four different markets, wherever, it may be supposed, the personal bargains of American exporters with their foreign customers enabled them to take advantage of the recent very low rates for foreign exchange. But a heavy specie movement from Great Britain has been withheld, the Bank of England using every exertion to prevent such an outflow. Through the machinery available for such a purpose, the Bank of England has accumulated in its own vaults practically all the gold in London's market, and has pursued precisely the policy adopted one year ago by our own Treasury Department—the refusal to deliver in exchange for drafts gold in any form but sovereigns. The necessity of reassaying and remelting gold in this form before its use is possible in a foreign country has virtually made its acquisition on exchange impossible. It will, however, be remembered that the similar policy, when adopted by our Treasury officials, checked only for a few days the export movement. Were the actual balance of trade in merchandise, securities, and credits now in our favor, the Bank of England would be equally powerless. As a matter of fact, the exchange of merchandise, though at present apparently against us, is prospectively turning in our favor. English importers of our wheat, who lately bought heavily of grain for July and September delivery, sold their exchange in advance against such purchases, and our future export trade is therefore to precisely that extent figuring in the market balance of exchange. But it is very noticeable still that the foreign trade in our securities and the free transfer of foreign credits is slow to begin again, and the motive for the hesitation is perfectly obvious. It may be that foreign confidence will be restored in anticipation of the Sherman Law's repeal; it is certain that it will return when the law has been publicly cancelled from our statute-books. But it is quite as certain that a failure to deal thoroughly and honestly with that demoralizing law would turn the tide of foreign capital once more and immediately against us.

---

The Atlanta (Ga.) Clearing-house has adopted by a unanimous vote resolutions which declare in strong terms that the Sherman Act should be repealed, and that no silver dollar should be coined at our mints which is not as good as any other dollar. The resolutions also call for the repeal of the tax on State bank-notes, but there is nothing like unanimity of opinion in favor of this policy throughout the South. Indeed, the strongest newspaper opponent of it in the whole country is that thoroughgoing Democratic journal, the Richmond *Dispatch*, which declares that, on a proposition to repeal the tax on the circulating notes of State banks and return to the banking system which obtained in this country before the civil war, "there may be expected from the voters a swelling chorus of 'Noes' when they get an opportunity to make known their wishes in the premises."

---

It is already evident that the Colorado mine-owners have plunged far too deep in gloom and have made predictions too black and sweeping. Their fellow-citizens have become apprehensive of the effect on the State's credit of their ostentatious proclamations of ruin, and have begun to warn the country, especially that part of the country which has investments in Colorado, that these tragic miners must not be taken too seriously. It was early announced that Colorado's ruin was only of a sort which would still allow her to pay all her debts in good money, and now that good news is followed up by the cheering information that "the actual effect of closing the silver mines" would affect the State's prosperity only in a "trifling" way. This is amply borne out by the statistics of the production and wealth of Colorado, by which it appears how far agriculture and manufactures surpass mining. If the miners are not able to frighten even their neighbors in any way except to inspire a fear that their affected melancholy will injure the reputation and credit of the State, and if the Idaho and Montana mine-owners announce, as they do, that their mines will go right on turning out silver as before, we think that the Colorado men might as well quit their private theatricals at once and go to work again.

---

In view of the fact that our own Clearing house banks issue their weekly statement with the required reserve figured at 25 per cent. of the deposits, it is a matter of interest at the present time to know how small a percentage of deposits is deemed necessary by the London joint-stock banks. The London and Westminster at last reports had but 17.4 per cent. of cash reserve, yet this was the highest on the list. The London Joint Stock Bank had but 12.4 per cent., and the National Provincial but 13.3 per cent. This latter bank has 221 branches and agencies throughout Great Britain as compared with the 16 branches of the Westminster, all situated within the metropolitan area. So, too, the London and County, with 173 branches, carries but 10.7 per cent. in cash. Well may the London *Statist* call these reserves "quite inadequate," especially in the cases of those banks whose sub-agencies are scattered all over the country. Either the London banks are taking grave chances on monetary quiet throughout Great Britain and Europe (for of those stated percentages of reserve the greater part is on deposit in the Bank of England, whose own reserve is 50 per cent. of its liabilities), or else our New York percentage is more than ample for safety. If we may judge by banking practice in London, our own banks are well protected, even if their reserve should run down to the legal limit of 25 per cent.

---

The determination of the Pension Bureau to scrutinize the list of pensioners under the Dependent Pension Act of 1890, and to erase from it all names not lawfully there, is simply an attempt to enforce the law and make it honorable. Under the terms of the act itself, it is the duty of the Secretary of the Interior to make rules and regulations for establishing "due proof" of the fact that applicants are "suffering from a mental or physical disability of a permanent character, not the result of their own vicious habits, which incapacitates them from the performance of manual labor." Secretary Smith has become satisfied that, in the case of about a thousand names on the list, such due proof has not been had, and his order is that no pension shall be paid to these persons until they prove their right to one under the terms of the law. This step is necessary in the interest of justice, and it is also necessary in the interest of economy. The total expenditures of the Government during the past fiscal year on what may be called the war-power, including pensions and the army and navy, were upwards of $239,000,000—far more than half of the entire cost of running the Government, and nearly double the military expenditures of either France or Germany with their immense standing armies and groaning taxpayers. The *Financial Chronicle*, commenting in its last issue upon this condition of things, asks if it is not time to call a halt. There can be no doubt that the country will heartily approve of all efforts to cut the annual pension bill down to the lowest limits consistent with the enforcement of law.

---

The decline of party spirit is illustrated in the small importance attached to the fact that the death of Justice Blatchford of the United States Supreme Court furnishes the opportunity for the appointment of a Democrat to that bench. It is really a matter of no consequence whether Judge Blatchford's successor is a Republican or a Democrat, for there has not

been in many years a division in the court along party lines. Although a Republican, the late Justice joined in such decisions as that annulling the Civil-Rights Act for unconstitutionality, and sustaining the State-rights side in the Virginia debt controversy. So far as Republican party policy during the period of his service was concerned, the record of the court would have been no different if a Democrat had sat in his place.

---

The News Bureau of the Navy Department has been lying very low about the case of Commander Higginson. It was in a state of great activity when he was on the high seas, on his way to Greytown, where an order detaching him from his command was awaiting him, but immediately after his return to this country every leaking spigot of it ceased to drip. The oozing began again on Monday, however, and "an officer who says that he is acquainted with the facts" shows what a pickle the Department is in. It "does not now hold that Commander Higginson evaded his orders." That is to say, he was not a coward and a scoundrel for refusing to go to sea without coal and for reporting the bad condition of the *Atlanta*. That ship, in fact, had no sooner reached this country than she was ordered into dry dock for those very repairs which Commander Higginson insubordinately and unpatriotically said she needed. The only fault now to be found with him is that, in his hurry, he was guilty of a breach of etiquette in writing direct to Commodore Melville for the needed boiler tubes instead of sending his request via the Secretary. The Department seems now to have intimated to him that if he would apologize for this bit of broken red tape, his command would be restored to him "as a favor." We should have expected that such a sneaking officer as he was represented to be would have been glad to crawl back to his ship in that way, but the audacious man actually demands his restoration "as a matter of justice," inasmuch as the Department practically admits that he was removed without cause. We shall watch the news attachment of the Navy with great interest to see if it will adopt the discipline of a burlesque court, and cashier a worthy officer for having made the horrible mistake of calling upon the First Lord of the Bedchamber, instead of the First Gentleman in Waiting, to hand the King a handkerchief.

---

When Mr. James Bryce was in the British Foreign Office, he maintained that it was "the clear and constant duty of the Government, which holds in its hands the threads of a vast organization stretching over the world, to do all that it legitimately can to further the interests of our commerce." Acting upon this view, he prepared a memorandum showing in what manner British trade might be assisted by her Majesty's diplomatic and consular officers. He discovered, by means of careful investigation and wide correspondence with boards of trade, that the information regarding commercial matters transmitted from abroad by these officers was not of the right kind, that it came too late, and that it was not published in an accessible and attractive form. His correspondents bore witness to "the great assiduity displayed by the consular agents of the United States in sending home frequent and detailed reports of the movement of trade," and recommended that "the agents of the British Foreign Office take example from their American confrères." Mr. Bayard, as Secretary of State, printed the memorandum and correspondence, and, in laying the pamphlet before our consuls, reminded them of their duty to work with increased diligence, inasmuch as the reforms about to be instituted in Great Britain were suggested by the series of reports begun under Mr. Evarts in 1880. That the reports of our consuls have been free from the defects mentioned by Mr. Bryce no one will maintain, but it is not too much to say that, compared with similar publications of other governments, they are very creditable. In the November number of last year appeared a report by our consul at Piedras Negras on "Mexican Trade and How to Secure It," which, says *Bradstreet's* of July 1, "has received the unusual distinction of being utilized by trade and daily papers of the United States as an editorial article, or in other ways, at intervals of a few weeks from the time of its first appearance in the State Department publication to this time." Among other papers quoting from it or referring to it approvingly is the London *Ironmonger*.

---

After a silence of more than two years, a silence by which even the editor of the *Sun* has been perplexed and troubled, Mr. William H. Hurlbert has published the reasons why he put himself beyond the reach of a treaty of extradition when "wanted" in England to answer a charge of perjury, and why he keeps beyond said reach, and why he does not even now disclose his whereabouts. The reason why he departed suddenly from the United States was that under the new treaty of extradition with Great Britain it was a matter of doubt whether our courts could refuse a warrant of extradition on any grounds whatever. "In pursuance of this belief," says the *Sun*, "Mr. Hurlbert was advised by counsel that, even if overwhelming proof could be produced that he was in New York when he was said to have committed an extraditable offence in London, the testimony could not be accepted by a Federal court as ground for refusing to recognize the warrant." The *Sun* refrains from committing itself to the view taken by Hurlbert's counsel—an exercise of caution which may be due to an examination of the treaty, the sixth article of which says:

"The extradition of fugitives under the provisions of this convention . . . shall be carried out . . . in conformity with the laws regulating extradition for the time being in force in the surrendering States."

That is to say, the new treaty has introduced no new rule whatever touching the sufficiency of evidence to warrant the writ of extradition. The caution shown by the *Sun* in not committing itself to the view of Hurlbert's counsel is no less sagacious than the caution of Hurlbert himself in not taking any risks on the wording of the new treaty.

---

Oklahoma is trying hard to outbid all of its neighbors in the matter of granting easy and quick divorce. An attorney at Kingfisher, in that Territory, has issued a circular which points out that the statutes of Oklahoma specify no fewer than "ten separate and distinct causes, for any one or more of which a divorce may be obtained," including that all-embracing term, "gross neglect of duty"; that the probate court of each county, "which is always in session," has jurisdiction in actions for divorce, "which affords litigants an opportunity to obtain relief very speedily and without having to await the slow process of the District Court"; that the statute requires only three months' residence in the Territory; and, finally, that "persons coming to Oklahoma will find the city of Kingfisher, with its 4,000 inhabitants and all modern improvements, a very pleasant place to live in." Apparently Indiana, Chicago, and South Dakota are all to be outdone in the divorce line by Oklahoma.

---

The capital of Kansas is now suffering the natural results of the shameless application of the spoils system by which the new Democratic Postmaster summarily removed the old force of letter-carriers—men who had served faithfully and efficiently for years—in order to make room for a lot of Democrats who were afraid that they could not pass an examination under the Civil-Service Law, which is about to be applied to the office. The new carriers are always late in delivering mail, and letters are constantly delivered to wrong addresses. There is a universal agreement that never in the history of Topeka has there been a time when the mails were so shiftlessly delivered, and letters of indignant protest are daily sent to Washington. The First Assistant Postmaster-General has acknowledged the receipt of a petition of citizens, affidavits, etc., against the removal of the carriers, and states that the matter will be investigated. The investigation ought to be a thorough one, and it should be followed by the prompt removal of the new Postmaster, on the ground that any man who will open his administration of a public office by utterly demoralizing it is unfit for the place.

---

It is shocking to have such revelations made about a recent Secretary of the Treasury as the Ohio press is printing regarding "Charley" Foster. It appears

that the assets of the bank which he controlled are only $70,286, while the liabilities are $296,089, and that this enormous excess of liabilities is largely due to the fact that Mr. Foster's account was overdrawn in the great sum of $136,000! The Ohio newspapers are making proper comment upon this disgraceful state of things, and partisanship does not prevent so good a Republican journal as the Cincinnati *Times-Star* from telling the exact truth about it. It points out that Mr. Foster drew out the funds deposited day after day by his neighbors, and that they are now deprived of their money through his act in "gobbling it by overdrawing his account. If," it adds, "any one had broken into the bank and stolen the money or had obtained it by forging the names of depositors, he would have been pronounced guilty of a flagrant crime. To the depositors the effect of Mr. Foster's overdrafts is precisely the same as if some one who didn't enjoy the privilege of overdrawing his account had abstracted the amount." The *Times-Star* holds that there was absolutely no excuse for Mr. Foster's course, and that his prominence and political fame should not shield him from censure.

---

The experiment of opening the World's Fair on Sundays has disappointed both its advocates and its opponents. The management expected a great increase in revenue from the attendance of large crowds, while the Sabbatarians feared irreparable harm to the morals of the multitudes who would rush in to their destruction if they were given the chance. In point of fact, the attendance on Sundays has been smaller than on Saturdays almost from the first, and the number of visitors on that day diminishes every week. Two causes produce this result. People from a distance, who are spending a number of days at the Fair, are as a rule so weary by Saturday night that they want absolute rest on Sunday. The poorer classes of Chicago, from whom the largest number of Sunday visitors was expected, are so much dissatisfied at having to pay the full price of fifty cents for only about half of the show that comparatively few of them attend, and the same objection prevents the organizing of large Sunday excursions from the surrounding country. It now seems obvious that a mistake was made in not fixing the rate of admission on Sunday at twenty-five cents, and advertising that visitors must not expect much beyond a sight of the buildings and grounds. This is the policy which was pursued on Sundays until the formal opening of the Exposition, and under it there were large crowds of well-satisfied people every Sunday.

---

Prof. Henry Drummond's lectures on evolution at Chautauqua are the clearest index yet seen in this country of the silent but sweeping change wrought in the religious world by the teachings of science in regard to the origin of man. Mr. Beecher's sermons on evolution, in the last years of his life, were not so significant, because he was an exceptional man and was preaching to an exceptional audience, accustomed to startling novelties. Nor has the acceptance of a modified evolution by Christian teachers and preachers here and there given any very sure indication of the great revolution quietly going on. But Prof. Drummond expounding a pretty thorough-going evolution at Chautauqua is a striking phenomenon. He is by no means a commonplace man, but Chautauqua is a paradise of commonplace people. Those who flock to the lectures there come mostly from parts of the country removed from intellectual stir, and are typical representatives of the church people to whom, a generation or less ago, evolution was synonymous with atheism. Moreover, the purveyors of instruction at Chautauqua have always been careful to make it of a kind at which the most sensitive prejudice need not revolt. When, therefore, Chautauqua managers provide lectures in defence of evolution, and Chautauqua audiences gather to hear them with much pious edification and strengthening in their faith, it is a sign of the times which no observer can neglect. The very protest against the management and the innovating lecturer, drawn up by a handful of those who have not lost their old dread of godless science, only emphasizes the profound nature of the change that has taken place.

---

The Bellamyites may take heart again. A communistic settlement is to be seriously undertaken, on a somewhat important scale, on a site already famous in the Jesuit annals of Paraguay and in the pages of Muratori. It is not a little curious that the movement should have started from Australia, the title of the community being The New Australian Coöperative Settlement Association. The declaration of principles contains the familiar complaint against the tyranny of society: "Whereas, so long as one depends upon another for leave to work, and so long as the selfishness induced by the uncertainty of living prevents mankind from seeing that it is best for all to insure one another against all possibility of social degradation," etc., etc. For all these evils it is proposed to establish a settlement, with common ownership of land and equal division of expenses and profits, "without regard to sex, age, office, or physical or mental capacity." Absolute equality of the sexes is one of the fundamental principles. The community is to maintain the children, under the guardianship of their respective parents. No religion is officially recognized, and "the individuality of every member in thought, religion, speech, and leisure, and in all matters whatsoever whereby the individuality of others is not affected, is to be held inviolable." In effect the plan of organization involves the maintenance of a State within a State. To this arrangement the Paraguayan Government has consented. The community is responsible to the Government as an individual, and is bound to obey its laws, but the members are directly responsible to the directors of the Association, who are to be elected annually. A grant of land, comprising 100 square leagues, equal to 450,000 acres, has been obtained near Villa Rica, on the Rio Tibicuari, 110 miles from Asunción. As an earnest of good faith the Association has deposited with the Paraguayan Government a substantial forfeit, agreeing to establish 400 families within two years from January 7, 1893, and to plant a colony of 800 families within four years from that date. There are no promoters seeking profit out of the enterprise; it is divorced from politics; the members are plain workingmen and women, who are thoroughly sincere, and who are setting out to improve their own condition—not to further socialistic reforms or to prove any original theories of government.

---

It is not often that words of wisdom are heard from the mouths of the French Socialists, but a manifesto published at Roubaix by the "National Council of the Labor Party" contains, with much folly, some truths that it would be greatly for the advantage of France to heed. The manifesto was drawn out by the charges of lack of patriotism made against the Socialists because of their "internationalism." But this, they reply, is neither the abasement nor the sacrifice of Fatherland. The evolution of "Fatherlands" has been a necessary step in the evolution of humanity, but it is not the final step, and when the time for the unity of mankind has arrived, it is not patriotism but bigotry to insist upon preferring the claims of particular nations to those of humanity. France is, therefore, not the end of all social organization, but, as it is an important factor, the French Socialists desire a country "great and strong, capable of defending its republic against the united monarchies, and capable of protecting its future artisans, as in '89, against an eventual coalition of capitalist Europe." But while they desire this, and because they desire it as patriots, they oppose war, "which, fortunate or unfortunate, could end only in unexampled disasters, considering the millions of men who compose modern armies and the machinery of modern warfare." Especially do they not desire a war which, whatever its issue, "would only play the game of Asiatic barbarism, represented by Russian Czarism, against the exhausted West." It is reasonable to believe that the declared hostility to war upon the part of such numbers of citizens as are now identified with Socialism in both France and Germany may sensibly increase the reluctance of military leaders to bring on hostilities, and that if the present terrible burden of military preparation could be diminished, the numbers of the Socialists would be correspondingly depleted.

*WHAT SHALL WE DO WITH IT?*

THE producers of silver are, perhaps, those most vitally interested in the disposition of the great fund of that metal now in the Treasury of the United States. They were aware when the act for the purchase of pig-silver was passed, that the demand for silver as currency was more than satisfied, and that the act provided for an accumulation that would presently assume large proportions. They must have known that the existence of this vast fund would be regarded by financiers in general, and dealers in silver in particular, very much as the dwellers in a narrow valley may regard the existence of a reservoir above them which is unprovided with any waste-way and is swelling from constant rains. Whether they acted upon the maxim, *Après nous le déluge*, or not, we do not know, but if they had been sagacious, they would have sold their product "short." They may have done so; but at all events they have now to sell in a market rendered extremely precarious by their own schemes.

The discharge of workmen in the silver mines, which must probably take place to some extent, is certainly deplorable; but there is no particular reason why the owners of silver mines should receive any more sympathy than the farmers, who have seen the price of wheat fall almost one-half within the past few years, or the makers of pig-iron, many of whom can remember selling for $40 and $50 a ton what they now have to dispose of for less than $15. The case of the people of the United States is somewhat different. In the legislative lottery they have drawn an elephant of prodigious size; and though this monster does not exactly have to be fed, it yet requires housing and watching at considerable cost, and is evidently decreasing in value. In fact, any attempt to dispose of it would break the market, so that what value it has depends principally upon no attempt being made to realize it. This value would scarcely meet the requirements of the economic definition of value in exchange, for the exchange cannot be made; nor does it seem in accordance with truth to say that it has value in use.

Is there, then, nothing whatever to be done with our pile of silver but to keep it indefinitely? Doubtless this would be the simplest thing to do, but it is repugnant to the utilitarian genius of our people. Several ideas have occurred to us as perhaps solving the problem, and we venture in a tentative way to lay them before our readers. In the first place, there seems much to be said in favor of what might be called the Egyptian solution, viz., the construction of an enormous silver pyramid at Washington in plain sight of Congress. This, it might be hoped, would operate to remind that body that we have had some financial experience in the past, and would be a monument as lasting as brass to the financial follies of the last twenty years. Upon the sides of this pyramid might be engraved the Bland Act and the Sherman Act, and any other appropriate sentiments; and if Mr. Bland will favor this idea, we should be willing to have his effigy in silver, of any size that he prefers, placed upon the apex of the pyramid. It would seem, however, more consistent with the Egyptian origin of the idea to have the interior of the pyramid a place of sepulture, and chambers might be constructed there for all of our leading silver statesmen. But in this case we should be disposed to insist upon the condition that they should be occupied at once.

The chief objection to this plan would be that the location of the pyramid would not be such as to make it an object-lesson to all the people, although in reply it could be urged that if Congress can be perpetually admonished, the chief purpose would be attained. Another objection is, that nations do not deliberately make it a practice to commemorate their inglorious and ridiculous performances, although to foreigners they may sometimes seem to do so. But this might be obviated by regarding the monument as erected, not in commemoration of the folly of past Congresses in passing silver bills, but of the wisdom of the present Congress in repealing them. Thus men celebrate the destruction of the Bastille, the repeal of the corn laws, the abolition of slavery, etc. These objections may appear to some minds to be of a momentous character, and, in view of the importance of the subject, should receive the fullest consideration.

Another plan, which avoids these objections and possesses several of the advantages, although not all, of the plan above set forth, is of genuinely utilitarian character. Vast quantities of silver are constantly absorbed in India through the propensity of the inhabitants of that region to indulge in bracelets, anklets, and nose-rings. Our countrymen and countrywomen, of course, cannot be expected to take up such practices, but we have customs that might be utilized by Government so as to bring about the same result. What proverb is most expressive of good fortune? Is it not "to be born with a silver spoon in one's mouth"? What is most earnestly desired by every bride, and regarded by large members of the community as the best evidence of social position? The possession of an abundance of silver spoons. Our people have positively refused to encumber themselves with silver dollars, but silver spoons fall into a different category. For the purpose of a spoon nothing has ever been found superior to silver, and it is not probable that anything ever will be. As a standard of social respectability the silver spoon is far less fluctuating than the silver dollar as a standard of value. The value of silver spoons is not an exchange value, but a utility value, and, as a certain school of modern economists contends, this value, to those who have none of a desired commodity, is infinite. But the great majority of our people have no silver spoons, and (if the women are allowed a voice in the matter) we are satisfied that they yearn for them far more than they have yearned for the silver dollar. Moreover, the standard of living would in this way be permanently raised—a great desideratum with sociologists—for no one that has ever been accustomed to the use of spoons of silver will ever willingly go back to wood or horn or iron or pewter. Our people would thus in a few years, if they were once accustomed to the use of silver spoons, acquire permanent proclivities like those of the Hindus, but far more rational, and a demand would thus be established which would eventually absorb all of our surplus.

There seem, therefore, to be very strong arguments in support of a measure for the transformation of our stock of silver, not into dollars, but into spoons, and for the distribution of these spoons among all our people by the Government. They should be, of course, "souvenir spoons," and they might bear the effigy of Columbus. The constitutional objection that the Government has no power to dispose of its funds in this way can be easily avoided, as it was avoided in President Jackson's time. The surplus funds were then distributed—not to the people, who as taxpayers were logically entitled to receive them back, but to the States, in the form of loans, the return of which, it was understood, would never be asked, and never has been. In this case the States at once proceeded to squander these funds, and very little now remains of them, while souvenir silver spoons would be cherished and become heirlooms of increasing value. It is true that the silversmiths might at first object to this Government competition, but they might be appeased by being employed to make the spoons, and the more enlightened would see that the increased use of silver spoons would enormously enlarge their trade in the future. Of course no objection could be raised by the silver-producers without involving them in self stultification. Perhaps they would not mind that so much, but the proposal is so evidently in their interest that their enthusiastic support could be counted upon. As to the gold-bugs, we will answer for them. Our word for it, if the outcry for the coinage of silver dollars shall cease, not a word will be heard from Wall Street against the coinage of silver spoons. The price paid by the nation for these souvenirs may be a little high, but, as Ben Franklin observed, experience keeps a dear school, and if we can put a stop to legislative meddling with the standard of value, no price would be too high to pay for it.

*BIMETALLIC THEORY.*

IT would be a great misfortune if the experience through which our country is now passing should not result in some substantial gain to monetary science.

This science is eminently an inductive one, and has been slowly developed and constantly modified by the aid of financial experiments, made by both public and private corporations. Its main outlines are now indelibly engraved, but there are many features still undetermined, and in completing these there is much work to be done. The theory of bimetallism, for instance, can hardly be maintained hereafter in the same form as in the past. That it must be modified in some respects will hardly be denied by any of its rational advocates. Whether anything will be left of it after the necessary modifications are made, is a question upon which different opinions may be entertained; but at all events it is clear that the modifications will be determined by the recognition of causes the importance of which has not been hitherto duly appreciated.

The theory of bimetallic money has certain attractions for professional economists, and it has been maintained by men familiar with business. Stated briefly, the chief advantage that its advocates dwell upon is the supposed stability of value resulting from the employment of the accumulated stock of both gold and silver as money. This vast reservoir, it is thought, cannot fluctuate violently under such relatively small additions as are made to it from the production of the mines; while if gold alone is employed as the standard, the ratio between the existing fund and the annual increment would be far greater, and the fluctuations of values therefore more extreme. On the other hand, it is objected that, while this might be true in theory if the metals were of unchangeable value relatively to each other, yet, as the ratio between them constantly varies, the comparison should be not of one reservoir, but of two, and that consequently values in general are less stable, having to adjust themselves first to one standard and then to another.

The reply of the bimetallists to this objection—and it is the only reply they can possibly make—is that the decree of the sovereign power can overcome the inequality of values. A silver dollar may be worth less than a gold dollar, but, they say, the fiat of the Government that it shall be worth as much will make it practically worth as much. The really scientific bimetallists do not press this argument to an extreme. They are disposed to admit that a "readjustment" of values may be from time to time necessary, and consider that this can be done by governmental authority. Thus one distinguished bimetallist compared bi metallic money to a pair of horses harnessed together. One horse might be stronger or faster than the other, he said, but the driver, by checking one and urging the other, could make them pull evenly and keep abreast of each other. But this comparison of course implies that there is no very great disparity between the horses. If there is, it is plain that the strain upon the driver becomes painfully severe.

Now, it is exactly this function of the driver that has been tested by our recent experience. The driver in this case consists of a President and two legislative bodies, containing some five hundred men. This composite driver took the reins of the financial chariot with the expressed purpose of maintaining "parity" between the two steeds, gold and silver. The silver steed, showing a disposition to lag, was stimulated by large purchases and by most cheering and sympathetic words, while the gold steed was sternly repressed. But the result is that the gold steed has had to do all the work, silver is practically run down and under the wheels, the driver is confused and frightened, the passengers are all trying to climb out of the wagon, and the spectators are either laughing at the amazing exhibition of incompetence or in terror at the prospect of a ruinous overthrow.

We do not see how the bimetallic theorists can deny that this experiment demonstrates the practical worthlessness of their theory. If Government can make values, their theory may answer; but whenever Government tries to do this it fails. It is not competent to exercise this function. No body of men is competent. Omnipotence alone can do that. A government is a human creation and efficient only as it adapts itself to the nature of its creator. Values are simply the embodiment of human judgments as to the relative desirability of things, and all that Government can do is to register these judgments and carry them out as well as possible. Just so soon as men find out that Government is attempting to do more than this by ordaining that what men have valued less they shall value more, the authority of Government is brought into disrepute. It may command obedience for awhile, and try to command it longer by penal legislation, but it is bound to collapse sooner or later. It might be thought that mankind had had sufficient experience to establish this principle before, but our present situation amounts to a demonstration of it accord ing to the most rigid canons of induction.

One further element must hereafter be considered by monetary theorists, although it resolves itself into the same principle that we have just stated. It evidently makes no difference what views about money and value are held by people who have not money to lend; it is the lenders who control the situation. If business were not done upon credit, this would not be so, but it is done upon credit, and without credit our present business could not begin to be done at all. Now, Government has repeatedly tried to make people lend who did not want to, but just so soon as the lenders found out what was going on they stopped lending, or charged such a rate as insured them against loss. Hence we have a simple dilemma before Government: either put a stop to all business done on credit, or provide laws insuring lenders the return of the money or value loaned. If people who lend money want to be repaid in gold, then there is nothing for Government to do but to meet this want. Just at present they are unanimous in the opinion that they do want gold, and the Government has simply got to comply with this demand or ruin the country.

### *GEARY ON THE GEARY LAW.*

THE Hon. Thomas J. Geary of California, like another Daniel come to judgment, expounds and defends the Chinese Exclusion Law of 1892, in the July *North American Review*. It is all a mistake, he assures us, to regard the "intention" of that law as "harsh" or "unjust," or even "unreasonable"; on the contrary, the law was "wise and right," was meant to be "beneficial to the Chinamen legally here," was, in fact, a benevolent effort of a humane government to provide for the protection of the Chinese in this country against all "inconvenience and annoyance." The Act of May, 1892, Congressman Geary explains, not only was "in accordance with the treaties made between this Government and China," but actually aimed "to prevent the deportation of the innocent," and "imposed no undue or unjust hardship" upon any of the Chinese; and "the consequences that now confront the Chinese in the United States are not the result contemplated by the act, but of the action of the Chinese themselves in defying the Government."

Mr. Geary should have told us this before and prevented all the pother. Why he waited so long, and let such a false impression get abroad, we can explain only by supposing that he thought it decent to let at least one year pass before putting himself in flat contradiction with what he said and did in Congress. In referring to the Congressional debates upon the Exclusion Act, it is necessary to distinguish between Geary as a thing in itself, as the Germans say, and Geary as shaped by circumstances. The pure and undiluted Geary appears in the bill called up by him on April 4, 1892, and supported by him in a speech, and it is by the terms of that bill and the sentiments of that speech that the Geary of the magazine article is to be judged. He now professes a great regard for the obligations of a treaty. Section 14 of his bill declared that "the provisions of all treaties now in force between the United States Government and the Chinese Empire, in so far as they, or any of them, conflict with the provisions of this act, be, and the same are, hereby abrogated, set aside, and repealed." And in his speech he met the argument that his bill was in violation of treaty obligations by valiantly saying: "I do not care what treaty may stand in the way. . . . I am prepared to abrogate every such treaty, to violate every such law."

It was also this same gentle Geary, who, in his article, is pained at the thought

that any one should think him capable of needlessly setting foot upon a worm, that proposed to nullify the writ of habeas corpus when sued for in behalf of Chinamen, to confiscate ships from which a Chinaman might have escaped into our territory, to imprison for five years and then deport any Chinaman crossing the boundary lines of the United States, and many other little amenities of the sort. He now says: "If we had imposed a tax upon Chinamen, . . . some modification of the law might be justifiable." What he really proposed in section 13 of his bill was to tax each Chinaman three dollars for the certificate he was to be compelled to take out, on pain of imprisonment and deportation. He gloried in this feature of his own bill, saying on May 26, 1892, after the Senate had stricken out the section, "The bill that passed this House and went into the Republican Senate provided in itself a sufficient amount to enforce the law, because it levied a tax upon every Chinaman and made him enforce the law which this Congress had passed." Yet he writes plaintively now of the "ignorance" of those who condemn the inhumanity of taxing the Chinamen to pay for their own wrongs—a proposal which innocent Congressman Geary never heard of before.

It seems a pity to criticise his description of the mildness of the law in so far as it provides for deportation. He now says that the "possible deportation" of the Chinese was "not contemplated or expected when the law was passed." It is only because the Chinese have refused to register that any of them are in danger of deportation. But a little further on he argues that as many as 49,000, out of the 106,000 Chinamen in this country, "entered in defiance of our laws." Now every mother's son of these is liable to be deported under the Geary Law, as it is not possible for them to get certificates even if they were to apply. In Geary's speech in Congress he put the number of those illegally in this country at 60,000, so that, on his own showing, the man who now says that the possible deportation was not contemplated was actually contemplating and ordering, so far as the law could do it, the deportation of considerably more than half of all the Chinamen in the United States.

The only other point we shall notice in which Mr. Geary the magazinist gives the lie to Mr. Geary the Congressman, is in what he says about the duty of enforcing the law. He dismisses the argument that we should injure our Chinese trade, by saying that we should be "better off without any part or portion of it." The reason for this is that the Chinaman, in spite of all we have done for him, persists in allowing "no sentiment to influence or affect him in the matter of trade, but buys where he can buy the cheapest, and sells in the market that will take at the highest price the greatest amount of his commodities." Clearly there can be no profit in trading with such an unfeeling fellow. As little regard has Mr. Geary for what he calls "the Fatherhood-of-God and the brotherhood-of-man standpoint." This "beautiful sentiment" has no charms for him, as "American interests in the far West" are of "more consequence than the maintenance of missionary stations in China," and the law should be enforced to protect those interests. The sufficient answer to this from the Geary-and-sand lots standpoint is that, on his own confession, the law is entirely inadequate to protect those interests, and therefore that there is no use of enforcing it. On April 4, 1892, he said of his own bill, yet unshorn of a single tooth or claw, "*No measure short of this* will effect the purpose desired by our people." When it came back from the Senate, he grieved that the "drastic features" had been knocked out of it, and said that the Conference Committee "gave away everything in the House bill." Why then, we ask, answering Geary according to his Gearyishness, should we enforce a law which, by his own confession, is certain to prove as ineffective and useless as he admits the laws of 1882 and 1888 to have been?

## *THE PRINCIPLE OF "BETTERMENT" IN ENGLAND.*

THE House of Commons has recently voted that in raising funds for metropolitan improvements, the land immediately benefited shall contribute as well as the taxpayers at large. This principle has been so long embedded in American jurisprudence that nothing seems to us more palpably equitable. A landowner who should insist that if a park was laid out in front of his residence, whereby its value was doubled, the entire expense should be borne by the public, would here be thought extremely unreasonable. If he should declare that any assessment for benefit levied upon his land under these circumstances was "robbery," he would be thought crazy. But this is the position occupied by landowners in London as a class. They maintain that among their "vested rights of property" is one that all increments of value, however arising, shall go to the landlord. It is perhaps owing partly to this bigoted and irrational conservatism that socialistic proposals have come into so much favor of late years in England. Where rights of property are pressed to such an extreme it is not surprising that somewhat violent reactions should take place.

Curiously enough, the principle of betterment which is denounced in England as an "Americanism" was formerly recognized by the law of that country, and the *Daily News* points out that Pepys records in his diary an application of it when London was rebuilt after the Great Fire. It seems to have been transplanted to this country and to have been recognized in our law from a very early period, while it has been abandoned in England. Its application by commissions instead of juries has been attacked in this State as depriving owners of their property without due process of law, but the courts have not sustained this claim. In some States, as in New Jersey, we believe, the verdict of a jury may be invoked as a matter of right, but we do not know that it is anywhere contended that the principle, if properly applied, is unjust. At the time when the land upon which the Exhibition at Chicago is now taking place was devoted to public uses as a park, assessments for betterment were levied upon land six miles distant. Yet who can say that the increased attractiveness of the city due to this park may not have increased the value of every foot of land within the corporate limits much more than in proportion to the cost of the improvement? The value to the city of New York of the acquisition of Central Park was inestimable. Not only the property in its vicinity was increased in value, but the city in general, as a place of residence, as a place of resort, and even as a place of business, has derived great pecuniary benefit from the existence of this "midway pleasance."

There have been cases of the grossest abuse of this principle. In this city, in Brooklyn, in some of the neighboring cities of New Jersey, and doubtless throughout the land, there have been assessments for betterment that have amounted to confiscation. This is a good reason for putting safeguards about the operation of the law, and the present widening of Elm Street in this city and the recent New Church Street case show that, with our form of municipal government, the dangers of corruption and oppression are serious. This, however, is not because of any vice in the principle, but because of its abuse. And this seems to be all that the opponents of the measure could say against it in Parliament. One of them declared that it was unjust, because it was impossible for anybody to estimate adequately the increased value given to property by public improvements. The bill, however, proposed that the owner of property increased in value by a public improvement should pay in gross only half the amount of the increase, or else pay 3 per cent. upon this amount as an annual charge. It is quite incredible that the increased value of land due to such causes should not be susceptible of calculation with sufficient accuracy to prevent any actual confiscation under such an act as this, especially as the County Council was allowed seven years' time to make its calculations and assessments.

It is true that the practice of levying taxes through local or parish rates in London tends to impose the charge for improvement more directly upon property benefited than our own system of a uniform tax throughout the municipality. But the equitable adjustment of rates appears to be a matter of as much difficulty as the estimate of betterments, and the argument based upon this ground has little weight.

The true objection, as was frankly avowed by one member, is that the adoption of this principle is dreaded by property-owners as the first step towards the "Henry George theory" that all increment in the value of land belongs to the community. It is quite probable that much of the support given to the bill in the House of Commons — it was adopted by 216 votes against 118—was given by believers in this theory. But it should be remembered that the main objections to this theory have always been (1) that its author, or more properly its most noted advocate, insisted that all existing increments of value in land should be confiscated, and (2) that upon the scale proposed by him the plan was practically inexpedient as causing greater injustice than it remedied. When, as has been demonstrated in this country, it can be ascertained that a particular public improvement causes a definite private gain, the fact that certain theorists are in favor of the principle from other motives is not sufficient to prevent its adoption. At the same time the fact that the act in question fails to provide any compensation for property-owners who experience damage and not benefit from the public improvement, is from our point of view extremely deplorable. So long as landowners as a class were not assessed for betterments they could not claim to be compensated for damages, but when the betterment principle is adopted that of compensation for injury should go with it. We fear that in this case the hostility of the socialistic elements to "vested interests" may have overcome their regard for equity.

## *GUY DE MAUPASSANT.*

THE news of the death of this brilliant writer comes not unexpectedly, and lovers of literature will regret that no more of those marvellously strong tales which make Maupassant's real fame will ever again appear to delight and entrance them. It is as a *conteur* that Maupassant will live in French literature; among his longer works one novel, 'Pierre et Jean,' will probably survive, but of his tales one hazards nothing in saying that a large majority will endure to be read for many a year. Maupassant was not wholly a beast or a sensualist; he was both in part, and unhappily in one or other of those aspects he is best known to most people, even to those who are acquainted with him solely through translations. But he was also, and primarily, a rarely keen observer and a writer of great dramatic power. Very few writers—Alphonse Daudet is among the exceptions—have come up to Maupassant's level in the short tale, in which not a word is wasted, not an incident unnecessary, not a line written in excess; and this not in the class of work referred to as bestial or sensual, but in that rich series of stories which, whether in the original French or the weaker English, may be put in the hands of almost any reader. The simplicity of the means employed conceals the consummate skill with which the tale is constructed; the attention, captivated at the outset, remains riveted to the end, and not occasionally only, but invariably. The characters live; in a few touches Maupassant makes them real to us; in a few pages we have learned to know them, to sympathize with them, to remember them long afterwards. The Corsican mother, the little soldier, the great hunter, the coward, live in the mind when once their story has been read; Père Toine is unforgettable; the old vagabond, the wretched dog, the poor ass cannot fade from memory. Taking the whole range of tale-writers in French and English, there is not one who has noted so many varied types and characters, who has impressed so many of them on the mind, as Maupassant. The fact that he is not so one-sided as Zola or Bourget nearly compensates for his lack of sustained power in longer work.

Maupassant belongs to the naturalistic school; he sees the very ugly side of life, but he sees also the brighter. No more than his fellows does he give us a noble, a lofty ideal, but more than they he lights up his work with a touch of pathos, of healthy fun, of genuine feeling. His characters are not all despicable, not all mean and vile. Even when, as in 'Un Bock,' he depicts fallen man, he succeeds in awakening pity for the victim. The farmer's wife who sells the broken-down old donkey to the pair of scamps, in 'L'Âne,' has genuine human feeling and shows it, and we are grateful to Maupassant as an artist and a man for recording that feeling. He is impersonal, very largely, but not so much that his sympathies are wholly extinct; they break out at times and give what is even a sweet touch. Maupassant is much better than his reputation; the public generally has seized eagerly upon the sensual part of his work, and that has become best known. To palates accustomed to the fiery spices of the filthy school, the beauty and worth of the purer and better portions of his work are undistinguishable; none the less they exist, and over and above the tales already translated for decent readers are fully as many more quite fitted for general publication, and, equally with some not so to be classed, exhibiting the peculiar power and attractiveness of the writer.

Of the longer works of Maupassant, none deserves to survive save 'Pierre et Jean.' Harsh and arbitrary, as well as premature, as this judgment must appear at first sight, it is likely to be justified by time. 'Bel Ami,' 'Mont Oriol,' 'Notre Cœur,' 'Fort comme la Mort,' in spite of their literary qualities and the remarkable powers of analysis and observation they evidence, are not in a strict sense strong works. 'Pierre et Jean' is. The subject is unpleasant, but it can scarcely be called illegitimate. It is treated gravely, seriously. Sensuality is almost wholly absent. Neither the story itself nor the manner of telling it will corrupt. It is really moral in its tendency; stern in reproof, firm in warning. The very impersonality of the author, his detaching himself from his characters, and the simple manner in which the dread, repulsive truth is slowly brought out, contribute to the moral value of the work. There are better ways of teaching morality, and it were to be wished that those alone were needed; but some people who could not be uplifted by pure ideals may be deterred by such uncompromising narrations.

'Sur l'Eau' will be read chiefly for the insight it gives into the author's state of mind when the balance of reason was already in part upset and the mind was losing its hold. In the light of what happened soon afterwards and of the death that has now come, there are pages in it inexpressibly sorrowful, for in them is heard the cry of a lost, a despairing soul. Maupassant paid dearly for beliefs and unbeliefs, for use and abuse of power, for pride of life and pride of intellect; and some notion of the price is had in the revelations of 'Sur l'Eau. He prostituted art again and again, pandering to the debased tastes of a public whose ceaseless craving reacted upon him and impelled him to repeat his offences. Happily what is good in his work will not be buried with his bones.

## PASQUIER'S NAPOLEONIC MEMOIRS.

PARIS, June 23, 1893.

STILL a new book on the Napoleonic era, the Memoirs of Chancellor Pasquier. The first part only has appeared; it extends from 1789 to 1810, and will be followed by several others. The realistic school has found its true expression: we are getting tired of novels, and the prodigious success of the memoirs which are now published in rapid succession on the time of the Revolution and of the Empire shows a curious tendency of the public mind: we are hungry for facts, root facts, and find memoirs more interesting than the numberless productions of the novelists, which give us only imaginary facts. And, in truth, can anything be more interesting than what has real life? At the same time it must be remarked that our interest has narrow limits: the things which interest us must not be too distant. We would turn our backs on a historian who should speak to us of Louis XIV. or of Henri IV.; we wish to know everything, even the minutest details, only about the men and women who have a near connection with our own time. We care no more for the eighteenth century than we do about the Greeks and the Romans.

"Qui me délivrera des Grecs et des Romains?"

In short, we become more and more modern as we become more and more realistic.

The Memoirs of Chancellor Pasquier were certainly not expected with as much eagerness as those of Talleyrand; but they were known to be interesting, and could hardly fail to be so, as Pasquier had been in high places for many years and under many governments. He was commonly cited as the man who had taken the greatest number of oaths of office; he was one of the most curious products of our numerous revolutions—a type of the men who think themselves faithful to themselves as long as they are faithful to the State; office-holders under every régime, always ready to criticise the régime which they serve; servants born, but good servants; one of those who candidly think, what was once said, that "the more régimes a man has served, the more fit he is to serve a new one."

Beneath this versatility it is not impossible to discern some innate and indefeasible traits, some permanent characteristics. Pasquier was born and remained to the end a man of the old Parlement of Paris, what we still call a Parliamentarian—by which word we designate those great families *de robe* which did not belong to the *noblesse d'épée*, but sometimes had alliances with it; families which were all rich and lived in great style. Between the noblemen who were at court and the opulent and extravagant *fermiers-généraux*, they formed a proud class, which owed its importance to the administration of justice. The Parlement placed them in contact with dukes and peers and princes of the blood, and Saint-Simon tells us, with his usual eloquence, how they contrived to defend and to augment their prerogatives. The Parliamentarians had, by

a sort of natural selection, formed in the end a curious coterie; they were submissive to the Crown, though there remained in them a remnant of the old Fronde, extremely jealous of their privileges, inclined to Jansenism, as it had always been their duty to defend the King against the pretensions of Rome. The Parlement was averse to all novelties, though many of its members had been influenced by the ideas of the philosophers; it had all the defects of a close corporation without any of the advantages of a deliberative assembly.

Pasquier was born in 1767. His education was, so to speak, twofold: it bore the impress of the old ideas, and at the same time of the new philosophical and irreligious ideas. He spent the greater part of his youth at Coutans, an estate which was a short distance from Le Mans, in a province over which the jurisdiction of the Parlement of Paris was extended. He was admitted as counsellor to that Parlement in 1787, at the age of twenty. He was too young to take any large part in the struggles which had begun between the Parlement and the Court. There was a great agitation all over France in favor of the convocation of the States-General (they had not been summoned since 1614). An old counsellor said to Pasquier: "Young man, this idea was already discussed during the life of your grandfather, and this is what he always told us: 'This is no child's play; remember, gentlemen, that the first time that France sees States-General again she will see also a terrible revolution.'"

Pasquier enters into many details on the period which preceded 1789. "I saw the Bastille taken," he says. "What has been called the *combat* was not serious; the resistance was absolutely null; there were no munitions in the fortress, it was not even necessary to invest it." The blow, nevertheless, was strong, and the old régime was demolished with the old prison. "The year 1789 saw the end," says Pasquier, "of the social life which had so long constituted the charm of France. Political quarrels, violent discussions, passions, troubled society and dispersed its elements." Pasquier was a Royalist, but he seems never to have experienced a strong passion. "Though I was convinced that we defended the good cause, I could not help thinking that our adversaries had more cleverness than ourselves. Many of us had adopted the principle (I did not share their error) that to arrive at something better, we had to go through something worse." He disapproved of the emigration; he did not believe that it was possible to make a French kingdom, a French King, out of France. "The crusaders of Saint Bernard," he says, "started to conquer a foreign land; they did not return to reconquer their own."

We have in Pasquier a witness of a great many of the revolutionary *journées*. It is rather singular to find in his book a number of passages beginning in this way: "I was accidentally going through such or such a street, the day when, etc. . . ." He met accidentally Mlle. Contat of the French Theatre at the storming of the Bastille. He was accidentally at the races at Vincennes, the day when Réveillon was murdered, and saw on his return an insurrectionary movement. It was accidentally that he struck with his foot the body of Foulon in the Rue Richelieu; accidentally that he saw the arrival of the unfortunate Berthier at the Hôtel de Ville. There came a time, however, when Pasquier had to conceal himself in the country. He wandered to Abbeville, to Champigny, a village in the neighborhood of the capital; in his retreat he contrived to get married—he does not say to whom in his Memoirs; he merely says that "it is somewhat difficult to understand how people could then think of anything but their peril, and could dare to be married." His father was arrested and executed; he succeeded in hiding himself a little time longer, but finally was thrown with his wife into the prison of Saint-Lazare. He entered it on the 8th Thermidor, and on the 9th Thermidor Robespierre was hurled from power; a reaction set in, and Pasquier owed his life to this timely revolution. He had seen Louis XVI. on the scaffold, he now saw the execution of Fouquier-Tinville. He established himself at Croissy, where he entered into relations with Josephine de Beauharnais, who was to become the Empress Josephine.

"Chance placed me, one evening at the play, next to a box occupied by two very pretty women who were unknown to me. In the midst of the representation, they received a message. I saw great movements and signs of joy. They went away, and I heard that they were the sisters of Bonaparte, who had just landed from Egypt."

The conduct of Bonaparte on his return was "a prodigy of cleverness"; he kept all parties uncertain of his design, he was a living enigma. Pasquier gives us, with many details, the history of the 18th Brumaire; he does not pretend to give the military history of Bonaparte, but shows us the difficulties with which the First Consul had to contend at home. He is especially familiar with the conspiracies of the Jacobins and the Royalists, as he afterwards became Prefect of Police and had all the original documents in his hands. The conspiracy of Pichegru, his suicide, the arrest of Georges Cadoudal, of Gen. Moreau, of the Prince de Polignac, form an interesting chapter of his book. Bonaparte seemed at one moment to have lived in constant fear of his life.

We come now to the terrible tragedy of the Duc d'Enghien. Pasquier throws almost all the odium of the crime on Talleyrand; it was, if we believe Pasquier, Talleyrand, then Minister of Foreign Affairs, who advised Bonaparte to seize the Duke at Ettenheim, in the territory of Baden:

"The very day the news of the seizure of the Duc d'Enghien arrived at Paris, there was a ball at the Hôtel de Luynes. M. de Talleyrand was there. Somebody asked him in a somewhat low voice: 'But what will you do with the Duc d'Enghien?' He answered: 'He will be shot.' A lady who was close by and heard the question and the answer, told me both the next morning."

Two secret councils had taken place at the First Consul's, where the question of the Duke had been agitated. In this Council, "M. de Talleyrand," says Pasquier, "was of opinion that the greatest possible rigor should be used." All the actors in this fearful drama afterwards tried to exonerate themselves in a degree—Caulaincourt, who was sent to Ettenheim; Réal, Savary, Hulin, the officers who formed the council of war at Vincennes. Talleyrand in his Memoirs takes great pains to do the same thing. Pasquier's testimony is certainly not without value; he maintains that Talleyrand furnished Bonaparte with all the arguments he could use. "The death of the Duke would be in the eyes of the world a just reprisal; he must teach the House of Bourbon that the blows it tried to strike would fall on itself." One thing is certain, the day after the fatal event Talleyrand wrote to the Powers the official despatch in which he explained it in diplomatic style.

Bonaparte always called the Duc d'Enghien "le malheureux" in the conversations which he afterwards had with Talleyrand, on whom he tried to throw a large portion of the responsibility. In the violent scene at their rupture in 1809, he reproached him bitterly with, among many other things, the advice which he had given him in the affair of the Duke. At St. Helena, however, when he wrote his will, he inserted in it with his own hand this paragraph:

"I had the Duc d'Enghien arrested and tried because it was necessary to the safety and the interest of the French people, at a time when the Comte d'Artois had in his pay sixty assassins in Paris; under the same circumstances, I would act in the same manner."

The very haughtiness of this declaration makes us infer that Napoleon could not always think without remorse of the innocent man of twenty whom he had dragged to Vincennes, and shot on the night of his arrival, after the mockery of a military trial. Lamartine says in his beautiful Meditation on Bonaparte, in which he describes him walking on the seashore:

"Et toujours en passant la vague vengeresse
Lui jetait le nom de Condé."

# Correspondence.

## COLOR SENSE IN WOMEN.

To the Editor of The Nation:

Sir: Gratifying as it is to find that I was not mistaken in supposing that woman's immunity from color-blindness can be made into an item in the long list of her weaknesses, if one only takes the trouble to think a little, I have to ask "C.'s" attention to the fact that she is quite inaccurate in saying that I inquire how the comparative freedom of women from color-blindness can be reconciled with the supposed inferiority of the sex. It would be silly to suppose any single trait of superiority to require reconciliation with either a real or a supposed inferiority of the sex, and especially so small a matter as the one in question; and as I imagine it is on the score of silliness that "C." has referred to me as a woman, I have ventured, on the ground of inaccuracy, to place her likewise in the inferior sex.

What I did say, as I have intimated above, is that the peculiarity referred to "must indicate some deep-rooted inferiority." The challenge thus playfully made has been accepted in earnest by "C.," who, however, has not perhaps been entirely successful in meeting it. For, granting that the male has more capacity for variation than the female, it should be mentioned, first, that color-blindness is not an instance of "variation" in the biologist's sense of the word, being in all probability a case of atavism; and, secondly, that the attribution of keener color-sense to the female's interest in the colors of the male does not seem in any way to support the charge of inferiority. As to the absence of great painters among women, much goes to the making of a great painter (not least of all stimulus, sympathy, opportunity) besides keenness of color-sense, and it would be rash indeed to infer from women not being great painters—as "C." does—that the keenest color-sense in women is inferior to that in men. If A's money amounts to a thousand dollars and B's to only ten, is it quite logical to infer that even of copper pennies A has more than B?

### *BORE.*

To the Editor of The Nation:

Sir: Though, as you point out in your 1459th issue, *bore*, whether as a substantive or as a verb, has been current much longer than "only of late years," it may be interesting to some to see a few old authorities for it additional to those produced by Dr. Murray in the *New English Dictionary*. The following exemplifications of it all date upwards of a century back.

The first group of quotations is for the substantive, in the sense of 'thing that annoys,' etc.

"What a terrible *boar* [*sic*] it has been all this day!" Miss F. Burney (1771), *Early Diary* (1889), vol. i., p. 171.

"Books now are become quite a *Bore* to me." Anon., *Learning at a Loss* (1778), vol. i., p. 37.

"One great *bore* was, that the whole room rose," etc. Miss C. A. Burney (1782), in Miss F. Burney's *Early Diary* (1889), vol. ii., p. 303.

"I presently learnt that he considered . . . matrimony as a *bore*." *New Spectator* (1784), No. xxii., p. 6.

"The next change surprized rather than pleased, . . . upon which Folly turned her back and cried 'a *Bore*.'" Robert Bage, *Barham Downs* (1784), vol. ii., p. 4.

"To this . . . he turned an ear of nonchalance, vowed it was an excessive *bore*," etc. Anon., in *Microcosm* (1786), No. vi.

"It was an arrant *bore* to be terrified with the sight of hieroglyphics," etc. Anon., in *Trifler*, No. xxxix. (1789).

As a personal epithet, *bore* is found, by Dr. Murray, first in 1812. Apparently, however, it was not unknown thirty-seven years earlier:

"If you attempt to tell a story, one puppy puts his hand to his cheek, and cries Patch! implying, it seems, that the tale is old, and smells of Joe Miller, and, if you continue your narration a minute and half, another puppy turns to a monkey next him, and whispers, 'what a *bore!* or *boar!*' for I don't know how they spell their nonsense; but (take it which way you will) it is intended to convey an idea of tediousness, and to compare the speaker to a hog or a gimlet." George Colman, *Gentleman*, No. iv. (1775).

Here are some eighteenth century quotations for *bore*, the verb:

"It brings with it a consumed long string of past transactions, that *bore* me to death." "Excuse my *boring* you with these trifles." Anon., *Sylph* (1779), vol. i., pp. 19, 240.

"Oh, I abominate your grave reflections, Sir George; they *bore* one to death." Robert Bage, *Barham Downs* (1784), vol. ii., p. 330.

"The audience . . . were once more *bored* with Harlequin Rambler!" *New Spectator* (1784), No. iv., p. 7.

Of the adjective *bore*, unrecorded by lexicographers, I have come across a single instance:

"I believe, Louisa, I must send you a dictionary of polite phrases, or you will be much at a loss, notwithstanding you have a pretty competent knowledge of the French tongue. I blush twenty times a day at my own stupidity; and then sir William tells me, 'it is so immensely *bore* to blush,' which makes me blush ten times more, because I don't understand what he means by that expression, and I am afraid to discover my ignorance, and he has not patience to explain every ambiguous word he uses, but cries, shrugging up his shoulders, 'Ah! quel sa[u]vage!' and then composes his ruffled spirits by humming an Italian air." Anon., *Sylph* (1779), vol. i., p. 62.

Here is corroborated, in a way, the suggestion of Dr. Murray, based on his citations, that the obsolete word for "boredom," taken subjectively, or "tedium," as also for "a person bored," namely, *bore*, was, together with its cognate verb, derived to us, somehow, from France. Its etymology being still to be solved, it is a pity that Miss Julia Stanley, who epistolizes as above, did not master her blushes, and insist on a full exposition of Sir William's mysterious phraseology. Noticeably, the scholarly Colman did not surmise the presence of an exotic in "what a *bore!*" It may be added that Shakespeare's *bores*, in *Henry VIII.*, is no longer interpreted 'wearies,' 'annoys,' but 'plays upon,' 'makes game of,' 'tricks.'

Marlesford, England, June 27, 1893.

### TYPESCRIPT AND TYPOSCRIPT.

To the Editor of The Nation:

Sir: Having used type-writing machines for upwards of ten years—the Caligraph, the Remington, and the Franklin—I have, during nearly all that time, spoken and written of work thus composed as *typoscript*. It is more mellifluous than typescript.—Yours, etc.,

Nathan Haskell Dole.

Boston, July 7, 1893.

## Notes.

This summer witnesses two anniversaries of events closely associated with the history of the literature of sylvan England: one, the centenary of the death of Gilbert White; the other, the tercentenary of the birth of Izaak Walton. The former was celebrated on Midsummer Day (June 24) by a visit of the Selborne Society to the Hampshire village from which it takes its name, where the 'Natural History' and 'Antiquities' gathered their unfailing charm and freshness, and where the present occupier of 'The Wakes' had offered to throw open the house and grounds. On August 9 Stafford, Walton's birthplace, although not, like White's rural parish, his religiously retained home, will be the scene of festivities which are to be attended by representatives from the various angling clubs throughout England. Mr. Alexander Cargill will contribute a paper on the Father of Angling to the August number of one of our magazines, while the autumn will bring forth still another edition of the 'Complete Angler,' to be called the tercentenary edition. The publishers will be Samuel Bagster & Sons; the notes and elucidations of the author's statements, from the point of view of a modern scientific naturalist, will be supplied by the librarian to the Linnean Society, Mr. J. E. Harting. The work, in two quarto volumes, will be an *édition de luxe*, printed on hand-made paper, with plates on Japanese vellum. The illustrations will consist partly of portraits and facsimiles, partly of etchings after paintings by John Linnell, senior, supplemented by drawings, by G. E. Lodge, of birds and riverside animals.

Swan Sonnenschein & Co., London, have in press 'The Story of Louis XVII. of France,' by Elizabeth E. Evans, author of a recent work on 'Caspar Hauser.' She aims to prove that the Indian missionary, Eleazer Williams, was the son of Louis XVI., and to show the futility of the claims of Naundorff and other minor pretenders.

D. C. Heath & Co., Boston, have in press five volumes of selections in prose and verse for the young, called "The Heart of Oak Books." They have been edited by Prof. Charles Eliot Norton and Miss Kate Stephens.

T. Y. Crowell & Co. will publish directly a volume of personal reminiscences of Whittier by Mrs. William Claflin.

Lee & Shepard announce a story of Jewish life, 'Joseph Zalmonah,' by Edward King, and 'Paula Ferris,' by Mrs. Mary Farley Sanborn.

'The Literature of Philanthropy,' soon to be issued by Harper & Bros., will form the second volume of the woman-made "Distaff Series," edited by Frances E. Goodale.

The Open Court Publishing Co., Chicago, have nearly ready an authorized translation of Prof. E. Mach's 'The Science of Mechanics.'

From the annual report of the Boston Registry Department we learn that Mr. Whitmore is about to print in a pamphlet the city's death returns from 1810 to 1850, a term covering "several periods of extra mortality from fevers, cholera, and lung diseases." Also, that the Record Commissioners have in press a volume of Boston births, deaths, and marriages from 1700 to 1800. The report is curious for a list of Chinese marriages registered in Boston, 1885-1892. The brides had such familiar New England names as Church, Wilson, Chase, Howard, Weeden, Roberts, Bassett, Perry, Fitch, McLean, Leach, McKay, West, Bennett, Locke, Post, White, Comstock, Harrison, Whipple, Franklin, Fletcher, Hayward, Raymond, and Sawyer, to say nothing of Smith and Johnson. The rarity of Irish names is remarkable.

The *Commercial and Financial Chronicle* has issued in bound form its weekly numbers for the first six months of 1893, constituting the fifty-sixth volume of the series. These volumes are, notoriously, an invaluable library of reference on financial history; the tables of weekly security quotations and fluctuations, and the news data in monetary and corporate finance, being compiled with fulness and accuracy not approached in any other publication. The bound volumes include the bi-monthly *Investors' Supplement*, itself a work of convenient form and trustworthy authority regarding the finances and history of railroad and miscellaneous corporations, and the lately introduced *State and City Supplement*, a similar text-book on public securities. A file of the *Chronicle* is indispensable to a financial library.

Prof. Thomson's 'Notes on Recent Researches in Electricity and Magnetism' (Oxford: Clarendon Press; New York: Macmillan) is an excellent work, intended as a sequel to the great 'Treatise on Electricity and Magnetism' of Clerk Maxwell, the first edition of which was published about twenty years since. The author adopts Maxwell's theory absolutely, and has made a very interesting and successful attempt to apply that theory to the recent progress of electrical science. His work is by no means exclusively mathematical. The seven chapters of which it is made up contain all the purely physical details necessary for a clear understanding of the mathematical treatment. The long chapter on the passage of electricity through gases gives a very full account of the best experimental work, and most readers will, we think, find it an especially agreeable and suggestive study. Almost the same may be said of the chapter on electro-magnetic waves, in which is given an account of the memorable researches of Hertz and of most of the work of others in the same direction. Other chapters, again, are more purely mathematical, and, taking the volume as a whole, we must regard it as a very important contribution to physics.

Only a few weeks after the appearance of the English translation of Mme. Arvède Barine's sketch of Bernardin de Saint-Pierre, her sketch of Alfred de Musset was published in Paris as the twenty-fifth volume of M. Jusserand's admirable series, "Les Grands Écrivains Français" (Paris: Hachette; New York: Christern). There are already two biographies of Musset in existence—one by his brother

Paul, and one in German by Paul Lindau—but Mme. Barine's sketch, brief as it is, contains much not hitherto printed. Especially, fresh light is thrown on what may be called the George Sand chapter of Musset's career. The complete Sand-Musset correspondence is in the possession of Mme. Maurice Sand, and Mme. Barine was allowed to inspect it, although Musset's family still forbids the printing of any of his letters. In summing up, she quotes from Lindau, Taine, and Sir F. T. Palgrave; but no notice is taken of Henry James's paper on Musset in his 'French Poets and Novelists.' Mme. Barine formally accuses Paul de Musset of deliberate misrepresentation.

On the 28th of April Prof. Konrad von Maurer of the University of Munich celebrated his seventieth birthday, and, in addition to the congratulations usual on such occasions, received a stately volume entitled 'Germanistische Abhandlungen' (Göttingen: Dietrich), containing treatises by Oscar Brenner, Felix Dahn, and other pupils on Old German and Scandinavian history, literature, language, and law. This broad field Von Maurer's researches more than those of any other scholar have opened up, and in it he is now acknowledged to be the greatest living authority. The essays are in German, Danish, Swedish, and Icelandic, and possess no small amount of interest in themselves, apart from their value as a splendid tribute of personal esteem and an evidence of the far-reaching influence of Von Maurer's labors as a teacher and an author.

*L'Art* is a mother work to many collections from its articles and illustrations, as we have remarked from time to time. In the series "Les Artistes Célèbres," the latest brochure is that on the brothers Van Ostade, by Marguerite Van de Wiele, which is equipped with sixty-five process engravings, of varying degrees of clearness and utility ('Les Frères Van Ostade,' Paris: L. Allison & Cie.; New York: Macmillan). From the same storehouse come two fascicules of 101 plates without letter-press, entitled 'Paysagistes Contemporains.' There is a show of universality, and the arrangement is alphabetical, but France occupies more than half the field, and Russia and the peninsular countries of Europe (but for two Italian landscapes) are quite unrepresented. These memoranda, more or less coarse and inadequate, of course tell something about the original canvases and about the "schools," but they can convey but little pleasure in themselves.

'Kilmât 'Araby' is the title of a pretty text-book published privately at Florence by Prof. Willard Fiske, and being in fact a list of 'Arabic words arranged in the order of the alphabet, with an attached grammar.' The words are from the vulgar Arabic, and the compiler follows the lead of Spitta Bey in seeking to make this language a literary one. With the aid of Mr. Socrates Spiro, who is himself diligently preparing a much more extensive vocabulary, Prof. Fiske has got together about 7,000 words taken down in Cairo or along the Nile, and has appended grammatical paradigms and illustrative sentences—these last intended to show that the spoken language is capable of being used to convey literary and scientific information. He has adopted Spitta Bey's simple and ingenious modification of the Latin alphabet, but discards the semi-vowels, now associated with the greatly corrupted classical Arabic employed by the Egyptian and Syrian press, in which Prof. Fiske sees the marks of caducity.

The *Illustrated Archæologist*, edited by J. Romilly Allen and published in London by Chas. J. Clark, No. 4 Lincoln's Inn Fields, W. C., lies before us in its initial number, for June. The typography is excellent and the illustrations numerous. The opening article is on the making of gun-flints and tinder-flints at Brandon, a village on the borders of Suffolk and Norfolk, and very curious details are given as to the mining of the flint and the fashioning of it. The neighborhood has always been the seat of a flint industry from prehistoric times. The present support of it is found in the demand on the one hand for tinder-boxes in tropical countries, where damp is to be feared in the case of other modes of striking fire, and on the other for flints to replenish the old-time muskets which have been sold to the natives of Africa. In the paper on portable Roman anvils found at Silchester, it is stated that similar ones are now made in Birmingham for export to Spain and elsewhere. Very interesting is the paper "Half-an-Hour in the Grosvenor Museum, Chester." Others relate to precious objects, architecture, etc. There are Notes on Museums, Notes on Archæology, and Notes on Books, all abounding in pictures. The *Archæologist* promises well for entertainment and instruction.

The Munich *Medicinische Wochenschrift* of June 10 contains the first part of an exceedingly interesting article entitled "Die Cholera asiatica eine durch die Cholerabacillen verursachte Nitritvergiftung," and embodying the results of the joint bacteriological researches of Prof. Dr. Rud. Emmerich of Munich and Prof. Dr. Jiro Tsuboi, a Japanese pupil of Dr. Koch. That the comma-bacilli produce nitrous acid and nitrite is no new discovery—bacteriologists have been familiar with this phenomenon for some time; but instead of seeking the cause of the destructiveness of the microbes in this secretion, they have directed their attention chiefly to the poisonous albuminous substances which they have discovered in "cholera-cultures," but which prove to be the contents of the cells of dead bacilli and therefore perfectly harmless so far as the genesis of the disease is concerned. It is the active product of their vital functions, and not any lifeless residuum of decomposition and decay, that works the mischief. By a series of experiments on rabbits, Profs. Emmerich and Tsuboi have shown that the symptoms of cholera and of poisoning by nitrite are perfectly identical in their action on the blood and on every part of the organism. If this discovery is all it purports to be, it is one of the most important hitherto made, inasmuch as its therapeutic application for the suppression and prevention of cholera will be comparatively easy and thoroughly effective.

—Following a line of thought somewhat parallel to that of Mr. Winsor's article on public libraries in the June *Atlantic*, Mr. Edward S. Morse, in the current number of the same periodical, brings forward various arguments in favor of establishing public museums on a similar scale in all local centres. The advocates of education by training the faculty of observation rather than the faculties aroused by book-reading may well maintain that for such purposes a well-organized museum would far outweigh the ordinary library, with its disproportionate circulation of fiction, exciting merely in a loose way the lower functions of the imagination. In directing and training the inquiring, eager mind the museum undoubtedly plays a great part, and no one can deny its importance as an adjunct to the school and to the library; but we doubt whether as a means of popular education the zoölogical or historical museum has yet been proved to possess the virtues that its most earnest advocates claim for it. In other articles in the same number we recognize familiar hands. Sir Edward Strachey describes with quiet grace the varied scenes attendant on a general election in England, and adds a dialogue discussing questions of political welfare and expediency suggested by it; and Harriet Waters Preston and her collaborator contribute a first paper on Petrarch's letters. Interesting, also, is an article aimed against the popular impression that so-called circumstantial evidence is totally distinct from other kinds of evidence, and that proof based on it is scarcely worthy of implicit credence.

—Herman Grimm, in a most instructive essay in the June number of the *Deutsche Rundschau*, gives an account of the wonderful effects produced by the stereopticon as a means of teaching the history of art. No other form of reproduction seems to him as well qualified to bring out the essential features of a work of art as this. Permitting one, as it does, to enhance the proportions of the object in question at will, it enables us to subject every line and every curve to the closest examination, and thus renders to the art student the same service which the physicist derives from the microscope. But in some cases the service of the stereopticon is of a still higher nature. Some works of art which, in the artist's imagination, were conceived in colossal dimensions, have through circumstances been prevented from being carried out in their natural grandeur. These the stereopticon restores to their true size. Grimm illustrates this in a most conclusive manner through an analysis of the principal works of Dürer, Holbein, and Rembrandt. Dürer's "Knight, Death, and Devil," for instance, is known to us only through an engraving of a few inches in height. This Herman Grimm threw on the screen, and at once it loomed up before him in such overwhelming statuesque proportions that it was perfectly clear that here was the form in which Dürer's mind originally harbored this gigantic conception, to execute which in its genuine dimensions he found, however, no opportunity. In a similar manner the "Passion," the "Apocalyptic Visions," the "Adoration of the Trinity," when cast upon the screen, seemed to expand and to blossom out into fuller life. The latter work at once took its place by the side of Raphael's "Disputà." As Grimm says himself in his inimitable manner: "It was a new experience for me thus to see Dürer's works at once enlarged and simplified. The master stood before me as one redeemed. It seemed to me as though his pictures for centuries had been held in prison, and were only now freed and permitted to appear what they really are."

—Among the Government exhibits at the Columbian Fair there is a turn-table stack of official publications. These, in gay bindings, attract the eyes of many passers-by, and incline some weary wayfarers to look at their contents. It is a pity so many of them were so carelessly compiled. Seeming to speak with authority, they will stereotype errors in readers who cannot, or will not, "go behind the returns." One attractive volume is a "Statistical Abstract of the United States, Fifteenth No., 1892." In this work one heading is, "Date of admission of new States into the Union," and the date of the act of Congress admitting Wisconsin is given as March 3, 1847. This statement makes that State about fifteen months older than it is represented in hundreds of Wis-

consin books, and so naturally excites surprise. The Abstract, however, cites a supreme authority—the United States Statutes, vol. ix., p. 178. Turning to the volume and page thus referred to, we discover that an act was passed by Congress at the time mentioned in the Abstract, admitting Wisconsin into the Union—not, however, unconditionally, but provided that the electors there should assent to a Constitution which had been adopted by a Territorial Convention December 16, 1846. The writer of the Abstract ought to have ascertained whether that Constitution was assented to. He inferred or fancied that it was, and so was betrayed into error. The truth is, that that Constitution was rejected by 20,431 negative votes, against 14,119 affirmative. The act of Congress was thus nullified, and Wisconsin remained a Territory till May 29, 1848 (see acts of first session of Thirtieth Congress, chap. 50), when it in fact attained to Statehood. As to the admission of other States, there seem to be similar blunders. Indeed, in various points of its make-up the Abstract cannot stand the ordeal of inspection by intelligent men, whether natives or foreigners. It will make them suspect more errors than they detect, and incline them to fear that civil-service reform has not yet completed its perfect work, even in its Washington fountain-head.

—Variously instructive and suggestive is the report on the "Open Competition for Situations as Female Clerk in the Post-office," which took place in London last March. The age of the competing candidates was fixed at from eighteen to twenty years. The salary attached to these female clerkships, those of the lowest class, commences at £65, rising, by £3 annually, to £100; and the incumbents of them are required to resign their appointments on marriage. Promotions to vacancies in the higher classes depend on merit. The hours of attendance are seven daily. At the recent competition the vacancies to be filled were only fourteen, and the competitors for them were 1,162. The subjects examined in were six, namely, Arithmetic, Handwriting, Orthography, English Composition, Geography, and English History, the maximum marks for which were 500 for the first and 300 for each of the rest—the total being 2,000. Handwriting and Spelling were specially tested by Copying and Dictation, respectively. 286 of the candidates failed to qualify in one or more of the obligatory subjects—that is to say, all the subjects but Geography and English History. The marks allotted to the first and the last of the successful candidates were 1,584 and 1,468; those allotted to the first and the last of the unsuccessful candidates, 1,467 and 876. The highest marks allotted were, for Arithmetic, 440, to an unsuccessful candidate; for Handwriting, 278, also to such a candidate; for Orthography, 300, to each of five successful candidates and to each of fifty-four unsuccessful; for English Composition, 240, to an unsuccessful candidate; for Geography, 243, to a successful candidate; and, for English History, 237, to another such candidate. The examination was by no means easy. In English Composition an option was allowed between three subjects; two hours being the time fixed for writing on the one selected. The subjects were: "Relate a Fable, giving its moral from your own experience"; "The Comparative Influence of Home and School Life in the forming of Character"; and "Charles and Mary Lamb." Of these the last was certainly ill chosen, while, as to the second, which is expressed with scant observance of grammatical propriety, few will question that it was much too difficult. The examination here spoken of was superintended by the Civil Service Commissioners; but, in pursuance of a mysterious policy, the public is denied any knowledge of the persons by whom it was actually conducted. Similar examinations, generally two a year, have been held since September, 1881.

—It seems not very generally known to the readers of the daily press that Rear-Admiral Albert H. Markham, whose vessel, the *Camperdown*, annihilated the flag-ship of the British Mediterranean squadron in the recent manœuvres off Tripoli, Syria, was the leader of the advance column of the Polar Expedition of 1875-76, under command of Capt. (Sir George) Nares. The name of no more gallant commander appears in all the annals of Arctic exploration, and the exploits of few travellers have done more to establish a reputation for English pluck and dogged determination than that terrible struggle with the frozen sea which alone retrieved the fortunes of the most elaborately equipped expedition that ever sailed the Northern waters. Markham's "farthest" (83° 20′) has since been eclipsed by the "farthest north" of Lockwood and Brainard (83° 24′, 1882), but this later exploit has in no way diminished respect for an achievement which carried the British standard many miles nearer to the Pole than had been possible before. In the official report addressed to his superior, Markham states: "I feel it impossible for any pen to depict with accuracy, and yet be not accused of exaggeration, the numerous drawbacks that impeded our progress. One point, however, in my opinion, is most definitely settled, and that is, the utter impracticability of reaching the North Pole over the floes in this locality." It was this experience, even more than the outbreak of scurvy, which induced the early return of the expedition, much to the surprise of all England and the disgust of those who had confidently imagined that the Pole had finally been conquered. A popular clamor for court-martial was, through Government influence, quelled by conferring knighthood on the commanding officers. Rear-Admiral Markham is without question one of the first authorities on Arctic exploration, and his opinions on a subject to which he has given the closest study are entitled to the highest consideration. In his work 'A Polar Reconnoissance,' published in 1881, he states his conviction that the Franz-Joseph Land route to the Pole offers greater possibilities than any other—a conclusion in which he is to-day supported by many Arctic "experts," and which had long ago been arrived at by the late Dr. Petermann. It is known to many who have followed recent Arctic developments that Admiral Markham had a longing desire to return to the Polar regions, and it was for some time assumed that he would be associate commander in the Nansen Expedition. Another distinguished member of the same family, Mr. Clements R. Markham—traveller, geographer, and historian—has recently been elected President of the Royal Geographical Society of London.

—Among the great men of classic German literature of the eighteenth century, none, with the possible exception of Klopstock, has been so completely forgotten as Wieland. Yet it is safe to say that in his day none, not even the greatest, exerted a more powerful or wider-reaching influence than he. Not only did his novels and satirical romances, such as 'Agathon,' 'Die Abderiten,' 'Aristipp,' express, in a more popular and striking manner than any other contemporary productions, the rationalistic creed of the time, but his skilful management of the *Teutscher Merkur* and his own frequent contributions to that periodical were by far the most potent single factors towards the creation of an organized public opinion in Germany at the end of the eighteenth century. A curious illustration of this latter point is given by Dr. Richard Fester in his recent monograph, 'Rousseau und die deutsche Geschichtsphilosophie' (Stuttgart: Göschen). Fester makes it perfectly apparent that it was Wieland who fixed Rousseau in the German mind as the advocate of a return to natural primitiveness. It is well known nowadays that this was a decided misrepresentation of Rousseau's views, neglecting as it did the final and most important phase of his thought, and resting exclusively upon the two youthful Dijon prize essays. Yet this falsified and incomplete Rousseau, this imaginary champion of uncultured and unthinking innocence—in short, this Rousseau of Wieland's make—undoubtedly called forth an intenser and more vigorous intellectual reaction than the real and complete Rousseau did. There is hardly a single one among the great German poets and thinkers who, starting from this pseudo-Rousseau standpoint, did not eventually turn against it, each in his own way demonstrating that the future of humanity should be sought in the direction of more highly developed culture rather than in a return to primitive conditions. That Rousseau himself had practically arrived at this self-same conclusion does not take away from the originality of the German movement, nor from the part played in it by Wieland.

—Of late years it has become admitted that the historical method of Tacitus was not so much one of independent research as used to be supposed, but that he was very dependent upon his predecessors for the incidents and the circumstances of his narrative, and that his power lay in the manner and the style of his descriptions rather than in the discovery and setting forth of new truths. If further proof is needed of this belief, it is to be found in M. Philippe Fabia's essay entitled 'Les Sources de Tacite' (Paris: Imprimerie Nationale), which won the Prix Bordin in 1892. Without entering into the details of M. Fabia's arguments, or expressing any opinion upon the truth of the conclusions at which he arrives, we shall merely remark that his contention is that in both the 'Histories' and the 'Annals' Tacitus followed, and followed closely though not slavishly, a principal source. For the 'Histories' that source was the elder Pliny, and for the 'Annals' Clodius. There is, of course, nothing new in these conclusions, for both have already found champions in Germany; but no writer has hitherto gone into the questions so deeply nor treated them so fully. In France and England, indeed, nothing of importance has ever before been written upon the subject. The essay, which is a long one, contains also chapters upon the secondary sources and upon the originality of Tacitus in both his immortal works. It exhibits much study and careful research, and will be indispensable to future investigators, although a question which never, probably, will be answered in such fashion as to convince all the world of scholars.

## PIERCE'S LIFE OF SUMNER.—II.

*Memoir and Letters of Charles Sumner.* By Edward L. Pierce. Vols. III., IV. Boston: Roberts Brothers. 1893.

MR. PIERCE is always at his best in his historical passages, and none of them is more com-

pact and forcible than that which introduces his fourth volume with an account of the compromising temper of the North between the election of Lincoln and his inauguration. This passage of history has been written many times, but not elsewhere with so much detail of personal weakness, cowardice, and imbecility. Some of the best as well as many of the worst were implicated in the general collapse. Sumner stood immovably for the preservation of the Union without compromise. He implored Seward not to make the speech of January 12 which Seward blandly read to him in advance. With Charles Francis Adams he protested so vigorously as to break off the friendship which had been growing for fifteen years.

Although of Whig extraction, Sumner was never taken in the snare of a high tariff; when the Morrill tariff was passed, he opposed several of its more radical provisions, and he was always resolute in his interpretation of the war duties as provisional. Made Chairman of the Committee on Foreign Relations immediately on Lincoln's inauguration, he entered on a course of duty which for ten years was wholly congenial to his taste, and went far to qualify the current criticism on his talent as engrossed by one idea. Generally at variance with Seward on questions touching slavery and reconstruction, it is eloquent for the sobriety of his own temper in dealing with foreign matters and for his disengagement of personal from official matters, that he kept the peace with Seward all those years. With his English friends he did not fare so well. His speech on the *Trent* affair stirred up a vast amount of British indignation, but it went far to reconcile the American people to the surrender of Mason and Slidell. That something sternly practical mingled with Sumner's habitual idealism, was well proved by his relation to this matter. He declared that the Rebel ministers must be given up, at a time when Seward was "elated and jubilant over the capture" and among those approving it were Everett and Cushing, and such distinguished jurists as Joel Parker and Theophilus Parsons. He never for a moment had a different opinion, and for the flimsy grounds adduced by Seward for the surrender he furnished others that involved no humiliation and had the support of international laws, which should not be disobeyed to secure a temporary and unreal advantage. This speech did much to secure for him the confidence of people who had imagined that he was "a mere moralist and reformer." It made him an authority on foreign affairs second to no other until he was degraded from his post. From the *Trent* affair onward his influence upon our relations with England was as pacific as it could be consistently with a decent national self-respect. Mr. Pierce has established this position by exhibiting his humane opposition to letters of marque and reprisal, his treatment of the St. Albans raid, his defeat of the attempt to scale down the neutrality acts in 1866, his opposition to the Retaliation Bill in 1868, and in general by his attitude towards a bumptious anti-English spirit in the Senate. Not less pacific was the speech of April 13, 1869, explaining the action of his committee in rejecting the Johnson-Clarendon Convention. The speech was not a plea for heavy damages, but for such a principle of amity as should actuate a friendly nation in its dealings with another engaged in putting down a pro-slavery rebellion. Like the *Trent* speech, it was "joy of the street, curse of the home" reversed. Well received in America, it put England in a frenzy of astonishment. Mr. Pierce goes over the whole matter carefully, on account of its relation to Sumner's trouble with Grant and Fish a little further on.

This trouble furnishes the most elaborate and painful episode of Mr. Pierce's book. If anywhere he abates something of his judicial temper, it is in his contemptuous estimate of Mr. Fish's ability and performance up to the time of his being made Secretary of State. It is an estimate that reflects severely upon Sumner's great regard for Fish—a regard which intensified a hundred fold the hurt inflicted by Fish's letter of December 30, 1870, to Moran, replying to Motley's of December 7. In that letter Sumner was indicated as "one who uses the words and the assurances of friendship to cover a secret and determined purpose of hostility." Mr. Pierce's caution is not less than usual because he brands this letter and Fish's subsequent treatment of Sumner with the sternest condemnation that he can express. Sumner's great mistake in the San Domingo business, of which Fish's letter to Moran was the most shameful incident, was in not calling on the President, who had called on him to solicit his support for the treaty, and assuring him that he could not support it. It may not be doubted that Grant was entirely confident in his belief that Sumner promised to support the treaty which he afterwards opposed so ardently, and that he was entirely mistaken in his confidence. But for subserviency to the wishes of the President, the treaty would have had few supporters at any time. Fish himself did not care for it, but finally, to humor his chief, pressed Sumner to forego his opposition and offered him the mission to England. Mr. Pierce is more than kind in his acceptance of Fish's apology—that he did not intend the offer for a bribe—as sufficient under the circumstances. Sumner did not yield, and the rejection of the treaty, only in part because of his opposition, was followed the next day by Motley's removal from his post as Minister to England. If the *post hoc* was not a *propter hoc*, the coincidence was remarkable. But to strike at Sumner through his friend was not enough. His relations with Fish continued friendly after Motley's removal and until after the Moran letter. Of course, they could not be friendly after that. His personal relations with Grant had also ceased, and this fact and his breach with Fish were the excuse for removing him from the committee of which he had been a member for twelve years, and chairman for ten. It was the most unkindest cut of all. It hurt much more than Preston Brooks's cane. It struck his weakest part, his self-esteem, which, always abnormally developed, now took on a more portentous bulk, with painful inflammation, and a disturbance of his moral vision in everything that related to Grant. All this reached its climax in his arraignment of Grant as a colossal nepotist and in his support of Greeley in the campaign of 1872. The intensely personal character of Sumner's politics in that year is not to be disguised, and it marks the lamentable injury to his happiness and self-poise wrought by the San Domingo episode.

However valuable the influence of Sumner on our foreign affairs, it was not the most characteristic influence of his Senatorial career. For this we must turn to his anti-slavery polemics for ten years before the war and to his steadfastness in the winter of 1861; next, to his persistent advocacy of emancipation as a proper instrument and only perfect justification of the war; and lastly to his persistency in demanding for the freedmen equal political and civil rights with the white population of the South. He began to urge emancipation upon Lincoln in the spring of 1861; addressing his constituents in the fall of that year, he made the destruction of slavery central to the conflict, and did much to prepare that public sentiment to which Lincoln looked for his support; early in the session of 1861–62 Lincoln replied to Sumner that he was only a month or six weeks in advance of himself; on July 4, 1862, the Senator urged Lincoln to celebrate the day by declaring emancipation, and September 22 came the preliminary proclamation. After that of January 1, 1863, Sumner addressed himself to bringing the action of the Government and the army into harmony with its spirit; to the prevention of slave-catching in the army and the abolition of slavery in the District of Columbia; to the suppression of the slave-trade by treaty with Great Britain; and, in general, to meeting slavery, in whichever of its countless shapes it might appear, with ruthless opposition. His relation to the several amendments which gave emancipation constitutional force was the most striking paradox of his career. He was generally indifferent to them and sometimes in opposition. He was consistent here—any constitutional attack on slavery implying its national existence, which he did not admit. Especially obnoxious to him was the provision of the fourteenth amendment bribing the slave States to extend the suffrage to the freedmen with a promise of increased representation. His Civil Rights Bill furnished the only passionate interest of his waning life. He babbled of it with his dying breath. Carried after his death, it was finally adjudged unconstitutional.

The problem of reconstruction engaged him from an early stage of the events that forced it on the public mind. To the assertion, widely current, that Sumner's doctrine of "State-suicide" met with no response, Mr. Pierce replies that it was practically worked out in the extra-constitutional legislation to which we were obliged to resort. Sumner's fight against Lincoln's early scheme of reconstruction was one of the hardest of his life. He developed in it a genius for obstruction that was something new for him and strange, and he accomplished his purpose in the defeat of Lincoln's scheme. How different Lincoln was from Grant is shown by his friendliness to Sumner after the defeat of a measure as dear to him as San Domingo was to Grant. It was a few weeks before his death, and those weeks were marked by special kindness towards the Senator who had opposed him to the bitter end. Sumner's opposition rallied the anti-slavery people to his side, and it is, as Mr. Pierce has written, "to his credit or discredit as a statesman that suffrage irrespective of color or race became fixed and universal in the American system." To make sure of this was the beginning, middle, and end of Sumner's labor and anxiety in the reconstruction times.

Sumner was not favorable to Lincoln's re-election, but Mr. Pierce denies that the movement against him had Sumner's "earnest support and eager instigation," as Hay and Nicolay have written. Yet how miserably imperfect Sumner's appreciation of Lincoln was is shown by his writing to John Bright that "any one of a hundred" could be more easily elected, and by his saying in the same letter, "Mr. Lincoln resembles Louis XVI. more than any other ruler in history." In a collection of contemporary judgments, that would probably have the distinction of being the most utterly absurd. Had Lincoln lived, Sumner would have been his Secretary of State. Under Johnson he had quite another fate: he was soon ar-

rayed among the most eager of his opponents, resisting at every step his policy of reaction. He was also among the first to favor his impeachment, as usual the rush of his moral purpose sweeping away all technical obstructions as of no account.

Mr. Pierce attempts no general analysis of Sumner's character, but, telling the story of his life with beautiful fidelity alike to him and to the truth, he has given us an admirable impression of the man. This was easier because of Sumner's remarkable simplicity. His character had no elements of subtlety or complexity. He had no concealments or disguises. He wore his heart too much "upon his sleeve, for daws to peck at." Even his vanity was so naïve that those who knew him best accepted it as part of his sincerity—saying exactly what he thought where others might have been more shrewd. Evidently he liked to be liked and loved to be loved, and he had what he desired. Something rhetorical and histrionic in his public speech, and something overbearing in debate, was in striking contrast with the manners of his private life. There was nothing patronizing in his relations to the younger men whom he attracted to his side. His secretaries cherished for him a warm affection. His correspondence, without emasculation, is wonderfully free from the asperity which so often vitiates the mutual regards of public men. Quick to take offence, he seldom nursed his wrath. That his best friends were Longfellow and Theodore Parker, Whittier and Lydia Maria Child, shows that he loved the simplest and the best. There has been much exaggeration of the sumptuousness of his way of living. Hundreds of men in the country have a single picture which could not be bought for all his books and bronzes, paintings and engravings. His taste in the matter of paintings and engravings appears to have been imperfectly developed. He was a man the dealers liked to have approach them. His taste in other things was not always what we should expect from one of the most cultivated statesmen of his time. There was often a fly in the ointment—some foreign substance in his speeches and orations marring their unity and effect. He had not the self-restraint to put aside the show of learning which often made their moral value less than it would otherwise have been.

Mr. Pierce has shown that Sumner was much more than a political anti-slavery reformer; but he was this from first to last with a consistency in remarkable contrast to the stumblings and the haltings, the twistings and turnings of some others. The course of Mr. Pierce's narrative is strewn with the wrecks of political hopes and reputations, where Sumner held his course right on and never wavered for a day or hour. Not many lives are made so entirely of one piece. Mr. Pierce's volumes, with a hundred incidental qualities to instruct and entertain, have their best justification in the impression that they make of a great and good man devoted to one sacred purpose from the beginning to the end of his political life.

## MORE FICTION.

*The World of Chance.* By W. D. Howells. Harper & Bros.

*Children of Destiny.* By Molly Elliot Seawell. D. Appleton & Co.

*Island Nights' Entertainments.* By R. L. Stevenson. Charles Scribner's Sons.

*The Story of a Story*, and Other Stories. By Brander Matthews. Harper & Bros.

*Stories of a Western Town.* By Octave Thanet. Charles Scribner's Sons.

*The Stickit Minister*, and Some Common Men. By S. R. Crockett. Macmillan & Co.

*Sally Dows*, and Other Stories. By Bret Harte. Houghton, Mifflin & Co.

*Merely Mary Ann.* By I. Zangwill. Raphael Tuck & Sons.

*Squire Hellman*, and Other Stories. By Yuhani Aho. Translated from the Finnish by R. Nisbet Bain. Cassell & Co.

FEW figures are more engaging in fiction than the young man from the country who arrives in the city with no capital except his ideas and virgin enthusiasm, confident that fame awaits him. Whether, to use the sacred phrase, he "comes up to the metropolis" on foot, with blonde locks tossing and his wild harp slung behind him, or by train, with a roll of manuscripts under his arm, the story of his vicissitudes is sure to command interest and sympathy. He attracts the young because they share his courage and assurance of coming out all right; and he touches springs of tenderness in the old because they remember how that fine scorn of disaster once was theirs, and because they foresee some possibilities of his making a false step or two and coming out all wrong.

In choosing such a figure for the hero of 'The World of Chance,' Mr. Howells had, of course, no intention of trading on ready-made sentiment; on the contrary, he spares no conscientious effort to destroy a romantic predilection for his aspiring novelist, Ray, by giving his defects of nature their full value. Mr. Howells does not write about people in order that the reader may, first of all, like them, but that he may understand them and recognize the truth of the delineation, then profit thereby according to his capacity for inference. If it is often impossible to cherish any fondness for those characters in whom the fidelity and subtlety of his representation are indisputable, the fact is uncomplimentary only to our species, not to Mr. Howells. Still, in Ray's case, there seems to be no sufficient reason for depriving us of preconceived affection. A trifle more of sensibility to afflictions not his own, a more frequent generous deflection from the direct line of self-interest, and the value of his character, either as an expression of art or as a lesson in conduct, would not have been diminished. He would be a pleasanter person to know when his youth lies behind.

The adventures of Ray during his first year in New York do not strain credulity; if they show how much in life depends on chance, they also prove how much more depends on character. Life brings a queer assortment of treasure and of dross to our feet; it is the faculty to select and the force to keep and use that make destiny. The episode most interesting for its own sake is that which brings Ray in close contact with the Hughes family. The chapters devoted to these examples of the failure of community life to insure happiness are strong in feeling, and touched with a hopelessness about the practicability of any scheme yet devised for the permanent mitigation of human misery. The sketches of Mr. Hughes and his demented son-in-law, Denton, impress vividly the power of constant contemplation of social injustices and evil to unhinge a very keen intellect and to drive a morbidly emotional man mad. In permitting Mrs. Denton to tell her dying father the comforting lie which the clever, upright sister dares not speak, the author makes one of his nicest distinctions in feminine character. Reckless unveracity is characteristic of the "fool-woman," and, on occasions such as this, justifies her existence. The other episodes describe Ray's struggle to get on and to get in with heartless publishers and editors. Here we have pages of "shop" talk which may be dull reading to the general public, but is saturated with the wisdom of experience. It is, besides, invaluable for convincing any who may doubt that, so long as Mr. Howells remains with us, genuine wit will not become extinct.

The author of 'Children of Destiny' apparently doubts the determinative influence of character for good or ill, or at all events believes it to be subject to *Ananké* assuming the form of a family doom. Her chief figure is Mr. Richard Skelton, a Virginian land and slave-owner, born seventy years ago and fortunately able to enjoy his property without any question of right or righteousness. Skelton is rather an interesting person, of marked individuality, but we cannot let ourselves go with him heartily, because, from sundry hints, we have gathered that, at the moment when we should most wish him to abide with us, he will, in accordance with family precedent, depart for another world. Doubtless there are families that seem to enjoy a prescriptive right to tragedy of one sort or another, but to insinuate its inevitableness at the beginning of a story is to give an impression of inability to complete it without resort to a very common trick of the trade. Miss Seawell is too thoughtful and original a writer to need to eke out her store with paltry conventions of romance, and it is a pity that, having set out to write a tragedy, she should not have contrived something more impressive than a family tendency to early death. If one can forget the impending catastrophe, there is much to enjoy in the delineation of unusual characters and in the pictures of social life. Miss Seawell has probably grasped pretty exactly the kind of splendor which prevailed in the splendid old South, and which has dazzled the eyes of so many enthusiastic and imaginative chroniclers. The penalty of perpetual lotus-eating is intellectual and spiritual death; and when we are invited to consider what the slaveholding aristocracy had not, we are less moved to envy what it had or to exaggerate its magnificence.

Miss Seawell's novel is from every point of view good enough to make it worth while to call attention to her lapses into slovenly English. She is addicted to "did have" for "had" or "had had," and scruples not to employ both "which" and "who" as relatives to the same noun in one sentence. Local usage is probably responsible for such phrases as "telling goodbye" and "liked to have fallen through." These are only a few examples of slips of the pen or inattention to detail in composition sufficiently numerous to disfigure her work.

One of the most encouraging signs of the times is the recognition of the virtues of the "old maid." Unless she is rich, she is not yet accorded any particular social status, but she is no longer an object for contumely and derision, and it is generally conceded that she is not necessarily either an old cat or an old fool. When she gets a novel written in her praise and honor (euphemistically called 'The Odd Women'), she may be said to have cast off the last shred of disability. If half that Mr. Gissing affirms and predicts about them is true, the hope of the future certainly lies in our old maids. Through the intemperance of partisanship he has perhaps put a scourge in the hands

of the enemies of that class which he wishes to exalt, the self-supporting unmarried women. His examples of marriage go to show that that institution is a failure, and the drift of his conclusions on sexual relations is in favor of the *union libre*. "We told you so," cry the conservators of morals; "freedom for women means license and the sacred hearth gone to the dogs!" Far be it from them to read patiently and to learn that Mr. Gissing points to the voluntary relation between men and women only as the far-off ideal consummation of human striving towards self-knowledge, self-reverence, and self-control. But the time is not yet, and we go so far with the adorers of home and humdrum as to fail to see that its coming is in the line of social progress. The great thing is for society to give the odd women a fighting chance, and to consider with charity those who fall in the fray.

The story in which the 'Odd Women' are thus ably championed is excellent both for construction and for characterization. The novel with a good purpose is too apt to be a very bad novel, and it is a pleasure to testify that Mr. Gissing's is, in spite of and on account of its intensity of purpose, an uncommonly good one.

Satan is presumably still roaming about this planet seeking whom he may devour, and there is no spot so out of the way or unlikely that he can't at least catch an author looking for local color. We should not regret too bitterly his making a meal of Mr. Stevenson, unless that gentleman would promise to desist from writing stories about the heathen, white and tinted, who inhabit the isles of the Pacific. In the volume entitled 'Island Nights' Entertainments,' three very slim tales are, by the assistance of large type, wide margins, and many illustrations, spread over more than two hundred pages. The last two tales deal with the supernatural, and though they may contain elaborate satire upon Kanaka vices and peculiarities, we prefer to class them as specimens of Oceanic folk-lore. By this expedient Mr. Stevenson is relieved from responsibility for their existence, and the learned are made quite free to note a subtle significance, obscured for the vulgar by apparent childishness of motive and limpid, simple expression. "The Beach of Falesá" is, however, a story, and, though not planned in any accurate sense of the word, is very deliberately executed by Mr. Stevenson. The harangues of the noble savage are notoriously tedious, and Mr. Stevenson's narrative style appears to have become infected with that quality through continued pow-wowing with Samoan grandees. Besides, he has seemingly forgotten that his public is not exclusively engaged in the copra traffic, and can therefore not be expected to take the wild interest in the vicissitudes of that industry which doubtless perpetually agitates the Samoan breast. Whatever the reason, the narrative is inconsequent and dull, and the narrator, Mr. Wiltshire, offensively coarse. Could Burns have known Mr. Wiltshire, he would have regarded him as a concrete and direct answer to his prayer for the "giftie" to see ourselves as others see us. The copra-trader's description of himself is a most luminous and just bit of self-analysis: "I'm just a trader; I'm just a common, low, God-damned white man and British subject, the sort you would like to wipe your boots on."

Mr. Matthews's latest volume also owes much of its size to margin and blank spaces. Every excuse for illustration has been seized, but the excuses are comparatively few. It is always unpleasant to comment disparagingly on any work of a man whose work is mostly admirable, but in this volume Mr. Matthews does little more than show how neatly and aptly he can say nothing, or, at best, things little worth the saying. He dedicates, or, as he says, "inscribes," the volume to Mr. Aldrich, "from whom I learnt the trade of story-telling." By the trade he probably means the method by which the best effects in words can be produced; and the joy of conscious perfection in that may have led him to believe that a story need be nothing more than a brilliant exercise in composition. But the masses, learned and illiterate, critical and thoughtless, differ from him, and agree that a story which has no definite point, no continuous interest heightening to the finish, is not a story at all. We do not mean to imply that the stories are without incident, but that the incidents, except that of "Two Letters," are trivial and aimless. Excessive attachment to the form rarely goes along with vigorous idea and vivid imagination, and the devoted stylist frequently arrives at barren artificiality and affectation. Mr. Matthews is still far from this unhappy consummation, but "A Cameo and a Pastel" may compel his admirers to take a somewhat gloomy view of his future.

In striking contrast to these vain and dainty words are 'Stories of a Western Town.' Octave Thanet's style is not noticeably good or bad, and her claim on attention rests upon her faculty for selecting for stories subjects and characters that any one can understand and every one must feel. Her perception of the nearness of tears and laughter in life is very acute, especially when dealing with certain sensitive, reticent spirits, whose worries and cares would present only one aspect to a less keen observer. Her affair is, in fact, with the mind and heart of man, and not with his clothes or his form of speech or his way of eating his dinner. "Tommy and Thomas" is the cleverest of the stories, though it has, too, more of the conventional stuff of fiction than any other. We are all painfully familiar with the ways by which Tommy rose from no condition at all to that of first citizen of the State, and we could more readily forgive his likes and equals their political iniquities if we had any reason to suppose that they were half as good fellows at heart as was the Honorable Thomas Fitzmaurice. Mr. Frost's illustrations of the volume demand a word of praise, especially the drawing in "Tommy's funny picture."

A similar faculty for seizing and reproducing the feeling which gives importance to ordinary character and simple situations is shown in the collection of Scotch stories entitled 'The Stickit Minister.' There are twenty-five stories or sketches in the volume, most of them very short, and almost exclusively given up to the "minister." A favorite trick of politicians is to excoriate the Irish by eulogies of Scotch patience and fortitude under political inequality, if not injustice. Orators ignore, or are really ignorant of, the fact that every parish in Scotland has a perpetual outlet for spleen and discontent in the person of the "minister." The people regard their spiritual counsellor as an object of common property. They "call" him, they pay his generally paltry "stipend," and they own him body and soul. Great outward respect is shown him, and his virtues are probably appreciated in secret, but his personal liberty of thought and action is ruthlessly invaded on all sides, and the parish wit is kept alive at his expense. Any one who can read Scotch dialect will learn from Mr. Crockett just how much fun the people get out of the situation; also the various degrees of death suffered by the "minister" till he "flits."

The scene of Bret Harte's 'Sally Dows' is laid in the South during the period of reconstruction. The old legend of a Northern soldier finding the portrait of a lovely lady next the heart of his dead foe, and of his subsequent quest for the damsel, is furbished into an appearance of novelty. Excepting the remarkable dialect, which is the peculiar property of Mr. Harte's Southerners, there is nothing attributed to Miss Dows which suggests the scion of Virginian aristocracy. She is altogether of the "breezy," indeed cyclonish, Western type—a good-tempered girl with no end of go, and a sparkling central figure for an entertaining story. Another Virginia "lady" figures in "Mrs. Bunker's Conspiracy," known by the dialect. Mr. Harte's "real ladies" are always rather dreadful persons, but Mrs. Fairfax is clothed with exceptional terrors. Mrs. Bunker, who was "no lady," resembles that indescribable entity the more closely of the two. The conspiracy is very well devised, and the reasons given for its collapse are the best imaginable. The two remaining stories were probably printed to make up a volume.

'Merely Mary Ann' is the first number of a series called "The Breezy Library." Breezy is a hard-worked word, and there is no good in contending that it would be improperly used in describing anything in heaven above or on earth beneath. Therefore, let it be accepted as correctly descriptive of a gloomy, indeed sordid and morbid, tale of a gentleman who kissed a chambermaid and the consequences of the deed. In the beginning Mr. Zangwill makes several attempts at humor, but soon gives that up, doubtless feeling his sportiveness to be so very sad that the elastic "breezy" could never be strained to fit. Mr. Zangwill knows the world, and is especially familiar with its shady side and its seamy side, and with those phases which offer interesting and complex problems for elucidation. There is a very large novel-reading public, with ideas and literary taste, that he is well fitted to entertain, yet he abandons it for the public that wants 'Mary Ann.' Perhaps the publisher's bribe, the label "breezy," may have seduced him from the ways of wisdom and common sense to which he may again return.

The Finn is a fortunate person of whom little is known and nothing expected; therefore most people would be sufficiently surprised and pleased by the volume entitled 'Squire Hellman' without the translator's prefatory laudation. The title story is a good sketch of a cantankerous and rude old man, and the situation into which his evil temper forces him is broadly comic. The other sketches can hardly be regarded as fiction, for they are no more than scraps or paragraphs from life literally transcribed. The author has strong feeling and some art, but the work translated is too slight to show the length of his tether or to prove any wide-felt need for the Finn in literature.

---

*B. F. Stevens's Facsimiles of Manuscripts in European Archives relating to America, 1773–1783.* Vol. XVI., Nos. 1545 to 1600. January, 1893. London: B. F. Stevens.

With a few exceptions, particularly of Nos. 1584 and 1585, all the documents of volume xvi. are of interest and have at least a relatively important bearing upon the continuity of the narrative. Of the fifty-six numbers, eighteen are despatches, generally "most secret," from Lord Stormont to Lord Wey-

mouth. On several occasions that insistent Ambassador favors his Minister with as many as three lengthy papers dated the same day. In all he tells the same story of pushing his complaints upon Vergennes with constant vigor if not with immediate effect. The polite, able, and equally honorable French Minister of Foreign Affairs seems always to have listened with admirable fortitude to the almost daily repetition of the same reasonable objections, to have admitted with candor what he could not deny, and to have set about actively, as is seen in his frequent despatches, redressing such open violations of treaty as required instant remedy. The main contention of the English Ministry centres, with increasing directness, upon the American privateers and upon the curious condition of Franco-American commerce seemingly tolerated by the French Court. Dunkirk, Saint Malo, and Martinique are the objective points of Stormont's attack; while Hodge, Wickes, and Cunningham are the names most often in dispute, amid the endless assertions and assurances, reassertions and reassurances. Were it possible to read these papers in a wholly unrelated way and without the memory of subsequent disparagements, by their own acts, of the finely drawn arguments here urged by the English, it would be difficult indeed not to sympathize in the main with the course of their diplomatic conduct as manly and unyielding. Stormont certainly, in his letters to Weymouth, appears to better advantage than does Vergennes in the few here given from the latter to Noailles at London. In the light of history, and in the clear atmosphere which surrounds these intensely veracious documents, it becomes no longer a question of principles, but a contest of personalities.

In the first place, Stormont was not an easily deceived man; that he recognized himself at the best to be playing a close game is plain enough. In No. 1557 he writes: "I am convinced they wish to wound, but, weighing every Circumstance as well as I can, I do not think them ready for War, or willing to provoke it, and am persuaded that they will wait at least to see the Fate of this Campaign." It is difficult to understand, and the motive nowhere reveals itself in this volume, why Stormont chose to unbosom his feelings in the way he did to Maurepas. If Vergennes was not then an open friend to the "Insurgents" or to Beaumarchais and his marvellous business concern of Rodrique Hortalez et Cie., the trifling President of the Council of State certainly was. This careless and purposely forgetful Maurepas could not have deceived where the evenness of Vergennes wholly failed. It is probable that Stormont echoed in his heart the sentiment of D'Aranda, "Je cause avec M. de Maurepas, je négocie avec M. de Vergennes." The period covered by this volume ends with August 8, 1777, two months before Burgoyne's defeat and four months before the settlement for which Stormont had so steadily striven, yet which proved so contrary to his anticipations. To the requests and finally to the menaces of the English Ministry, Vergennes had constantly been acquiescing in much the same spirit in which a boy will pay out the string of a kite which is cutting his fingers off; partly because it was the best thing to do, and partly because he must.

To come back to the personal element in this affair, it is also evident that Vergennes understood Stormont. This is seen in one of his despatches (1590) to Noailles, in which he remarks: "He has no moderation except on entering my closet. It is said that he is longing to go to Scotland to build a country-house there with the fruit of his savings; this motive, as you see, well deserves that several hundreds of thousands of men should be shot or perish, and perhaps a greater number be ruined." For discerning "comments" of this sort, Stormont shows no relish; his forte, in his own estimation, was to drive things "home" to Vergennes, and on the whole he did it in a homely and direct fashion, English-wise, and after a while this persistency had its result upon Vergennes. On one occasion, however, Stormont allowed himself a rather wide departure from his diplomatic rectitude. He asserts in No. 1568 that he told Vergennes of news from America to the effect that the "Rebel Emissaries" had said to Congress in substance as follows: "We do not see the French Ministers often, but we frequently see those who are deputed by them—which comes to the same thing; they give us every assurance of friendship and express the strongest desire of our success; they say that we are able to defend ourselves, and wish not to interfere for the present, but they declare they will run every Hazard rather than suffer Great Britain to reduce us to Obedience; and in the meantime, they promise us every secret succour." On the same page he admits that he did not in the least gain this interesting news from American sources. This personally convenient use of language Stormont calls putting his remarks "into Historical Shape." Vergennes was the last person to be hoodwinked in this way, although he could not gainsay the general truths brought out by this sort of indirection. Writing later a little more nervously than usual to Weymouth, Stormont tells of the report that Franklin and Deane have been urging the acceptance of the Treaty of Alliance. The story ran that Sartine, whom Stormont would call Sartines, zealously spoke to Vergennes, who dissuaded him, and "made use of this extra[ry] expression Il n'est pas Tems encore."

But besides these two astute statesmen there was another *dramatis persona*, with whom Stormont, as is evident enough now, felt it necessary to reckon. In the second of two despatches of the same day he records himself as saying to Vergennes: "We sir shall never consider any Articles that relate to *Nations* as applicable to these Rebels any otherwise than as what is called an Argument *a fortiori*" (No. 1568); in the preceding despatch (No. 1567), however, to Weymouth he quotes himself as follows: "I have observed Sir with great Regret, that when I have made Representations to you, they have been attended to for the Moment, and fair Promises made, but some secret invisible influence, has always counteracted my Representations, and rendered your promises without effect." Behind all these things which baffled him, Stormont seems here to have reluctantly hinted at the influence of Franklin, who, almost unrecognized as yet, was silently impressing France by his generous abilities and his charm of manner, never idle, yet never seeming to act. Against this individuality mere diplomacy was growing powerless. Stormont practically admits it all when he exclaims, almost in exasperation, to Vergennes, who urges rather feebly that he has only seen Franklin twice, "Il est Tout excepté un Sot" (No. 1556).

The method of arrangement of this collection still appears to be mysterious. It certainly is not strictly chronological, for in vol. iv. the Burgoyne defeat was well over, and France had made the desired concessions, while here we are, in vol. xvi., back among the intricacies which preceded these events. If it has been the plan of the editors to group documents in such a way as to dispose of definite events or episodes, it is hard to explain the introduction into the midst of the Stormont-Vergennes papers of the two highly interesting numbers 1571 and 1573—the only two papers giving direct news from America. The first is from Brigadier-General Simon Fraser to his kinsman John Robinson, dated "Skeensborough," and relating to his attempt to keep open the line of communication between "Ticonteroga" and Crown Point, and to his investiture of the former place and of Mount Independence. His account is graphic of a sharp action at Huberton, when 2,000 Americans and 850 British met. Fraser was supported by Riedesel, who, after the engagement, started off on his own account, being Fraser's senior officer, towards Skenesborough, making, according to Fraser, "a march rather more rapid than when he moved to my support." No. 1573 is a letter to the Earl of Dartmouth from Col. Philip Skene, full of adulation over the condition of things under Burgoyne, from whose breast "flows every degree of humanity." Skene was one of the picturesque lesser figures of the royal side, and it was he who, it will be remembered, in a spirit of mock humility, signed himself on the parole of honor after Saratoga as "a poor follower of the British Army."

For good reasons the translations are literal rather than idiomatic, but occasional slips need attention, as, "the motives of which you have been informed of" (No. 1578), and "that no captive or capture be allowed to remain nor receive any help" (No. 1581). Neither the technical beauty nor the general purpose of these facsimiles would in any wise suffer if, in the case of the more faded documents, the dimmed lines and words should be lightly restored with a pen before the impression for the final work is taken. Great convenience to scholars, especially to those with senescent eyesight, would be secured by such a restoration of No. 1592, which is a conspicuous instance of the difficulties attending the reading of a too precise reproduction of an obliterated original. It is of interest to note that Nos. 1583, 1584, and 1586 are three of the twelve papers captured on the *Lexington*—three already having been issued in previous volumes.

---

*The Great Barrier Reef of Australia:* Its Products and Potentialities. By W. Saville Kent. With a chart, 48 mezzotype plates, 16 chromo plates, and figures in the text. London: W. H. Allen & Co. 1893. 4to, pp. xii, 387.

SINCE the appearance of Dana's magnificent 'Report on the Zoophytes of Wilkes's Exploring Expedition' nothing has been published containing so much new information regarding polyps as the superb volume before us. It contains a popular account of the fauna of the Great Barrier Reef by W. Saville Kent, Commissioner of Fisheries to the Government of West Australia. The report is also interesting to the naturalist from the detailed account, accompanied by colored figures and photographs, of numerous species of corals taken from life. Unfortunately, the colored sketches are not as successful as the photographs. The chromolithographic plates of the fishes, the sea-anemones, the holothurians, the alcyonarians, and echinoderms, as well as of other animals living upon the reef, can hardly be compared for accuracy or for beauty to such illustrations as accompany Dana's 'Zoophytes,' Semper's 'Holothurians of the Philippine Islands,' or some of the colored sketches of tro-

pical fishes published by the Godeffroy Museum.

Mr. Kent has, nevertheless, done more for those who have never had the good fortune to visit a reef than all the descriptions of former writers. He is not only an excellent naturalist, but also a most skilful photographer. The forty-eight photo-mezzotype plates give us pictures of the Great Barrier Reef of Australia of the greatest beauty. It is difficult to imagine that any illustrations could convey to one who has not seen a coral reef so admirable an idea of its structure and appearance. The greater number of the reefs which have been described are found in districts where the tide has but little rise and fall, so that naturalists have usually limited their accounts of a growing reef to what could be seen through a water-glass, and from a boat floating over the submerged reef. Mr. Kent worked in a region where the tide has, in some cases, a range of eighteen feet, and was thus able to photograph extensive tracts or detailed portions left bare at very low tides. In some cases his camera has even reproduced patches of corals below the surface, so that it becomes an easy matter to imagine these vast fields of corals as they would appear when covered by the rising tide. The great rise and fall of the tides, subjecting parts of the reef to extreme atmospheric influences, naturally explains the existence of extensive tracts of dead corals between the living banks and high-water mark.

As Fish Commissioner, our author naturally devotes a good part of his volume to the practical side of his subject. He has interesting chapters on the pearl and the oyster-fisheries, and deals also in a very interesting manner with the holothurian fishery, which is the most important of the Queensland marine industries, yielding about £23,000 a year. The bêche-de-mer are collected by hand at low water and are prepared entirely for the Chinese market. As their food consists mainly of foraminiferal sand, they can hardly be called succulent. As soon as collected the holothurians are boiled for a short time, split open, gutted and smoked, and are shipped when dry and crisp. To a European they are not attractive, looking like so many charred sausages; as eaten in Japan, cut up in small slices and thoroughly disguised by the sauce in which they are served, they become nearly as palatable as a piece of cartilage properly seasoned.

While we owe to Mr. Kent so valuable an account of the appearance of the Great Barrier Reef, he has added comparatively little to the description given by Jukes, between 1842 and 1846, so far as it relates to the general theory of the formation of coral reefs. The discussion by Mr. Kent of the coral-reef theory is limited to a reproduction of its essential points as given by Darwin, to a short statement of its acceptance by Dana, and further to the practical adoption of Bonney's objections to the attacks on the Darwinian reef theory by Murray and others. Even granting that subsidence has been in many districts the principal factor in the formation of coral reefs, it by no means follows that subsidence is the only explanation for the formation of coral reefs in an equal number of other districts. Many of those who oppose the Darwinian theory merely state that it is not sufficient to explain the simultaneous existence of fringing reefs, of barrier reefs, and of atolls in certain areas, and they look for simpler natural causes to explain their growth. It is no answer to their arguments to call the atolls of those regions pseudo-atolls, or to exclude them altogether, as is frequently done, from the discussion.

The bases for the growth of corals may as well have been formed by elevation as by subsidence; there is no greater improbability in the one than in the other theory. In fact, many of the observations made by Mr. Kent fully support the objections to the theory of subsidence as explaining the formation of all coral reefs; and were he more familiar with the recent literature on the subject, he would have learned that the coral-reef theory is not quite as simple as he gives his readers to understand. It is becoming more and more apparent that nothing short of a renewed study of the elevated reefs of some favorable locality, coupled with borings carried to great depths through an atoll in a region of subsidence as well as through the outer edge of a barrier reef, will once for all settle questions which are now answered by more or less lucky guesses.

Mr. Kent looks for the conditions of subsidence which have made the formation of the Great Barrier Reef possible in the former undoubted connection of Australia with Tasmania and New Guinea; and if that is not satisfactory, he is quite ready to call upon a still greater subsidence of the Australian Continent as shown by its presumed connection with New Zealand. If, as is probable, and as Mr. Kent suggests, the Great Barrier Reef existed as a narrow fringing reef in the late Tertiary, there has elapsed more than ample time also for its transformation into the Great Barrier Reef of to-day from other causes than those called upon by him. The Great Barrier Reef has entirely obliterated the Australian coast-shelf itself, and it may have found upon that all the conditions of depth necessary for the vigorous growth, both vertically and laterally, of the original insignificant fringing reef of the northeastern coast of Australia.

The Government of Queensland is to be congratulated upon having placed so competent a naturalist as Mr. Kent in charge of the exploration of the Great Barrier Reef, and also upon having published so valuable a contribution to marine zoölogy. Nothing would do more for the practical objects which the Government has in view than the establishment in Torres Strait of the Biological Station suggested by Mr. Kent. The problems which the fisherman wishes to have solved can be attacked by naturalists only when working continuously at a spot so admirably located for all marine investigations as Thursday Island, and within easy reach of the rich fauna of the Great Barrier Reef.

We may state for the benefit of instructors and others that twelve of the characteristic reef views have been enlarged for use as illustrations, and are to be obtained separately from the publishers. Lantern slides of any of the photographs can also be purchased.

---

*Japan As We Saw It.* By M. Bickersteth. With a Preface by the Bishop of Exeter. Illustrated. London: Sampson Low, Marston & Co.; New York: Charles Scribner's Sons. Pp. xvi, 354.

THIS is a pleasing account of a twenty weeks' trip over the beaten tracks of travel in Japan in the autumn of 1891. Written by an Englishwoman, the daughter of one bishop and the sister of another, it recounts, in diary fashion, but with a smooth and quiet straightforwardness of style, all the details of the journey, from the scenery of the St. Lawrence at one end to the chimes of Exeter Cathedral ringing a welcome home at the other. But the title of the volume should have been '[The Church of England Mission in] Japan As We Saw it.' This was the object of the tour, and this is the scheme of the book. Incidentally much else is noted down, but scarcely anything that is not found already in other books of travel. Of Christian missions in general there is a studious effort, once in a while unsuccessful, to see nothing and to say nothing. Naturally the writer's peculiar point of view affects all her observations. The Japanese are regularly termed "heathen"—country, people, institutions, and religion. This narrowness often results in statements deliciously ridiculous in their simple-mindedness; *e. g.*, "We could see with our own eyes what my brother called 'the Christian look' in the faces of those who had been reached by the Mission. We could note the effects of long, unbroken heathenism on the thousands who, of necessity, were left untouched." Apparently the "Nonconformist" American missions do not succeed in producing this "Christian look."

The writer's cast of mind has prevented her, moreover, from doing justice to some topics very germane to her chosen subject. For instance, there is scant mention of the work and personality of Archdeacon Shaw, who is one of the truest Christians and noblest workers in that country—probably the most popular missionary (alike with Japanese and foreigners) in Japan to-day, if we except Dr. Hepburn (now absent) of the Presbyterian Mission, and possibly Dr. Verbeck of the Dutch Reformed Mission. The author's brother, "the Bishop in Japan," would have a very different showing to make for his jurisdiction if he had not Archdeacon Shaw as his viceroy in Tokio. But, of course, his sister could not be expected to see this in a twenty weeks' tour under the guidance of "my brother, the Bishop in Japan." However, everybody who has ever lived in Japan knows what a sterling work the Archdeacon has accomplished, even if his bishop's sister does not.

*Joseph Bonaparte en Amérique*, 1815–1832. Par Georges Bertin. Accompagné d'un Portrait. Paris: Librairie de la *Nouvelle Revue*. 1893. 8vo, pp. 423.

M. BERTIN traces his subject from Joseph Bonaparte's arrival in this country, through his daily life, his various peregrinations, his establishment at Bordentown, his correspondence with relatives and friends—making a very minute study of a man and a career really of little importance or interest. Joseph Bonaparte fills a small place in the long roll of distinguished foreigners who have made this country a temporary place of refuge, but, coming as he did just on the fall of Napoleon, and representing the family by right of seniority, he naturally attracted a good deal of attention and drew around him many of his countrymen. He shared the belief, then current abroad, that the ownership of a large body of land would be serviceable; indeed, there was some rumor that he intended bringing together all the Frenchmen loyal to his famous brother, and in some way rescuing him from St. Helena and restoring him to power in Europe. At all events, he bought from Le Ray de Chaumont—an agent for Mme. de Staël, who was one of the large number of French people owning land in this country—a vast body of land on Black River in Northern New York, said to contain one hundred and fifty thousand acres. There he gave small farms to a few French settlers, mostly old soldiers in exile, but finally sold

the remainder to John Lafarge of New York for $80,000, about half its cost. Then, upon looking over the country, he bought at Bordentown, N. J., a farm of more than eighteen hundred acres, at a cost of $106,000, and spent a very large sum, said to be $150,000, in building and laying out the grounds. He brought over from Europe many valuable pictures and much fine furniture, relics of his successive thrones in Naples and Madrid, and, what with occasional visits from his daughters and a large family of French companions and dependents, he maintained a degree of state then quite unknown in this country. Finally, on the death of the Duke of Reichstadt, Napoleon's son, once King of Rome, he returned to Europe to be the head of the family, and to maintain a system of intrigue that revealed, if need were, his utter incapacity to represent the name once made famous by his younger and greater brother. He sold his old masters in London and Paris for more than $130,000—a large sum for those days, leaving only those sold in Philadelphia in 1845, which have supplied so many doubtful pictures "from the gallery of Joseph Bonaparte." He had a house full of fine furniture of the Empire, bronzes, candelabras, decorations from the Luxembourg Palace, portraits and busts of the family, pictures of Napoleon's great battles, pieces of Sèvres of great value, a gallery of paintings, and a library of 8,000 volumes, many of which were sold to meet his lavish outlay, for he lived and entertained on a generous scale. Among his visitors were Regnault de St.-Jean-d'Angely, Réal, Grouchy, Clausel, Bernard, Lakanal, Vandamme, Hulin, the Lallemands (one of these married the niece of Stephen Girard, the other planned a settlement of old French soldiers in Texas), and a host of others, French, Italian, and American, who paid their respects to him. Among his American friends were the leading men of Philadelphia, and he testified his appreciation by the characteristic bequest to Dr. Chapman, a noted wit and successful practitioner and teacher of medicine in Philadelphia, of a copy of Voltaire's works, and to others of portraits and statuettes of the great Napoleon and others of the family. To Mr. C. J. Ingersoll he gave a good deal of material relating to France for his 'History of the War of 1812,' and to Dr. Lieber he supplied details for an article in the 'Encyclopædia Americana,' while he inspired many articles in Robert Walsh's *United States Gazette* and in the *Courrier des États-Unis*. All of these and much else M. Bertin has unearthed with infinite pains, and found a suitable place for them in his book, which has a value as a picture of life in this country during the fifteen years of Joseph Bonaparte's secure and inglorious self-imposed exile.

There are full chapter summaries and an index of names.

*La Femme aux États-Unis.* By C. de Varigny. Paris: Armand Colin & Cie.

ALTHOUGH every one would admit the attractiveness and the importance of the subject of this book, no one will be likely after reading it to feel inclined to pass it on to a friend or to go back to it for a second or a third perusal. The impression it first leaves, in fact, is that it is more remarkable for its faults than for its merits. The generalizations are both tedious and flippant, forced and superficial. Cases of breach of promise are detailed in the most sensational style of French journalism; an account of the life of Jay Gould is followed by another, equally irrelevant, of the divorced American wife of Jerome Bonaparte, spending her days in Florence and her wit in railing at her countrywomen; while the American public-school system is gravely expounded from two sources of information, the College of Punahou, near Honolulu in Hawaii, and Mr. Richard Malcolm Johnston's 'Oddities of Southern Life.'

Yet, notwithstanding their various absurdities, there is reason to be found in these pages why the young American woman and her friends should pause and reflect. In them she is to be seen pretty much as she must appear to any observant foreigner who brings over with him some letters ("good" ones or otherwise), a keen eye for the superficial aspects of society, and an untarnished faith in the newspapers as true and infallible exponents of national manners and customs. That such an observer should suppose "flirtation" to be the fundamental feminine and even national institution it is here described as being, she has only to thank her own behavior in public—at watering-places, in the streets, at entertainments, and even while she is making foreign "tours." If she is supposed, when she marries on small means, to be driven to the sad alternative of life in a boarding-house or hotel, or of domestic drudgery because of the dearth of service at reasonable remuneration, the supposition comes near enough the mark to cause us to blush for its truth. That a foreigner should be able to understand either our apparently supine helplessness before the "incapable German and recalcitrant Irishwoman," or the willingness of young couples to put up with a life in which they "must already have lost, together with respect for the domestic fireside, the notion of the refinements of married life and the duties of paternity," is too much for even our aggressive self-esteem to expect.

Since they have had no share in making the laws by which they may be summoned, tried, and convicted, American women can hardly be held responsible in the same degree for the figure they cut in the divorce courts. That they appear there in numbers sufficient to justify the allotment of a goodly portion of a book about them to this phase of their collective careers, is an undeniable fact, however bewildering its bearings to a Frenchman who has the racial respect for "the family." That such an observer should feel himself confused in presence of the chaos of differing divorce laws in different States is not to be wondered at. Still less surprising is it to find him having a quiet fling at the boasted superiority of institutions under which prostitution has in such brief time reached such large proportions. He touches lightly on this theme, however, and shows himself at all points a convinced believer in the purity and native integrity of the American girl, notwithstanding the paradoxes of her conduct. Finally, in spite of M. de Varigny's elaborate admiration for the women of the United States, it is impossible to lay aside his book without being reminded afresh that they belong to a nation which, if it has fewer vices to conceal, has more social vulgarities to expose to public view, than any other civilized nation in the world.

---

*A Leap in the Dark;* or, Our New Constitution. By A. V. Dicey, Q.C., etc. London: John Murray. 1893.

IT must not be taken as any want of respect to Prof. Dicey, or any failure to appreciate his character and his writings, if we do not devote a lengthened notice to this his latest tract. It is such a purely trenchant onslaught on the Home-Rule idea and upon the Home-Rule Bill, paragraph by paragraph, that any minute review would be too polemical for our columns. Instead of 'A Leap in the Dark' it had better been styled 'To Destruction by Daylight'; for certainly if one-half of Prof. Dicey's contentions are well founded, Mr. Gladstone, Mr. Morley, Mr. Bryce, and Earl Spencer are working naught but the destruction of the British Empire. The Constitution of the United Kingdom at present, as Prof. Dicey so clearly points out, is each for all and all for each. A representative from Kerry has as much right and duty to guard and decide the interests of a Surrey hamlet concerning a new pump as has the Surrey representative to question the length to which a Kerry constable is to grow his beard. There is something sublime in the idea, but it works out to strange conclusions. For while the two or three gentlemen who know anything concerning the pump or the beard are fighting out their differences, 667 other gentlemen, the chosen of the land, are, if not away paired, kicking their heels on the terrace, or in the corridors or libraries, and will decide the matter one way or the other, not according to the merits, of which they can know nothing, but according to party ties or personal friendships. The maintenance of the system may be necessary to the greatness of Britain—Prof. Dicey thinks it is. The other English-speaking peoples over the globe work upon different lines, and may be excused from recognizing the certainty of ruin in any change. Moreover, there does appear some want of proportion about the present arrangement; for while 670 gentlemen are devoting their attention each to all and all to each within their own borders, they are leaving practically in the hands of permanent officials, and unattended to, the lives and interests of millions under their sway—of an empire such as was not dreamt of by Alexander or Augustus. As we read in this volume and pondered on the author's sinister anticipations as to the evils likely to arise under home rule, we found ourselves constantly noting on the margin, "How now?"—to what extent are not such anticipations certainties under the present system?

This book is the quintessence and boiling down of the speeches being now, day after day and week after week, delivered by Unionist orators in the House of Commons. Rather it is the stock from which the arguments and method of their speeches are derived, and in brilliancy and concentrated force the author far surpasses all but the ablest of them. What will be the outcome of the present sustained argument it is impossible to say. Never did a proposition put forward by a responsible Ministry meet with anything approaching to such vigorous and patently sincere opposition as the Home-Rule Bill. If Mr. Gladstone and his party are discredited, if the British people again determinedly set themselves to the pacification of Ireland and its amalgamation in thought and feeling with the rest of the United Kingdom on the lines of the present Constitution, it will to no inconsiderable degree be attributable to the publication of works such as Mr. Dicey's.

---

*Hypnotism, Mesmerism, and the New Witchcraft.* By Ernest Hart, M.D., etc. 12mo, pp. vi, 182. D. Appleton & Co. 1893.

THIS book is made up of rather popular papers from the *Nineteenth Century* and the *British Medical Journal*. They served a very good purpose as articles, but they have no place in book form. They aim to expose the abuses

which have arisen in many quarters about the phenomena of hypnotism. All these abuses should be exposed, although such an exposure edifies only those already convinced. What medium is ever led to confess that he is a fraud? No doubt such papers are wholesome, but a book should have a more serious purpose than that of exposing some humbug, especially when all the humbugs exposed are known to all good people already to be humbugs.

Dr. Hart's book also associates "Hypnotism and Humbug" in such a way that those not "well up" in the former might conclude that it is all humbug. This is the more to be feared since such is the opinion entertained by those who have not looked into the subject, especially medical men. Dr. Hart does not believe this—on the contrary, he recognizes the facts of hypnotism; but in our opinion he does not discriminate well even among the humbugs which he exposes. It is certainly unfair, for example, to the British Society for Psychical Research to bring it in for indiscriminate reproach along with the impostors of Luys's clinique, the clairvoyants of the shady side of Paris, and the soothsayers of the Orient. Dr. Hart certainly deserves credit for improving his time while in Paris (by official invitation to the Pasteur celebration, as we are told twice, for no adequate reason) by investigating Dr. Luys and Col. de Rochas; but it has been an open secret among competent observers for some time that these men could not stand investigation. To refute the claim that "sensibility may be transferred to inanimate objects" and that "layers of air may be sensitivized" is to advertise shams, no matter what "great institution in Paris" may harbor such charlatans. Dr. Hart fills out his book by printing twice in full a letter from Dr. Olivier which says as much—*i. e.*, "a question which I ought to say has been decided by the vast majority of the French scientific public in a sense absolutely opposed to the results proclaimed by MM. Luys and de Rochas. . . . The opinion of these two experimenters finds no support in the French scientific world" (p. 137, and again p. 182).

As far as Dr. Hart expresses opinions about hypnotism, he seems to accept the view of the Paris school without much independence. He repeats himself, for example, in two sections (pp. 69 and 153), declaring, on authority, the "therapeutic uselessness" of hypnotism; and many other instances might be cited of unsupported opinions and of citations "in the lump." But the book is not worth more space. If the reader wants a good one on the subject, let him read Möll's 'Hypnotism,' in the "Contemporary Science Series."

*At all bookstores. Mailed, postpaid, on receipt of price.*

**ROBERTS BROS., Publishers,**
BOSTON.

**G. P. Putnam's Sons,**

*NEW YORK AND LONDON.*

HAVE JUST PUBLISHED:

**The Wilderness Hunter**

With an Account of the Big Game of the United States, and its Chase with Horse, Hound, and Rifle. By THEODORE ROOSEVELT, author of "Hunting Trips of a Ranchman," "History of the Naval War of 1812," etc. With Illustrations by Remington, Frost, Sandham, Eaton, Beard, and others. 8vo, $3.50.

"For a number of years much of my life was spent either in the wilderness or on the borders of the settled country—if, indeed, settled is a term that can rightly be applied to the vast, scantily peopled regions where cattle ranching is the only regular industry. During this time I hunted much among the mountains and on the plains, both as a pastime and to procure hides, meat, and robes for use on the ranch, and it was my good luck to kill all the various kinds of large game that can properly be considered to belong to temperate North America "—*Extract from Author's Preface.*

**Pratt Portraits:**

SKETCHED IN A NEW ENGLAND SUBURB.

By ANNA FULLER Fourth edition. 16mo, cloth, $1.00; paper, 50 cents.

"One of the richest and most worthy contributions to American literature of the past decade. With a pen positively photographic, this skilful writer has limned the portraits of this New England family, Pratt by name, and so thoroughly New England by nature."—*Rochester Herald.*

*HAVE ALSO READY:*

**The Silver Situation in the United States.**

By Prof. F. W. TAUSSIG, author of "The Tariff History of the U. S." (Questions of the Day Series, No. 74.) Cloth, 8vo, 75 cents.

This monograph, which contains chapters on the history of Silver from the Bland Bill to the opening of the present year, will be found invaluable to the student and to the general reader.

**Tasks by Twilight.**

A Series of Essays By ABBOT KINNEY. 12mo, $1 00.

CHIEF CONTENTS: Education - Education of Girls—Thoughts—Diet.

"Parents and teachers, and, indeed, all who have the care and responsibility of the training of children, will find much of value in this volume. . . . The author talks plainly, but not too plainly, and he tells sober truths and gives sound, wholesome advice."—*Boston Advertiser.*

**Lorenzo De' Medici.**

An Historical Portrait. By EDITH CARPENTER 16mo, cloth, $1.00.

"It is a story which reads almost like a romance, a result largely due to the author's excellent style and her happy faculty of clothing her facts in striking language The chapters on 'Fifteenth Century Love' and 'Lorenzo and Savonarola' are especially attractive "—*Detroit Free Press.*

**Harvard Stories.**

Sketches of the Undergraduate. By W. K. POST. 12mo, $1 25.

A collection of bright stories and sketches of undergraduate life in Cambridge.

*** Notes on New Books, a quarterly bulletin, prospectus of the Knickerbocker Nuggets, Heroes, and Story of the Nations Series sent on application.*

WILLIAM S. COOPER BRASS WORKS, PHILADELPHIA.

# The Nation.

NEW YORK, THURSDAY, JULY 20, 1893.

## The Week.

SENATOR SHERMAN'S letter on the subject of the Silver Purchase Law which goes by his name, must be taken, like most of his public communications, with a grain of salt. Mr. Sherman can always be depended on to say and to do the right thing, so far as, in his judgment, political exigencies will warrant him in doing so. Mr. Sherman says in this letter that it was necessary to pass the Act of 1890 in order to defeat a free-coinage bill. In reply to the counter argument that President Harrison could have easily vetoed such a bill and would have done so, he says, "We had no right to throw the responsibility upon him." Why not? The responsibility of the President in the passing of laws is of exactly the same kind as the responsibility of Congress. If Mr. Sherman means by this high-sounding phrase that he and his friends had no right to expose Mr. Harrison to the apprehended loss of votes in the silver-producing States, that is a matter of personal or party advantage, not of constitutional or political morality, as at first blush it seems to be. There is no word so well adapted to produce confusion in public debate as the word "right." When a man says, as Mr. Sherman does, that he had "no right" to do so and so, he may mean that he had no constitutional right, or that he had no legal right, or that he had no moral right. In any case he is bound to tell what he means, because it is certain that different people will understand him in different ways. Instead of telling what kind of a right would have been infringed if Congress had put upon President Harrison a responsibility that the Constitution devolves upon him, he says in the next paragraph: "I never for a moment have regretted the passage of the Act of 1890 commonly called the Sherman Act." Even here the Senator cannot tell what caused him to prefer the Sherman Bill to the preëxisting "Bland Act"—meaning the Allison Act. The real reason was that it contained the declaratory clause about keeping the two metals at a parity. This was a good reason. It was worth all that it cost, but Mr. Sherman cannot claim the merit that he is really entitled to because he maintained that it was the law already. So instead of making a good and substantial claim, he stuffs the public with a lot of unmeaning words about the advantage of using both gold and silver as "reserves." Reserves of what? The letter is Shermanesque in a high degree. As we have said aforetime, Senator Sherman has promoted more financial heresies by his words and killed more by his acts than any other man in our history.

It may safely be said that a very critical week, as well as one of great significance, closed on Saturday in the financial markets. Especially in London it had been expected that the regular fortnightly settlement of Stock Exchange accounts would develop serious trouble. Within the fortnight had occurred the violent break in prices consequent on the India Council's move, and the feeling in London had been very gloomy. Last week was bound to bring the situation to a test. Although the local monetary situation in New York had grown a trifle easier, it was feared that a further fall in market prices would precipitate trouble here. These double expectations were reflected last week in a bold and extensive movement, on both security markets, by speculative operators for the decline. The movement was conducted with the use of every expedient known to professional wreckers of values, including the reckless circulation of false rumors and sales of enormous quantities of "short" stock; but it failed almost completely. Neither in London nor in New York did the anticipated disasters come to light. In London there were perhaps a dozen broker failures, only one of which, however, was of any consequence, while nearly all were those of small business men, not members of the Stock Exchange, and described on the London market somewhat contemptuously as "jobbers." The end of the week's experiences has, therefore, been a distinct improvement in confidence; and confidence, at the moment, is the one thing needful. The incidents of the past week showed with unusual force how closely, in these days, the world's financial markets are bound together. In Capel Court and in Wall Street the week's experiences have been identical, both as to time and to character. A difference has existed in the fact that while New York has gathered encouragement from the increasing signs of a movement of foreign gold in this direction, London has regarded with some apprehension the drain on its reserves. It is, however, hardly possible that a steady improvement in the American markets should not far more than offset in London the incident of a heavy specie export. In point of fact, the Bank of England's gold balance has for a fortnight been larger in amount than at any period in the last fifteen years.

---

Bank clearances for the first six months of the present year are published by *Bradstreet's* and the *Financial Chronicle*. The total is thirty-one thousand millions of dollars. If we double this amount for the year and add something to it for the banks whose transactions are not reported, we have clearings of $1,000 per capita per annum. This measure of business is no doubt too small for the whole country, since it takes no account of transactions outside the banks; but taking the estimate as it stands, we have this large amount of business done through banks whose book accounts cover but $72 per capita, while their actual cash holdings are but $10 per head. In other words, transactions in which payments are made by checks or other instruments of credit, amount to fifteen times more than the reported deposits of all banks, savings and trust institutions, and one hundred times more than the actual cash kept on hand. It is easy to see from these figures why distrust paralyzes trading, and why suspicion of the real value of our currency has so great an effect, since the $1,000 of bank clearings per capita is based upon the traders' confidence in the small cash balance back of it all. Clearly enough, too, it is not a large volume of currency that we need, since we should have to obtain and put in circulation an amount of money enormous and impossible, if each transaction were to be covered by actual cash instead of checks. Our supply is ample under good credit. We must have confidence in that currency if we would have it made the basis for expanding and prosperous trade. For every dollar of depreciated silver put out, we destroy hundreds of dollars in that exchange of credit by which modern business is alone possible.

---

The preliminary report of exports of breadstuffs for the fiscal year ending June 30, embracing 98 per cent. of all exports of articles named, shows the quantity of wheat sent abroad to have been the largest since 1883, with the exception of the previous year. Unfavorable comparison month by month with 1892 has led us to lose sight of the exports, which are really large, if we glance back a decade for a true comparison. The average price per bushel was the lowest. On the other hand, the quantity of wheat flour sold abroad was the largest in our history, the record showing a constantly increasing number of barrels exported year by year. In 1893 (year ending June 30), 45 per cent. of all wheat exported was in the manufactured form of flour. This large proportion shows briefly and strongly the importance of our milling industry as bearing upon our exports of wheat. There is no reason to doubt that our totals of wheat exported would be much less were it not for the energy and business sagacity displayed by the flour-millers, who have doubled their foreign trade in ten years. Being of necessity unprotected by tariff duties, the growth and success of flour-manufacturing and the steady increase in foreign sales form a most encouraging sign of what American industries in other lines will be able to accomplish when the removal of absurd

tariff restrictions shall enable them really to compete for the trade of the world.

---

The country is to be congratulated upon its good fortune in securing Mr. Morton as Secretary of Agriculture. His Department is, to be sure, a fifth wheel to our car of State, but he is managing it with such vigor and upon such sound principles as to do him the greatest credit. We have had abundant promises of economy and reform, but the expenditures of the Government do not so far show much sign of decreasing. Secretary Morton, however, no sooner took office than he showed that he had a firm grasp of the fundamental principle of governmental reform, by putting his department on a sound business basis. Employees were discharged in large numbers, not in order to make places for the nominees of politicians, but because they were incompetent or useless. Their places have not been filled, because there was no need of filling them, and the saving in salaries in the Bureau of Animal Industry alone is reported to be at the rate of more than $200,000 yearly. In other directions Secretary Morton has instituted similar reforms, and it seems probable that his department will furnish a unique example of that wise and economical administration of the affairs of our people which they are familiar with only in the platforms of the political parties.

---

Secretary Morton's latest move is to suggest to the meat-packers that the principle that their products should be inspected and marked at the public expense is not unquestionable. At present the law provides that the Government shall inspect meats intended for export, but Secretary Morton observes that he is not required to incur any unnecessary expense in doing this. It seems that during the two years that the law has been in operation we have sold to countries demanding a certificate of inspection meat to the value of $3,547,000, while the Government has paid in salaries and expenses incurred in this work a sum equal to 8 per cent. of this amount. At the same time we have sold to countries that do not require this inspection meats to the value of more than $34,000,000, without any cost to the general public. As Secretary Morton says, if the law is supposed to create a demand for our meats abroad, it is evidently a failure. The situation is briefly this. Certain foreign Powers, notably France and Germany, desiring to propitiate the protectionist element, took advantage of some cases of trichinosis attributed to eating the flesh of the American hog, and threatened to prohibit its importation. Some of our diplomatists succeeded in effecting an arrangement by which the import was to be allowed if our Government had the flesh inspected and marked. Thus the astute foreigners practically imposed a duty of 8 per cent., under the guise of inspection, upon imports of meat from this country. The astute meat-packers transferred this duty to the American Government, and the guileless American people paid the duty, and proceeded to glorify our diplomacy and to listen complacently to effusive representations that "the foreigner pays the tax." The whole business has been a monstrous humbug from the beginning, and Mr. Morton deserves a vote of thanks for showing it up. France and Germany will certainly insist upon taxing imports from this country so long as our Government will agree to pay the tax; and in any event the meat packers of this country have a practical monopoly of a highly lucrative business in which they have acquired riches sufficient to enable them to fight their own battles.

---

*Good Government*, the organ of the National Civil-Service-Reform Association, in its issue of July 15, contains interesting statements of the practical treatment of the civil service by the present Administration. There are a good many small things which are not encouraging. Among them may be noted the "clean sweep" in the Post-office at Bloomington, Ill., where the brother of the Vice-President has been made Assistant Postmaster, and where the new carriers are so ignorant of their duties that they have had to hire their predecessors with a bonus of $35 down and $5 a day to give them the necessary instruction. The stories of other post-offices, like that at Terre Haute, are also told. The editor finds, however, that even in the vexatious field of the Post-office Department there has been under this Administration substantial progress. During the first four months of the present Administration there were 3,226 removals of fourth-class postmasters; during the corresponding period of 1889 these removals numbered 7,460. Of this advance the editor says:

"It is more fully appreciated by one watching events on the spot than by an observer at any distance. The charges filed now in order to procure the removal of a fourth-class postmaster before he has served four years are often pitifully trivial, but at least they are charges. When Mr. Stevenson or Mr. Clarkson was wielding the axe, no charges were required."

Another article discusses the changes that have been made in regard to promotions in the different departments by Secretaries Carlisle and Smith and Postmaster-General Bissell. It says that in both the Interior and Post-office Departments, while the rules regulating promotions made by the last Administration have not been formally revoked, "they have been contemptuously ignored when the head of either department has had any promoting to do." Of the postal promotions it is stated that they appear to have been meritorious, while those of the Interior Department have been of a mixed character.

The printed arguments of the United States—each one of them signed by the author—presented to the Tribunal at Paris are striking in many ways. The seized vessels were condemned by the judicial tribunals of Alaska as forfeited to the United States, upon the contention that the United States had exclusive municipal jurisdiction in all the waters of Bering Sea east of the treaty meridian of longitude; but each and all of the printed arguments put the right of the United States to prevent pursuit and destruction on the high seas of the Pribyloff seal herd, upon the contention that the United States have a *property* in the herd which in public law and in self-defence the President can vindicate by force anywhere and everywhere in the open ocean. A distinction is drawn between exclusive municipal, legislative jurisdiction, on which the vessels were condemned, and executive right of self-defence on the high seas. In the last half of the volume is a very calm statement by Judge Blodgett of the indefensible character of the British claims for indemnity for injuries inflicted by the seizures, wherein he demonstrates that the real owners of the greater part of the seized vessels were not Canadians, but Americans. He makes it clear, on the evidence before the Tribunal, that even the notorious schooner *Sayward*, which was before the Supreme Court, was, with all her outfit and supplies, in fact, "owned by one Joseph Boscowitz, a citizen of the United States"; that Warren, the nominal owner, had no capital; that the money representing his share in the schooner was lent to him by Boscowitz and secured by a mortgage on the schooner; that in 1885 Warren became insolvent, and one Cooper, a brother-in-law of Warren, and a British subject residing in San Francisco, bid in the schooner on a sale for one dollar, and then mortgaged her to Boscowitz, all of which was done to get a British registry. Judge Blodgett shows eighteen vessels seized as Canadian, for which Great Britain claims damages, but ten of which with the supplies on board were owned by Americans.

---

The *Hawaiian Gazette* says it is a great mistake to suppose that "the Provisional Government is merely temporary, and must make way for some form of irresponsible native government in case annexation is not immediately consummated." The truth is, it goes on, that the Provisional Government was "established to secure some form of stable government for Hawaii, and it will be maintained until that end is reached." Then the establishers lied like troopers. In their manifesto dethroning the Queen and seizing upon the Government, they said: "Provisional government for the control and management of public affairs and the protection of public peace is hereby established, *to exist until* terms of union with the United States of America have been negotiated and agreed

upon." As Judge Cooley has remarked, this was the most extraordinary provisional government the world ever saw, formed on its own showing expressly and solely to give the country away. That was audacious enough, but it would be still more outrageous and unheard of if the men who had seized the Government in order to turn it over to a foreign Power should now, after failing to dispose of the goods, go on to claim the plunder as their lawful property in perpetuity.

---

The Sunday-closing question has at last been settled by the World's Fair directors so that it will stay settled. The Fair will be closed on Sunday because it does not pay to keep it open. The visitors who are not residents of Chicago refrain from Sunday attendance partly on religious grounds, and partly because they are so tired out by their week's work that they must have a day of rest. Some are deterred undoubtedly by the fact that the Fair is not fully open on Sunday anyway. The local population who would go to the Fair on Sunday because they cannot spare the time any other day is not sufficiently numerous to warrant the expense of Sunday opening. As this has been proved by experiment, there is no more room for dispute. As the Sunday closing now rests upon rational grounds, the dispute will cease.

---

The London *Spectator*, commenting on the loss of the *Victoria*, raises some very serious questions as to the management of the new iron-clad vessels of the English Navy. The loss of the *Captain* was admittedly due to want of stability, but the *Captain* was an experiment, and no more vessels have been constructed upon that model. Yet within a few years there has been a series of disasters to the English Navy "sufficient to cripple the fighting strength of a third-class Power, and to deprive England during the present year of the services of a formidable fleet." The *Sultan* ran upon the rocks three years ago, and it will be a long time yet before she leaves the dry-dock at Portsmouth. She was manœuvring in a narrow channel at torpedo practice. Her captain was reprimanded. The *Howe* was got off the rocks only by blasting, and the lower part of her hull must be rebuilt; but it was decided that no one was to blame for this, as the rocks upon which she ran were not marked upon the ancient chart furnished by the Admiralty. The *Warspite*, which cost £500,000, although only a cruiser, was badly damaged by running on the rocks near Esquimault, and the *Undaunted*, a first-class cruiser, has also been upon the rocks. The *Naiad* and the *Apollo*, new cruisers, ran ashore during the last manœuvres and were much damaged. The *Victoria* was saved for her final calamity by a change of wind, which raised the waters of the Mediterranean where she was recently stranded and floated her off without injury. Her captain was reprimanded for his mismanagement. Thus during the last twelve months three ironclads, one belted cruiser, and three other cruisers have been unfitted for duty. It is scarcely credible that so many injuries to vessels should have taken place without incompetent management. The art of navigating these strange engines of modern naval warfare cannot yet be fully understood, or the executive officers of the British Navy cannot have mastered it. If they continue to lose ships as they have done in the past, it would only be necessary for a hostile squadron to keep to its harbor, and wait for the British vessels to destroy themselves by running into one another or grounding upon the rocks.

---

What the policy of "revenge" is costing the French people in a financial way appears from the report upon the budget of 1894 just submitted to the Chamber. No one will maintain that after 1870 France was in the slightest danger from any quarter. She had suffered all that it was possible for her to suffer, and if she had not maintained a soldier in arms, she would have been entirely free from all risk of attack. She would, indeed, have been freer than she has been with all her preparations, for these very preparations at one time nearly brought on another attack from Germany. Her armament, therefore, has had but one object—the recovery of the lost provinces. But not the slightest progress has yet been made towards this recovery, for Germany watches every French move and prepares herself accordingly. For this miserable result the appropriations for military and naval purposes, including the colonial service, now amount to nearly a thousand million francs per annum, although under Napoleon III. they scarcely exceeded one-half of that sum. In this way the total cost of the war of 1870 is mounting up until it is now computed at 11,500,000,000 francs. The total debt incurred since 1869 appears to be over 17,000,000,000 francs, and the charge for interest has risen from about 600,000,000 in that year to nearly 1,300,000,000 in this. The budget submitted for 1894 calls for the expenditure of the appalling sum of 3,438,000,000 francs, and a deficit of 150,000,000 francs is anticipated, which in view of the bad harvests we may consider an underestimate.

---

The revolution in the Brazilian State of Rio Grande do Sul nominally turns on a disputed election of the Governor. In November, 1891, a popular agitation began against Gov. Castilhos, which soon grew into something like a revolution, and at that time the Federal troops were called upon to preserve order. Then an agreement was entered into by both sides to settle all their differences at the ballot-box in the approaching State election, the Federal Government especially binding itself to abstain from all interference. This last promise was disgracefully broken, and the national troops were kept in the State to see that Castilhos was reëlected. That official, in fact, was declared elected by the military commander of the district in June, 1892, and was forcibly seated. Since then he has been able to keep in office only by the aid of Federal soldiers, and the dissatisfaction with this military rule has become intense, not only in the State affected, but throughout the whole country. So strong did the feeling become that two members of the Cabinet, the Minister of Marine and the Minister of Finance, threw up their portfolios on April 27 last, and published their letters of resignation, in which they severely scored President Peixoto for his conduct in overriding the will of a sovereign State. About that time Admiral Wandenkolk, a member of the Cabinet under Fonseca and then a Senator, set out from Rio for the scene of the insurrection, leaving behind him a letter to the newspapers, in which he said: "I now break for a moment the silence which I have imposed upon myself, simply to say to Marshal Peixoto, 'General, we will one day meet each other.'"

---

It seems to be settled that two new saints are soon to be added to the calendar. The Pope is reported to have said that the canonization of Columbus would not be much longer delayed, and such earnest efforts have been making at Rome to canonize Joan of Arc that it is thought they cannot fail of being successful. Columbus's fitness for sainthood has long been a moot point with Catholic historians, but few would venture to oppose it in this quatercentenary year, when, as the saying is, it would be a peculiarly graceful thing to make a saint of the man whom all the world is delighting to honor. It might even reconcile the Duke of Veragua to that enforced poverty which so many of his "good friends" in this country are now invited to view with consternation and to help to abolish, to be known as the lineal descendant of a saint. In connection with the proposal to canonize Joan of Arc, fear was expressed by a considerate French prelate that such an act might wound English susceptibilities. Thereupon the Catholic hierarchy of Great Britain was consulted on this point, and reported that Joan as a saint would be "well received" in their country. In fact, she already has an English cult, many English tourists leaving marks of their regard at her native village, Domremy, and a group of English ladies having lately left a wreath at the foot of her statue in Rouen, with the inscription: "From Englishwomen to the great Frenchwoman." Even if there were any English objection to her canonization, it would doubtless be swept away by observing that it is written in the book of the prophet Shakspere:

> "No longer on Saint Denis will we cry,
> But Joan la Pucelle shall be France's saint."

*POPULAR FINANCIAL IDEAS.*

PROF. SIMON NEWCOMB has an article on "The Problem of Economic Education" in the last *Quarterly Journal of Economics*, in which he makes some shrewd and weighty remarks on the great gulf that is fixed between the conclusions of expert economists and what he calls the "popular political economy." By this phrase he means a body of old ideas, of the folk-lore order, about production and trade and finance, which have been handed down in almost unimpaired vigor from the Middle Ages or earlier to our own day, and subsist in spite of repeated demonstration of their falsity and harmfulness. In almost every other province of human thought and action, as Prof. Newcomb points out, the views of experts have finally come to prevail with the masses; but in the economical field the work and teaching of experts have made no permanent impression, so that "our public thought, our legislation, and even our popular economic nomenclature are what they would have been if Smith, Ricardo, and Mill had never lived, and if such a term as political economy had never been known."

Prof. Newcomb proceeds to prove this, as regards the subject of international trade, with disheartening clearness and force. What he has to say of the nature and danger of popular conceptions in that department might have been applied with equal cogency to those popular ideas of finance which have brought us into the present situation. The country is now in a financial slough on account of its jaunty disregard of the advice and warnings of financial experts for the past fifteen years. Because the question of money and the standard of value had come to be a political one, the idea arose that it could be settled by majorities, and that the "horse-sense" (or mule-sense, as we prefer to call it) of men who had never given ten minutes of steady thought to the monetary question was as good a guide as the opinion of one who had made it a life-long study.

Popular ideas of finance purport to be very clear and simple. They profess to go no further than plain, ordinary intelligence will carry a man, and boast themselves to be very different from the abstract and difficult conceptions of professional economists. Now just here, as Prof. Newcomb points out, is a great error, the truth being that the "use of abstract reasoning, to the exclusion of a due consideration of facts, is a vice in which the public far outdo any school of economists that ever existed." Take, for example, the popular axiom that money ought to be cheap and plenty. That seems as clear as daylight compared with the hard sayings of the economists about standards of value, and parity of exchange, and Gresham's law, and as definite a principle in as close contact with human needs as one could wish for. Yet it is really as abstract a proposition as was ever framed. It appears simple only because the words are familiar, but the idea underlying them is as remote from the facts, and as greatly ignores all experience, as any verbal juggle ever invented by the schoolmen of the Middle Ages. Translate the abstract principle into concrete facts, and your theory of cheap and plentiful money becomes the reality of lowered wages, impaired savings, general distrust, and final panic.

We see these results now in the process of realization, but they were just as clear and inevitable to the trained financier when the first steps towards a depreciated currency were taken as they are to day. No finer vindication of the scientific principles of finance was ever seen than the fulfilment in the last year of the predictions confidently made by professional economists from the very beginning of the silver craze. Why was no heed given these prophecies? Not simply because of popular ignorance. As Prof. Newcomb remarks, the great body of educated people who stand midway between the expert economists and the masses are the ones who are mainly responsible for the spread of popular economic error. They "are almost at one with the public at large in unwittingly accepting the doctrines of the popular political economy." No one who recalls the history of the past two decades can doubt that this has been true in our financial blundering at least. Think of the powerful newspapers, owned and edited by educated men, which caught up the popular cries, scan the list of college men who have repeatedly voted for free coinage in House and Senate, and it will be hard to deny that Prof. Newcomb is right when he says:

> "The question is not between intelligence on the one side and ignorance on the other, but between the handful of men who have made a special study of economics and the intelligence of the country at large. When that intelligence is won over to the side of the economists, we may expect with entire confidence that the ideas of the masses will soon follow."

It is the most encouraging feature of the situation that, on the silver question, the intelligence of the country has now been won over, and, not only that, but has become aroused and insistent in the cause of sound money, and there are gratifying signs that the masses are following after. Luckily, one idea has become fixed in the popular theory of money, and that is that one dollar must be as good as another at all times and places. This is one great achievement of our national banking system, which has made it for ever impossible to go back to the varying and uncertain currency before the war, and has done a great deal to give us, what England has had for eighty years, a popular idea of the necessity of a single and stable standard of value. It is this notion of the common people which is now working here and there positive discrimination against the silver dollar. The report has gone abroad that that coin is really worth only fifty cents, and we are continually hearing of cases where simple minded people are refusing to take it for more. This is a popular error, but it is one on the right side, and will do to set off against the many on the wrong side. The vital thing is that the masses have been stirred up to scrutinize the various kinds of currency, and to express their preference for the very best. All that is necessary for those who want to educate the people into sound conceptions on the money question, is to seize upon that fixed idea and keep it alert and in action until our currency shall, in fact, be only the very best. There will be no difficulty in getting all the votes needed for sound money when the voters are made to understand their immense personal interest in having it.

*LEGISLATION AGAINST THE RICH.*

THERE seems no probability that the country will derive any material gain from our experiment in maintaining the price of silver; but if only a few of the lessons that can be drawn from this experiment are learned, we may find it not unprofitable. Conspicuous among these is the lesson that legislation purporting to be in the interest of the poor as a class and against the rich as a class, while it may hurt the latter somewhat, is almost always especially disastrous to the former. Furthermore, while such legislation is injurious to some of the rich, it may be extremely advantageous to others, although it seldom benefits any of the poor.

A classical example of legislation of this kind is afforded by the usury laws. The theory of these laws is always that the money lender is hard-hearted and grasping; that he watches for the opportunity of driving hard bargains, and is never so happy as when he is taking advantage of the distress of his neighbors. On the other hand, the borrower is conceived as a simple-hearted, virtuous, deserving man who is the victim of unfortunate accidents. Assuming these conceptions to be correct, it seems absurd upon the face of it to undertake legislative interference. Interest beyond the normal rate is simply an extra charge for increased risk of loss. If the money-lender thinks that it would not pay him to lend to a borrower of doubtful solvency at 5 per cent., although he would take the chances at 10, what is going to happen if the law steps in and makes his contract for more than 5 per cent. void? Either the money will not be lent or the rate will be raised beyond 10 per cent., so as to cover the additional risk arising from the violation of the law. In either case it is evident that the poor man is worse off for the meddling of Government, while the rich man may be even better off. It may be asserted without hesitation that the usurer who lets people of doubtful credit have his money at the same rate as people of good credit, merely because of statutory obligation, will not

continue in business very long. If there are such usurers, they are evidently kind-hearted men, who will be ruined by their beneficence. The really wicked usurers at whom the statute is directed will thus be those who will chiefly profit by it.

Whether these conceptions were ever valid or not we need not inquire, for it is certain that they are nowadays simply grotesque. The money-lender, as an individual, is often known to his countrymen to be an extremely benevolent person. So far as morality in general is concerned, we have never been able to satisfy ourselves that the possession of money had much to do with it, since riches and poverty both have their attendant temptations to evil, and inducements to righteousness. But so far as benevolence is concerned, no man in his senses, except a Congressman or a demagogue, will deny that rich men in this country are astonishingly benevolent. They have covered the land with the evidences of their generosity to the public, and every one who has had any occasion to observe the private affairs of rich people is aware that their liberality to their poor kinsmen, and to the poor in general, is a serious drain upon their income. On the other hand, the poor man who is anxious to borrow because he is in straits, may or may not be deserving and honest. The spectacle of a poor man who is both honest and capable allowed by his well-to-do neighbors to be ruined through misfortune—"the righteous forsaken and his seed begging bread"—is not a common one in any part of this country with which we are acquainted. But it is perhaps nearly as common as that of the usurer engaged in sucking the blood of his victims.

As a matter of fact, however, the individual money-lender is nowadays relatively insignificant. The great lenders are corporations—savings banks, trust companies, insurance companies, banks, etc. Hence there is always an intermediary in the process, and this intermediary can never long carry on the practice of making loans with the expectation of foreclosing his liens and taking the property. Some of our great life-insurance companies have, it is true, made a good deal of money by the rise in the value of real estate which they had to take most reluctantly, but it was a "close shave" with them, and there was a time when they almost sank under their load. They had to assume this load, however, not because of their foresight, but because of their lack of it. They thought their debtors were solvent and their land good security, but they were mistaken in both respects. No doubt some of the investment companies operating in newly settled regions have charged extremely high rates for their loans. But it has frequently proved to be the case that these rates have been too low rather than too high, for the whole investment has turned out a loss. Again, it is to be remembered that until recently it was so common as to be almost the rule that a farmer taking up a quarter-section could pay its price out of the proceeds of the crop of the first year or two. If such abnormal profits are not immoral, there seems nothing very wicked in lending at high interest.

In short, when a man's business is lending other people's money, he cannot prosper long unless he learns to turn away from the seductions of high interest and to fix his mind upon the security. When a loan is offered, that is the first question to be settled, and if that is settled satisfactorily he will then get as high a rate as he can. But legislation in favor of cheap money as a boon to the poor man and a rebuke to the rich puts all these money-lenders on their guard. The "poor man" who clamors for such legislation may get it, but he will get no one to lend him money, be it cheap or dear; and even the honest poor man has a hard time of it. But the rich man who has money to lend, although he has to scrutinize his security very closely, finds much consolation in the rate of interest which the situation enables him to obtain. What has been the effect upon the banks of the hostility of the People's party and of the silver folly? Many of the poor ones have failed, thus losing the money of their depositors, who are not of the richest class. But the rich ones have, so to speak, coined money. As they did not bring on the trouble, and would gladly have been relieved from an unusual strain, they cannot be blamed for this. Whatever blame attaches to it belongs to the demagogues who insisted upon legislating for cheap money with the result of making it dear.

## *KNOWLEDGE ON SIGHT.*

THE French have long been famous for their quickness in seeing and their logic in applying great principles, and hence it is no surprise to find a Frenchman grasping and extending a principle which has been thought peculiarly an American possession. We refer to the great discovery made by pictorial journalists, that a picture is better than words to describe an event or convey a moral, that "cuts" will do what "text" cannot—whether it be a question of portraying a civil war in Samoa, or winning contributions for the victims of a calamity or votes for a great political party. It is in pursuance of this discovery that the conductors of our great dailies have taken the position that whoever will may write the editorials and print the news, if they may be allowed to educate the American people by newspaper pictures.

Now see how much better they do these things in France, as shown by the principles and practice of M. Grand-Carteret. His superiority over our newspaper practitioners is revealed, in the first place, by his profounder grasp of the truth which underlies the whole business. We have often tried to extract a coherent theory of the picturesque newspaper from the minds that are in control of it, but have never been able to get anything that was satisfactory. Some of the blunter editorial intellects have confessed that there was no rational principle in the matter whatever, and that it was all a simple question of "giving the public what it wants." Others, less frank and also less clear, have vaguely talked about "resting the eye," the "interdependence of the senses," the satisfaction of seeing a portrait of the man you are reading about, even though it turns out to be the portrait of somebody else. This fumbling after a consistent theory seems feeble and foolish enough beside the Frenchman's lucid exposition of the true principle. He goes to the bottom of things at one stroke by laying down the broad proposition, "People do not read any more; they only look."

Obviously this accounts for everything, and our puzzled journalists, who have been acting all this while on a great sociological truth without knowing it, ought to be devoutly thankful to M. Grand-Carteret for giving the only rational explanation of their conduct. But in strict logic, they ought also to be prepared to go with him in his thorough application of the principle, and do, what we have always maintained they would be, in the end, bound to do on their own principles, and that is to abolish "text" altogether and rely exclusively upon "cuts." With the basic truth once settled, that we must give the people pictures because they do not read any more, it is the merest paltering to stop short of the logical inference that it is a sheer waste of good type to put anything in the papers except pictures. The Frenchman has too logical a head for any such miserable truckling to antiquated notions as even our most picturesque editors are guilty of in still going through the motions of printing matter ostensibly to be read. Why print reading-matter for a non-reading public? asks M. Grand-Carteret; and really we do not see that there is any answer to that question.

He is truly a terrible fellow for logic, and does not at all limit the application of his principle to newspapers. They are but a part of the vast machinery of modern education, but the principle that applies there applies everywhere. "People do not read any more; they only look." Then what is the use of writing histories? "No use whatever," replies M. Grand-Carteret, with admirable consistency; "if you wish to teach people history, show them some pictures." With a faith in his public as sublime as his consistency, he proposes to issue a series of historical text-books—picture-books, we mean—based upon the supposition that they are to be looked at, not read. He forcibly argues that precisely that is what is done with histories printed on the old plan, and pertinently asks if those who come to scoff at history in uninteresting type may not remain to pray over history tricked out with all the charms of the illustrator's art.

So far, we confess, we have no fault

to find with M. Grand Carteret, and rather feel much in his debt for having given so convincing an account of the real origin of illustrated daily journalism. But we cannot so heartily go with him when he treats his theory that people do not read any more, and can have only a pictorial education, not only as a fact, but as a desirable fact. He seems to regard the growing aversion to reading, and the increasing fondness for labor-saving and thought-saving "graphic representation," as a part of the progress of civilization. To us, on the contrary, it has always appeared as a distinct reversion to barbarism, being nothing more nor less than a recurrence to the picture-writing and sign-language of savages. The step from such primitive modes of conveying thought to the more complicated but infinitely more rapid and accurate methods of spoken and written language, most sociologists have regarded as a mighty advance. Modern man can get along with the old ways, no doubt, and they might not be immediately destructive of civilization. We have read of an artist travelling in Sweden, ignorant of the language of the country, who was able to make his wants tolerably well known by the aid of his clever pencil—drawing a picture of himself getting out of bed when the sun was just on the horizon, for example, as a way of telling his hotel "boots" at what hour he wished to be called in the morning. But that seems to us civilization under difficulties, not its supreme and happy development.

It is argued in favor of teaching history by pictures that a vivid impression is best secured in that way. But the great desideratum is accuracy and fulness, not vividness, of impression. It is one thing to have such a work as Green's illustrated history of England, where faithful representations of the dress and furniture and architecture and ceremonies of the different periods do indeed help to complete the knowledge gained from patient study of the text; but what could be more shallow, what more misleading, than to give the idea that an acquaintance with English history could be had by looking at even the most admirable illustrations? And suppose the labels get disarranged, as so often happens with the daily illustrated press. What advantage is there in deriving from a picture a "vivid impression" of the seven bishops being rowed to the Tower, if it turns out that it is only a crippled Oxford crew that you have been looking at? Is it maintained that pictures will remain in the memory when words are forgotten? But there are other ways of cultivating the memory. There is the old way implied in the story about himself told by Benvenuto Cellini, that when he once saw a salamander crawl out of the fire, his grandfather immediately gave him a sound beating to make sure that he should never forget such an extraordinary occurrence. It was long a firm belief that a good whipping was an excellent mordant for the memory, and, for our part, we should be entirely willing to have the pictorial editors adopt that method of making the impressions derived from their illustrations not only "vivid" but lasting. They ought to offer a stout birch rod, instead of a chromo, with each issue, and in that way agreeably vary the torture they inflict.

## AUSTRALIAN BANKS.

SYDNEY, June 12, 1893.

BETWEEN the 5th of April and the 17th of May, there occurred in Australia a series of bank suspensions, involving sums of money of enormous magnitude considering that the total population of the Colonies is but three and one-half millions. On April 1, besides numerous smaller financial institutions, there were in operation eleven important banks of issue, having total assets of about $750,000,000, and liabilities to depositors of about $600,000,000. On the 18th of May only three remained open, their total assets being about $325,000,000, and deposits $250,000,000. It would seem at first that nothing short of a revolution could have caused such a collapse. As the suspensions rapidly followed each other, panic prevailed, and the Governments of the different colonies considered themselves called on to interfere, their first rash step being to proclaim in the colony of Victoria, which had suffered most, a five days' bank holiday. Government interference in such matters is seldom wise; but fortunately, in this case, the banks were wiser than their rulers, and the bold action of the two great banks, the Australasia and the Union, in disregarding the Government proclamation, and carrying on their regular business, so far as they legally could, established public confidence in their powers to meet any demands, and gave time for the frenzy to calm down.

One of the facts most strikingly brought into prominence by these events is the immense size and power of the three banks that remain. The Bank of New South Wales has a paid-up capital of $6,250,000, reserve fund $5,000,000, total assets $125,000,000, and deposits of $100,000,000. Of the deposits $11,000,000 is money loaned by English depositors, and $89,000,000 is borrowed in the colonies. Next to this in size come the Australasia and the Union, with figures about 20 per cent. less, except paid-up capital, which is larger, being $8,000,000 and $7,500,000, respectively. Of the banks that have suspended, two had assets of $70,000,000 each, three of over $50,000,000, and three of over $40,000,000; the proportion of British to colonial money on deposit varying from 3 to 60 per cent. Each had a paid-up capital of over $3,000,000, and none had been established less than forty years. Institutions of such magnitude must command respect in any portion of the financial world, and it seems probable, even on slight consideration, that it must be some defect in principle rather than in detail that has caused their suspension.

Banking in Australia differs somewhat from the systems in other countries. There are no private bankers or national banks; all foreign exchange, letters of credit, and Government business being arranged by the ordinary banks. Their business has been very profitable, one institution having for seventeen years paid dividends of 25 per cent. per annum, and accumulated reserve funds exceeding its paid-up capital by more than 50 per cent., its $100 shares standing at $600 on the Stock Exchange. The funds in the hands of the banks were in some cases twenty times as great as their own capital, these funds being placed with them by the public, repayable in from one to three years, and at rates of interest of from 3½ to 4½ per cent. per annum. In every case, more than the paid-up capital, reserve funds, and credit balances of current accounts, on which no interest is allowed, is tied up in the coin and bullion reserves and premises occupied. Hence, all profit for the shareholders and the interest due on the deposits must be earned by the use of the deposits. On an average, the banks probably had to pay 4 per cent. for money secured to them for two years, and this money they could use at 7 to 8 per cent. in regular banking business. A very large proportion of the business firms in Australia borrow from their banks on daily balances, paying a minimum of 8 per cent. per annum, the American custom of discounting notes for fixed amounts for a definite time being unknown. Three-quarters at least of the local transactions are settled by promissory notes at from three to four months, nine-tenths of which are discounted by the holders, who pay at the rate of 7 to 8 per cent. per annum for the accommodation.

But it is quite clear that the enormous sums described could not all be used in this way, and as labor troubles rendered capitalists less ready to use their money in manufacturing, and a general depression restricted mercantile business, more and more money was offered to the banks on fixed deposit, the owners preferring to accept a lower rate of interest and avoid the trouble and difficulty of investing for themselves, and to secure, as they thought, absolute safety. Hence, for years, all the banks had found their deposits steadily increasing in amount, and continually renewed as they fell due, and gradually they began to look upon these deposits almost as capital, and to think less seriously of the prospect of being called on to repay them. Hence, also, they began to use these funds in ways approaching the nature of fixed investments more nearly than has been found to be safe. Money advanced on buildings and land cannot be called in as needed, and though no doubt the investments were generally profitable, they were clearly suitable only for the use of funds over which the investors had absolute control. Even of the suspended banks all held from 20 to 30 per cent. of their liabilities to the public in coin and liquid securities, but when these reserves were once seriously encroached on, it proved impossible to realize on the investments rapidly enough to meet liabilities as they accrued from depositors calling for their money as due. Finding, therefore, that sooner or later their liquid assets must be exhausted, a decision was reached while good coin balances remained to close the doors and try to make terms with the creditors.

Just what caused the trouble to come at this particular moment it is hard to see; but one bank, finding itself hard pressed, decided to suspend, even though offered assistance by the others, and this suspension caused the runs on the others which have had such disastrous results. In a way, therefore, these suspensions are hardly actual failures, for they are modified a good deal by the fact that all show very much over the twenty shillings in the pound. The cause is an inability to meet an immediate liability with a deferred asset. The difficulty having arrived, a decidedly new method of solving it was devised, and schemes of reconstruction, so called, have already been put forward by all the suspended institutions, and good progress made with them. At first it was

proposed that depositors should take preferred shares for a portion of their deposits. This has now been abandoned, and practically simply an extension of time of from five to seven years has been granted to the banks in which to pay off their liabilities, calls being made on the shareholders for a portion of the liability on the shares, the money thus paid to be an additional security to the depositors. Difficulties have arisen in some cases from the difference between English and colonial laws; under the latter an arrangement acceded to by three-quarters of the creditors in number and amount and sanctioned by the Court is final. In England this is not the case, and already the English depositors are taking steps to test the validity of the compromises. Still it is perfectly clear that nothing better can now be done than to grant time, and the position must be faced by all.

What it means to the community at large is hardly yet realized; but so much wealth cannot be tied up for such long periods without involving an immense change in the whole scale of social life. A bitter time is before the Australians, and the strictest economy, public and private, will be necessary for some years to come. Yet, while the resources of the country —wool, wheat, and gold—remain as sound as ever, and continually increasing in value, and when Australia, as New Zealand already has done, proves its ability to do without assistance, assistance may again be safely looked for from Great Britain, where capital accumulates so much more rapidly than use can be found for it within its own confines. In future, too, it is safe to assume that the borrower will more carefully consider what he borrows, and not look on caution as the duty of the lender only; for as well as to the lavish borrowing of the past, some blame for the collapse that has occurred may fairly be attached to careless and foolish lending.

J. E. Bullard.

## PASQUIER'S NAPOLEONIC MEMOIRS.—II.

Paris, July 7, 1893.

The death of the Duc d'Enghien changed the disposition of many Royalists towards Bonaparte. Before this sad event, Pasquier had taken the resolution to accept office; he changed his mind. Chateaubriand resigned his diplomatic post. In Europe the effect of the execution of the Duke was even greater than in France; the law of nations had been manifestly violated. Bonaparte went his way, without minding the murmurs of a small opposition; he exchanged his title of Consul for the title of Emperor, was consecrated by the Pope in person, and his reconciliation with the Church became his real consecration as a sovereign. "What right," says Pasquier, "had a Frenchman to understand his duties differently from the chief of the Catholic Church? What could the Royalists say who had never separated the cause of royalty from the cause of religion? No; whatever may have happened afterwards, whatever part I may have taken afterwards, nothing will prevent me from saying even to-day that after 1805 Bonaparte was the legitimate sovereign of France, in the eyes of the nation taken as a whole." After Austerlitz, Pasquier changed his mind, and, feeling the need of some occupation, he accepted office.

"It was not, however," he says, "without great hesitation. I feared the discontent of the society in which I lived; I knew that many intolerant people would not forgive me for the step I was going to take. But there were many strong reasons to oppose to their criticisms. Was it possible to forget one of the hardest lessons taught by the Revolution? Had it not taught us that our reason commanded us to sacrifice our repugnance in order to work, with all our might, against the return of such calamities as we had seen? Was not the best method that which consisted in placing around the Government the men who could protect it against revolutionary ideas?"

Pasquier asked Cambacérès to place him among the *maîtres des requêtes*—a new creation, then, as now, attached to the Council of State; they make reports on the various affairs which are brought before this Council. Pasquier tells us with candor: "The cause of the Bourbons was the cause of misfortune, and had received my first attachment; I belonged to it by my birth, by my convictions, by the sacrifices I had made; it was impossible for me not to preserve the profoundest sympathy for it; but I had come to the conclusion that, if this cause could ever triumph again, it would be at a very distant date and after events which it was impossible to foresee." So his sympathies were shelved for an indefinite period, and we shall see him now in the Emperor's Council of State. Napoleon had become for him the "necessary" man. Pasquier gives us interesting portraits of those who became the chief and obedient instruments of the Emperor; of his former colleagues in the Consulate—Lebrun, Cambacérès—who had become archtreasurer and archchancellor; of Fouché, of Talleyrand, of Barras.

Fouché was fit only for the Ministry of Police:

"He had seen everything, known everything. I add that he cared seriously for nothing. Without affection for anybody; of a perfidy which was never equalled, capable of sacrificing for the smallest interest the man who considered himself the day before his best friend; possessing in the highest degree, if not the ability, at least the impudence, of a liar; gifted with a light, superficial mind, often happy in repartee, and maintaining always an imperturbable coolness, it cost him nothing to betray everybody, beginning with Bonaparte, though he had served him, in the first period of his elevation, with a fidelity which had all the appearance of devotion."

The portrait is not flattered, but it is true; but what shall we say of the portrait of Talleyrand? Hatred of Talleyrand seems to have been the moving, perhaps the only real, passion of Pasquier. He evidently considered him as the personification of all that is base, vile, and criminal. "M. de La Fayette told me, some time ago, that, on the day of the Federation, the Bishop of Autun was mounting the steps of the altar, with the holy chalice in his hands. He sees M. de La Fayette, commander-general of the National Guards, sword in hand, near the steps, and whispers to him: 'Don't make me laugh.'" Pasquier calls him "this worthy priest of all the revolutionary immoralities." He describes him as a gambler, a coward; he shows him coming back after the Terror, obtaining from Barras, through the influence of Mme. de Staël, the portfolio of Foreign Affairs, using his post for his private fortunes. "This talent for making money never abandoned him; he used it on all occasions, and no treaty is known which did not furnish him an occasion. . . . Later, secularization in Germany and the arrangements which the new territorial partitions occasioned, became a fresh source of profits, and much greater than the first. I have heard them valued by well-informed persons at four millions at least." Sainte-Beuve, who wrote a severe article on Talleyrand in his 'Causeries du Lundi,' says in it: "M. de Talleyrand values himself at the sum of sixty millions, which he received altogether from the Powers, great or small, during his diplomatic career."

Pasquier speaks of Talleyrand's marriage with Mme. Grand in these terms: "To marry an old mistress, who has been the mistress of twenty others, when nothing remains to her but a glaring and well-recognized stupidity, when all traces of her beauty are effaced, etc." Mme. Grand was remarkably silly, and it was said that Talleyrand married her because Napoleon ordered him to do so. The marriage took place furtively at Épinay, in the Valley of Montmorency. "If there was a circumstance on which M. de Talleyrand never opened himself to anybody, it was this. I have heard it said by M. de Choiseul-Gouffier, one of his intimate acquaintances, that he had employed all his acuteness (and he had much) in trying to make Talleyrand explain himself on this subject, and that he never succeeded."

The war with Prussia, the victory at Jena, marked the culmination of Napoleon's successes.

"At no moment of his career did he enjoy, with more apparent security, the favors of fortune. Generally, in the midst of his greatest successes, he affected an anxious air, as if he wished it to be understood that his great designs were not yet accomplished, and that people ought not to think that there remained nothing more to do. . . . I think I see him still as he was on that day [the day of a Te-Deum at Notre-Dame], dressed in a costume which, though it was a little theatrical, was noble and fine. His features, always calm and serious, recalled the cameos which represent the Roman emperors. He was small; still his whole person, in this imposing ceremony, was in harmony with the part which he was playing. A sword glittering with diamonds was at his side, and the famous diamond called the Regent was on the pommel. Its brilliancy did not let us forget that this sword was the hardest and the most victorious that had ever appeared since those of Alexander and Cæsar."

Pasquier describes the ceremony of the marriage of Jerome, King of Westphalia, with a Princess of Wirtemberg, which took place at the Tuileries, in the Gallery of Diana: "All the magnificence of the most sumptuous court was exhibited. The quantity of pearls, diamonds, precious stones of all sorts, was really prodigious, and we were all the more surprised because we remembered the miseries of the end of the century." Pasquier says incidentally, speaking of the King of Wirtemberg (he was only a Grand Duke before Napoleon erected the Grand-Duchy of Westphalia into a kingdom):

"This King, who gave his daughter to Jerome, could not be ignorant that Jerome had contracted a first marriage in America, with a person of the most honorable family, and that this marriage had been consecrated after the forms and the laws of the country where it had been accomplished. The Emperor had declared this engagement null and illegal, since he, as the chief of the family, had not given his consent to it; but could such a motive, borrowed from the customs of certain sovereign families, be valid out of France, and especially in America?"

Talleyrand seemed at the height of favor; but

"La Roche Tarpéienne est près du Capitole."

Napoleon was aware that Talleyrand often made reflections on the Empire's want of solidity. Talleyrand had told the Duc de Dalberg, one of his confidants, that if Napoleon died in battle, his brother Joseph ought to be chosen his successor. Talleyrand was made Vice-Grand Elector, a purely honorary title, and had to abandon the portfolio of Foreign Affairs. Napoleon ceased to work with him and kept him at a distance. Few persons perceived the change, but Pasquier understood it well. Pasquier was now thirty years old; he

had an independent fortune; he was not one of the creatures of the Revolution. "Napoleon," he says, "had an admirable instinct for appreciating the dispositions of those who surrounded him. I appeared, therefore, to him, from the beginning, as a man of whom one could expect good services, but who would never belong to him as completely as he liked." In reality, Pasquier never belonged completely to anybody but himself. He was the type of the servant of the State; so was Molé, who was more sympathetic towards Napoleon than Pasquier. The Emperor liked old names; and these names, if they did not belong to the old feudal nobility, belonged to the old parliamentary families.

Pasquier openly accuses Talleyrand of having betrayed Napoleon at Erfurt, and of having secretly helped the Emperor Alexander in the conference which took place in that town. He warned Alexander at the house of Princess Thurn und Taxis against certain projects of Napoleon; he considered himself less as a servant of the Emperor than as a sort of arbitrator of the destinies of Europe. "Napoleon's resolution to take M. de Talleyrand with him to Erfurt was an error. He had no need of him, and he showed too much confidence in a man who was secretly discontented and whose dangerous character he well knew." Talleyrand's discontent had free play during the expedition to Spain. He reconciled himself with Fouché, who had long been his open enemy; together they formed the project, if Napoleon died, to have him replaced by Murat, the King of Naples. While Napoleon was in Spain, letters were written to Murat, asking him to hold himself in readiness; these letters were intercepted by Prince Eugène, the Viceroy of Lombardy, and were sent to Napoleon. He came back from Spain; the storm broke at the first reception he held at the Tuileries. Pasquier gives us the whole detail of this terrible scene. Before all the high officers of state, Napoleon said to Talleyrand:

"You are a thief, a coward, a man without honor; you do not believe in God; all your lifetime you have betrayed everybody; there is nothing sacred for you; you would sell your father. I have covered you with wealth, and there is nothing that you would not undertake against me. For ten months you have had the impudence, because my affairs in Spain were going wrong, to say that you always blamed my enterprise there, whereas you gave me the first idea of it and persistently urged it. And that man, that unfortunate [the Duc d'Enghien], by whom was I advised of the place of his residence? Who incited me to be severe with him? What are your projects? What do you want? What do you hope for? Do you dare to say? I ought to break you like a glass. I can do it, but I despise you too much to take the trouble."

Talleyrand remained impassible; he was apparently insensible. The courtiers drew away from him. He allowed Napoleon to expend his rage, and went home silently without complaining. The Emperor maintained him in all his dignities.

# Correspondence.

## THE WILL OF JOHN WASHINGTON, 2D.

To the Editor of The Nation:

Sir: I have discovered one more of the early Washington wills, which confirms what has hitherto been conjectural. John, the immigrant, had three children, of whom the eldest was a son John, and the second a son Lawrence. From this Lawrence the President traced descent. Of John almost nothing has certainly been known; and in drawing up my pedigree of the family, I was unable even to determine the name of his wife. The Hayward will, first printed in this journal, gave a family of four sons to a John Washington, and I conjectured them to be the children of this John. The matter was of some moment, as one of the children was named Henry, and that was a name not occurring in the immediate descendants of either immigrant. I have found the will of John Washington of Westmoreland, and it confirms the conjecture I made when noticing the Hayward will. The four sons are noted, and his wife Ann. His sister Anne, who married Francis Wright, may have died before the will was made, as she receives no mention, nor do any heirs of her body. The Francis Dade mentioned in the will married a sister-in-law of John's cousin, also named John, and son of the immigrant Lawrence. The document also proves that the power of attorney printed by Mr. Conway as executed by the widow of John the immigrant, was really executed by the widow of her son John, the maker of the will. The will of the immigrant was probated in 1677, and that of his son in 1697, while the power was dated 1698. Further, the name of Thomas Howes occurs as a witness to the will of John second and to the widow's power of attorney. The copy of this will which I use was made by George Lee, who married the widow of George Washington's half-brother, Lawrence Washington.

Worthington C. Ford.

Washington, July 13, 1893.

---

In the name of God amen this 22d day of January in the year of our Lord, 1697-8 in the ninth year of the Reign of our Sovereign Lord King William I John Washington of Washing [ton] parish in the County of Westmld Being sick & weak of Body but of Perfect Mind & Memory thanks be Given to God therefore Calling into mind the Mortality of my Body & Knowing it is appoynted for all [ ] to dye doe make & ordain my Last will & Testamt in maner & form following, that is first & principally I give my Soul into ye hands of God whoe gave it me & for my Body I Commend it to the Earth to be buryed in Christian & Decent manner in ye Burying place on ye pla[n]tation where I now live, by my Father, Mother & Brothers nothinge Doubting but at the general resurreccon I shall receive ye same again by the Mighty power of God & as touching such [ ] it hath pleased God to Bless me with [in] this Life, I give devize bequeath and dispose ye same in Manner & form following first I give & Bequeath unto my welbeloved wife Ann Washington the plantacon I now dwell on at appamattox Dureing Her Natural Life. Item I give & Bequeath unto my Eldest son Law: Washington that tract of Land which I Bought of Mr. Francis Dade Commonly called Barnets Quarter it lyes on uper Machotickes In Stafford County. I give it to my sd son & His Heirs for ever. Item I give to my son John Washington that tract of Land wch I now live on after the decease of my sd wife, to him & his Heirs for Ever. but if it please God that my sd son John should die before my said Wife then I give the said Tract to my son Lawrence Washington to him & his Heirs for Ever, & if Both my sons John and Lawr should die before my sd wife or without issue of their Bodys Lawfully begotten then I give it to my son Nathaniel to him and his Heirs for ever, & if my three sons Lawr John & Nathl should die before my wife or without Issue Lawfully begotten of their bodys then I give the sd Tract to my son Henry Washington to him & his for Ever & if it please God that all my Four sons should dye before my sd wife or without Issue of their Bodys Lawfully begotten then I give to the next heir at Law to him and his heirs for Ever. Item I give to my son John Washington that Tract of Land Lying on pope's creek wch John Flewelling now Lives on to him & his Heirs for Ever. Item I give to my son Nathl Washington that tract of Land wch Lyes at ye Head of Appomattatox Creek which Anthony Rawlins & Joseph Smith & John Betts now Lives on to him & his Heirs for Ever. Item I give to my son Henry Washington that tract of Land which was Between me & Robert Richards John Whitcraft lives now on part of it it is in Stafford County on the Dam side which the head of [ ] Machotick makes I give it to my sd son & his Heirs for Ever. Item it is my will that if my son Lawe should dye without issue of his Body Lawfully begotten or before he arrives to the age of Twenty one years that then my son John Washington have the tract of Land wh I bought of Mr Francis Dade called Barnetts Quarter to him & his Heirs for Ever. Item It is my will that if my son John Washington should dye before he Come to the age of twenty one Years or without Issue of his Body Lawfully begotten that then I give to my son Lawe the tract of Land that I now Live on after my wife's decease to him and his Heirs for Ever and I give that Tract of Land on Pope's Creek that John Flewelling Lives on to my son Nathaniel Washington to him & his heirs for Ever. Item it is my will that if my son Nathl Washington should dye without Issue of his body Lawfully begotten or before he arrives to the age of Twenty one Years that then I give to my son Jn Washington that tract of Land at the head of Appamattax Creek which Anthony Rawlins & Jos: Smith & John Beatts Lives on to him and his Heirs for Ever. Item It is my will that if any three of my afores'd sons should dye without issue of their Bodyes Lawfully begotten or before they arrive to the Age of twenty one years that then all the Aforementioned lands I give to that son which is Living & if it please god that they should all dye without Issues of their Bodys Lawfully begotten, or before they arrive to the age of twenty one years, or if I have no more Issue that then I give to my wife those two tracts of Land that lyes in Stafford County to her and her heirs for ever. the other three tracts to bee divided between what Children it may please God to send my brother if he have but one I give it to him or her if more the Eldest son to have his Choice of the tracts the next Eldest his next choice if two sons if it be a Daughter, that she have her Choice after her brother to them & their heirs forever. Item it is my will that all my p'sonl Estate in Generall be equally divided into five parts, and that my wife have her first choice & my son Lawrence the next my son John the next my son Nathl the next & my son Henry the other. Item it is my will that if it please God any of my sons should dye without Issue of their bodyes Lawfully begotten or before they arrive to the age of Twenty one years that then his part of the p'sonall Estate be divided between my wife and the other three sons Living & if it please God that three of my sons should dye without issue of their bodyes Lawfully begotten or before they arrive at the age of twenty one years that then the p'sonall Estate be equally divided between my Wife and that son that is Living. and if it please God that if all my sd sons should die without Issue of their bodyes Lawfully begotten or before they arrive at the age of twenty one years that then my p'sonall Estate be Divided Equally between my Wife Ann Washington & my brother's children. it is my will that my brother &* tuition of my son Lawe Washington & that my sd Brother have the Keeping of my sd sons Estate & of this my Last [will] & Testamt. I make & ordain my welbeloved brother Capt Lawrence Washington & my Loving wife Ann Washington my full & whole Execr & Executrix. and I do hereby utterly Disallow revoke and annul all & every other former Testamt Wills Legacies bequests & Exts by me in any wise before this time named willed & bequested ratifying & confirming this & none other to be my last will & Testamt.

In witness whereof I have hereunto set my hand & seale this day & year as afores'd signed sealed published pronounced & declared by the said John Washington as his Last Will & Testament in the Presence of

Item it is also my will that Mrs. Elizabeth Hardidge have my Watch that was given to me by Capt Wm. Hardidg's Will. Item it is my will that my welbeloved godson John Dudlstone have a Gold Signet which was given me by his father on his death bed. Item it is my will that my wellbeloved Capt Lawre Washington have my wearing Ring.

John Washington.

John Scott Thomas Howes
A. Webster Peter Hyott.

## AN UNPARDONABLE AMERICANISM, ETC.

To the Editor of The Nation:

Sir: What is here specially alluded to is a misuse, widely current in the United States, of the verb *predicate*.

Before touching on that solecism, however, I wish to show to what extent words referable, for their source, to *prædicare* as employed in late Latin have been overlooked by dictionaries of the otiose school of Johnson and Richardson. For example, of the conjugates about to be exemplified, only one of them excepted, there is no recognition whatever by those lexicographers:

"A Magical Monk in Spain, or some Fryer *Prædicant*, was familiar with a Nobleman that had a fair wife." Rev. John Gaule, *Mag-astromancer*, etc. (1652), p. 355.

"Prayant as well as *Predicant*." "A dispirited, . . . proletary, *predicant*, not many degrees removed from a mendicant, condition." Bp. John Gauden, *Ecclesiæ Anglicanæ Suspiria* (1659), pp. 93, 250.

"That they be satisfied with the Title of Friers *Prædicants*," etc. Rev. John Sergeant, *History of Monastical Conventions* (1686), p. 56. Not to go outside of English, the construction here seen is that of *letters patents*, long very common.

"The last deceased and the new-born year join in presenting us with three *predicant* tourists." *Westminster Review*, vol. x., p. 197 (1829).

"Timorousness of *Predicants* occasioned thereby." "Holy liues of professors and *predicants*." "Or doe they well who presse it upon Monkish *predicants*, from Pauls example?" Rev. Dr. William Sclater, *Briefe Exposition upon II. Thessalonians* (1626), pp. 219, 220, 260 (ed. 1629).

"Dominicans or *Prædicants*." Rev. John Sergeant, *ut supra*, p. 37. Also pp. 55, 56, 57.

"But, though these strolling *Predicants* have allured some itching Ears," etc. Bp. George Lavington, *The Enthusiasm of Methodists and Papists Compared* (1749–'51), vol. i, p. 14 (ed. 1754). But earlier than the earliest of these quotations for the substantive *predicant* is one from Hooker, given by Dr. Johnson's editor, Archdeacon Todd, and, it appears, misunderstood by him, and, in his wake, by Webster, Worcester, Dr. Latham, and others, to signify "one that affirms anything." Does it mean, with Hooker, "a Dominican"?

"She likewise takes off Warburton to the greatest exactness; his very voice, and the mien of his visage, as he contemplates, and as he *predicates*." Thomas Amory, *Memoirs of Ladies of Great Britain* (1755), vol. i., p. 97 (ed. 1769).

"I propose coming up on Monday, the 12th, and *predicating* the 13th." Rev. John Keble (1832), in Cardinal Newman's *Letters* (1891), vol. i., p. 277.

"On account of the singularity of the *predication*, I wish some fair Arcadians of your acquaintance would mind it, who seem but little to regard the descriptions of a heavenly spirit from the pulpit." Thomas Amory, *ut supra*, vol. i., p. 28.

"If heresy is not increased by it, it must be immaterial to the feelings of Lord Sidmouth and of the Imperial Parliament, whether Mr. Shufflebottom preaches at Bungay, and Mr. Ringletub at Ipswich; or whether an artful vicissitude is adopted, and the order of insane *predication* reversed." Rev. Sydney Smith (1811), *Works* (ed. 1850), p. 198.

"How rational is it, then, to conclude (but I only offer it for Argument-sake) that, was Adam reposses'd of Paradise again, and premonished of Sin (as we are daily precautioned), whether or no it might not be thought to raise a Circumspection in him to evade the Serpent, the Sin, and the Woman's Temptation? Into this Opinion most Ages have crept; and our Modern Assertors and *Predicators* approve on't." Richard Franck, *Northern Memoirs* (1658), p. 7 (ed. 1694).

"The main design of their [the Dominicans'] Institution being to Read, Preach, Write, and Expound the Word of God, which gives the occasion of naming them Prædicants or *Prædicatories*." Rev. John Sergeant, *ut supra*, p. 55.

Here and there in literature, *predicate* seems, by a bold Latinism, to imply "commendation," "eulogy":

"The more her Vertue is *predicated* by her Cousen, the more she humbles her selfe." Anthony Stafford, *The Femall Glory* (1635), p. 66 (ed. 1860).

"That Colledge . . . will for ever . . . *predicate* yo[r] Bounty by w[ch] it hath beene so much beautified and inlarged." *Id.* (before 1641), *A Just Apology*, *ibid.*, p. xxiv.

"This Wisdom from Above, of which the Apostle so highly *predicates*, is, we see, the same as Wisdom revealed immediately from Heaven." Bp. William Warburton, *The Doctrine of Grace* (1750), book ii., ch. vi.

"The interest of such men requires that the spirit of arms and of arts be extinguished. They will *predicate* peace, that the people may be tractable to them; but a religion altogether pacific is the fomenter of wars and the nurse of crimes, alluring Sloth from within and Violence from afar." W. S. Landor, *Imaginary Conversations, Lucullus and Cæsar* (1829).

From post-classical Latin we have, farther, the ordinary *predicate*, that briefly definable by "affirm," which some one among our republican predecessors succeeded in setting on foot as a synonym of "found," "base." Long ago, as those who consult our Dictionaries are aware, it was such a synonym with Chief Justice Marshall and President John Quincy Adams; and, notwithstanding reiterated protests, it has been so with countless others, down to our own day, yet, as lately as 1880, it had the tacit approval of Dr. Webster's editors. As to its occurrence orally, an American who has not heard it a hundred times must have had an exceptional experience. Even Dr. O. W. Holmes has lent it his countenance; writing, as he does, in 'The Autocrat of the Breakfast-table,' ch. vi., of "any opinion *predicated* on the supposition that," etc.

Of the objectionable expressions which, far more freely than is generally supposed, besprinkle the pages of the late Mr. J. R. Lowell, here, relevantly to the abuse animadverted on, is a specimen:

"His moroseness, his party-spirit, and his personal vindictiveness are all *predicated upon* his Inferno, and *upon* a misapprehension or careless reading even of that." *Among my Books, Second Series* (1870), p. 46 (ed. 1876).

As usually employed, the verb *predicate* signifies not merely 'affirm,' but 'affirm as a basis of deduction.' Besides that the idea of affirmation is all-essential to the word, there is indication, by it, of a ground for something. In the American misapplication of the term, while the latter fact is recognized, the former is unrecognized. To come to Mr. Lowell, did he mean, by the sentence quoted, that moroseness, on the part of Dante, is asserted in consequence of the Inferno? Or did he mean that the imputation of moroseness to the poet is based upon the Inferno? His "predicated upon," to import 'affirmed because of,' 'alleged on account of,' is a mode of speech neither authorized nor tolerable. Clearly, he would never have written as he wrote except for his familiarity with the illiterate and unwarranted use of *predicate* just adverted to, and its unconscious influence on him. Missing both English and American, he has fallen between two stools.

Attractive to the eye, and no less seductive to the ear, from its seemly amplitude, *predicate* has, moreover, often been impressed, at least in England, to serve the place of *predict;* just as *prædicare* was substituted by Tertullian for *prædicere*. This blunder, according to a review-article in the London *Spectator* of July 6, 1867, conspicuously marked, at that time, "the language of Parliament." It has certainly been common elsewhere than in Parliament; and it has repeatedly been censured. Dr. W. B. Hodgson quotes for it authors so respectable as Mr. Anthony Trollope, Lord S. G. Osborne, Sir H. L. Bulwer, Mrs. Lynn Linton, and so on. He might have added the Rev. Sydney Smith, Charles Dickens, and leading articles in the London *Times*. I find it, indeed, in works published so long ago as 1789 and 1795. Has it yet crossed the Atlantic?

F. H.

Marlesford, England, June 24, 1893.

# Notes.

G. P. Putnam's Sons' fall announcements include 'The Writings of Thomas Paine, Political, Sociological, Religious, and Literary,' edited in four volumes by Moncure D. Conway; the conclusion of Worthington C. Ford's edition of the 'Writings of Washington' (vol. xiv.), and the continuation of Paul Leicester Ford's 'Writings and Correspondence of Jefferson'; Rousseau's 'Social Contract,' translated by Rose M. Harrington, and edited by Prof. Edward L. Walter of the University of Michigan; 'Comparative Administrative Law,' embracing the national and local law of the United States, England, France, and Germany, by Prof. F. J. Goodenow of Columbia College; 'The Pottery and Porcelain of the United States,' an historical sketch by Edwin A. Barber, with more than 200 illustrations; the Marquis de Nadaillac's 'Manners and Monuments of Prehistoric Peoples' and 'Prehistoric America,' both illustrated, and both translated by Nancy Bell, and the latter edited by William H. Dall; 'The Jews of Angevin England,' inedited documents, collected and translated by Joseph Jacobs; 'Rambles in Historic Lands' (England and the Continent), by Peter J. Hamilton; 'Poems of Nature and Love,' by Madison Cawein; 'The Legend of the White Canoe,' by William Trumbull, with designs by F. V. Dumond; 'Parables from Nature,' by Mrs. Alfred Gatty, in two volumes, with illustrations by Paul de Longpré; 'Chinese Nights' Entertainments,' by Adele M. Fielde, with Chinese illustrations; and *éditions de luxe* of Julia Kavanagh's 'Woman in France during the 18th Century,' Frances Elliot's 'Old Court Life in France,' and 'Knickerbocker's History of New York'—the last uniform in size with the Granada and Alhambra editions of the past two years.

Macmillan & Co. announce Irving's 'Rip Van Winkle' and 'Legend of Sleepy Hollow,' with fifty-four full-page plates by George H. Boughton; Miss Mitford's 'Our Village,' illustrated by Hugh Thomson, and issued after the manner of Mrs. Gaskell's 'Cranford'; 'The United States: An Historical Sketch,' by Prof. Goldwin Smith; 'Chronological Outlines of American Literature,' by Selden L. Whitcomb; a translation of Prof. Friedrich von Wieser's work on 'Natural Value'; and a 'Dictionary of Birds,' by Alfred Newton, assisted by Hans Gadow.

D. Appleton & Co. will publish immediately, with many illustrations, 'Campfires of a Naturalist,' by Clarence E. Edwards.

Several important works on Dante are just now in preparation in England. Mr. Paget Toynbee, a well-known scholar in mediæval literature, has been for some years engaged on a dictionary of the 'Divine Comedy.' He has now determined to divide his task, publishing first the part dealing with the proper names in all Dante's works. Dr. Edward Moore, distinguished as a text-critic, is preparing a one-volume edition of all Dante's writings, and Mr. A. J. Butler, whose commentary on the 'Divine Comedy' has been, on the whole, remarkably successful, has just completed a translation of Scartazzini's 'Dante-Handbuch.'

Ginn & Co., Boston, have become the proprietors of Blaisdell's series of Physiologies, hitherto published by Lee & Shepard.

F. T. Neely, Chicago, takes advantage of the expiration of the copyright of 'Uncle Tom's Cabin' to publish a new cheap edition, with a biography of Mrs. Stowe.

In like manner, David McKay, Philadelphia, profits by the lapse of copyright in Lowell's 'Conversations on Some of the Old Poets,' which, as being in a measure superseded by later and riper addresses, Mr. Lowell did not include in the Riverside Edition of his works. If any have thought this omission an unfinished window in Aladdin's tower, Mr. McKay has gratified them by imitating as far as possible the edition just mentioned; and though it falls a little short of its model, externally this unnumbered volume will take its place very well beside those issued by Houghton, Mifflin & Co. It is marked "Third Edition," and contains a somewhat perfunctory preface by Prof. Robert Ellis Thompson.

Something may perhaps be said in favor of the growing practice of reprinting, as if for class-room use, critical essays which are by no means out of print, and which are not of sufficient importance to be put in the library of any one but the advanced student of comparative or historical criticism. We fail to see, however, why it is necessary to annotate reprints of this sort as if every letter of the original were sacred in itself, and every chance allusion worth being dragged out into detailed mention. Such is the practice in Prof. Cook's 'An Answer to the Question, "What is Poetry?"' (Ginn & Co.), a reprint of a pretty essay of Leigh Hunt's, in which the editor repeatedly calls attention in a note to the fact that Hunt inadvertently left out *the* or wrote *he* for *it* and *or* for *nor* in a quotation, takes advantage of a mention of Ariosto's hippogriff to lug in Pegasus and Hesiod, and furnishes us with the exact reference for Homer's comparison of Apollo descending in his wrath to the coming of night.

The preface to William Renton's 'Outlines of English Literature' (Charles Scribner's Sons) sets the characteristic note of the book when it states that "the consideration given to an author individually is [here] subordinated to that given him as belonging to a type or school." Following this plan, the author sketches, with compactness, suggestiveness, and individuality, the chief eras in the history of English and American literature. In the hands of an experienced teacher or a mature student, this little treatise of 250 pages might give good results. Conventional teachers and dull pupils, however, it would certainly mystify or lead astray by such marvellous formulæ as (s+p)s +(v+h) T, which expresses the constitutional quality of Shakspere's artistic power; by similarly amazing geometrical diagrams, which group in a philosophic and comparative fashion the authors of a particular epoch; and by such sweeping generalizations as the remark "that the singular energy of the American character, if intensity and force of expression are to be considered as its correlative, is inadequately represented in the higher American literature, which tends rather to the measured, the finished, and the minute, than to the bold and impassioned—to the manner of Boston or New Orleans rather than of New York and Chicago."

A very welcome addition to English Goethe literature is a translation, by Mr. Bailey Saunders, of the "Sprüche in Prosa," those incomparable reflections on art, literature, science, and life which, having first appeared sporadically in the 'Wahlverwandschaften,' in 'Kunst und Alterthum,' in the 'Wanderjahre,' and in the 'Nachgelassene Werke,' were subsequently collected by Eckermann and for the first time critically edited by Von Loeper. The present translation, which appears under the title 'The Maxims and Reflections of Goethe' (Macmillan & Co.), is the first one attempted by an Englishman, and it is safe to say that it will remain the best. It is accompanied by an admirable introduction dealing most pertinently with the nature and use of maxims and the peculiar value of those of Goethe. We also learn by the way that Mr. Saunders was assisted in his work of selecting and translating by such men as Profs. Harnack and Huxley and Sir Frederick Leighton.

We wish the same praise could be given to another work, presumably intended to facilitate the study of Goethe, viz., 'Einführung in Goethe's Meisterwerke,' by Dr. W. Bernhardt (D. C. Heath & Co.); but we cannot help protesting against the sort of bookmaking exemplified by this production. To cut up the works of a writer in a way to make the limbs fly in every direction, and then to bury these dissected fragments in a mass of "copious biographical, literary, critical, and explanatory notes, a vocabulary of difficult words, and an introduction containing a life of the author" (all this is promised on the title-page), is a proceeding which must be characterized as an attempted murder not only of the author himself, but of the good sense and judgment of his readers as well.

A disciple and admirer of Émile Montégut, Auguste Sautour, has, in a small book of some hundred and twenty pages ('L'Oeuvre de Zola,' Paris: Fishbacher), given us a concise and, on the whole, satisfactory estimate of the value of Zola's work. Taking 'La Débâcle' as his starting point, he examines the whole of the Rougon-Macquart series from the point of view of science, philosophy, morals, humanity, æsthetics, literature, ideas, and usefulness. That he condemns it in each successive review as false to nature and truth, as harmful in its immediate and its eventual effects, is not to be wondered at, nor that he succeeds in establishing his position in nearly every case. But one may justly wish he had indicated some of the better features of Zola's work and given more prominence to the fact that there are passages in these books unequalled for force and magnificence. This reservation apart, the *brochure* is a useful contribution to the formation of an opinion on the head of the naturalistic school.

As a result of the particular activity in the last two or three years of French interest in Algeria, the number of good books about the country is rapidly increasing. One of the last of these, 'Kabylie du Jurjura,' by Jules Liorel (Paris: Leroux), while it does not pretend to reveal any new facts, is an excellent comprehensive study of a region and people much less well known than they deserve to be. It is still the common belief that the population of Algeria is made up principally, if not entirely, of Arabs, and even the Government long seemed to share this delusion. The French are now beginning to recognize that for the future of the colony the Arabs are a far less important and hopeful element than the Berbers, chief among whom the Kabyles are attracting increased attention (see, for instance, the Vicomte de Caix de Saint-Aymour's 'Arabes et Kabyles,' published year before last). They are descended from the earliest inhabitants of North Africa, intermixed with fugitives from every new invasion. They were never thoroughly subdued by the Romans or any one else before 1857; and even then it was long after the rest of the land had submitted, and twenty-seven years later than the capture of Algiers, not seventy miles away. M. Liorel's book is full of curious and valuable information, though he will find few readers for his list of villages, which takes up some sixty-five pages. Especially interesting is his example of a "Kanoun," or code of village laws. The short preface by M. Émile Masqueray is better worth reading than advertisements of this kind usually are.

Prof. D'Ancona, the first two instalments of whose excellent 'Manuale della Letteratura Italiana' we noticed not long ago, has now published the second part of the first volume, covering the period from Petrarch to the end of the fourteenth century. Petrarch and Boccaccio are, of course, the principal figures, but they are not given undue prominence over a host of minor writers, many of whom, we think, appear for the first time in a work of this kind.

Dr. Angelo Solerti has extracted from his critical edition of the minor poetical works of Tasso, published by Zanichelli, his Bibliography of the same, thus completing his guide to the entire work of Tasso in prose and in verse.

The Pope has awarded a gold medal to Prof. W. M. Ramsay of Aberdeen University, well known for his explorations in Asia Minor, for his recently published work on 'The Church in the Roman Empire before A. D. 170.' This distinction, which is not only signal but curious, considering that Prof. Ramsay is presumably a Presbyterian, is bestowed, no doubt, because of his vigorous and convincing advocacy, among other things, of the Apostle Peter's life and martyrdom at Rome.

The Nestorian tablet which was discovered in 1625 in a wall outside of the city of Singan Fu in northwestern China, has been visited recently by a traveller who reports its serious mutilation. The stone, which is of coarse marble, was erected in 781 as a monument to the labors of the Nestorian Christians. The inscription is partly in Syrian characters, and eulogizes the propagation of Christianity in China, and is, according to Dr. Williams, "the most ancient Christian inscription yet found in Asia." A few years ago, the Chinese Government, on account of foreign representations on the subject, caused a roof to be built over the tablet in order to protect it from the effects of exposure to the weather. This roof has, however, been broken down and "several of the characters have been effaced, and there are other signs of malicious hands." At a meeting held last month in London, the Archbishop of Canterbury announced that the well-known traveller Mrs. Bishop (Miss Isabella Bird) was about to set out on another journey, one of the objects of which was to see this stone and to secure an accurate representation of it and the inscription. To this end she was receiving instruction in photography and would take cameras with her.

—Prof. Payne of Northfield, Minnesota, proposes the publication of a periodical devoted exclusively to popular astronomy, and issued monthly. The reading matter will be expressly prepared for, and adapted to, the wants of amateurs, teachers, students of astronomy, and popular readers; it will be plainly worded, untechnical in language, and fully illustrated, at the subscription price of $2.50 annually. There is in this country a large number of amateurs who have the desire and the time to undertake useful astronomical work, if only they knew what to do and how to do it. Co-operation in method and work ought to be mutually helpful under proper guidance. One purpose of this new periodical will be to point out useful elemental lines of work for small telescopes, the field-glass, opera-glass, naked-eye observation, and suitable methods of mapping subjects adapted to that kind of illustration. Tables of current celestial phenomena, with full and particular descriptions of the face of the sky, will appear from time to time, and suggestions will be made to secure effective work. Students and popular readers constitute other classes who are interested in astronomy, and who might be aided in plans for self-instruction—an idea which has never been worked out in any periodical, although perfectly feasible. A few of those eminent in astronomy to-day have gained their renown chiefly in this way. For the publication of this new periodical it is believed that the astronomers of Carleton College enjoy superior advantages.

—'The Babylonian Expedition of the University of Pennsylvania, Series A: Cuneiform Texts, edited by H. V. Hilprecht,' has recently appeared as a reprint from the Transactions of the American Philosophical Society, N. S. xviii., No. 1. There are fifty pages of text and fifty pages of plates. Thirty-five of the plates are photographic reproductions of autographic copies of Babylonian inscriptions found on door sockets, brick stamps, vases, lapis-lazuli discs, stone and clay tablets and cylinders, etc. Most of the inscriptions belong to periods but little known, and some of them come from kings not known heretofore at all. Fifteen of the plates contain photographs direct from the objects. The new material of this publication will be welcomed by all Assyriologists, while the beauty and accuracy of the copies made by the editor add greatly to the value of the work. It is estimated that the series will contain eight or ten volumes. These remains come for the most part from the temple of Bel at Niffer, one of the oldest seats of Babylonian culture, whence they were dug by Dr. J. P. Peters in 1889-90. A history by Dr. Peters of his expedition, with diagrams of his diggings, ought not to be much longer delayed. The specialist gains from the texts just published some idea of the success of the party, but there is a large reading public now which feels an interest in all such work, and for it, as well as for specialists, an account of the expedition should be published.

—Since Miss Fawcett, in 1890, outranked the senior-wrangler, both believers and sceptics in the mathematical normalcy of the female mind have scanned with interest the examination lists of the Cambridge Mathematical Tripos. This year, of the ten women who passed this examination, two are wranglers, and one (Miss Johnston of Newnham) stands between five and six on the list; the non-wranglers, with two exceptions, hold rank with the senior optimes. Such successes are no longer exceptional, nor are they confined to any special line of study. The two comparatively small women's colleges of Cambridge have this year won twelve first classes in the various triposes; and in the mediæval and modern-languages tripos and in the moral-science tripos *only* women appear in the first class. This term three of the Oxford women students took the final examination in natural science. Miss Shorrock of Somerville Hall obtained a first-class in chemistry, Miss Sharp of Lady Margaret Hall a third, and Miss Evelyn Berkley from Lady Margaret, who is the first woman to try the final honor School of Physics, took an excellent second-class. Our correspondent comments on Miss Berkley's good standing, as she had not been able to take previously a mathematical honor examination, as men generally do. At Oxford the past term has in several ways brought additional recognition of the women students. To recapitulate: three more honor examinations have been opened to them—theology, Oriental languages, and the examination for the degree of Doctor of Music; the University has decided to print officially the successful women's names in all class lists, with the name of the college to which each belongs; the Council has offered a room in the Clarendon Building as an office for the Association for the Education of Women in Oxford, and has further recognized this Association by appointing a University delegate on its committee; the University has, furthermore, consented to appoint a delegate to sit on the council of Somerville Hall, and will doubtless extend similar official countenance to Lady Margaret and St. Hugh's, when these bodies solicit it. Both in Great Britain and in the United States 1893 seems destined to serve as one of the mile-stones in the progress of higher education for women.

—"There is no gainsaying," writes a correspondent, "that whatever beauty London may boast is mainly the result of chance—the chance of atmosphere and light, of mist and fog and smoke. As a rule, the conscious effort to ornament its streets has, in modern times, resulted in failure—in buildings that are a discredit to the architect and statues that are a dishonor to the sculptor. By contrast, the unveiling of Mr. Gilbert's fountain, raised as a memorial to the late Lord Shaftesbury, is an event of no little artistic importance to London. The fountain stands in Piccadilly Circus, a site worthy of a fine monument. Mr. Gilbert is a sculptor of rare distinction, who, it was known, could not, if he would, have produced such an abortion as those which, for a hundred years and more, a well-meaning people have been offering to their heroes. Now that the fountain has been unveiled, the all but universal verdict is that it is an honor, not merely to Lord Shaftesbury, but to Mr. Gilbert, who, by it, has still further strengthened his reputation. It is distinguished by all those characteristics which hitherto have delighted in his work. It is vigorous and dignified in design as a whole; the detail is exquisite, but never too ornate in its marvellous elaboration; the different metals introduced are used in the pictorial rather than the sculpturesque spirit, but always with admirable result. Indeed, the chief charm of the fountain is, that, while the detail, especially in a beautiful arrangement of dolphins and water-babies running around one of the three basins, bears the minutest inspection and study, the fountain, as a whole, impresses by its sobriety and restraint. There are none of the swirling draperies and flying figures of the Bernini School, no *rococo* excesses. It is almost stern in its simplicity of outline, and, consequently, it is in perfect harmony with London gloom and melancholy. Without question, though its jewel-like finish may be criticised, it is one of the modern world's finest pieces of street sculpture. There is hope for the future loveliness of London if its decoration henceforth be intrusted to its Gilberts, instead of the Boehms, who heretofore have been first in favor."

—Dr. Max Kaluza's observation that the Middle English translation of the 'Roman de la Rose' falls into three fragments, of which the first contains little or nothing that contravenes Chaucer's rules of language and versification, was first made public in the *Academy* for July 5, 1890. He has recently published the last results of his studies on this subject in a book of some two hundred and fifty pages, under the title of 'Chaucer und der Rosenroman' (Berlin: Felber). Dr. Kaluza's book has been received very favorably in Germany and in England, and the conclusions at which he has arrived seem in a fair way to meet with wide acceptance among scholars. These conclusions are, in brief, that lines 1–1705 and 5811–7692 were really written by Chaucer, and comprise the whole of his translation, but that lines 1706–5810 are the work of an imitator. This thesis Dr. Kaluza supports by an elaborate argument from metre, vocabulary, and style, with a collection of parallel passages covering almost a hundred pages of fine print. By these parallel passages he supposes that he has proved a similarity so close between Chaucer's phraseology and the phraseology of the first and third fragments of the translation that it is impossible longer to deny the Chaucerian authorship of these parts of the English 'Romaunt.'

—Though this collection of parallels is a valuable contribution to our knowledge of Middle English phraseology, it is impossible to accept it as evidence in the sense intended by its compiler. German scholars are very prone to yield to the seductions of this parallel-passage argument; but never, perhaps, has so astonishing a collection been made as this of Dr. Kaluza's. In many instances the resemblance confines itself to one or two words, and those among the commonest in the language. Thus, the fact that Chaucer and the translator both use the phrase "to go to bed" seems to Kaluza of sufficient importance to deserve a note, and there are many other illustrations of quite as trivial a character. A large number of parallels, again, simply show that the translator followed his original very closely, and that some word that he found there was also well known to Chaucer and used by him whenever he chose. What else is to be inferred, for example, from the fact that the translator uses the word "engender" where the French has the same word, and that Chaucer uses engender now and then, when he sees occasion, as everybody else did and does? Dr. Kaluza's belief that Chaucer's translation of the 'Roman de la Rose' was confined to the parts included in the first and third fragments of the extant English version, is, besides, in flat contradiction to the evidence that may reasonably be extracted from the prologue to the 'Legend of Good Women.' His theoretical considerations about the way in which the translation reached its present form are curiously at variance with probability and with each other. He even makes the suggestion that a part of the version was prepared by Chaucer "for his private use." What private use a poet who was perfectly acquainted with French should have for an English translation

of a French poem which was one of his favorite pieces of reading, is a question that Dr. Kaluza would find some difficulty in answering. As a whole, this investigation must be regarded as a valuable contribution to Chaucerian literature, but as very far from settling the question who wrote the extant English version of the 'Roman de la Rose.'

—A complete edition of Martin Luther's sacred and secular poems with notes has been issued as a "Festgabe" on the occasion of the restoration and reconsecration of the Schlosskirche at Wittenberg. The couplet,

> "Wer nicht liebt Wein, Weib und Gesang,
> Der bleibt ein Narr sein Leben lang,"

so often quoted and so generally ascribed to the Reformer, is not contained in this collection, and indeed there is not the slightest evidence that he ever wrote it. It is simply the translation of a verse current in Italy long before his time:

> "Chi non ama il vino, la donna e il canto,
> Un pazzo egli sarà e mai un santo."

It was first printed in the *Wandsbecker Bote* in 1775 as follows:

> "Dir wünsch' ich Wein und Mädchenkuss,
> Und deinem Klepper Pegasus
> Die Krippe stets voll Futter!
> Wer nicht liebt Wein, Weib und Gesang,
> Der bleibt ein Narr sein Leben lang,
> Sagt Doctor Martin Luther."

This epigram was written by Johann Heinrich Voss and reprinted by him in the Hamburg *Musenalmanach* in 1777; it was accepted by Herder as Luther's in the first volume of his 'Volkslieder,' published in 1778, and passed into Methfessel's 'Allgemeines Kommers- und Liederbuch' in 1818. Voss never stated on what authority he attributed the couplet to Luther, and perhaps it was merely a facetious rhyming of the sentiment expressed in Luther's Table Talk: "Wie wollt ihr jetzt anders einen Deutschen vorthun denn ebrietate, praesertim talem qui diligit musicam et mulieres?" In some humorous verses written in the Palatine dialect, the Old-Bavarian poet, Franz von Kobell, extols the wisdom of Luther's saying, and as a good Catholic only regrets that a man of this genuine stamp should have been such a "horrid Lutheran":

> "Drum hot der alte Martin Recht,
> Sei Spruch is schö un klar,
> Un's is nor schad, dass halt der Mann
> Erschrecklich luthrisch war."

## KELTIE'S PARTITION OF AFRICA.

*The Partition of Africa.* By J. Scott Keltie. London: Edward Stanford. 1893.

FEW people know precisely in what way Africa has been divided between different European Powers, and still fewer have more than the haziest notion as to how this division took place. And yet the opening up of the Dark Continent and its partition among civilized nations constitute an event of tremendous importance, whose full consequences it is impossible to foresee. So quickly has this been accomplished that it has been very difficult to get a connected idea of what has happened, and why and how it has happened. At the present time, therefore, when there seems to be a lull in the scramble, which is by no means over yet, we are especially grateful for a work that gives us in the smallest possible compass, while hardly omitting an important detail, a clear, dispassionate account of this extraordinary phenomenon. Mr. Keltie's book is not only most timely, but is good enough to be of value under any circumstances. All that he says is so much to the point that it would take a volume as large as his own to analyze and discuss it properly. After a few introductory chapters on the earlier history, he describes the furious rush of the last ten years, and ends with an excellent short study on the worth of what has been acquired. Mr. Keltie's name on a title-page is a guarantee for accuracy, though we wish to call attention to two small slips. It is probably a typographical error which makes him say (p. 2) that there are "some 130,000,000 of people of European origin or descent" on the American Continent; and momentary forgetfulness when (p. 260), speaking of the chiefs "Ahmadu" and "Samory," he gives "Samadu" as the alternative name of the former instead of the latter.

In reading a discussion of such recent political events, each of us can disagree with this, that, or the other of the author's conclusions, according to our own opinions. All must do justice, however, to the great fairness and calmness of his views, even if we find in him a natural tendency to rejoice whenever England has been quicker than a rival in grabbing something. He evidently belongs to those who believe that the larger the Queen's empire, the better, not only for it, but for the rest of the world; yet there is a refreshing absence of cant or declamation in what he writes. Although he likes to mention cases where native rulers, through some friendly consul or mere traveller, have spontaneously (?) sought British protection, which has been refused by a self-denying Government, he does not mind telling us that "many similar so-called 'treaties' have been signed by African chiefs in favor of various Powers. It is doubtful whether, as a rule, these chiefs have any idea whatever of the significance of what they are doing."

Among the things left unsaid, two are curious and rather significant. In the account of the Anglo-Portuguese dispute, there is not a word to remind us that a solution was reached by the simple method of an ultimatum on the part of the stronger Power. In the appeal for the retention of Egypt, with which the book comes to a close, we miss any reference to the main difficulty in the way of the British, viz., their solemn and repeated promises not to make their occupation permanent.

The most important steps in the partition of Africa were the Berlin Conference (1885) and the treaties of Great Britain with Germany, France, and Portugal (1890 and 1891). Plenty of other treaties of demarcation were concluded at about the same time, and plenty more will be in the future, but none of quite the interest of these. Germany "stole a march" on England several times in annexing vacant territories; but the latter, by playing on German pride and patriotism about Heligoland, got altogether the best of it in the final arrangement. This is easy to explain: in one case Lord Granville was matched against Bismarck, in the other it was Salisbury versus Caprivi and his master. The French, on the whole, fared well in their agreement—better, indeed, than they have ever been willing to admit. To be sure, their dream of completely owning the Niger vanished for ever, and much of what they got was Sahara—what Lord Salisbury called "very light soil"; but the dream was hopeless by that time, and in another year or two the English were far more likely to get above Say, the present dividing point on the river, than they themselves were to get below it. Besides, the recognition of their protectorate over Madagascar greatly outweighed any interests they abandoned in Zanzibar.

In dealing with the controversy between Great Britain and Portugal, Mr. Keltie, like other English writers, takes great pains to show on what flimsy foundations Portuguese pretensions were based. So they were, and it is also perfectly true that the English govern their possessions much better than the Portuguese do, and it is better for civilization that the former have acquired Nyassa, Zambezi, and Matabeleland. Still, the Portuguese had hard measure dealt them. As claims in Africa go, theirs were rather superior to the average, and much older, while it is hard to see that the British had any claim at all (except their "interests") to most of the regions in dispute. In other words, here was valuable property which they wanted, and took in a somewhat brutal manner, utterly scorning the appeal of Portugal for arbitration. However, we need not quarrel with an author who says of England, with pleasing frankness, that "at the worst she can only be accused of obeying the law of the universe, 'Might is right.'"

'The Partition of Africa' would be impossible to follow or understand without maps. Fortunately, those in the work are numerous and satisfactory, the only exception being that of population, which ought to have been colored. The most important is that of the political divisions; and it is worth our while to examine it closely, because it shows the grand result of the events narrated in the text, and also because it is not easy to find two good political maps of Africa that agree. This one differs in several respects even from the one in Mr. Keltie's own 'Statesman's Year-Book' for 1892. South of the equator, almost all national boundaries have been clearly fixed by treaty. The only important question still unsettled is the limits, on the upper Zambezi, of the Barotse, a people in the British "sphere of influence," whose frontier Mr. Keltie has pushed, at the expense of the Portuguese, much further west than it is given on most maps. We may hear of trouble about this frontier some day. When he comes to East Africa, he is also very generous with his pink (color of British possessions), and capricious likewise, as there is no reason why, if he is going to include the region of the upper Nile and Bahr el-Ghazal, he should not add the rest of the former Egyptian Sudan. In point of fact, English influence does not as yet extend beyond Lake Albert. We think that the Belgians, who have now established themselves at Emin Pasha's old capital, Wadelai, will succeed in advancing the boundaries of the Congo Free State to Lakes Albert Edward and Albert and the Nile, although England has so far steadily opposed this, and may exact something in return for her final consent. If the French can push forward in time to Bahr el-Ghazal—and it is not improbable—they will pay but little heed to the article of the Anglo-German treaty that seems to hand it over to Great Britain; nor will they listen meekly, as the Italians did about Kassala, to the assertion that the guardian of Egypt cannot surrender any territories that once belonged to her protégé, no matter who holds them now. This would mean more trouble. Still, if a good deal is claimed in this quarter, we find, to our surprise, nothing in map or text about the coast strip below Morocco, between Cape Jub and Cape Nun, where there is a fortified British factory; it is colored as a possession in the 'Statesman's Year-Book.'

The English and Germans have been reluctant to recognize the rapid progress in Africa of the French. Their color, blue, is the one on Mr. Keltie's map whose limits are most open to question. In general, there is not enough of it, but with two exceptions. The oasis of Ghat is assigned to the French, though they do not always dare to claim it; and it is most astonishing to find an English map conceding to them

the Hinterland of Dahomey, thereby connecting their colonies and separating those of England. As this is in contradiction with what is said on pages 284 and 286, it would seem to be accidental. On the other hand, French dominions are curtailed in several instances. Beginning near the equator, we notice that the treaty boundary between Cameroons and French Congo is carried more than a degree too far to the east. It really ends at the fifteenth meridian, beyond which it is not likely to be prolonged, as De Brazza has already turned it and penetrated further north. The effects of the treaties concluded by him, Mizon, and Maistre (the last named since this book was written) with various native States, up to and including Adamawa, yet remain to be seen.

On the Guinea Coast, the district between Cape Palmas and the San Pedro River is allotted to Liberia, not to France. The latter, which has already occupied it, will probably keep it, in spite of the remonstrances of the United States. German maps, which formerly gave it to Liberia, have begun to realize this. In the interior, Massina, Aribanda, and Mossi should not be left white: they are French, or rather will be, for, like many other parts of the map, they represent future, not present, European possessions. The frontier line, running from Say on the Niger to Barrua on Lake Chad, is still uncertain, and likely for a while to remain so; but since the expedition of Lieut. Monteil, it looks as if it would be more to the south than it is here given (compare p. 285). On the northwest, the region called "Spanish Protectorate" represents what Spain claims, though hardly what she will get. On the other side of Africa, at the entrance to the Red Sea, we find the colony of Obock reduced to its smallest possible dimensions; and finally, for some unknown reason, Madagascar, instead of being blue, has only a blue border. It is true that the hold of the French on the island is at present very slight, but it is at least as good as that of Italy on Abyssinia; and they are not going to let go, as the Italians may have to do for lack of money.

Altogether, it is very evident that the partition of Africa is not yet definite or complete. When it is, let us hope for a new edition of Mr. Keltie's work with the end of the story which he has told so well.

## RECENT LAW BOOKS.

Mr. Charles F. Beach, jr., in his two large volumes of 'Commentaries on the Law of Public Corporations' (Indianapolis: Bowen-Merrill Company), has sought to "cover the entire field of public-company law in all its details, using the term 'public companies' in its widest modern sense." The book is designed to supplement the author's earlier 'Private Corporations,' making with it "a complete treatise . . . on company law in all its phases, from the Federal Government at the one extreme . . . to the most insignificant joint-stock association" at the other. This is an extensive subject, the very breadth of which seems to have led the author at times farther than was altogether profitable into the peculiarities of local law. It may be surmised that he would have come nearer to complete success in his difficult undertaking if he had not aimed so much at quantity in book-making as he appears to have done in recent years. He certainly writes useful books; but their merit, in the present instance at least, lies rather in the elaborate collection of authorities than in any original or historical exposition of the law, or careful criticism of the cases. In these points the volumes before us suffer as much by comparison with Judge Dillon's excellent book on 'Municipal Corporations' as did the author's 'Private Corporations' with the work of Mr. Morawetz.

Mr. Bigelow's new edition of 'Jarman on Wills' (Fifth Am. ed.; Boston: Little, Brown & Co.), published simultaneously with the fifth English edition, by L. G. Gordon Robbins, brings down to the present time one of those treatises, only too rare nowadays, which are to be judged by the highest standard of what a law book should be. The English editor, whose work appears to be excellently done, has added so much to the book that Mr. Bigelow has seen fit to strike out the brackets in the text which have heretofore distinguished the original from its later accretions. Among other things is a just criticism of the late case of Whitby vs. Mitchell (44 Ch. D. 85), containing many observations already made by Prof. Gray in his admirable book on the 'Rule against Perpetuities,' to which Mr. Bigelow makes proper reference in his notes. These notes, and the not infrequent monographs which accompany them, are so good that we can only wish they were twice as many, and not concealed in microscopic type.

The second edition of 'Sheldon on Subrogation' (Boston Book Co.) is a thorough revision of a useful book. In the preface to the first edition the author observed that it was his aim "to state the doctrines which have been laid down by the courts in applying the law of subrogation, without going, beyond the most limited extent, outside of the adjudications of this country and of England," and he added: "Regarding it as the distinguishing feature of our system of law that it is established by judicial decisions *a posteriori*, and not deduced from *a priori* reasonings, I have made no attempt to go further than the courts have gone." Such limitations upon the scope of the book (and it has not been changed in the new edition) have largely prevented the scientific and historical treatment which would have been of peculiar value in a subject so difficult, and so extensively derived from the civil law, as that of subrogation.

The subject of Mr. Henry F. Buswell's 'Civil Liability for Personal Injuries arising out of Negligence' (Boston: Little, Brown & Co.) is open to the criticism of being either too narrow or too broad—too narrow for a comprehensive treatment of the law of negligence as a whole; too broad for a studious monograph on some one of its subdivisions. The practical justification of the subject is probably to be found in the large and increasing number of actions, in a sense a class by themselves, against corporations and others for personal injuries. But surely the needs of the practitioner in this class of cases will not be fully satisfied without some treatment of so important a head as the measure of damages. Mr. Buswell's work, within his field, seems in the main to be well and carefully done—witness his interesting discussion of the Employers' Liability Act. But it is not a little surprising to hear him refer to the antiquated and indefensible doctrine which imputed to the passenger in a vehicle the negligence of his driver, overruled more than six years ago in The Bernina (12 Prob. D. 58), as the "English rule."

'Death by Wrongful Act' (St. Paul: West Publishing Co.) is a more promising title, suggesting a branch of the subject last mentioned which might well repay careful investigation. We regret that we cannot say as much for Mr. F. B. Tiffany's treatment as for his choice of a subject. He has made a good collection of modern facts—statutes and decisions—but has thrown no great light on their antecedent causes or on the inferences to which they lead. Indeed, the discussion of so many different statutes in so small a compass could not well permit the precise examination of each so necessary to its right understanding. The practising lawyer will need to supplement this book by some more detailed commentary on the law of his own State. It should be observed that both this and the foregoing treatise give evidence of "padding" by their publishers.

'Black on Tax Titles' (West Publishing Co.) is the second edition of a very good book. Its method might to advantage be more historical, and the treatment of the general subject of taxation, especially on its constitutional side, is necessarily slight. But it has the free style and the clear and orderly arrangement of the author's other works. Especially to be commended is the handling of the local statutes, the number and variety of which must have made their proper subordination to the general principles peculiarly difficult.

## A FRENCHWOMAN.

*La Comtesse de Chambrun: Ses Poésies.* Paris: Calmann Lévy. 1893.

This is one of those books in which the preliminary memoir has an interest far beyond that belonging to the compositions which it precedes. It will be found especially useful to such as are afflicted with a chronic social distrust of our fellow-republicans across the Atlantic, and can see nothing in France except frivolity and corruption. Here we find, on the other hand, in the highest social circles of that country, and amid vast wealth, the record of lives that are singularly pure and high-minded; a glimpse of something quite outside the range of even the more favored class of ordinary tourists; a group of righteous souls who might save even Paris. We here find Frenchmen and Frenchwomen who enjoy beautiful and stainless domestic relations, surrounded by simple and refined social pleasures, and who show a constant devotion to public and private duty—devotion such as could not have been surpassed had they been brought up on Wordsworth's "Ode on Immortality" and under the shadow of Bunker Hill Monument.

Marie Jeanne Godard-Demarest, Comtesse de Chambrun, was born at Baccarat, the second daughter of the well-known glass-manufacturer of that place. She was educated as a Catholic, although her nonagenarian Béarnese grandmother was a stanch Protestant. In winters spent in Paris supplementing her mother's instruction, she cultivated music, both vocal and instrumental, with other arts of expression, enjoying to the full the privilege of Delsarte as a teacher. Not strictly beautiful, but attractive, gracious, and graceful, she was married at the age of twenty-six to Viscount Adelbert de Chambrun, relative of the Marquis of that name who has lately contributed to *Scribner's Magazine* his interesting reminiscences of Lincoln and Sumner. This marriage was brought about, as is not unusual in France, by the father-confessor of both contracting parties, and a friend writes: "Jeanne not only received at the hands of the Abbé de Sénac the spiritual guidance she craved, but also unhoped-for earthly felicity." In fact, though a childless union, it proved to be an exceptionally happy one: flawless, indeed, except for the nervous suffering to which the Countess was constitutionally liable. After her mother's death she writes in her journal: "Three months to-morrow! Three

eternities of grief in three distinct phases, each with its own characteristic torture—the bewildered despair of the first shock, my despair all alone, and then the same despair shared with my husband in which I feel all the harm my grief does him, and my sorrow thus redoubled becomes even more intolerable."

Six years the senior of his wife, a devout Catholic, though descended like her from Protestant ancestors, Joseph Dominique Adelbert Pineton, Vicomte de Chambrun, devoted himself from his youth to active political life as well as to philosophical studies. Three times elected Deputy and once Senator, he has always voted with the Extreme Right in the Corps Législatif and Palais du Luxembourg. Austere and tender, he writes constantly helpful letters to his school-boy brother, not only saying, "Prie et travaille," but setting him the example. It is a characteristic trait that during their honeymoon the "Quis mihi det ut moriar ?" of the Apostle Paul was constantly on his lips—"not very gay for a bride," Jeanne writes later; and in the poem called "Une branche de jacinthe rose" there is a pretty allusion to an enforced renunciation, in those early days of their married life, of some promised festivity, where the husband is made to say that he would gladly sacrifice all to her, but that other duties also claim him :

"Je sacrifierais tout à ma jeune captive,
Mais je me dois au bien, à la science, à l'art."

They were always unaffectedly proud of each other, and she was associated with him in every phase of his political life. While Prefect of the Jura he never once left his post during the prevalence of the cholera, and was at last struck down by the disease himself. His wife stayed by his side, encouraged to do so by letters from her heroic mother.

During the Franco-Prussian war M. de Chambrun went to the Lozère at the request of M. Guizot, but he insisted on his wife's remaining at Pau, where an ambulance was established under the auspices of "Les Petites Sœurs des Pauvres." After the battles of the Loire, wounded Bavarian soldiers were sent there, and Mme. de Chambrun tended them zealously, though many had the varioloid. There, when the epidemic was at its height, she made the acquaintance of a beautiful girl of German origin, who was fearlessly devoting herself to her suffering countrymen. Full of admiration for her grace and heroism, the Countess Jeanne forced on her acceptance a necklace of opals and diamonds, a present from her own mother. "Since it was not in my power," she said, "to have her decorated, I gave her the most beautiful thing I possessed.' She did more—they became inseparable, and the young girl remained with her as a companion as long as the Countess lived.

After the war, M. de Chambrun was a candidate for the place of Senator, and instead of making the customary profession of faith he sent this card to his constituents : "Comte de Chambrun, député en 1857, en 1863, en 1869. Sénateur en 1876 si vous voulez." He was elected. On this or some previous election, a local poet sang: "We gave our votes to the Count and our hearts to the Countess." In all sorts of ways, in fact, they were helpful reciprocally. The wife's ardor and excessive sensibility were regulated and checked by the calm philosophy and methodical habits of her husband. During a long visit to Rome in 1872, Mme. de Chambrun writes to the curé of Lons: "I am in a place where the days are all too short for the marvels, religious, historical, and artistic, by which we are surrounded. They inspire my husband with great, profound thoughts which he imparts to me sometimes, and which help me to appreciate the interest and grandeur of the places we visit." At this time, at the "Villa Médicis," M. Hébert was painting the portrait given in the frontispiece. It represents the Countess Jeanne, her cheek resting on her hand, and with a sweet, far-away look in her eyes. "Her lips are slightly parted by a smile, and she seems lost in contemplation of the ideal." Her husband called it "The Muse," and the name has clung to the picture.

At the time of the burning of the theatre at Nice, Gounod writes to Mme. de Chambrun: "In making you acquainted with grief God has enabled you to console all who sorrow," and her kindly help and heartfelt sympathy were always forthcoming in time of trouble for all sorts and conditions of men. We read in a letter sent to Baccarat at the time of the annual festival: "Greet for me all my townspeople and brethren, workmen and employers, and say how sorry I am to be kept away from them at this time." In the Lozère her relations seem to have been rather more feudal. She was temporarily in the Pyrenees for her health a long time after they had left that department, when she learned that 3,000 pilgrims from Lozère were on their way to the shrine at Lourdes. Supplying herself with 3,000 medals to distribute, she went to meet them, and the pilgrims almost lost sight of the object of their visit in their joy at seeing their benefactress and being remembered by her. The humble were especially dear to her, and at one time she denied herself the pleasure of returning to Paris, where her husband was impatiently awaiting her coming; and remained in Baccarat watching over the dying-bed of her old nurse, to whom she was a great consolation.

It was in this power of comforting, of giving something of herself with her alms and benefactions, that she reaped the harvest of her own pain, for it can hardly be said of her that she "taught in song" what she had "learned in suffering." This wind-harp of a woman breathes strains that are sweet and sad, but her poems want consistency and are more plaintive than profound. Then she never quite mastered the difficult art of French versification. Her ready sympathy and faculty of assimilation should have made her a good translator. Among the fragments of verse we find these lines, evidently translated from the "Wi' lightsome heart I pu'd a rose":

"D'un cœur léger je cueillis une rose
Trop attirante en son arbre épineux;
Mon faux ami m'a pris la fleur éclose,
Et m'a laissé l'épine pour adieux."

The epigraph of these poems is simple and pretty:

"Ah ! si mes vers avaient des ailes,
Ils tourbillonneraient vers vous,
Comme à nos toits les hirondelles
Quand revient un souffle plus doux.

"Ils vous murmureraient des choses
Qui vous feraient vibrer le cœur,
Dont jamais de vulgaires proses
N'auraient eu l'ardente saveur.

"Mais ces pauvres vers n'ont pas d'ailes;
Ils tomberont sur le chemin,
Oiselets aux plumes trop frêles,
Si vous ne leur tendez la main."

And M. Caro says of the poem entitled "Une Marche de Pierre," "I have just read these pretty, melancholy verses, and must say how graceful and charming they are. It is a surprise to find lines inspired by De Musset from such an austere pen." But the tone soon changes, reverts to sadness, and she dwells at last on the final refuge, on the great day of His coming. The verses on "La Roma Sdegnata" of M. Hébert have more vigor.

"Oui, je te foule aux pieds, Rome antique et chrétienne,
Je jette ta poussière aux quatre vents des cieux;
Ta gloire de martyre ou ta grandeur païenne,
Je réduis tout en poudre, et tes saints et tes dieux.

"Sur ton sol profané j'étends ma griffe avide,
J'écrase tes palais, j'arrache tes cyprès,
Et je m'installe en roi dans cette Rome vide;
Je suis maître du monde et m'appelle Progrès."

Of all Mme. de Chambrun has written, nothing, however, is so widely known as her "Passiflore":

I.

"Voici, sur mon déclin,
La fleur que j'ai choisie,
D'aucuns l'appelleront
Fleur de la passion,
Je la nomme fleur de la vie.

II.

"Qu'importe ? c'est le même nom:
Elle a la couronne d'épines,
Et l'échelle qui mène au ciel,
Et l'éponge aux gouttes divines,
Tour à tour d'hysope et de miel.

III.

"Elle a le vert de l'espérance,
Elle a le violet du deuil:
C'est la joie et c'est la souffrance,
C'est le berceau c'est le cercueil !

IV.

"C'est donc, sue mon déclin,
La fleur qui j'ai choisie;
D'une teinte pareille au jour qui va pâlir,
Elle est l'image, l'image de la vie:
C'est le passé, c'est l'avenir !"

Dom Pedro, then Emperor of Brazil, translated this poem into Portuguese, and his daughter sent the author a copy printed by her boys on the little printing-press in the palace at Rio Janeiro. The French original was set to music by both Gounod and Ambroise Thomas, neither of whom was aware that the other had undertaken to do so; and the Countess Jeanne sang it herself to the dethroned sovereign and his family in her villa at Nice. There, and in their splendid hôtel, "Rue Monsieur," in Paris, the De Chambruns gave the choicest musical entertainments, both sacred and profane, with such artists as Patti, Nilsson, Krauss, and Materna for performers, accompanied by the orchestra of Colonne or Lamoureux. The sacred concerts took place in the chapel of the hôtel, a miniature copy of the Sainte Chapelle of Saint Louis. At one time they issued invitations to a course of lectures on the history of music, illustrated by these celebrities; and in 1880, when the Comte de Chambrun's sight was failing, he engaged the best lecturers to speak on the philosophical subjects in which he took such a deep interest. They came on regular days, as for a public course. A great admirer of Wagner, the Countess Jeanne never rested till she had converted her husband, who ended by surpassing her in enthusiasm, and they made together the annual pilgrimage to Bayreuth.

Inheriting from her father vast wealth, of which she made noble use, Mme. de Chambrun never seemed to attach any importance to what was factitious in herself or others; and, Legitimist that she was, it would seem that, even when dealing with royal personages, their woes were the best passport to her favor. Though frail and suffering, she led the life of a Sister of Charity at Pau, at Versailles, and at Paris after the Commune, and her deeds of mercy were numberless.

She had a strong love for the drama, and was fond of acting in her own private theatre, preferring the plays of Shakspere, De Musset, and Feuillet. Sometimes she wrote a "proverb" herself, and created the principal part. At the time of her death, which took place in Paris in the summer of 1891, after a few days' illness, her husband directed that the funeral rites should be of the simplest kind, and would not allow them to emblazon with armorial bearings the black draperies of the church or those at the porte-cochère of the hôtel. The pathetic, dirge-like lament written by him as he sat, blind and desolate, in his sick-room, while the bell of St. François Xavier near by was toll-

ing for his wife's funeral, recalls the "He and She" of Sir Edwin Arnold. At the funeral services in the Montmartre Cemetery, M. Émile Ollivier said, in his eloquent farewell to the Countess Jeanne: "She was buoyed up with a great hope. God has welcomed her to a peace which passeth understanding."

The curtain falls. It has seemed almost indelicate, even like a breach of confidence, to call public attention to these intimate revelations of the wedded life of M. and Mme. de Chambrun, of which more can be read between the lines than appears on the printed page; but the book may do missionary work in more than one way.

*Comparative Syntax of Greek and Latin.* By Eustace Hamilton Miles, B.A. Part I. Cambridge: Macmillan & Bowes; New York: Macmillan. 1893.

THE study of syntax has for years been profoundly influenced by evolutionary methods, and nowadays he who studies syntax studies the laws of life, the laws of growth. The old logical apparatus has been discarded, and psychological instruments of precision have been introduced. The assemblage of facts goes on as it did of old, but with an exhaustiveness of which earlier schools did not dream. It is true that abundant illustration and acute observation are not of yesterday, and that many discoveries of recent days are old stories to the few who know the history of grammatical research, and who recognize traditions and reminiscences in many of the theories that are put forth by minuscule scholars as personal contributions to the advance of science. But, for all that, there is no questioning the fruitfulness of modern methods, the value of modern results. The lucubrations of a great scholar like Gottfried Hermann are almost incredible to our generation. On one page Latin is tortured to express subtle differences of Greek syntax that often exist only in the imagination of the interpreter; on the next a theory is supported by examples drawn from the most diverse spheres of Greek literature. Even Cobet had no true historical sense. His orthodoxy brooked no variations. All that was not Attic was of evil, and in failing to understand pathology he failed to understand physiology.

The historical study of syntax has led to the comparative study of syntax, the historic to the prehistoric. We go back to the parent speech, to the arborescent forms of the original stock, each with its several office. We watch the fusion here, the differentiation there. We see three case functions covered by one case form, and abandon our old abstractions of genitive, dative, and ablative; and yet we are haunted by the thought that to the men who used the language there must have been unity where we see diversity. We interrogate our own consciousness as to our own language, in which also form and function are at variance, and try to reconstruct by sympathy the scheme of the popular grammar. It is a fascinating study, a subtle study. It is a study to which no one scholar is equal. The student of form must be content to learn from the student of function, and vice versa. Through myriads of examples, through the shifting phases of periods, dialects, departments, authors, the patient explorer must feel his way, assembling his facts critically as well as exhaustively, tracing organic growth here and disturbing (not to say "false") analogy there, and the end not a dogmatic certainty, but a modest provisional hypothesis. Such is the syntactical study of the present day. It is yet in its beginning: hosts of problems remain to be solved, and there is room enough for any number of new workers.

Now, into this quiet company of students comes Mr. Eustace Hamilton Miles, B.A., scholar of King's College, Cambridge—"comes with a whoop, comes with a call, comes with a good will," in the approved fashion of the nursery rhyme. Prof. Brugmann "had most kindly offered" him "the advice" "to devote" himself "to thoroughly sifting and working out some small detail"; but Mr. Miles is evidently afraid lest the study of detail might interfere with the full and free exercise of his robust common sense, and finds it much more "funny and nice," if one may use his own choice language, to bully-rag Prof. Brugmann than to follow his wise counsel. "To dote upon a thousand items," he says "(sometimes to the exclusion of an exceedingly practical and undeniable principle of common sense), characterizes very much of German work, much of American work, and not a little of English work"; and it is in the interest of practical and undeniable principles of common sense that this comparative syntax has been written. It is impossible to take Mr. Miles seriously, but it is equally impossible to be angry with him. His light-heartedness reminds one of Brer Rabbit and his way of going to work; of the chapters in which Rabelais describes the adolescence of Gargantua. Like the youthful Gargantua, he runs after butterflies, returns to his muttons, puts the cart before the horse, catches larks when the sky falls, looks a gift-horse in the mouth, falls between two stools, *trop embrasse et mal étrei t*, and all the rest. A more determined young fellow to break down an open door, a more zealous schoolmaster in teaching dolphins how to swim, is hardly to be found in the limbo of grammatical infants. His "main contention," in black-faced type, is "that our evidence does not often justify that dogmatism with which prehistoric forms or constructions have hitherto been mapped out as certainties, and that many views hitherto stated and accepted as certainties still remain to be proved to be certainties." This main contention will hardly seem to be a desperate novelty to any one who is acquainted with the tendency of recent research, which is more and more cautious, more and more reserved, more and more averse to large conclusions, more and more prone to keep within the sphere of phonetic sequence and homely analogy.

The armor in which this *enfonceur de portes ouvertes* is clad consists chiefly of native resolution. "This is not a learned work," he acknowledges. "My knowledge of Sanskrit is small." And yet, strong in his common sense and uncommon assurance, he proceeds to treat Brugmann and Delbrück very much as Brer Rabbit treated the tar baby. Of the history of the department he knows nothing, and wastes both praise and blame on the wrong persons. His tumultuous list of authorities is of a piece with the tumultuousness of the book. In brief, Mr. Miles has been at a great feast of grammars and stolen the scraps, and now proceeds to pelt the grammarians with what he does not find to his taste. It is a performance such as would be impossible outside the British Isles, in which all things grammatical are possible; and the American grammarians, whom Mr. Miles does not spare, will not be much more disturbed by his censure than Brugmann and Delbrück, who are also taken to task in a most schoolmasterly way.

*Fragments of Earth Lore.* By Prof. James Geikie, D.C.L., LL.D., F.R.S., etc. Edinburgh: Bartholemew. 1893. Large 8vo, 428 pages, 6 colored maps.

THE brothers Archibald and James Geikie both possess to a remarkable degree the combination of professional ability of a high grade with an attractive style of popular writing that fits their essays for preservation in handsome volumes on library shelves. Their official positions, the first as Director of the Geological Survey of Great Britain and Ireland, the second as Professor of Geology and Mineralogy in the University of Edinburgh, have not prevented their making contributions to magazine literature as well as to the proceedings of scientific societies, to which professors of the sciences too commonly restrict themselves. Both science and general intelligence are promoted by meetings of the specialist and the general reader on common ground, under the leadership of such men.

Fourteen essays by the younger brother, James Geikie, are now gathered under the title, 'Fragments of Earth Lore,' which we commend highly to those who are too busy to read widely enough to follow all the better popular scientific articles that appear nowadays, but who nevertheless do not like to abandon entirely a field of reading and information from which in their college career they received suggestive information and entertainment. We find a particular interest in the essays entitled "The Physical Features of Scotland," "The Cheviot Hills," and "The Glacial Succession in Europe." The first of these, neatly illustrated by a relief map, gives an admirable account of a most attractive country, and impresses the lesson which so many teachers of geography are slow to learn, namely, that a rational understanding of the physical geography of a country can be had only through an understanding of its geology; and that an essential preparation for any one who would properly teach any stage of geography but the most elementary, is a training in geology. It emphasizes a further fact that our States might take note of—namely, that no good geographical teaching can be expected in their schools until their teachers are supplied with reasonably good local maps.

The second essay, on the Cheviot Hills, is an excellent illustration of the common sense of geology; a leisurely presentation of a series of facts that all together make up a truly complicated history, although every one of them taken alone is simple enough for elementary teaching. The border land of England and Scotland, a district of no great scenic reputation, but attractive from its picturesque succession of hill and dale, and full of historical associations, is here described in so entertaining a manner that the traveller should be tempted to stop in the Cheviots, if only for the satisfaction of reading on the ground an essay that gives much pleasure even when read far away. We need many an essay of this kind in our own country.

The third of the three essays above mentioned is one of the best illustrations of ingenious geological argument that have recently come under our observation. The discovery of new facts may call for changes in its conclusions, but it is not to be expected that they will overthrow its essential thesis, that the glacial period was a complicated succession of events, to which no justice can be done by regarding it as a single geological epoch. There were advances of the ice sheet during colder climates, retreats of considerable duration when a mild

climate prevailed, and readvances of the ice under a colder climate again. Indeed, Prof. Geikie is persuaded that five epochs of advance can be discriminated. This is truly a remarkable development of the primitive glacial theory, which classed all the northern drift as the product of a single glacial invasion. It testifies strongly to the opinion of our leader in this line of study, Prof. Chamberlin of Chicago, to the effect that the investigator should now enter the field without preconceptions as to the unity or complexity of the glacial period, and that his conclusions should be based only on critical interpretation of facts gathered from a broad region. As Prof. Geikie is a specialist in glacial geology, it is natural to find that subject receiving the most attention in his writings, and we do not doubt that this will be gratifying to the general reader, for there are few theories in geology which attract more widespread interest than this almost incredible belief as to the effects of former climatic changes. A large number of the civilized people of the world now live on lands which were not long ago swathed in ice, even as Greenland is to-day; and when so good a story as that is well told, it is well worth the reading.

The illustration of the volume by maps from the geographical establishment of Bartholemew adds greatly to its value and beauty. Bartholemew's work is coming to be widely known to geographers through his illustrations in the *Scottish Geographical Magazine*, from which some of the plates are here reprinted. It is a good thing for geographical science in a country to have a publishing-house so successfully devoted to illustration of the subject.

---

*Women Adventurers.* Edited by Ménie Muriel Dowie. London: T. Fisher Unwin; New York: Macmillan & Co. Crown 8vo, pp. 288.

We have in the volume before us (number fifteen of the "Adventure Series") the biographies of four female soldiers of fortune, edited, or, more properly, reëdited, by a writer who has won much praise by the narrative of her own adventures as 'A Girl in the Karpathians.' As an editor, Miss Dowie (Mrs. Norman) has chosen to wear her responsibilities somewhat lightly. That she is not deeply impressed by the veracity of the three histories she has resuscitated bodily (with the title-page of each apparently in facsimile) from their first incorporation in type, in the middle of the last and early part of the present century, she very frankly confesses in the preface with which she precedes them. She would "as soon," to quote her own words, "disturb the immemorial crust upon some pale and spiritualized '34 as disperse the gathered must and bloom on these old histories." To this point of view an exception is made in favor of the heroine whose adventures lead the list, and who, it is stated, "stands upon a different, a more serious platform, for she is of our own day, and plenty of men now living must have known her as Lieutenant Harry Buford."

The exploits of the lady thus vouched for, Mme. Loreta Janeta Velazquez in private life, were given to the world by a Hartford publisher in 1876. The first engagement she took part in, as an officer of Independent Scouts, C. S. A., was the battle of Bull Run, where, if we are to accept her own authority, "no man on the field that day fought with more energy or determination than the woman who figured as Lieut. Harry T. Buford." Failing, in spite of her valor, to get herself attached to a regular command, and "annoyed beyond expression" at the "slow and inconclusive progress of the military movements," this unrecognized military genius transformed herself into a spy, and continued thenceforward to alternate between the rôles of spy and soldier with a versatility worthy of her sex. In her matrimonial feats she is approached by only one of her compeers in the volume, whose partners in matrimony number three to her four. In inclination for independent warfare she is equalled by none, though all were able to undergo hard service in the Low Countries, in the East Indies, and, under Lord Howe, on board the war-ship *Brunswick*. All, like herself, escaped the tragic fate of battle and ended their days by natural causes in scenes of peace.

All were also able, for long periods and under circumstances the most unfavorable, to preserve intact the secret of their disguise as men. This, indeed, is the point of resemblance by which these lives have been brought into the intimacy of a common title and cover. That women may, if they choose, without too great difficulty, deceive the world as to their sex, may fairly be taken as the moral of the volume, if moral there be. A fourfold enforcement of this sentiment seems, however, of small practical value at a time when, again to quote Miss Dowie, there is no longer any need for women to put on the garb of men "in order to live, to work, to achieve, to breathe the outer air." Neither in physical endurance, in contempt of danger, nor in sustained courage do any of her adventurers surpass others of their sex who will readily occur to the memory. In refinement of nature and nobility of purpose they all fall far short of an ideal standard. Retold in Miss Dowie's own rather adventurous English, their histories might perhaps have gained a literary charm that would have made them live to be more than a nine days' wonder. As it is, the dulness and heaviness of the style in which they are for the most part written will be likely soon to drag them back into the oblivion from which they have been temporarily rescued.

---

*The New Era;* or, The Coming Kingdom. By the Rev. Josiah Strong, D.D. The Baker & Taylor Company.

The author has not abated one whit of that religious chauvinism which, in his former book, 'Our Country,' made Matthew Arnold stare and gasp. He has only come now to give the scientific reasons for the faith that is in him, and these we have in a little series of "fundamental laws and principles" which have governed the development of the world up to the present, and from which it follows with the most irrefragable logic that the Anglo-Saxon race is the flower of all creation, and the United States its destined garden—or, as Dr. Strong puts it in startling italics, "Now for the first time in the record of history the greatest race occupies the greatest home."

In one chapter of twenty-four pages we are given the great "principles" operative in the history of civilization, which "seem to afford the true key to history, though I find no recognition of them in Hegel, Guizot, Buckle, Draper, or any other writer on the philosophy of history." What these principles or "characteristics" are, the reader can find out, by an easy short-cut, through learning that "the miracle" is that they "are all united in one and the same race"—that lucky Anglo-Saxon, of course, in its American variety. Dr. Strong lays it down, in the usual italics, that "the civilization of all peoples is inversely as their isolation," and that it is one of the signs of being on the verge of the millennium, or whatever the new era is, that steam and electricity "render isolation and, therefore, barbarism, impossible." But a little further on he tells us that "the cranial capacity of the Australian is forty cubic inches less than that of the European. It would be impossible to raise the intellectual life of the former to that of the latter until his brain had been equally developed." This looks as if something besides "isolation" were the trouble; or would the Australian's brain at once double in size if he were dragged out of the bush and clapped down in Union Square? We think the author is bound to maintain that it would, not only as a deduction from his great principle that to get rid of isolation is to get rid of barbarism, but also from his enumeration of "the telegraph, the press, and the ballot-box" as "all the means which the intellectual life of a perfect social organization would require for its exercise and expression." The small-skulled Australian could have all these, with the telephone, the electric motor, the Ferris wheel, and all the other instruments for the perfecting of character by which, we are assured, it is the intention of Providence to "Anglo-Saxonize mankind."

Dr. Strong seems to fear that his readers will be inclined to stand still and see his great principles work out the salvation of the world unaided, and so, in the last half of his book, drops his principles for the most part and takes up practical difficulties. Here we begin to see that the greatest race has the toughest job on its hands. We are told of the extent of "popular discontent," of the "steady deterioration of our rural population"; we learn that "the church and the home are weaker in the city than anywhere else," that "those who are not Christians are on the increase in the world." This is pretty discouraging, but Dr. Strong always comes to the rescue just when things look blackest. Under the "Problem of the City," for example, he says, there are three alternatives possible: present tendencies may go on and the churches fall still further behind; the cities may find their growth arrested; or the churches will awake. The first alternative is ruled out because to accept it would be "to despair of our country." The second is impossible because of the "great world-movement towards the cities." Therefore, the third "shall be. *The churches will awake.*"

We have thought it worth while to give up space to this book, not only because it is doubtless destined to considerable vogue, but because it is the very flower of a kind of taking writing and speaking on great subjects, by good and able men, which is accepted by multitudes in lieu of sounder thought, and particularly as an excuse for doing no thinking themselves. These neat generalizations, even supposing them not to be preposterous, as they often are, are but so much feeding upon the east wind. Of his "principles" Dr. Strong says he is "absolutely sure"; that they must be applied if civilization is to be saved, he "cannot doubt"; but of "specific methods of applying them" he must "speak with diffidence." This puts us on track of the essential vice of such appeals to the emotions in great swelling words of vanity, followed up by such a pitiful modicum of practical example and direction.

---

*Letters from Queensland.* By the *Times* Special Correspondent. Macmillan & Co. 1893. Pp. 110, 8vo.

The main object of these letters is to show what inducements Queensland has to offer for

English capital and labor, and at the same time to indicate the progress which less than half a million white men are making in developing a country three times as large as France. In order to do this intelligently, the writer travelled through the sugar district stretching along a thousand miles of coast, visited the great mining centres of Mt. Morgan in the east and Charters Towers in the north, and rode over some of the largest sheep-ranges of the interior. Each of these industries he describes with more or less detail, but gives most attention to the first, as upon its success apparently depends the development of tropical Australia. He shows, by facts taken from the experience of planters, and by carefully prepared tables of figures of the outlay necessary for breaking in new land, that "modest fortunes" are to be made in the cultivation of sugar by the small farmers and peasant proprietors. This is dependent, however, upon the employment of Kanakas, for on this vexed question of colonial politics the *Times* correspondent takes decided ground. As the result of his investigations he holds that native labor is absolutely essential to the profitable raising of sugar, and also that the labor traffic is now so safeguarded by legal restrictions and official oversight that the old abuses are no longer possible. After inspecting the quarters and rations of the islanders on plantations in every part of the sugar district, he says: "I have never in any country seen the lot of the average manual laborer so well cared for." Their contentment is proved by the fact that "two-thirds of the Kanakas now in Queensland are time-expired"—that is, men who have voluntarily renewed their contracts rather than return home.

There is an interesting account of Mt. Morgan, a hill rising 700 feet above the plain, "of which the core is seamed and traversed and permeated with gold." This is being gradually taken out, and the timbered chambers in the heart of the mountain "resemble rather the halls of a spacious castle than the burrows of a quartz vein." More important, however, than this mountain of gold is the gold field of Charters Towers, with 113 mines, having an output of 20,000 ounces a month, about which has sprung up a substantial town of 20,000 inhabitants. The letters descriptive of pastoral Queensland are perhaps the most entertaining and suggestive of all. A graphic picture is drawn of the shearing-shed at the height of its activity, as well as of the strange life of the shearers and their associates, known as the "rouseabouts." Though living like brutes, many of them are "decent, intelligent, and thoroughly respectable men," who were "ready to discuss theories of social and political economy. They are readers of George and Hyndman; Bellamy's 'Looking Backwards' is to be found in every shed." Very striking, also, is the account of the labor meeting in the bush. The closing letter states clearly and impartially the arguments for the division of Queensland and the serious difficulties in the way of accomplishing it.

---

*The Chronicles of the Sid;* or The Life and Travels of Adelia Gates. By Adela E. Orpen. London: Religious Tract Society. 1893. 8vo, pp. 413.

We have here a very entertaining account of a remarkable woman. The Sid (Arabic for mistress) is an American lady who has been a Lowell factory-girl, a schoolmistress, a student at Antioch College, in later life a flower-painter by profession, and, after having attained the age of threescore, a traveller. To many readers the first chapters, giving graphic pictures of life on a Kansas prairie during the civil war, will prove the most attractive. We single out an episode of the battle of Mound City:

"I stopped at a friend's house some four miles nearer the front than we were. She was standing outside her door, with her little children gathered around her, and their faces were anxiously turned towards the direction of Mound City—the gathering point of the militia.

"'Is there any news?' I asked.

"'Hush! we are listening,' said she.

"'Listening for what?' I asked.

"'Dare's 'nudder one,' said the youngest child, a little tot who was just beginning to talk. 'Tannons.'

"Sure enough, I heard now a sound that my horse's hoofs had prevented me from hearing sooner, a faint soft boom that floated across the still autumn air. Gently vibrating upon our ears, these soft faint booms followed each other at intervals of about thirty seconds, and were triumphantly listened to by the little babbling baby, who smilingly told me they were 'Tannons.'

"'We've been listening for some time,' said the mother gently—her husband was at the front, poor soul—'to hear if they get louder.'

"'And if they do?' I inquired.

"'Then we are going to your house, to go with you to the plains until the danger is past—those were father's directions.'

"'Dare's 'nudder tannon,' cried the little child gleefully.

"'Hush, baby, hush,' said the mother, kissing her tenderly. 'Don't say that.'"

From the West the scene abruptly changes to the Old World, and the remainder of the book is taken up with sketches of travel in the Sahara, on the Nile, in Palestine, Norway, and Iceland. These not only show unusual descriptive powers, but bring out very clearly the peculiar characteristics of Miss Gates as a traveller—namely, in addition to the ability to endure the utmost hardships, a perfect fearlessness and the faculty of attracting people of every class. In Southern Algeria it was an absolutely unheard-of thing to see a white woman travelling alone and like an Arab, and the sight called out all the hospitality and chivalry of the dwellers of the oases which she visited in quest of flowers to paint. Next in interest to these descriptions of life in the desert is the account of the journey up the Nile to the Wady Halfa, two hundred miles beyond the limit of the ordinary tourist. As this was made from Cairo on the deck of a native boat, it cost her "under four pounds ten shillings." The chapter narrating the Sid's wanderings in the Holy Land is written by Miss Gates herself, and contains many graphic descriptions, particularly of the people and their manner of life; but her style lacks the grace and charm of her biographer. The book closes with a brief account of journeys to Norway and Iceland.

---

*The Microscope:* Its Construction and Management, including Technique, Photo-micrography, and the Past and Future of the Microscope. By Dr. Henri Van Heurck, Professor of Botany and Director at the Antwerp Botanical Gardens, etc., etc. English edition, augmented by the author from the fourth French edition. Translated by Wynne E. Baxter, F.R.M.S., F.G.S. London: Crosby Lockwood & Son; New York: D. Van Nostrand Co. Royal 8vo, pp. xvi, 382.

The English edition of Dr. Van Heurck's important work is the last word on the microscope and its technique from the practical point of view of the investigator. The author's researches in the field of the Diatoms, in which he is a principal authority, led him into careful experiments with objectives of the widest aperture, whether used for direct observation or in photography. By the union of his great practical expertness with the theoretic ability of Prof. Abbe in the physical formulæ of lenses, and with the mingled scientific and mechanical resources of the great atelier of the Carl Zeiss Company at Jena, a coöperation was established which has given the world the standard of what may be accomplished to-day in the resolution and definition of minute structure and its exhibition by the photo-micrograph.

Prof. Van Heurck speaks, therefore, in the description of the microscope, the accessory apparatus, and its technique with a personal authority which will be recognized everywhere as of the highest. His chapter on photography with the microscope is the fullest and most satisfactory which has appeared in any general treatise on the instrument. The origin and development of the microscope are treated in an historical chapter well illustrated with drawings of the earlier instruments, from Hooke's and Cherubin's in the seventeenth century, downward. The whole is supplemented by a noteworthy communication from Dr. Czapski of the Zeiss Company on the future of the microscope, indicating the directions and the extent of the further improvements which the present state of science renders probable. The large size of the page chosen in the book has enabled the author to give the figures of various styles of instruments on so ample a scale as to make the comparison of their mechanical construction most easy and satisfactory. The list of English, French, and German microscopes thus illustrated is very full, and two or three of the leading American makes are included. The microtomes, in which development has been singularly rapid of late years, are also very fully described, and are illustrated on the same ample scale as the optical instruments.

Dr. Van Huerck has confined himself to the practical treatment of the microscope and its accessory apparatus, and has not attempted to give an encyclopædic view of its "revelations" in the various fields of scientific research. Within the scope he has thus set for himself, the work leaves little to desire and must be accepted as an authoritative standard.

---

*Le Docteur Pascal.* Par Émile Zola. Paris: Charpentier; New York: Westermann & Co.—*Doctor Pascal.* Translated by Mary J. Serrano. New York: Cassell.

Zola's latest novel is also the summary and crown of his whole work, he tells us in the dedication to his mother and his wife. But it is not a crown of glory in any sense of the word. The book is disappointing; it is not the equal of 'La Débâcle,' of 'Germinal,' of 'L'Assommoir.' It displays abundantly enough the faults and vices of the writer, with but few of his better qualities and none of his great powers. It is a labored justification of his wholly false views of life, of his pet theory of heredity, which he lays down as a law. It is useful as containing in some twenty pages a rapid review of the characters and incidents in the whole of the author's work, and, scattered here and there, statements of his views on life, on realism, on truth, on morals (save the mark!). These views are already well known, and the minds of most thinking men are already pretty well made up on the value of Zola's opinions. His challenge to hostile critics, his semi-disguised appeal to posterity to place him in the ranks of finders of truth, and not merely of seekers after it, will scarcely

have much effect. An utterly false view of life, of society, of individual men and women, can never be the pedestal of an enduring fame. Foulness of the blackest, filth of the vilest, poured out in abundance, can never give a man a place among the great literary artists of France any more than maxims such as "One may be a murderer and yet serve God," make of him a moralist or a thinker of influence. One breathes a sigh of relief at the thought that 'Le Docteur Pascal' is the last of that series of repellent books in which passages of marvellous beauty and strokes of undoubted genius serve but to deepen disgust and to intensify regret.

As a story 'Le Docteur Pascal' is neither attractive nor very interesting. Not merely the approval of adultery, but its sensuous glorification, is in large measure the theme, and the trail of the serpent is over it all. The idea of a high-minded scholar earnestly striving after truth in the face of hostility, indifference, incredulity, unhappiness, cheered, however, by the enthusiasm and self-sacrifice of a pure, devoted girl, is prostituted to the illustration of the illicit amours of a sexagenarian and a girl whose mind, by study of so-called science, has been subtly corrupted. Pascal and Clotilde, the uncle and the niece, suffer eventually, but fail to awaken a spark of pity or sympathy in the reader's mind, for the author has made them despicable. The hideous and the gruesome have not been spared either—for this is a trait of the school: the maniac ancestress, Adelaide Fouqué; the idiot, Charles; the worn-out Maxime; the drink-soaked brute, Macquart; the harpy, Félicité, Pascal's mother, are paraded in all their deformity and repulsiveness. Death scenes, intended to be forceful but turning out simply ghastly, fail to convey any wholesome lesson or to produce any feeling save that of disgust. The book is laid down with thankfulness that the end has been reached at last.

The translation of the book published by Cassell is good and avoids dexterously some of the more offensive expressions of Zola. It cannot make his language quite unsuggestive, but it dulls the suggestiveness where it is worst and yet renders faithfully the spirit of the original.

---

*Outlines of Roman History.* By H. F. Pelham, Camden Professor of Ancient History in the University of Oxford. G. P. Putnam's Sons. 1893.

THIS book is a "reprint, with many additions and corrections," of Mr. Pelham's article on Roman History in the 'Encyclopædia Britannica.' Although it professes to be no more than an outline sketch of the lines of development from the founding of the city until the accession of Odoacer, yet it is much fuller than such sketches are apt to be, the plan is well conceived and carried out, and the author shows throughout a rare power of grasping the most important points and exhibiting them clearly and in simple language. It is undoubtedly the work of a man well acquainted with the best ancient and modern authorities, of one who certainly acknowledges his indebtedness constantly, and yet does not hesitate to differ frankly, when he feels that he must, even from such chiefs as Mommsen.

The most striking and useful parts of the work are perhaps the clear expositions, at all the different periods, of the Roman system of home and provincial government in all its forms. Society, too, and its manifold divisions, receive most satisfactory treatment, except that too little is said about the *collegia*. The reader's attention is directed in the main to movements and not to men, but the greatest "figures of the past" are treated in a remarkably sage and satisfactory manner, considering how short is the book compared to the period which it covers. It is not a cram book out of which a boy may "get up" his Rome for an examination; it is too broad in its scope to serve so debased a purpose. But to the thoughtful and intelligent reader it will be an excellent guide, and will tempt him on to deeper and more special study. Ample references to the authorities are given throughout. A slight slip on page 166, *dies fasti* (for *festi?*) deserves correction. It seems strange, too, that Mr. Pelham should cling to the view that *Roma Quadrata* was a term applied to the most ancient form of the city instead of to an altar. By the way, in the note on this passage (page 15), for *Testum* read *Festum*.

If we had a quarrel with Mr. Pelham, it would be because, in brushing aside the early legends, he does not pay them the compliment of telling what they are. Even a ten-pin must be set up before it is knocked down. A generation is growing up that knows not the kings, and to whom Horatius Cocles, Lake Regillus, and Virginia are mere inventions of Macaulay. Then, too, a history of Rome without a word about the Wolf!—an incredible thing to the two worthies of whom, as they stood gaping before the lightning-scarred bronze from the Capitol, one was overheard to murmur, "Think of what we owe to Romulus!" "Ah," sighed the other, wagging his head, "but just think what we owe to the Wolf."

---

*Text-book of Comparative Geology.* By E. Kayser, Ph.D., Professor of Geology in the University of Marburg. Translated and edited by Philip Lake. Macmillan & Co. 1893.

MR. KAYSER'S book, first published in 1891, is a text-book of historical geology for the German empire, with numerous remarks on the equivalent formations in other countries. Mr. Lake, in translating this excellent work, has made large additions to the extra-German descriptions, and thus added to its general value. The additions, however, have not been uniform, most of them being found in the first half of the volume. Limits of space are assigned as the reason for the lack of additions in the latter part of the book; but as the total number of pages is only a little in excess of 400, the validity of this reason is not very apparent.

The fact is that no work would be more welcome to geologists than an historical geology in which the formation of all countries where considerable investigations have been made should be luminously sketched. No one man could achieve such a task; but if geologists of other lands would imitate Mr. Kayser, we should soon have a dozen volumes with dovetailed contents, from which an Edward Suess could produce an almost ideal bird's-eye view of the subject. In the meantime this instalment will be warmly welcomed.

The matter is very well handled, and the very numerous illustrations of fossils, though not fine as works of art, are clear and sufficient. The literary references are decidedly unsatisfactory, as is apt to be the case with books growing out of courses of lectures. The value of the work would be doubled were it practicable to turn at once from its pages to the memoirs on which it is founded; but this omission can readily be made good in a second edition. There is a curious mistake on p. 351, where it is stated that marsupials are at present confined to Australia and *South* America, implying that there are no opossums in North America. This mistake does not appear in the German original. Lake Lahontan (misspelled Lahonta) and Lake Bonneville are confounded, and there are other errors, but not such as to detract seriously from the usefulness of the book.

---

*Sound Sense in Suburban Architecture:* containing hints, suggestions, and bits of practical information for the building of inexpensive country houses. By Frank T. Lent, Architect. With illustrations by the author. Cranford, N. J.: Frank T. Lent. 1893.

THE suburban house might be called the American specialty, for the American's country-house is usually only a suburban house standing apart, and, except in the large cities, his town houses are mostly the same houses crowded together. A rather surprising amount of good designs in their kind is distributed through the swarm of books made up of designs for houses which are issued to tempt whoever will build. The houses in Mr. Lent's slender book are better than the average in such books; his hints and suggestions are sound, as his title-page claims, though it did not need an architect to write them. The model specification which fills the latter half of the volume is careful, and, except for the balloon framing, which is out of keeping with the rest, is reasonable; but, if we may judge by the prices given in one or two instances, there can hardly be a close correspondence between it and the houses.

---

*A Winter in North China.* By the Rev. T. M. Morris. Fleming H. Revell Company.

THE Christian missionary work is so well established in China that it is the custom of the great missionary societies to send out, from time to time, delegations from home, for the encouragement of the missionaries, or for inspection of their work. The Baptist Missionary Society of England has sent out two of its ablest and most experienced men, Rev. T. M. Morris of Ipswich, and Rev. Richard Glover, D.D., of Bristol—the latter furnishing an introduction to the volume under review—for the purpose of examination and criticism. The missionaries in the field complain that their work has been frequently criticised by those who have never seen it, or who have known little or nothing of the circumstances in which, and the conditions under which, that work is being carried on. On the other hand, their work has never been described but by themselves, and they reasonably acknowledge that there are many who think that the maker of converts is not the best person to describe either the quantity or quality of conversion. They therefore prayed for two men, in whom there was mutual confidence, to come and spy out the land.

These two gentlemen of years and experience, practical Englishmen, went out to China, taking in Japan by the way. They noticed how the Gospel could lay hold on a mobile, artistic, but withal sensual people, and commend itself to thousands as the best guide for nations and for men. In China, all sorts of questions, of keenest interest, met them at every turn. As sociologists, students of history and of comparative religion, and as Christians anxious to convert their fellowmen reared in a faith of different form and spirit, they found a field replete with interest. Hence this account of their travels and expe-

riences, though of less value to the critical student who would study the great moulding forces beneath the surface, is of great popular interest, because everything appeared to the travellers so fresh and full of novelty. Every nerve seemed to be sensitive to the new impressions, and the author writes with all the joy and sparkle of one who sees an old thing for the first time. After the usual initial chapter concerning San Francisco, the Pacific, and Yokohama, we have a glimpse of Fusan and Jinsen and Korea, a glance at Chefoo and Tien-Tsin. A journey of five months in the interior, travelling by cart, wheelbarrow, and other strange conveyances, was made over eighteen hundred miles or more, the average rate of speed and travel being about three miles an hour. Most of the time was spent in the three great provinces, Chih-li, Shantung, and Shansi, though passing visits were paid to six other provinces, and most of the treaty ports were visited.

The special impression one gets from this book is of the vastness of the inland traffic of China despite the vileness of the roads. The wind-sped wheelbarrow, equipped with sail, is a notable means of transportation. The chapter on the Great Plain of China is of much interest, because it discusses in an interesting manner the life of the millions of cave-dwellers in the precipitous loess cliffs. Whole villages are made up of these troglodytes, who live in the excavations which rise terrace above terrace in this remarkable geological formation, which is believed to be of sub-aerial origin. Mr. Morris discusses the opium question from a point of view dear to the heart of the British taxpayer, who does not like to be troubled with principle: "As a set-off to opium-smoking there is no visible drunkenness in the interior of China; in the parts at least I have visited, I have not seen a drunken man. I have scarcely seen a Chinaman taking anything stronger than the weakest of weak tea or hot water." The writer is not insensitive to the beauties of art or the interest of folk-lore, and tells with gusto the pretty legends of fair virgins who cast themselves into the crucibles of molten metal in order to secure the successful casting of the great bells. One of these summoners to prayer always utters, in accents as of a female voice, "Hsie, hsie" (Shoe, shoe), because the spectator who rushed forward to seize and save the maiden was in time only to catch one of her shoes, which came off in his hand, and Ko-ai still calls for her lost shoe. The invariable interview with Li-Hung-Chang was sought for and obtained, and, as usual, the great Chinaman praised the medical missionaries, while still clinging to Confucianism, which he thinks is best for the Chinese. There is a very fair chapter about the religions of China, and the statement and discussion of missionary work and methods are unhackneyed, suggestive, and stimulating. Take it all together, this is a work worthy of wide reading.

## *Teachers, etc.*

*A LADY OF EXPERIENCE WITH* boys wishes to take two into her family, and will give them personal care. Steam and electric cars within three minutes' walk, making Boston schools available. Fine air and country sports. Refers to leading Boston teachers. Address E. M. P., Brookline, Mass.

*A GENTLEMAN LIVING IN CAMbridge*, Mass., wishes to let several rooms in his house to graduate or professional students who would prefer the quiet and comfort of a private house to a lodging-house. A party of two or three friends preferred. Apply to ELLIS & MELLEDGE, Cambridge.

*A YOUNG MAN (AMERICAN, 19* years' residence abroad) would like to secure pupils in French during the summer months; or would tutor for entrance to a scientific school. No objection to travel. Highest possible references. Address R. N., *Nation* office.

*A RETIRED ARMY OFFICER, A.M.* Princeton, LL.B. Columbia, desires a position in a college or high-grade school, preferably as instructor in military drill. Address "RETIRED OFFICER," *Nation* office.

*AN INSTRUCTOR IN PHYSICS IN* one of the foremost Western Universities (A.B. Harvard, Ph.D. Germany) desires a change. Also tutorship, beginning June 1. Willing to travel. Address Dr. X. B., care *Nation*.

*A STUDENT OF THE JOHNS HOPkins* University wishes to secure a position to teach Chemistry and Physics during the coming session. Several years' experience in teaching. Address FRANK SUTER, A.M., Alexandria, Virginia.

*HARVARD LAW STUDENT, A.B.,* Harvard, '90, would tutor one or more boys during the vacation—anywhere. Address F. H. BROOKS, 52 Weld Hall, Cambridge, Mass.

*CHARLES W. STONE, Tutor for Harvard*, 68 Chestnut St., Boston.

## *School Agencies.*

*SEPTEMBER VACANCIES!—Teacher* of Science, City High School, $1,600; teacher Mathematics, same, $1,600; Military Drill and Gymnastics, $1,500; Science in Academy, $1,200; 2 Directors of Music, $1,200 and $1,500; Drawing and Commercial Branches in Episcopal boys' school, $700 and home. We are asked to recommend candidates for each of the above and many others. Address C. J. ALBERT, Manager, 211 Wabash Ave., Chicago.

*AMERICAN AND FOREIGN TEACH*ers' Agency supplies Professors, Teachers, Tutors, Governesses, etc., to Colleges, Schools, and Families. Apply to

Mrs. M. J. YOUNG-FULTON,
23 Union Square, New York.

*THE FISK TEACHERS' AGENCIES,* 4 Ashburton Street, Boston, 371 Main Street, Hartford, 70 Fifth Avenue, N. Y., 106 Wabash Ave., Chicago, and 120½ South Spring Street, Los Angeles. Agency Manual free. EVERETT O. FISK & Co.

*THE NEW AMERICAN TEACHERS'* AGENCY.—Teachers seeking positions and those wishing a change at an increased salary, should address C. B. RUGGLES & Co. (Palace Hotel Building), Room C, 237 Vine Street, Cincinnati, O.

*AMERICAN AND FOREIGN Professors,* tutors, governesses, teachers, etc., supplied to colleges, schools, and families. MIRIAM COYRIERE,
150 5th Ave., cor. 20th St., N. Y.

*SCHERMERHORN'S TEACHERS'* Agency. Oldest and best known in the U. S. Established 1855. 3 East 14th St., N. Y.

*An Agency* is valuable in proportion to its influence. If it merely hears of vacancies and *that* is something, but if it tells you about them is asked to recommend a teacher and recommends you, that is more. Ours *Recommends*

C. W. BARDEEN, Syracuse, N. Y.

**Heath's Modern Language Series.**

**THE JOYNES-MEISSNER GERMAN GRAMMAR,**

Recently adopted by *Chicago* and *Buffalo*, has also been adopted by Brooklyn, Hartford, Minneapolis, Indianapolis, Omaha, Newark, N. J., Springfield Mass, and hundreds of colleges, private schools, and towns, and is reported as giving entire satisfaction.

Half leather, 390 pages, $1.12.

**D. C. HEATH & CO., Publishers,**
BOSTON, NEW YORK, CHICAGO, LONDON.

*READY IN A FEW DAYS:*

**THE MARK IN EUROPE.** *A Review of the Discussion on Early Land Tenure.*

By ENOCH A. BRYAN, President of Vincennes University. 12mo, cloth.

This book will appeal to all who are interested in any of those sociological questions which are connected with the history of landholding, and especially to teachers and students of history and economics.

**GINN & CO., Publishers,**
BOSTON, NEW YORK, CHICAGO, LONDON.

## FRENCH BOOKS.

Readers of French desiring good literature will take pleasure in reading our ROMANS CHOISIS SERIES. 60 cents vol., and CONTES CHOISIS SERIES, 25 cents vol. Each a masterpiece and by a well-known author. List sent on application.

**WILLIAM R. JENKINS,**
851 and 853 Sixth Avenue (48th St.), New York.

Letters of Credit.

We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make collections and issue Commercial and Travellers' Credits, available in all parts of the world.

Brown Brothers & Co., Bankers,
NO. 59 WALL STREET, NEW YORK.

**FRENCH BOOKS.**

**GENERAL FOREIGN LITERATURE.**

LIBRARIES, COLLEGES, and the TRADE supplied on the most liberal terms. Importations received by every steamer. SUBSCRIPTIONS TAKEN FOR ALL FOREIGN PERIODICALS. Catalogues sent free.

**BRENTANO'S,**
31 Union Square, New York.

Unprejudiced advice given. All makes half-price. Shipped anywhere for examination. Exchanging a specialty. Monthly payments. 52-page cat. free.

TYPEWRITER HEADQUARTERS, 45 Liberty Street, New York. 186 Monroe Street, Chicago.

# The Nation

VOL. LVII—NO. 1465. THURSDAY, JULY 27, 1893. PRICE 10 CENTS.

THE

## POPULAR SCIENCE MONTHLY

**FOR AUGUST.**

**Studies of Animal Speech.** By Prof. E. P. EVANS. Reviews the experiments that have been made on this subject, previous to those of Mr. Garner, by Wenzel, Radau, and others; recognizes the superiority of Mr. Garner's opportunities, and hopes that he may succeed in making important contributions to knowledge.

**Learn and Search.** By Prof. RUDOLPH VIRCHOW. Rectoral Address at the University of Berlin. Discusses the purpose of the university and the spirit that should animate those who attend it; considers the adaptability of the preparatory schools (particularly the German) to cultivate their spirit and fit their pupils for the objects of university life.

**Protection from Lightning.** (Illustrated.) By ALEXANDER MCADIE. Shows in the light of the latest discussions of the subject how and why confidence in the old methods of protection has declined and what are the principles on which protection should be sought.

**Professor Weismann's Theories.** By HERBERT SPENCER. A vigorous reply in the form of a postscript to the essay on "The Inadequacy of Natural Selection" to various propositions adduced by the German author.

*OTHER ARTICLES ON*

SUCCESS WITH SCIENTIFIC MEETINGS; THE COLOR CHANGES OF FROGS; WHY A FILM OF OIL CAN CALM THE SEA; HOW PLANTS AND ANIMALS GROW; THE REVIVAL OF WITCHCRAFT; SOME REMARKABLE INSECTS; THE MATERIAL VIEW OF LIFE; SEALING IN THE ANTARCTIC; HONEY AND HONEY PLANTS; SKETCH OF PAOLO MANTEGAZZA. Several of the articles illustrated.

*50 cents a number; $5.00 a year.*

D. APPLETON & CO.,

NEW YORK.

# D. Appleton & Co.'s New Books.

## The Life of Sir Richard F. Burton.

By his Wife, ISABEL BURTON. With numerous Portraits, Illustrations, and Maps, and two colored Plates. In 2 vols. 8vo. Cloth, $12.00.

The career of the late Sir Richard F. Burton, the distinguished traveller, and editor of "The Arabian Nights," was perhaps the most adventurous and romantic of any Englishman of the last generation. He was an encyclopedic scholar, and much more than a scholar. He knew and had seen more of dark Africa than most men, and more of Mohammedan lands than any man. It seemed a simple thing for him to travel in disguise among fanatics where discovery meant death, but his life was many sided, and his biography illustrates a remarkable variety of interests. Lady Burton has proved her literary ability before, and in these volumes she has done justice to an exceptional opportunity.

## Questions at Issue.

By EDMUND GOSSE. 12mo. Cloth, $2.50.

Some of the literary "Questions" which Mr. Black discusses in this volume are: "The Tyranny of the Novel," "The Influence of Democracy on Literature," "The Limits of Realism in Fiction," "Mr. Rudyard Kipling's Short Stories," "Shelley in 1892," "Has America produced a Poet?" and "Making a Name in Literature."

## General Greene.

By Colonel FRANCIS V. GREENE, author of "The Russian Army and its Campaigns in Turkey," etc. The fourth volume in the Great Commanders Series, edited by Gen. JAMES GRANT WILSON. With Portrait and Maps. 12mo. Cloth, gilt top, $1.50.

General Nathanael Greene has been termed "the most remarkable man, all things considered, among the soldiers of the Revolution," and it has been said that there was "no one whose reputation and advancement can with more justice be attributed exclusively to personal merit." His biography, which has been written in a clear, incisive, always interesting style by Francis Vinton Greene, presents a vivid picture of campaigns which extended from Newport to Georgia, and involved the larger part of the military history of the Revolution.

## The Story of My Life.

By GEORG EBERS, author of "Uarda," "An Egyptian Princess," "A Thorny Path," etc. With Portraits. 16mo. Cloth, $1.25.

For many years Dr. Ebers has kept his hold upon the reading public and has strengthened it with every book. But the personality of this creator of the romance of the past has until now been veiled. The author here tells of his student life in Germany, his association with movements like that for the establishment of kindergarten training, his acquaintance with men like Froebel and the brothers Grimm, his experiences in the revolutionary period, his interest in Egyptology and the history of ancient Greece and Rome, and the beginnings of his literary career. It is a book of historical as well as of personal interest.

## The Health Resorts of Europe.

A Medical Guide to the Mineral Springs, Climatic, Mountain, and Seaside Health Resorts, Milk, Whey, Grape, Earth, Mud, Sand, and Air Cures of Europe. By THOMAS LINN, M.D. With an Introduction by T. M. COAN, M.D. 12mo. Cloth, $1.50.

## A History of Crustacea.

By the Rev. THOMAS R. R. STEBBING, M.A., author of "The Naturalist of Cumbrae," "The Challenger Amphipoda," etc. With numerous Illustrations. Vol. 71. International Scientific Series. 12mo. Cloth, $2.00.

"It is not very generally known that the species of Crustacea extend to a number of several thousands. . . . The beginner will have provinces of a new world opened to his exploration. There is curiosity to be gratified. The sporting instinct will discover many an unexhausted territory. In the manners and customs of the creatures there is much to afford entertainment, and almost every new observer finds something singular to relate."—*From the Preface.*

## Many Inventions.

By RUDYARD KIPLING. Containing fourteen stories, several of which are now published for the first time, and two poems. 12mo, Cloth, $1.50.

"'Many Inventions' will confirm Mr. Kipling's reputation. . . . We would cite with pleasure sentences from almost every page, and extract incidents from almost every story. But to what end? Here is the completest book that Mr. Kipling has yet given us in workmanship, the weightiest and most humane in breadth of view."—*Pall Mall Gazette.*

## The Simple Adventures of a Memsahib.

A new book by SARA JEANNETTE DUNCAN, author of "A Social Departure" and "An American Girl in London." With many Illustrations by F. H. Townsend. 12mo. Cloth, $1.50.

"It is impossible for Sara Jeannette Duncan to be otherwise than interesting. Whether it be a voyage around the world, or an American girl's experiences in London society, or the adventures pertaining to the establishment of a youthful couple in India, there is always an atmosphere, a quality, a charm peculiarly her own."—*Brooklyn Standard-Union.*

"Another witty and delightful book."—*Philadelphia Times.*

## A Border Leander.

By HOWARD SEELY. 12mo. Flexible cloth, with special design in green and silver, 75 cents.

The popularity of Messrs. D. Appleton & Co.'s dainty Summer Fiction Series insures a welcome for the attractive and enlarged form of the series this year. "A Border Leander," the first volume in this series, is a picturesque Western romance, abounding in incident and humor. In their new form these volumes will be found desirable for preservation in the library as well as for summer reading.

*RECENT ISSUES IN*

## Appletons' Town and Country Library.

Each 12mo, paper, 50 cents; cloth, $1.00.

**THE TUTOR'S SECRET.** By VICTOR CHERBULIEZ-author of "Samuel Brohl and Company," "Saints and Sinners," etc.

**LUCIA, HUGH, AND ANOTHER.** By Mrs. J. H. NEEDELL, author of "Stephen Ellicott's Daughter," etc.

**SUSPECTED.** By LOUISA STRATENUS.

D. APPLETON & CO., 1, 3, and 5 Bond St., New York.

# MACMILLAN & CO.'S NEW BOOKS.

*Now Ready. New and Cheaper Edition.*

## The Memories of Dean Hole.

12mo, cloth, $2.25.

"'From grave to gay, from lively to severe,' the motto placed on the opening page, admirably sets forth the main features of a book which no one, we venture to say, will lay down without regret."—*The Churchman.*

"If any one wants to enjoy a truly delightful and charming work, we advise him by all means to purchase a copy of these 'Memories,' which we assure him will amply repay the reading, and which he will lay down with the Sam Weller wish that 'there was more of it.'"—*Living Church.*

"It abounds in bright, cheerful, sparkling anecdotes of all kinds of people, artists, writers, preachers, statesmen, scholars of deserved eminence. There breathes through the charmingly easy, flowing, rambling, chatty volume a spirit of broad, cheerful, hopeful, helpful humanity that will scarcely fail to make every generous reader love the cheery and bright-spirited author."—*Commercial Advertiser.*

*Just Published. Uniform with THE LETTERS OF JAMES SMETHAM.*

**The Literary Works of James Smetham.**

Edited by William Davies. 12mo, cloth, $1 50.

*Now Ready. New Popular Edition of*

**The Atlantic Ferry.**

## The Week.

SENATOR SHERMAN has been talking again, and says that "the Democratic position of friendliness to the free coinage of silver was largely assumed in order to cripple the Republican party by winning over the support of a dozen or so Republican Senators from the silver States." But why was the Republican position of friendliness to the silver lunatics assumed? Why did a party whose President vetoed the Allison Silver Bill, and whose Presidents and Secretaries of the Treasury year after year advocated the repeal of that measure, suddenly turn about in 1888, "condemn the policy of the Democratic Administration in its efforts to demonetize silver" (these efforts being simply a continuance of those made under Hayes and Arthur), denounce Cleveland as a foe of silver, and promise that Harrison would be friendly to it?

---

The Hon. Stephen B. Elkins throws the responsibility for the present financial troubles on the people of the United States. We had almost said that he does this boldly, but a more careful reading of his interview in the *Tribune* shows that he does it rather inferentially and covertly. He says that the trouble is all due to "the Democratic success in November." This enables the casual reader to understand that the responsibility is due solely to the Democrats. If they had patriotically refrained from voting last November, all would have been well. Their untimely exercise of the right of suffrage has been the cause of all the subsequent misfortunes. As this kind of misfortune is liable to happen again, we feel impelled to ask the Hon. Stephen why he does not point out a remedy for an evil so flagitious and to which the country is so much exposed. Nothing short of a change in the Constitution will meet the case. This instrument provides for national elections once in four years. Of course the people are always liable to vote wrong, as they did last November. The only sure way to prevent this is to prevent them from voting at all—that is, if the right party is in power—the risks of a financial panic being so great. Even this remedy would not always be effectual. We had a panic in 1873, much worse than the present one, although there had been no change of Administration or of political control, President Grant having been elected in 1868 and again in 1872. Still, Mr. Elkins's remedy would be well worth trying. We call it his remedy because, although modesty prevents him from avowing it, it is evident that this is what he means.

Mr. Depew has contributed his views on the financial situation, and he takes issue sharply with his fellow-Republicans, "Bill" Chandler and "Steve" Elkins. It is true that he feels bound to ascribe some share in our present troubles to the success of the Democratic party in the last Presidential election, but he does not make this element at all prominent, and he furnishes abundant evidence, from his observations abroad as well as at home, that the chief difficulty is the distrust in our financial system caused by the Silver-Purchase Law. "If," he says, "Europe believed that we were to be, and remain, on a sound financial basis, our stocks and securities would be bought within a few weeks to such an extent that money would go begging for people to borrow it." He proceeds as follows:

> "The first and at present only condition which will release us from this thraldom of fear, and bring to us the confidence of our own people and of the world, is the repeal of the purchasing clause of the Sherman Act. By just the number of days that Congress fails to do this will the present distress increase. It will not make much difference what they do afterwards. If they do nothing, the country would not be harmed. As long as all believe that the indefinite continuance of this acquisition must be stopped or we shall get on the silver basis, the country has fixed its mind on repeal as the solvent of these troubles. The repeal once effected, confidence will be restored in our finances."

Mr. Depew is a Republican of at least equal eminence with either Senator Chandler or Mr. Elkins, while his views have this claim to consideration above theirs, that they emanate from a Doctor of Laws.

---

President Andrews writes a long letter to the *Sun* from Colorado Springs to inform "our friends at the East" of "the woe which has come to the people of the Rocky Mountain region in consequence of the fall in the gold price of silver." He describes the closing of various mines and the general depression, and is really gloomier about the outlook than the natives themselves. He says it is not true that the agricultural product of Colorado is as large as that of the silver mines, and says that, even if it were, the point of importance is that "agriculture cannot subsist except as the mining population provides it a market." So, too, with the production of coal, iron, and steel: it "is all but entirely dependent on the activity of the silver mines." This is in flat contradiction with what Senator Teller and Mr. Wolcott have said, and will not, we believe, ingratiate President Andrews with the distressed business men of Colorado. They will find it harder than ever to borrow the money they need if he is to go on sending such dismal tales and prophecies for Eastern bankers to peruse. In so far, therefore, Mr. Andrews's self-constituted championship of Colorado is calculated to do that State more harm than good.

---

The absurdity of the Colorado demands in behalf of silver-miners and mine-owners is forcibly shown by the Detroit *Tribune*, through a comparison of their industry with the iron-ore industry of Michigan. According to the census of 1890, the value of the iron-ore product of Michigan was $16,000,000, the number of employees engaged in the industry 13,120, and the total amount of wages paid $6,353,741. According to the same census, the value of the silver product of Colorado, at its market value, was $16,000,000, the number of employees 13,196, and the total of wages paid $10,114,682. In other words, the number of employees in the two industries and the value of their products were almost identical, the only difference being in the excessive and extravagant wages paid to the silver-miners. The parallel can be carried a step further, for the iron mines of Michigan are nearly all shut down on account of the depression in the price of their product, as is the case with the silver mines in Colorado, and there are nearly as many iron-miners out of employment in Michigan as there are silver-miners idle in Colorado. There is exactly as much reason why the iron-miners and owners of Michigan should insist upon the rest of the country buying their products at the old prices as there is for a similar stand on the part of the silver-men in Colorado.

---

The remark of the Governor of the German Bank in Berlin that the attempt to revive bimetallism would be "merely flogging a dead horse," hardly bears out President Andrews's view that the Brussels Conference had created profound respect in Europe for the bimetallic theory. But many things have happened since then. It was hard enough on the bimetallic horse to have Germany and Austria leave off feeding him, and he began to wheeze painfully; but when India came along and cut off half his rations at a stroke, he fell heavily on the boundless prairies of the West, like an abandoned mule in the wake of a caravan. Yet his poor worn-out carcass is not to be allowed to lie in peace, but is to suffer a pitiless cudgelling between now and the 7th of August. Gen. Warner is a master at flogging galled jades, and the swish of his rawhide will be heard in the great bimetallic convention to be held in Chicago. Colorado is to send a delegation of her most expert whippers, whose lash has been so successfully held over Congressmen and political conventions. But the horse is dead, and his remains ought to be spared these useless indignities.

A despatch from San Francisco reports that a meeting has been held in that city at which speeches were made in favor of free coinage. Considering how easy it is to get a number of men together in favor of any proposition, it is not strange that such a meeting should have been held, but California is the last State in the Union which should look with any favor upon the prospect of a silver basis for our currency. Gold is used there almost exclusively as a circulating medium, and business has always been transacted on a gold basis. Even gamblers refuse to accept silver for chips. Every bank and every money-lender insists upon a specific promise that every debt shall be paid, both principal and interest, in gold coin, and the bonds issued by some corporations go a step further and specify that the coin shall be of the present standard of fineness. All public indebtedness, State, county, municipal, or local, must, by specific contract, be liquidated in gold coin. So unpopular is silver that at one time, about a dozen years ago, when a large proportion of the local taxes were paid in that coin, and county officials, school-teachers, and laborers on public works were compelled to accept a portion of their pay in that metal, they would promptly convert it into gold, even when they had to submit to a considerable discount.

---

It seems absurd to suppose that people who have enacted that the credit of the commonwealth shall be based on gold, and who have volunteered to pay all their debts in that coin, should really want to see a silver basis substituted, and there is no good reason to suppose that more than a very small minority do want it. Although both of the California Senators favored free coinage in 1890, yet when the contest came on for the vacancy caused by Mr. Hearst's death, Mr. Felton was chosen to the place, although he was an outspoken supporter of the gold basis and his opponents tried to arouse prejudice against him on that score. No reason appeared to suppose that Mr. Felton lost, or his free-coinage rivals gained, a single vote by reason of his attitude on this question. Like the election of Gen. Palmer, an opponent of free coinage, to the Senate from Illinois, and the reëlection of Congressman Catchings of Mississippi by an increased majority after his speeches against free coinage, this California case sustains the theory that the silver craze has never been half so violent among the people as the politicians have professed to believe.

---

The Australian ballot has had its first trial in Florida, the new system having been used in the municipal election at Jacksonville last week. The report is the familiar one, of unqualified satisfaction with its workings. "The election," says the local column of the *Times-Union*, "passed off very quietly and peacefully, the new law preventing any gathering at the polls and the pulling and hauling here and there of voters." On its editorial page the same journal says further: "On every hand and from all parties and factions alike are heard expressions of satisfaction at the working of the new ballot law—the Australian system. It worked like a charm." The Jacksonville trial of the law has been awaited with interest throughout Florida, the general opinion being that, if it proved a success, the next Legislature would apply the system to the whole State.

---

The Labor Commissioner of Iowa has been investigating the subject of teachers' salaries, and finds that they are extraordinarily small. Returns from about one-tenth of the whole number, which appear to be thoroughly representative, show an average salary of only $243.16 a year for women and $298.30 for men. This is much below the wages paid unskilled labor, and hundreds of teachers obtain their subsistence only through help from relatives and friends, their pay not being enough to secure food and clothing. The schools are already suffering by reason of the small salaries given teachers, since men and women of ability are more and more loath to enter so ill paid a profession. The old rule was to refuse a certificate to any applicant for a teacher's place who could not correctly answer at least 80 per cent. of the questions asked at the examination; but so low has the standard sunk that some county superintendents have been compelled to issue certificates to applicants who failed to answer correctly more than 55 per cent. of the questions, in order to get any teachers. Iowa has always been proud of her school system, and these revelations of its decadence are a disagreeable surprise.

---

The most flagrant case of the abuse of pensions yet brought to light is that of Justice Charles Dean Long of the Michigan Supreme Court. He has served upon the bench for a number of years, and receives for such service a salary of $7,000 a year, which he doubtless earns. Yet it appears that he has for years been receiving a pension of $72 per month for the loss of the left arm above the elbow and a gunshot wound of the left hip, resulting in alleged "total helplessness, requiring the regular aid and attendance of another person." He made his original application early in 1884, and was then granted $30 a month, since which time he has not been examined. Later in 1884 the allowance was increased to $50 a month. Soon after Tanner became Commissioner of Pensions in 1889, Judge Long went to Washington, and on the 6th of May had his pension rerated and $50 a month granted from June 4, 1874, and $72 a month from June 17, 1878. The case was taken up without legal application or declaration of any kind on May 6, 1889; examined on May 6, 1889; reviewed on May 6, 1889; medical action taken on May 6, 1889, and certificate issued on May 6, 1889. In other words, the whole thing was rushed through in one day, and the Judge took about $6,000 in arrears back to Michigan with him. On thinking it over, he seems to have been surprised at the moderation exhibited by Tanner and himself, and in June he applied for and, of course, secured a further rerating at $25 per month from June 24, 1862, to June 6, 1866, and $31.25 per month from June 4, 1872, to June 4, 1874, which netted the Judge about $1,000 more in back pay. There appears to be no question as to the truth of these statements, and the only defence advanced by the Judge's friends is that he was badly wounded, and to this day suffers seriously from his wounds, although such suffering does not interfere with the discharge of his well-paid duties on the bench.

---

The manner of Street Commissioner Brennan's removal from office—for that, of course, is what his "resignation" amounts to—is thoroughly characteristic of Tammany methods of government. That the man was unfit for the position, leaving out all questions of personal character and political affiliations, was morally proved by his extraordinary performances in the streets last winter, and was legally proved by the evidence laid before Mayor Gilroy by the City Club. But it would never do to turn out a faithful member of the organization just because it had been shown that he was an incompetent official and had violated the law; if such things were to be valid reasons for removal from office, what Tammany man would be safe? Oh, no, that is not the way to run the affairs of a great city, and so we were treated to the spectacle of Brennan's vindication and the Mayor's stern rebuke of the City Club for malicious interference, and the renewed and repeated demonstrations of Brennan's unfitness to do anything except to keep the streets and the force and himself in a perfect pickle, winding up with this belated and shamefaced confession that the City Club and all men with eyes in their heads were right, after all, and that Brennan was really intolerable. Of the shuffling about in the offices and the organization to get his successor, we need only say that it is a thoroughly *bouffe* performance. The last question in the Mayor's mind was, "How shall we get the streets cleaned?" and the first was, "How shall the 'plums' be redistributed in the Tammany baskets?" We say this without meaning to prejudge Brennan's successor, who must be estimated by his works.

---

A curious instance of the unforeseen results of well-meant legislative measures is noted by the *Financial Chronicle*. Un-

der the law of the Dominion of Canada banks issuing their notes as money are required to limit the amount to the amount of their unimpaired capital, and the note-holders are given a first lien upon the assets of the banks. These notes, moreover, bear interest at 6 per cent. from the time of suspension of payment on the part of a bank until they are redeemed. It seems that the Commercial Bank of Winnipeg, which recently suspended, had a paid-up capital of half a million dollars, while in May last its outstanding notes amounted to only about half that sum. Assuming that its capital was unimpaired, it was thus entitled to issue a large amount of notes, and it is asserted that it paid off certain depositors by issuing these notes. The effect of such a proceeding would of course be to make these depositors preferred creditors, by changing their status from that of depositors to that of note-holders. These depositors, therefore, instead of having a fourth lien, would have a first, and would also have the same lien for their 6 per cent. interest. The incident deserves to be studied in view of the currency legislation which we must presently consider.

---

There is a certain grimness in the demand of the colliery proprietors in the Midland coal-fields of England that the miners' wages shall be reduced 25 per cent., coming as it does so soon after the demand of the miners upon Parliament that eight hours shall be the limit of a day's work. When a law of Parliament comes in conflict with a law of nature, the struggle may be severe, but it generally has but one issue. In view of the state of British trade and the prices obtained for iron, it seems inevitable that some reduction of wages should take place, although a reduction to the extent of one-fourth is certainly severe. If the proprietors of the mines cannot sell coal for enough to pay their rents and operating expenses, they must obviously either reduce their operating expenses or stop their operations. It is to be borne in mind, moreover, that between July, 1888, and August, 1890, the miners' wages were advanced four times, each time by 10 per cent. While wages have fallen since then in other mining regions, they have been maintained in the Midland districts, until the proprietors declare they cannot go on without having them reduced. As the Miners' Federation refuses to consider the proposition of the masters, the probability is that a strike involving several hundred thousand men will presently occur. This strike will probably bring about the result which the masters say is necessary. The wages of the men will cease altogether for a time, the production of coal will be greatly reduced, and after a time prices will rise. By that time the miners will be driven by want to listen to the masters' terms, or at least to some reduction of the present rate of wages, and the industry will be resumed. There may be some loss to the proprietors from the cessation of mining which will not be recouped to them by the advance in the price of coal when it comes. But the loss to the men from the total cessation of wages is not likely to be made up by any advance over the present rate, and it will not be offset by their eventually holding the present rate.

---

The July numbers of all four of the leading English political magazines contain articles on the controversy between France and Siam. All declare that France is unjustly despoiling a helpless State, a country where British interests are predominant, one whose independence or dependence on Great Britain is necessary to the security of the Empire. The ethics of the original boundary dispute are of little consequence. The French have no intention of letting themselves be confined to a narrow strip of seacoast; and if their historical claims to the left bank of the Mekong are flimsy enough, those of the Siamese are of no great value. England herself is the last nation that would heed any such claims on the part of an Asiatic State if they conflicted with her plans. The quarrel has lasted some time (complicated as usual by "incidents"), until, as happens in these cases, the strong civilized Power has lost patience and undertaken to settle matters in its own way. This is a very old and familiar story. The difficulty in the present instance lies in the jealousies and rival interests of Great Britain and France. Rightly or wrongly, the English cling to the belief that they must have no European neighbor to India, as long as they can possibly avoid it. When King Thebaw of Burmah prepared to accept a French protectorate, eight years ago, they instantly picked a quarrel with him, and invaded, conquered, and annexed his dominions before he could carry out his intention. Up till now, they have not minded much the colony of Indo-China, as it was some distance off, and its struggling existence made it seem harmless; but a territory stretching to the Mekong, an influence equalling their own at Bangkok, are a very different affair, a contingency to be prevented. On the other hand, the French, who have invariably found the English in the way of their expansion, are in a temper to resent promptly anything like interference. As the French have already practically seized the lower eastern bank of the Mekong, they will keep that much in any case. If they extend their occupation northward until they reach the Chinese frontier, thereby becoming immediate neighbors to Burmah, and obliterating a "buffer State," and still more if they open hostilities against the Siamese capital, it is difficult to foretell what may happen; but in any event Mr. Gladstone will hardly welcome this diversion from the business of his Home-Rule Bill.

Cuba stands related to Spain and Spanish politics very much as Ireland does to England and English politics. Cuban affairs take up a disproportionate amount of time in the Cortes; the Cuban Deputies rival the Irish members of Parliament in a fatal fluency of speech and readiness to denounce the Government on the slightest provocation; and a standing cause of perplexity and dismay to Spanish Cabinets has been the problem of governing Cuba in a way to maintain Spanish supremacy and to satisfy native sentiment at the same time. The Minister for the Colonies recently brought in a bill for the reorganization of the Cuban Government, which provides for a considerable degree of home rule and distinctly diminishes the despotic power of the Captain-General. Upon it public opinion in the island and in Spain has been divided, some maintaining that it was a legitimate concession to the desire for self-government, others contending that it was a first and dangerous step towards complete independence. Minister Maura has planted himself on the very modern ground for a Spaniard that it is impossible to govern a free people without having some way of consulting their wishes, and that the majority in Cuba should be allowed to decide on affairs of local government. On the whole, the preponderance of opinion in Cuba seems to favor the plan; and as the Minister has Sagasta's full assent and backing, it seems probable that the bill will be given a trial. It will be nearly as interesting and instructive to watch its operation in Cuba as it will be to observe the working of the new Irish Parliament in Dublin.

---

As the fuller accounts of the late rioting in Paris come to hand, they show conclusively that the students, who set the mischief on foot, had really no grievances to speak of, but went into the thing out of pure animal spirits. Some of the transparencies they carried in their processions were lettered in such whimsically desperate fashion as to show the essentially frolic nature of the affair. One of them, for example, bore the terrifying legend, "Fire, Blood, Death!" and it is easy to imagine what fun the young fellows thought it. But Paris is a dangerous city to try the experiment of a mock mob in, and the jocose students soon found themselves joined and outnumbered by the worst of the riff-raff, who were out for blood and fire and death in good earnest. By that time the students found out that the joke had ceased to be amusing, and then they disclaimed all connection with the rioters and came forward as volunteer policemen to help preserve order. But the mischief was done, and it took bayonets and cartridges to quell the riot which began in a bit of boyish folly. It is estimated that the total cost of the joke, what with damages to pay for and the expense of moving in large bodies of troops, will be hard on to a quarter of a million dollars.

### THE RULES OF CONGRESS.

THERE has been a good deal of talk about the need of adopting the parliamentary rules of the Reed Congress, if the Silver-Purchase Law is to be repealed at the extra session of Congress. This has come mostly from Republicans who are anxious to see the Democrats stultify themselves by adopting methods which they were bitterly denouncing three years ago. Then we had a hint a few days ago from Senator Jones of Nevada that the Senate would prove intractable, no matter what the House might do. He said to a reporter of a New York paper:

"I can, if I wish, tie up the Senate from now until the terms of its members expire. Of course there is likely to be a prolonged debate. Stewart, Teller, Wolcott, and the rest of us who demand free coinage, or something akin to it, will have a great deal to say. If we get tired talking, a motion to adjourn, to go into executive session, or indeed any motion at all, will continue the delay."

"But what if a closure is attempted?"

"There is no more chance of a closure than there was during the Federal Elections Bill fight in the Fifty-first Congress. The gold men must come to us. We shall not surrender to them by any means."

Now, as regards the rules of the House, we see no reason why those of the Fifty-second Congress are not perfectly adequate, provided the Committee on Rules uses its power. It is always in order for that Committee to call up a report fixing an order of business and the hour for taking a final vote on any pending bill. Under this provision of the rules filibustering is absolutely cut off. It was under such action of the Committee that Bland was able to bring the House to a vote on his free-coinage bill a year ago last March, when it was beaten. It is, no doubt, true that many flagrant instances of filibustering were exhibited at various times during the last Congress, but this was only because the Committee on Rules did not use their power to put a stop to it. Speaker Crisp had no authority, as Speaker Reed had, to rule out motions he did not like, or to count a quorum. There was no need then, and there is not now, to lodge such autocratic power in the hands of one man. As it was well explained in the debate on the rules of the Fifty-second Congress, what was proposed was "not to vest the power in the Speaker, one man; not to vest it in the filibuster, one man; not to vest it in the Committee on Rules, a set of men; but to vest it in the House, by authorizing the Committee on Rules to ask the House whether it is its desire to proceed with business, and its desire that the filibuster be stopped."

It is perfectly clear that under that rule the repeal of the Silver-Purchase Law can pass the House in three days after its organization, if the House so desires. There is no occasion whatever for reverting to the Reed rules. All that is necessary, in the interest of either fairness to a minority or justice to a majority, is amply secured by the provision which enables the House to fix a time, after reasonable debate, for the taking of a final vote on the main question. This is all Mr. Gladstone is doing in the House of Commons. He has by no means taken a leaf out of Speaker Reed's manual. He has simply revived the practice, first introduced by the Tories in 1887, three years before the rise and fall of the Reed rules, under which he gets the House to vote that certain clauses of the Home-Rule Bill shall be brought to a vote at a certain day and hour. The rules of the Fifty-second Congress may need some strengthening in the way of making it incumbent upon the Committee on Rules to use their power more frequently and rigorously; but even if these remain unchanged, they are strong enough to put the repeal of the Silver-Purchase Law through the House with all reasonable expedition. Even the Colorado dervishes recognized this in their address, when they admitted that their cause was lost in the "subservient House," and pinned all their hope upon the noble Senate.

The case is different and somewhat puzzling, it must be admitted, when we turn to the Senate. The "courtesy" of that body has thus far left it possible for it to affront common sense and all decency by unlimited talk against time, on occasion; and its adoption of the previous question, or any other device to shut off debate, does not now seem probable. The surest way to bring about the enactment of a stringent rule of that sort would be for Jones to fulfil his threat of standing up single-handed to defy the unanimous demand of the business of the country. If he is really anxious to preserve the dignity of the Senate, he had better forego his intention, or he and his kind will find themselves closured in short order. The more likely result will be a motion to sit in continuous session until Jones gets through. Unless he begins his speech much further back of the use of silver by the pre-Adamites than he customarily does, and marches down the ages much more slowly than is ordinary with him, even he would have told the world all he knows in the course of a day and night of steady talking. Then a vote could be taken, and Jones left to revise his remarks at his leisure.

All the signs now point to speedy and definite action by Congress. It is not possible that Jones or any other Senator can stand up in Washington to try to talk to death a measure favored by a great majority of the Senate and practically the whole country. If he tries it, some way will be found to put a hook in his jaw. But he will not try it. He and his companions in misery will be given a fair opportunity to air their woes, and unlimited "leave to print." Then there will be a vote and a great calm.

### SENATOR ALLISON ON THE SILVER LAW.

THE Sioux City *Journal* publishes a letter from Senator Allison to Mr. J. Fred. Meyers on the present aspects of the silver question. The letter is important by reason of Mr. Allison's distinguished rank in the Republican party. Next to Mr. Sherman he holds the foremost place in the Senate, while in the matter of silver legislation he has been perhaps even more prominent than the Senator from Ohio. He was Chairman of the Committee on Finance when the Bland Free-Coinage Bill passed the House in 1878, Mr. Sherman being at that time Secretary of the Treasury. He caused the Bland Bill to be rejected by the Senate; the policy of buying silver and coining on Government account being substituted therefor.

This was nominally an act of statesmanship. If the Bland Bill had passed, the country would have gone to the silver standard at once. The bullion value of the silver dollar at that time was about eighty-nine cents. On that basis all debts would have been payable. Our gold would have been exported, and silver would have been imported to a corresponding amount. We should have had a panic at that time, and after a short experience of the inconveniences of silver we should have done what India has now done. We should have gone back to the gold basis, sending into retirement at the same time all the Congressmen who had voted for the Bland Bill. It might have been better for us on the whole to have gone through that experience and that valley of humiliation instead of wasting our substance all these years in the purchase of silver bullion and landing at last in the financial slough where we now find ourselves. On the other hand, by the substitution of the Allison Bill for the Bland Bill we escaped the stigma of virtual repudiation of 10 per cent. of public and private debts, and the confusion that would have ensued thereupon. The useless silver that we have accumulated since the Allison Bill was passed is perhaps not too great a price to pay for avoidance of this stain.

Mr. Allison, in his letter to Mr. Meyers, approaches the main subject, viz., the repeal of the Sherman Law, with very careful steps. He says in the first place that "there is a school of statesmen and publicists in our country who desire to force us to the single gold standard." He agrees with Mr. Meyers that "this ought not to be done," because there is not enough gold and not enough silver taken singly to transact the business of the world. At the same time he is opposed to the policy of the Government purchasing silver bullion and storing it unless this is done by international agreement. If there could be places of storage for both gold and silver bullion, and if international paper money could be issued upon such bullion, which paper could be used in settling international balances, that would be the kind of scheme that would reconcile the Senator from Iowa to the purchase

of bullion which is to be stored but not coined. The gist of Mr. Allison's communication is found in the following sentence:

"I am willing to vote to stop the purchase of silver, leaving other questions to be settled later, on mature consideration and comparison of views, as the whole subject must be dealt with presently."

This is a sound position to take, and we do not see how Mr. Allison's correspondent, Meyers, or any other reasonable citizen of Iowa can object to it. Yet there will be some, of the unreasoning kind, who will say that the prospect of getting an international agreement for the purchase and storage of silver and gold bullion and the issue of international paper money is very slim, and that Mr. Allison, as a member of the recent Brussels Conference, ought to know this. For all such cavillers the Senator has a supply of alternative propositions. One is that we might change our ratio and make it 25 to 1, "and as silver bullion advances relatively, change the ratio." Another is that which Secretary Windom suggested, viz., "that the Government should receive bullion and issue paper money thereon, and then redeem these paper issues in silver bullion at the current price or in gold." This, however, the Senator does not favor. One thing he is sure of, and this will undoubtedly go far to silence any Republicans who might be disposed to cavil at Mr. Allison's positions. This is, "that the Democrats cannot formulate satisfactory legislation upon *any* of the great public questions now in the minds of the people." If we were inclined to be hypercritical, we might say, "Satisfactory to whom?" Satisfactory to Mr. Allison, or to his correspondent, or to the Republicans, or to the Democrats, or to the silver-miners? The Senator's letter ends in this way, rather abruptly as it seems to us, but we can assure him that if the Democrats formulate legislation for the repeal of the purchase clause of the Sherman Act, which Mr. Allison says he will vote for, it will be satisfactory to most people hereabouts.

## *FINANCIAL WHIMSEYS.*

THE monetary system of the United States adopted in 1878 has worn itself out. This system went upon the theory that a cheap dollar is a good thing for the poor. Silver was the cheapest material that could be found of which to make dollars, after paper had been rejected, as it was in the elections which followed President Grant's veto of the Inflation Bill. So silver was taken up as the next worse thing, and has been coddled and made much of during the fifteen subsequent years. But it is now plain that silver has done no good to anybody. Most people are beginning to suspect that what the poor man really needs is the best kind of money that the world affords, and not the worst kind. What would be the situation of the poor man, regarded as a savings depositor, if all his money should be repayable in funds worth only fifty-five cents to the dollar? What would be his situation as a laborer for hire if his wages should be payable at the same rate? "He would strike for higher wages," would he? Yes, he would be compelled to do that, unless he was willing to lose half of the pay that he had received before. Then the question whether the strike would succeed would be open to dispute and would not be settled under three years at least. The employer would say that he could not raise the price of his goods so as to recoup himself, because his customers would not pay the advance; and so forth and so on. If the poor man were once brought into close contact and acquaintance with the 55-cent dollar that Congressman Bland and Congressman Bryan want to force upon him, he would make it very interesting for them. They would be "held up" at every turn of the road. It is really a mercy to them to prevent them from doing what they want to do and then falling into the hands of their victims.

As the 55-cent dollar recedes from view a lot of other oddities come into the field of vision. Our table is piled with them. One of them is the "goloid dollar." This is an old acquaintance, composed of say 55 cents' worth of silver and 45 cents' worth of gold melted together. Another is a new system of bank-note issues based upon silver and gold in equal parts. This might be called the goloid bank-note. Still another is a proposed issue of interconvertible bonds, which can be turned into currency whenever money is worth more than three per cent. interest, and the currency converted back into bonds whenever it is worth less than three per cent. This is likewise a venerable Joe Miller of finance. It had great popularity before the silver craze set in. The latter "knocked it out," and now it comes up smiling after a retirement of fifteen or eighteen years. All these snuffy old things proceed upon the theory that if the Government will only devise some kind of cheap dollar the people will be able to get it easily, but that each dollar will still buy 100 cents' worth of all the commodities needed to keep house with, just the same as a gold dollar. This expectation is as philosophical as it would be to suppose that a dozen gamblers shut up in a close room could increase their total winnings by using pasteboard chips instead of wooden ones.

We do not mean to deal harshly with people who, with honest purpose, bring forward what they consider to be remedies for the troubles into which silver legislation has brought us. Most of them have had silver dinned in their ears until they really think that, in order to have any money at all, it is necessary to dilute it and make it half good and half bad. A writer in the *Tribune* asks that paper whether it is not true that the $322,000,000 of silver certificates outstanding represent that number of coined silver dollars, being the same, to all intents and purposes, as though the coins were in circulation. The *Tribune* replies that these certificates derive their gold value from the credit of the Government and its promise to keep the two metals at par with each other; hence that the existence of a corresponding lot of silver coins in the Government vaults is of no consequence whatever, and that these silver coins might as well be sunk in the Atlantic Ocean. Very true and very well put, but the *Tribune* goes on to say that the only real silver dollars that circulate are the $57,000,000 that are moving about in the pockets of the people. Now this $57,000,000 is just as much "fiat" money as any part of the $322,000,000 which takes the form of silver certificates. If these dollars were circulating at their bullion value, every one of them would drop to 55 cents and probably lower, since the commercial world would expect them to come on the market as bullion before very long. This the *Tribune* has not quite made clear to its correspondent.

One of the oddities of the situation is that many people who hear and read about the "fifty-cent dollar," understanding that it means the silver dollar, refuse to accept these dollars at all. They will accept two half-dollars, or a silver certificate, without question, but a "cart-wheel dollar" or a "buzzard dollar" they will have nothing to do with. Of course these people are mistaken, but can we expect that all the people will understand these intricate matters after Congress has muddled them over and over again for thirty years so that only a minority of the people know what it is to have a sound monetary system? These people who refuse the cart-wheel dollar in trade are not more obfuscated than the silver editors who insist that they can be compelled to take them. "Are they not legal tender?" ask these sapient writers. "Why then should not everybody be compelled to take them?" This phraseology betrays ignorance of the fact that legal-tender laws operate only on past contracts. They have nothing to do with the present and the future. Therefore if a grocer declines to take silver dollars for tea and candles sold over his counter, or if the customer refuses to take them in the way of change, the fact that they are legal tender is of no account.

For the first time in a whole generation, there appears to be the sign of a dawning of common sense on the subject of money and finance. When the present Silver-Purchase Law is unconditionally repealed, daylight will appear.

## *THE END OF A SOCIALISTIC EXPERIMENT.*

ONE of the earliest victories for human rights gained in the Revolutionary period in France was the suppression of the

trade-corporations or guilds. Whatever may have been the origin of these associations or their earlier purposes, they had become monopolies of a very oppressive character, and their exclusive privileges were exercised in restraint of the rights of labor. For a century all such unions remained illegal in France, but as the prohibition of association in itself, where no illegal purpose exists, is a violation of natural liberty, no opposition was made to a law passed some ten years since authorizing the formation of trade-unions or syndicates, provided certain regulations were complied with.

This decade, however, has seen a recrudescence of socialistic ideas, taking its inspiration largely from the principle that the whole product of labor and capital is due to the laborer, all profit being nothing but robbery. Hence, a general sympathy for Labor as something downtrodden and oppressed became fashionable, and whoever assumed to speak for Labor was listened to with respectful attention. The more restless among the poor were of course ready to accept this sympathy and to demand this attention for their utterances. The formation of trade-unions gave them an opportunity to claim that these unions stood for Labor in general, and the spokesmen of these bodies at once became political powers. We have passed through an experience with these demagogues in this country which perhaps will not have to be repeated. In England they are now in the early stages of such an experience, but in France a picturesque culmination has just taken place.

Upon the theory that all those who work for wages constitute an oppressed class, it follows necessarily that the Government ought to do something for this class; and upon the theory that trade-unions represent this class, the Government ought to render its assistance to these unions. Accordingly, after much discussion, principally of a frothy character, the Government decided to establish a "Bourse du Travail," or gigantic labor exchange, at Paris, which should be the home of Labor, and furnish workmen a refuge where the tyranny of capital could not reach them. This large and magnificent building was, consistently with theory, turned over to the syndicates, who immediately demanded and presently obtained pecuniary subventions from the Government, which may be said to have provided them not only with lodging, but with board also. An important feature of this Bourse was an immense hall, where meetings in behalf of Labor could be held, and theories of reform and of government be discussed upon a grand scale. The rest of the building was principally given up to the offices of the syndicates, which soon came to be numbered by hundreds.

Undoubtedly a considerable legitimate business was transacted on this Bourse in bringing employers and workingmen together, but the leaders of the French syndicates were not content with this humble achievement. They insisted that, as they represented Labor by general consent, all laborers must submit to them, and their emissaries spread the doctrine that laborers who refused to join the unions ought not to be permitted to work: by such refusal they put themselves outside the social pale, as it were, and cast off their allegiance to Labor. Moreover, the leaders of the syndicates declined to comply with the provisions of the law by which their existence was authorized, finding that certain particulars required by the law as to the residence and previous history of members were inconvenient; and at the meetings in the great hall, sentiments were commonly expressed hostile to the Government and to the existing constitution of society. In fact, it was scarcely a year before the Government found that in organizing this labor exchange they had established a veritable hotbed of revolution.

The crisis was not long delayed. The recent riot in Paris was too much for the self-restraint of the syndicates. They heartily took part with the rioters, and denounced the police and the Government without stint. For the Government the situation was unpleasant if not serious. To be insulted and defied by Labor after it had been housed and warmed and fed was bad enough, but it would be worse if the Bourse should actually become the headquarters of a revolutionary committee. Accordingly the resolution was reached to compel the syndicates to comply with the law as to registration. The syndicates refused to obey, with loud protests against the persecution of a detestable Government. The Government then threatened them with expulsion from the Bourse if they did not submit; they replied that they would resist the Government with force. The last night of the struggle is described with much feeling by the reporters of the Paris press. The members of the syndicates found that large numbers of "laborers," not of their fraternities, but making the inconvenient claim to be equally entitled to occupy the Labor building, had volunteered to assist in the defence, and that it was impossible to decline their aid. These volunteers seem to have favored the view urged by one of the syndicate orators, that the true place for the audience to be was in the Latin Quarter assisting the mob. Against this another leader urged that their duty was to stay and defend the Bourse. Finally, after hours of wild uproar, it was proclaimed that the assembly was to separate into two parts, one to join the mob, the other to defend the Bourse. But though this assembly adjourned, another took its place, and pandemonium reigned during the rest of the night.

The following day a squadron of troops enclosed the Bourse du Travail, a detachment of police entered the building, and its defenders, protesting against the despotic act of the Government, accepted an invitation to withdraw. They are now frantically appealing to the trade unionists to "avoid all complicity" with the Government, and to engage in a universal strike. But the Bourse du Travail is closed. The great hall is empty. There remains only, as an epitaph for this experiment in Socialism, the inscription chalked upon a blackboard in this hall:

L'Anarchie, c'est le salut!
Vive la Révolution!

## THE FRENCH CHAMBER OF 1889.

PARIS, June 30, 1893.

A FEW weeks more, and the Chamber of 1889 will have ceased to exist. There is nothing in its character or work serving to distinguish it from its predecessors; but this very sameness and uniformity suggest certain reflections that may throw light upon some aspects of parliamentary life in France.

First of all, then, I may repeat that the Chamber of 1889 does not differ in composition from its predecessors; in other words, that the divers professions and trades of the country are represented in it in almost the same proportions. The computation that permits this statement to be made is a somewhat difficult one. It has nevertheless been attempted; and though, as may be easily understood, the results obtained cannot pretend to mathematical accuracy, the general conclusions one is able to draw are not without interest. For instance, it is remarked that of the three chief categories under which the labor of the country may be comprised—to wit, agriculture, industry, and commerce—there are very few representatives in Parliament. It may be replied, "Oh, that is easily accounted for. A tradesman or a merchant cannot find much time to give to any other interests than those strictly relating to his business." And yet if we compare the Chamber of Deputies with the English House of Commons in this respect, we find that in the latter the representatives of the agricultural and commercial interests occupy the first place as regards numbers. With us the majority of Deputies are either ex-functionaries of the State, who have left the public service to enter into politics, or else people belonging to the liberal professions. These latter are for the most part either country doctors or lawyers, whose calling and continual contact with the electors have permitted them to obtain a sort of popularity that at length arouses an ambition in them to offer themselves as Parliamentary candidates. One more class must be added to the former, a class which perhaps predominates over every other, that of barristers.

The preponderance of these elements in the Chamber necessarily introduces some inconveniences so far as concerns the carrying on of Parliamentary work. Thus, to begin with a small item, the barristers are naturally skilled in public speaking; and expressing themselves as they do with such facility, they never lose an opportunity of making a speech. They thus lengthen out useless discussions, and often excite debates of a frivolous character, the more so as they have a strong personal interest in putting themselves forward. The fact is that these people—doctors, barristers, and functionaries—are nearly all of them similarly situated. The posts they held were not very brilliant, and the future apparently in store

for them was not in accord with their ambition. Politics for them is the road leading to the honors they covet. And so they seek to bring themselves to the front by all the means in their power: make motions in the Chamber that are utterly devoid of utility, and are always ready with an interpellation from no other motive than to make a stir in connection with their name, and to acquire sufficient reputation in the country to assure their reëlection. Not that they really care about being Deputy. It is only ambition that prompts them; besides which, in many cases, the Deputies are men of slender fortune, and on the money score cannot be indifferent to the advantages of the position. As a matter of fact, 9,000 francs per year as salary, and a free pass on the railways, not to speak of other minor privileges, are not things to be despised. We may even go further, and say that though the cases are rare, yet there have been Deputies who, owing to the prestige of their parliamentary mandate, have increased their influence in the financial world, and have thus been enabled to make good strokes of business and signally to improve their pecuniary circumstances.

Another point of resemblance between the Chamber of 1889 and its predecessors consists in the large number of bills that it leaves undealt with after having taken them up. It need hardly be explained here that all the inquiries and drafting of bills carried out by the committees and sub-committees of one Chamber, if they have not been converted into acts passed by Parliament before the dissolution, become null and void, and have to be gone through afresh in case of being taken up by the Chamber that succeeds. A great loss of time and work is caused by this state of things, and to remedy it a motion was submitted to the Chamber a few days ago, by which it was proposed to substitute in place of the present general-election system a partial renewal similar to the one used in elections to the Senate. It was proposed that one-half of the members should be reëlected every two or three years, so that Parliament would in a way become permanent, and the inconvenience just pointed out would necessarily disappear. The motion was, however, rejected by a considerable majority, and we need not linger over a discussion of it.

Still another feature common to this and to preceding Legislatures is that it is dying a natural death. And yet if any Chamber deserved to be dissolved before its term, it is surely the present one. It has been said that, when elected, it was charged to deal with two things—first, to combat Boulangism; and, secondly, to modify the tariff in a protectionist direction. When these two missions were accomplished—when Boulangism was defunct and the commercial treaties formerly existing were replaced by the double-tariff system—the Chamber, it was said, was at a loss what to do. There was at that time some talk of a dissolution. It may be remembered that in a previous letter I referred to this eventuality, and said that, for rather more than a year before the Loubet Cabinet came into power, dissolution had been a possible occurrence. The Government, however, took no action in the matter—a course which it must since have regretted, for, as if to prove that the current opinion was correct, since that time the Chamber has presented the spectacle of a body without real coherence in its parts. The list of important measures and useful motions dealt with in Parliament since that date is not a very long one. To counterbalance it we have the ridiculous conduct of the Chamber in the Panama affair, and the grotesque incidents provoked quite recently by an honorable Deputy who undertook to support his charges with documents pretended to have been stolen from the English Embassy.

Contrary to the spirit of the Constitution, which seeks to counterbalance the Chamber by other powers, the Deputies are gradually becoming the preponderating element in our political system. One can scarcely lay too much emphasis on this tendency, since it appears destined sooner or later to assume prime importance in politics. It is, moreover, patent at the present time that any Government must hesitate to use the powers conferred upon it by the Constitution against the Chamber of Deputies, inasmuch as, according to the principles avowed by one section of the Republican party, such an act would seem to be directed against the accepted doctrine of the national sovereignty; and, being as such condemned by many as a kind of *coup d'état*, it would be used in the country against those who had had recourse to it. To overcome the deterioration in the character of the Deputies themselves, some reformers would abandon the payment of members of Parliament. Such a proceeding would certainly suffice to modify the composition of Parliament in a very marked manner. But what Chamber would consent to pass such a measure, which, indeed, would be in open contradiction of the ideas current to-day, which even admit the remuneration of town councillors? A measure of this kind would be declared anti-democratic, on the ground that a large number of citizens would necessarily be shut out of the Chamber. Not only so, but if the payment of members were abandoned, this reform would not go very far towards remedying the defects of our present arrangement. It would still be necessary to create political ambition in the minds of a number of people who for the moment possess no such ambition; and it would still be necessary to persuade the electors to let themselves be deceived by certain appearances—which would be less easy than it is now—and to succeed in making elections the exact contrary of what they are now. In a word, it would be necessary to modify all the political customs of the country, and even in some respects to modify the character of the nation. S.

## A PROPOSED REFORM IN PARIS.

London, July 7, 1893.

Parisians are so prone to herald their innovations with noise and disorder that changes wrought in silence are apt to pass unnoted. Were one asked for this summer's chief event in artistic Paris, the answer to spring to one's lips would be, the riots over the ball of the Quart'z' Arts and the action of the authorities in its regard. An affair that resulted in an old-fashioned mob, in barricades and cavalry charges, in besieged Boulevards, would seem to lead in importance. And yet to all save students a movement set on foot shortly before the revolt against Lozé and the death of Nuger promises far more serious consequences, though hitherto it has made small stir among artists. This movement threatens, not the Prefect of Police, but the foreigners in Paris, and it has been formally inaugurated by the Société Libre des Artistes Français. Their resolution, that henceforth, at the Champs-Élysées, medals ought not to be bestowed upon alien exhibitors, is the "little rift": if it widen, it will eventually rob Paris of that fine tolerance which has made her the capital of the world of art.

The step taken by the Society deserves more attention than it has received. It is safe to say that in the end, if such a resolution were adopted, it would prove more disastrous to French artists than to the foreigner against whom they would protest. But the causes leading to it are worth considering. I have already had occasion, in writing of the two Salons, to point out that the principal triumphs—with few exceptions—in both, this year, must be attributed to the English and Americans, the Scandinavians and Germans or Belgians exhibiting; a fact scarcely pleasant to the Frenchman who has been so generous in his hospitality. It would not be natural if he enjoyed seeing himself ousted from the position of honor which he has held since the great achievements of the men of 1830. But perhaps he feels still more keenly the admirable impartiality of the Government, which, in making its annual purchases, has recognized no distinction of nationality where merit is concerned, and consequently, of late, has been buying the canvases of foreigners in increasing numbers. Times for artists, the world over, are hard just now, and here the Frenchman fears loss not only of fame, but of fortune for himself. It is not so much what the Government pays—it pays very little; it is the great advertisement (and it is an advertisement in the best sense of the term) secured by having one's picture hung in the Luxembourg, or even in one of the provincial museums.

Perhaps this danger would not have been so fully realized but for the recent rearrangement of the Luxembourg galleries. The present grouping of the foreign work emphasizes its importance in the collection. It is true, it occupies merely one of the smaller rooms; but it is equally true that this small room is by far the most conspicuous and interesting of all. There are fine paintings scattered through the others (and I am not touching now on sculpture, since, so far, French sculptors have scarce been subjected to the same severe competition from without): nothing can lessen the distinction of the Manet; the fine Aman-Jean relieves the mediocrity of the most commonplace section; now that it can be seen from across a wide gallery, Puvis de Chavannes's "Pauvre Pêcheur," with the marvellous distance stretching away behind the simple figure, and the still more marvellous atmosphere that fills the landscape, can be really seen as it never was when it hung on the walls of one of the narrower apartments; Pointelin's "Soir de Septembre" delights, as do his contributions to every Salon; and so, with many other pictures which are now overshadowed by the preponderance of poor work, but which, if placed in one room, would make a striking display. For it is the collecting together of the foreign examples which strengthens their force. Here, to begin with, one finds the masterpiece of the whole collection, Mr. Whistler's "Portrait of his Mother," occupying, as it should, a centre of honor. However, one almost wishes it back in its old position, near the Manet, where it hung a little lower on the wall, and was in a better light, and altogether was seen to greater advantage. But it would take a bad light, indeed, to disguise utterly its incomparable beauty. Opposite now is Mr. Sargent's "Carmencita," original, daring, clever, and gaining, not losing, by time. Next to the Whistler—truly a test—is Mr. McLure Hamilton's portrait of Mr. Gladstone. It is impossible in passing not to mention, by way of reminder, that these three, the most distinguished canvases in the room, are the work of Americans. There are also the "Retour" of Mr. Mosler—I believe the first picture by an American bought for the collection—and the "Bénédi-

cité" of Mr. Walter Gay, and the paintings of Marie Bashkirtseff (but these are typical of industry and notoriety rather than of genius). In one corner, a drawing by Burne-Jones hangs under Carlos Schwabe's design for the cover of the last edition of Zola's "Rêve." Mesdag, Zorn, and Edelfelt are represented, and so also are De Nittis, who belongs to a past tradition, and Alfred Stevens, who still seems modern even in the Champ-de-Mars. The general effect of this little collection is that which is always desirable, but seldom attainable, in a picture exhibition: there is hardly a painting which fails to interest. Naturally, therefore, its strength and excellence seem greater, it may be, than they really are, and every time the Frenchman goes to the Luxembourg he is confronted with this eloquent proof of the foreigner's success and influence.

It is trying, I admit. But it will profit him little if the foreigner be banished—for banishment practically it must prove if the latter be declared ineligible for competitions and honors at the Salon. It is their international character which has made the Salons so important. Because Paris is the picture market, not of France alone, but of the whole world, have buyers and patrons and dealers swarmed thither for many years. The breadth which has prevailed in the schools has been their chief virtue. England has demonstrated what danger there is in an undue pride in national art. If France in the present panic decide to follow her example and turn the back upon the stranger at her own gate, it must result in the consecration of the French artist to the petty and the mediocre. His fellow-artists will not be slow to seek new headquarters elsewhere. But the authorities at the Champs-Élysées may have the sense to foresee the evil, and so avoid it. N. N.

# Correspondence.

## THE CLASSICS AT WILLIAM AND MARY.

To the Editor of The Nation:

Sir: I read with interest the note of Mr. William Garrett Brown published in your issue of June 22, 1893, concerning the admission of John Dawson of Virginia to Harvard College in May, 1780. I have tried for some time to find out something about his parentage, and Mr. Brown may be able to add to our information about him by an examination of the Harvard matriculation book. He was called "Beau Dawson," and was eminently popular in society and politics. Two Dawsons—William and Thomas—were presidents of William and Mary, but I am not satisfied that Hon. John Dawson was a son of either. Neither Greek nor Latin was taught at William and Mary in 1780. The College was reorganized in 1779 under the lead of Mr. Jefferson, and the two chairs of Divinity and that of "Humanity," in which the classics had been taught, were abolished. The great reformer, whose hand is seen in all departments of thought, substituted for the Divinity Schools the Schools of Law and Medicine, and for the School of "Humanity" the School of *Modern Languages*. He made his old preceptor, Chancellor Wythe, first Professor of Law; Dr. James McClurg, who represented Virginia in the Convention of 1787, Professor of Medicine; and an Italian gentlemen, Charles Bellini, Professor of Modern Languages.

I think that these chairs were the first of their kind in America. Up to 1783 there were only three chairs of regular professorships at Harvard. The professorship of Medicine was established in 1783 and that of Law in 1815. Mr. Jefferson's chair of Modern Languages, substituted for the Ancient Languages, at William and Mary, was, like his whole life, a revolt against the old order of things. But in 1794 the chair of Humanity was restored, and the study of Latin and Greek resumed, under John Bracken. The modern languages were found to be an excellent addition to the course of study, but it was also found that their study should not cause the study of the classics to be dispensed with. Jefferson had to admit that "while every other article could be as well acquired at William and Mary as at any place in Europe," the habit of speaking the modern languages could not be so well acquired.

Lyon G. Tyler.

College of William and Mary,
Williamsburg, Va., July 17, 1893.

## PROF. SIEMERING'S WASHINGTON.

To the Editor of The Nation:

Sir: In No. 1459 of your esteemed journal, a correspondent, writing under the signature "Help," from Philadelphia, June 6, enters his protest against what he calls "ruinous juxtaposition" to the venerable State-house of that city of a monument to be erected to the memory of Washington in the rear of said building. I do not purpose to engage in the controversy over that local question. In his eagerness, however, to save what he considers a sacred spot from encroachment, "Help" inflicts a great injury on the eminent artist who has created the monument in question, Rudolf Siemering of Berlin. Having been chosen by the Society of the Cincinnati of Pennsylvania for their great project upon the merits of his model, which was exhibited at Philadelphia in 1881, in competition with various designs from notable sculptors of different nationalities, Siemering has been at work on his task ever since, and bestowed upon it the fulness of his genius. When completed and shown here at last year's art exhibition, it was considered by the most competent judges as a work of art which, in sublimity of conception, originality of composition, and perfection in all parts, is to be ranked among the *chefs-d'œuvre* of all time. With the universal admiration, regrets were mingled that such a work should go abroad; but with its thoroughly American features it belongs to your nation, and Germans will be proud and gratified that it has been given to one of their kin thus to embody the glories of a kindred people.

To denounce such an achievement, as "Help" does, as "an obvious plagiarism of the design of the well-known figure of the great Frederick at Berlin," can be explained only by sheer ignorance of the subject on which he writes, basing his judgment avowedly on "newspaper cuts" only, and misled by some inconsiderate comparison as to the well-known monument of Rauch. There is nothing in the Washington monument that resembles it save the cocked hat worn by Washington and Frederick in the same way, after the fashion of their time. Of all this "Help" might have satisfied himself by taking a peep at the shop where the parts of the monument are stored in Philadelphia, before defaming a well-known artist whose name he suppresses. It must be mortifying in the extreme for a man of the standing of Prof. Siemering to see the work to which he has given his whole soul and devoted the prime of his life, greeted in such a manner, by being drawn into a local quarrel to which he is entirely foreign, having had in view rather a site in Fairmount Park for the sake of the wider range which a work of such calibre would seem to call for. This is the more to be regretted when ignorance, speaking of it as an incongruous pile to be set up, finds utterance in an organ of the tone which has ever characterized the *Nation*, in "juxtaposition" to certain performances of local Philadelphia sheets which appeal to the native spirit of the country for resistance to the "threatened Prussian invasion."

Very respectfully,

Dr. Johannes Rösing.

Berlin, July 10, 1893.

## ECONOMIC IDEAS IN NEBRASKA.

To the Editor of The Nation:

Sir: Having been compelled on account of ill-health to spend the past nine months here, and getting a surfeit of cheap-money gabble, I subscribed for my old adviser, the *Nation*. Thus fortified, I started out in a little missionary work, and have been successful in disabusing some minds of their ideas on money.

My object in writing you is merely to testify to the accuracy of your knowledge of the situation. Being sadly in need of capital, which could be used to great advantage to all concerned, and being compelled to pay a high rate of interest on what is obtained, the people here are willing to swallow anything that promises more money. Their willingness to be duped by mine-owners is exceeded only by the density of their ignorance in matters of finance. Some think that a circulation of $50 per capita means that they would have that $50.

During the past winter the Legislature passed a freight bill which had the effect of raising the freight on corn for through shipment. While complaining bitterly of the way they are robbed by railroads, not one in ten can tell the rate on grain to Chicago, or what the relation between prices there and here should be. Having bought 600 bushels of corn eight miles from the railroad, I must pay 4 cents per bushel to have it hauled those eight miles, while it costs only 16 cents to forward it to Chicago. I obtain not a little amusement in picturing the profits of a railroad for those eight miles, but so far have been unable to find any one who wishes to invest.

I am yours respectfully, K.

Nebraska, July 18, 1893.

# Notes.

Maynard, Merrill & Co. have nearly ready the twenty-second volume of their authorized Brantwood edition of Ruskin's writings, being 'The Elements of Drawing, in Three Letters to Beginners,' with the usual introduction by Prof. Norton.

Harper & Bros. have gathered 'Other Essays from the Easy Chair' as a second volume of selections from the late George William Curtis's contributions to their Magazine.

'Stories of the South' is the latest volume in the dainty series called "Stories from *Scribner*," and has its tiny measure filled out by Thomas Nelson Page, Harrison Robertson, Joel Chandler Harris, and Rebecca Harding Davis.

The International Limited Edition of the Waverley Novels (Boston: Estes & Lauriat; New York: Bryan, Taylor & Co.) is continued with four volumes, divided between 'Old Mortality' and 'Heart of Midlothian.' The illustrations to the latter seem to us the best yet

issued in the present series. The single-volume Dryburgh Edition, on the other hand (Macmillan), adds 'Ivanhoe' to its eight predecessors, with woodcuts after designs by Gordon Browne.

The Herbarium of Harvard University has issued a pocket 'List of the Plants contained in the Sixth Edition of Gray's Manual of the Botany of the Northern United States,' embracing the territory east of the one hundredth meridian and north of North Carolina, Tennessee, and Arkansas. Mr. John A. Allen is the compiler, his aim having been to facilitate herbarium exchanges and furnish a useful adjunct to the 'Manual.' An appendix of eight pages contains some corrections of the parent work.

Rand, McNally & Co., Chicago, have supplemented their general Guide to the World's Fair with 'A Week at the Fair,' in which, after some general information about Chicago and access to the Fair, the sight-seeing is apportioned among six secular days, with a chapter for each. The design is a good one. The guide is illustrated, and well equipped with diagrams. Laird & Lee, Chicago, send us a new edition of 'Hill's Guide to Chicago and the World's Fair,' which we have already characterized as particularly useful for the city. Its finding-list of articles on exhibition at the Fair will also be appreciated.

'Salem at the World's Columbian Exposition' is a catalogue issued by the Essex Institute, and no one can deny that the old Massachusetts city acquits itself handsomely in the great show. Two plates of old furniture adorn the pamphlet.

The July number of the *Library Journal* contains abstracts of the papers read at the World's Fair Congress and Chicago Conference of Librarians on July 13–22. In a paper read by Mr. G. Iles of this city, it is stated that next year there will be begun here a weekly index to periodicals, with this peculiarity, that each succeeding issue will repeat the titles already published. The Mergenthaler machine, or one operated on the same principle of casting type in solid lines of metal, makes this repetition with fresh alphabetization easy.

Apropos of this innovation, the Boston Public Library will hereafter publish weekly an alphabetical list of newly acquired books "printed from the type set up for new cards for the card-catalogue, so that the titles in the weekly list will be similar in all respects to those in the card-catalogue." This scheme involves the abandonment of the practice of printing in the Library's Quarterly Bulletin a *classified* list of new books. The space thus gained will be used in printing subject lists, special bibliographies, and reprints or facsimiles of original documents, prints, and manuscripts in the Library. The April number, for example, opens with a third and enlarged edition of its Chronological Index to Historical Fiction (including prose fiction, plays, and poems); the first instalment being of England to the reign of Victoria. Then follows a conspectus of works in the Library relating to the telegraph and telephone; a list of Transactions and like serial publications currently taken in the Library—a vast number; a list of books pertaining to Hawaii; and finally a facsimile of the earliest known chart of Boston harbor, prepared by the order of Gov. Andros. The alphabetical list of accessions may be subscribed for at $1.50 a year; the Bulletin at $1.00.

'Nicaragua,' by Courtenay de Kalb, is the title of a reprint from the Bulletin of the American Geographical Society, which proves to be a short but painstaking study of the Mosquito Coast. The political status of this former home of buccaneers was determined by the Managua treaty, as explained by an award of the Austrian Emperor in 1881. To almost all intents and purposes, the region governs itself, but it is subject to Nicaragua, while Great Britain, which formerly exercised a protectorate over it, retains a dangerous right to interfere in case of an infraction of the treaty. The arrangement works badly and produces trouble and confusion. The insignificance of the territory, with its 7,500 Indian, negro, and white inhabitants, has enabled it to get along tolerably so far; but the Nicaragua Canal would greatly increase its importance, and in time compel some sort of a new settlement, which may not be reached without serious difficulty. The country seems to be very healthy for the tropics, and its capital and chief seaport, Bluefields, has a future as the starting point of a railroad to rich lands in the interior. Mr. DeKalb's study, while mainly historical, derives interest from his observations of country and peoples on the spot. It may be had, for fifty cents, of the author, at Irvington-on-Hudson, N. Y.

In the *National Geographic Magazine* for July 10 Gen. Greely enumerates the hundred most populous cities of the world in accordance with the latest censuses, which are dated in each case. Canton alone is estimated. More than half (52) are populated by English-speaking races or controlled by them; and seventeen of these are in the United States, which has twenty-eight cities whose population exceeds 100,000.

The *Scottish Geographical Magazine* for July opens with an account of the proceedings of the Anglo-Portuguese Delimitation Commission in East Africa. This is followed by an interesting sketch of the Campas, probably the best representatives of the uncivilized Indians of Peru, by D. R. Urquhart, who had many opportunities of observing them during a surveying expedition to the upper tributaries of the Amazon. They have no elected chief, and "probably have not had" since Pizarro slew Atahualpa. Their veneration for the last of the Incas is shown also in the hereditary and inextinguishable hatred for the descendants of his murderers, as well as by the fact that their women still wear a black strip round the dress as mourning for their great chief. Crime is rare among them, and they are truthful, honest, and brave. Their religion is a strange mixture of Christianity, idolatry, and sun-worship. Added to this is a belief in witchcraft, which, unless eradicated, must lead to the extinction of the race. Nearly every death is ascribed to some witch, generally a woman, who is immediately strangled or beheaded. Apparently their only weapon is the bow and arrow; the latter being of cane, excepting the barbed point, which is formed of "a black, exceedingly hard wood, found as a sort of crust growing inward on a species of palm." Around the arrow "feathers are arranged in a spiral so as to give the missile a rotary motion in flight." A brief historical sketch of the progress in the teaching of geography in Germany may also be mentioned.

Part 2 of vol. xix. of the Annals of the Harvard College Observatory contains two memoirs, one, by Prof. Arthur Searle, upon the Zodiacal Light, and the other, by the Director, Prof. E. C. Pickering, upon the Atmospheric Absorption of Photographing Rays. Photographic plates are affected most by a bluer part of the spectrum than that which most affects the human eye, and this bluer part is much more absorbed by the atmosphere, so that the correction to the brightness of a star on account of its zenith distance is much greater when the photographic method of observation is used than under direct vision. The form and value of the correction are in this paper worked out elegantly and satisfactorily, and the photographic magnitudes of nearly 900 stars between declinations 55° and 65° are incidentally determined. Photographically, the blue stars are shown as brighter and the red stars as fainter than to the eye, the discrepancy often amounting to a whole magnitude. The effect of the atmosphere is to lower the photographic brightness of an average star in the zenith by 0.44 of a magnitude. This effect is diminished with a high barometer, and is slightly increased in warm and moist weather. It is decidedly greater in the autumn than in the spring of the year.

We have received the first volume of the *Physical Review*, "a journal of experimental and theoretical physics," conducted by Edward L. Nichols and Ernest Merritt, and published for Cornell University by Macmillan. "The Transmission Spectra of Certain Substances in the Infra-red," by Ernest F. Nichols; "The Infra-red Spectra of the Alkalies," by Benj. W. Snow; "Relation between the Lengths of the Yard and the Metre," by William A. Rogers; "The Critical Current Density for Copper Deposition," by Samuel Sheldon and G. M. Downing; and "A Geometrical Proof of the Three-Ammeter Method of Measuring Power," by Frederic Bedell and Albert C. Crehore, are the leading papers. There are notes and reviews of new books. The *Review* is beautifully printed.

The Marine Biological Laboratory at Wood's Holl, Mass., is holding its sixth summer session, with laboratory facilities for both investigation and instruction in animal morphology, physiology, and botany, under the general direction of Prof. C. O. Whitman of the University of Chicago, seconded by a corps of twelve assistants. There are at present in attendance 112 students and investigators, representing Chicago, Columbia, Yale, Princeton, Harvard, Cornell, Pennsylvania, Williams, Brown, Bowdoin, Cincinnati, the Northwestern University, Bryn Mawr, Vassar, Smith, Wellesley, the Missouri Botanical Gardens, and many of the smaller colleges.

Under the title 'Special Assessments,' Mr. Victor Rosewater contributes to the Columbia College Economic Series an exhaustive review of the practice and principles of our States in raising funds for improvements that are to such an extent local as not to be properly chargeable on the whole community. The "betterment" principle, Mr. Rosewater thinks, was introduced into the law of New York from the act of Parliament passed to regulate the rebuilding of London after the great fire of 1666, and it is from the law of New York chiefly that the system has been developed in this country.

Dentu's publishing-house has issued 'Mes Campagnes,' by Léon Chotteau, a gentleman who will be remembered by New York and Boston merchants and business men as an earnest advocate of reciprocity between the United States and France. The book is simply an account of the speeches delivered by M. Chotteau in both America and France on this one subject. He has not yet succeeded in bringing about reciprocity, but he is not discouraged, and this account of his campaigns is sure to interest those who are opposed to his views as well as those who are in sympathy with him.

One of the best works on French versification which have appeared of late is Clair Tisseur's

'Modestes Observations sur l'art de versifier.' M. Tisseur belongs to a Lyonnese family of poets and philosophers, the best known of whom, perhaps, is Jean, the poet. M. Clair Tisseur proposes certain reforms in versification, and, in order to justify his proposals, examines French verse, in its different forms and in successive epochs, with a clearness and an absence of technical phraseology which lend an added charm to his book. He is a very sprightly writer, and his erudition is never allowed to become heavy; and although such a subject as his is very apt to be treated in dull and most unpoetic fashion, M. Tisseur has made his valuable work an exceedingly bright and interesting one. As he brings down his subject to the most modern verse, he will frequently be referred to by students of prosody. We have received also 'Studies in French Versification,' by Prof. A. R. Hohlfeldt of Vanderbilt University. They bear upon the treatment of the Alexandrine verse by Racine and Hugo, and may be consulted profitably on this point.

That delightful critic, Émile Montégut, has added another volume to his work. This latest one, published by Hachette, is entitled 'Esquisses Littéraires,' and, while it does not deal with any of the greater writers, contains enjoyable articles on P. J. Stahl, Gustave Planche, Mme. de Gasparin, and a few others. These minor writers are as carefully examined and appreciated as any of the greater ones of whom M. Montégut had previously given us his opinion.

M. Gustave Larroumet, whose studies in dramatic history and criticism we noticed recently, has now issued a volume of 'Études de littérature et d'art' (Paris: Hachette & Cie.). Some of these studies are especially worthy of attention: that on "Somaize et la Société précieuse" contains several new points, and sweeps away some existing mistakes; that on "Le XVIIIe Siècle et la critique contemporaine" places that much discussed age in a truer light, and, when read in connection with the excellent study on "Les Origines françaises du Romantisme," gives a much truer view of the epoch of Voltaire and Rousseau than is generally taken. M. Larroumet also enters the lists on behalf of Scribe, who is a good deal talked and written about now, in a vigorous study which brings out the good points of the celebrated dramatist.

—The announcement of honors at the University of Chicago after the initial year may possibly shed light on the reluctance of our older universities to throw open their emoluments and rewards on equal terms to men and women. Eleven of the general fellowships have been won by women, although they numbered less than one-third of the applicants for these desirable appointments. The new fellows are graduates of Bryn Mawr College, University of Cincinnati, Cornell University, University of Michigan, University of Minnesota, Syracuse University, Vassar College (two students), Wellesley College, University of Wisconsin, and Western Reserve University. Of three new "special" fellowships, two will be held by women—that in history by a graduate of Vassar, and one in English by a Ph.M. of the University of Chicago. The relative proportion of male and female students did not justify expectation for more than a modest showing of women in the honor list, but their success all along the line buttresses two claims made by the advocates of university education for women, namely, women's mental capacity, and the high grade of work *now* being done by them at various educational centres. The thirteen fellowships just assigned to women at the University of Chicago represent preliminary college work broad enough to include special training in mathematics, Greek, Latin, Romance languages and literature, English, political science, history, physiology, and biology. Discussion of the question whether or no there is any significance in the fact that eight of these winners have been trained at coeducational institutions, we leave to those who delight in social dialectics.

—The "Old Two-seed-in-the-Spirit-Predestinarian Baptists" form a cardinal curiosity of the Census. It will surprise our readers to learn that this sect has churches in more than half our States, scattered in 219 counties. Three of them are not a hundred miles from the city of New York. Had Priestley lived a century later, they would have been prominent in his 'Corruptions of Christianity.' The Baptist tenet that immersion is an essential of baptism runs to seed in their requiring their members to wash the feet of the saints. Their "two seeds" are of death sown in Adam at the fall, and of life sown at regeneration. But many of them call themselves "Regular Predestinarians." Their vital point is the Calvinistic doctrine of decrees in a fatalistic caricature—"corruptio optimi pessima." Conversions are effected, as they maintain, by divine power unaided by preaching, and so ministers ought not to be paid. It is enough to say to them, Thank you for nothing. These Baptists are opposed to temperance, Bible, and missionary societies, as well as to theological seminaries, for they find them unmentioned in the Word of God. Yet, like every other sect, they "forsake not the assembling of themselves together," and their ministers "feed the flock, comfort Zion, and contend for the faith." Though their communicants are scarcely 10,000, their 333 churches have a seating capacity for more than ten times as many. Half their strength lies in Arkansas, Tennessee, and Texas, and there are seven of the twenty-three States in each of which they number less than one hundred. In Iowa there are 10 such witnesses and in New York 96. In Maine they number 170, but would have been much fewer there had their colony in Palestine endured, or, when that bubble burst, had not the maniacs whom the writer saw at Jaffa in 1868 been helped back to Maine by the charity of our Government.

—The first instalment of the General Report on the Eleventh Census of New South Wales, which has just been published, contains an interesting account of the origin of the census from the dawn of history. The first census of modern times is ascribed to the Canadian province of Quebec in 1665. Up to the year 1754 no less than fifteen regular censuses were taken by this province—nine of them in the seventeenth century—and in some, if not in all, of them every individual was recorded by name. Sweden showed during the seventeenth century a marked exception to the general European apathy towards this subject. Prior to 1686, special registers of births, marriages, and deaths were kept in certain districts of Sweden, but by a law of that year the practice was made obligatory upon the whole body of the clergy. In England, as early as 1753, a bill was introduced for taking and registering an annual account of the total number of the people, the number of marriages, births, and deaths, and also the number of paupers; but it was denounced as "totally subversive of the last remains of English liberty," as aiming at the imposition of new taxes, and as advertising the nation's weakness "to her enemies abroad." It was thrown out in the House of Lords. Nearly fifty years after this, Malthus published his essay on Population, which inspired Englishmen with such a dread of overpopulation and an exhaustion of the food supply that the fear of revealing the paucity of inhabitants was put aside. In 1800 and 1801 prices of wheat, barley, and oats in Great Britain were nearly double what they had been in previous years, and the introducer of the bill for taking the census said that, the subsistence of the people being in question, "it is surely important to know the extent of the demand which we are to supply." On this occasion the bill passed through all its stages without opposition, and on March 10, 1801, "the first enumeration of the inhabitants of England was made."

—In the current *Bulletin de Correspondance Hellénique* (January to April, 1893) one naturally looks first for news from Delphi. The results of the excavations so far have not been sifted so as to be presented formally in the main body of the reports, but it is encouraging to find that they begin with promise. The foundations of a small building of Pentelic marble have been laid bare, near the Sacred Way. The severe yet elegant style of the fragments of sculpture and architecture, the grace and skill of the workmanship, the names preserved in the inscriptions, all point to the conclusion that these are the relics of the Treasury of the Athenians. Thus a point of departure is fixed for the Delphic topography; moreover, the abundance of the remains and their fresh state of preservation (the color is still brilliant on some of the architectural members) show that the excavation is not misdirected, and give augury of ample reward for the large expenditure of money and labor involved. The initial difficulties which we Americans should have had to encounter, if our friendly competition had been successful, are briefly described by M. Homolle, Director of the French School of Archæology. They consisted first in the purchase of an entire village, in small lots, from 300 inhabitants; secondly, in the creation of a new village, for which land must be purchased and allotted, houses built, and water provided; and, lastly, in the construction of a line of railway for the transportation of the débris. The allowance from the French Government was 500,000 francs. Notwithstanding that the members of the French School were fully equipped for the undertaking in March, 1892, the work was forcibly delayed by unreasonable quarrels on the part of the population, and it was only by the zealous coöperation of the Greek Government, and by the aid of an armed body of Greek soldiers, that operations were finally begun about the first of November.

—We may console ourselves for our exclusion from such conflicts and such an opportunity, in reading the important paper, "On Certain Athenian Archons," which M. Homolle contributes to the present number of the *Bulletin*, and which, together with his previous work in restoring the history of Delos and of Rhodes from the inscriptions, proves—what the archæologist well knows—that the undertaking at Delphi has fallen into the hands of an expert and a master. M. Holleaux, in discussing, by the aid of recently discovered inscriptions, the relations of Rhodes with her possessions on the coast of Asia Minor, controverts the commonly accepted opinion of Droysen ('Geschichte des Hellenismus,' vol. iii.),

that it was Ptolemy Philadelphus who took Caunus from the Rhodians in 266 B. C., and who afterwards restored it to them for the sum of 200 talents. This capture is shown by the Delian inventory of 279 to be an imagination of the historian; and, in all probability, Caunus was acquired by direct purchase from some general of Ptolemy Ephiphanes (possibly Ptolemy Philometor) as late as 189 B. C. This is the transaction alluded to by the Ambassador Astymedes, in the address reported by Polybius, before the Roman Senate, 164 B. C. The paper on Tegea, by M. Bérard, announces the identification of the site of the most important public edifices, including the theatre; and here we find incidental testimony to the great popularity of Euripides as late as the second century B. C. An actor of Tegea records four victories with different plays of Euripides, won in places so widely separated as Athens, Delphi, and Dodona.

—Turning from these studies of inscriptions to the essays that deal with ancient art, we may note the discussion by M. Chamonard of a unique rock monument at Sondurlu, a small station on the Aidin railway, near the bridge which crosses the Meander River. This bas-relief illustrates the varied influences which at the time of its construction, probably near the early part of the fifth century B. C., flowed together into Phrygia. It represents a personage borne on a chariot, preceded and followed by men on horseback, symbolizing doubtless the journey of the deceased to his final dwelling-place. The scene is the same as on the tombs of Xanthus, and presents a class of ideas borrowed from Phœnicia. It differs, however, from the neighboring Phrygian rock-monuments and from Hittite or Syro-Cappadocian workmanship in that its style is strikingly superior. The motive is Asiatic, but the art shows decided evidence of Greek genius and influence, imported by way of Lycia and Cyprus. M. Salomon Reinach, in an interesting piece of research, traces the fallen fortunes of the colossal statue of Apollo at Delos from the earliest mention to the present day. Plutarch tells, in his life of Nicias, of a huge palm-tree of bronze dedicated by the Athenian general to the deity; this tree, blown down by a tempest, fell upon the colossus and prostrated it, at exactly what date we are not informed. It was soon afterwards raised and repaired. About 1420 A. D., Bondelmonte records that, with a thousand men, he vainly tried to raise the statue to an upright position. After this period, each visitor seems to have helped himself freely to any fragment he liked to carry away. The sole remnants extant in 1892 are inventoried as follows by M. Sauer: A fragment of the base *in situ*, a piece of the chest and the hips near by, one hand preserved in the house of the curator, a piece of the plinth and of the left foot in the British Museum.

## THE NEW ENGLISH DICTIONARY.

*A New English Dictionary on Historical Principles.* Founded mainly on the material collected by the Philological Society. Edited by James A. H. Murray. Part VII. Consignificant—Crouching. Oxford: Clarendon Press; New York: Macmillan.

HISTORICAL is the emphatic word in the title of this mighty thesaurus. On the side of etymology, tracing the form-development in chronological sequence; as regards the sense, exhibiting the successive growth of shades of meaning, under the influence of association or comparison or imagination, and again as connected with customs and institutions; and finally, in the matter of continuity, arranging, with dates and precise reference, examples of usage from the dawn of our Anglo-Saxon speech to the present time—such is the plan and the successful achievement of Dr. Murray and his colaborers. In the present instalment the offspring of the Latin *crux* furnishes the most striking example, perhaps, that this dictionary is likely to afford of the fate of words in their migrations, transformations, and functions. The roundabout Latin-Irish-Norse-North English *cross*, which has dominated all the other forms, occupies with its compounds and derivatives no fewer than twelve pages. The Latin prefix *contra* has given us through the French the useful *counter*, which has "become a living element of the language, capable of entering into new combinations even of Teutonic origin," but with a certain consciousness of hybridism. "In those compounds," we are told, "which we have taken from French or Italian, the consolidation of the word is usually greater than in those formed in English, and they are regularly written as single words. . . . In words formed in English the two elements are in looser union, both accentually and in writing," and the tendency is to employ the hyphen. In *contre-dance* (*contre-danse*, *contra-dance*) the pseudo-prefix is a corruption of *country:*

"The English country-dance was introduced into France during the Regency (1715–'23), and thence passed into Italy and Spain. . . . The arrangement of the partners in a country-dance, in two opposite lines of indefinite length, easily suggested the perversion of *country* into *contre-*, *contra-*, opposite. . . . But new dances of this type were subsequently brought out in France, and introduced into England with the Frenchified form of the name, which led some Englishmen to the erroneous notion that the French was the original and correct form, and the English a corruption of it. Thus, a writer in the *Gentleman's Magazine*, 1758, p. 174, said," etc.

The curious chain of error by which Mr. Tylor was led to affirm the existence of the *couvade* in Béarn was exposed by Dr. Murray with great particularity in the *Academy* last year. Mr. Tylor's *amour-propre* was obviously wounded by this procedure, but editors of dictionaries as well as of newspapers have the advantage of the last word, and hence we read (and so must the respected anthropologist himself, unless he practise upon page 1099 the smear of the Russian censor), "The recent application of the word in anthropology is due to Dr. E. B. Tylor, following M. Francisque Michel. . . . But this is a mistake, traceable to a statement as to the phrase *faire la couvade* in Rochefort's *Hist. Naturelle et Morale des Antilles* (1658), 494-5, repeated with variations by a sequence of later writers. . . . Further, the pretended existence of the practice in Béarn . . . appears to be merely the echo of a statement of Strabo as to the ancient Celtiberians," etc.

The discussion of *council*, its confusion with and differentiation from *counsel*, and the various applications of it to extant and defunct bodies, is a capital example of historical development; and along with this word may be mentioned *consistory*, *consociation*, *conventicle*, *convocation*, and *convention*. The extension of the last-named term has been vastly greater in the United States than in the mother country, as the verb *convene* is much more in vogue in Scotland and in the United States than in England; and accordingly we have a very full array drawn from our annals, *e. g.*, 1720, the Massachusetts Convention of Congregational Ministers; 1754, the Albany Convention of delegates from the colonies, for which Franklin drew up a Plan of Union; 1787, the Federal Convention; 1814, the Hartford Convention; and so forth down to 1891, November 13, "The great National Convention of the Women's Christian Temperance Union opened in Tremont Temple this morning" (Boston *Journal*). Such circumstantial particularity, by the way, as we have in the citation just made is frequent in our Dictionary. Thus, under *consort*, we read an extract from the *Court Circular* of December 13, 1861: "His Royal Highness the Prince Consort passed a restless night"—his last but one.

A bit of natural history attaches to *cony*, whose appearance in the language makes it certain that the rabbit was a late arrival in England as in northern Europe. There is no mention of it in Britain before the Norman period. The word still survives on its adopted soil along with the animal itself, and has a rich assortment of compounds, whereas it is wholly disused in the United States except in Scripture reading: not a single American citation is made for it by Dr. Murray. On the other hand, we have rescued *crotch* from its English dialectic obscurity and made an indispensable word of it. We have, too, a colloquial sense for *contrive*, which we do not find noticed, but which must have occurred more than once in the great body of New England tales. "I can't contrive how he did it"—*i. e.*, guess, imagine, divine. We identify this with Dr. Murray's No. 4, "to find out or discover (as the solution of a problem or riddle); to come to understand," which he makes obsolete, though his malicious epigram from Thynne (1600) compares very well with our usage—"Deepe witted menn b'experience haue contrived, that mariage good and quiet is ech hower, where the mans heringe organs are deprived of their right vse." *Corn-cake* seems a little belated in coming to the front with 'Uncle Tom's Cabin.' Gen. Butler's *contraband* is first quoted from W. H. Russell in the London *Times* of March 27, 1862, through default of some "reader" to furnish the original text of, or despatch concerning, Butler's whimsical ruling. The invention of *Copperhead* is assigned to the autumn of 1862, but the first instance given is from the New York *Tribune* of January 12, 1863—a date which should furnish a point of departure for further research.

It is odd to find Darwin the earliest authority for the substantive *constitutional*, 'a walk taken for health's sake' (1829); and Macaulay using *constituency* apologetically in 1831, Lady Holland thanking him and calling it "an odious word." *Cosmopolitan* in its literal sense as "not confined to any country" goes back to Mill in 1848, but in its figurative sense of "catholic" to Emerson in 1844. Robert Owen was the first to employ *coöperation* with a socialistic signification (1817). We owe to Sir William Hamilton (1836–'7) the convenient *conspectus*. The name of *corruptionist* is no older than 1810, of *contortionist* than 1859; and comparatively recent are *co-religionist* (1842), and the substantive *co-signatory* (1865). *Console* is but two hundred years old, dating from Dryden (1693). Hobbes first used *constantly* in the sense of "regularly" in 1651. *Cow*, 'to intimidate,' we must seek in Shakspere (1605), about which time also (1607) *cows* began to make head against the many other plurals of cow. America endowed England (1672) with the name of *cranberry* along with the delicious fruit itself; likewise (1879) with the name and invention of *creamery*. And if we did not devise either *cremation*, *crematory*, or *cremator*, an American author is first cited for

*cremate* (1874). Guiteau (1881) was, for literary purposes, the original *crank*.

Among the curiosities of pronunciation revealed in this instalment is Cowper's doubly accented *con'venti'cle*. *Con'summate* (for the verb) is said to be getting the better of the accent on the penult, and the same process seems to be going on with the past participle. The usage is equally mixed in the case of *contemplate*, but the tendency at present is in favor of the antepenult, as in all verbs in *-ate*, we are told.

"Of these the antepenult stress is historical in all words in which the penult represents a short Latin syllable, as *accelerate*, etc., or one prosodically short-or-long, as in *celebrate*, etc.; regularly, also, when the penult has a vowel long in Latin, as *alienate*, etc. But where the penult has two or three consonants giving positional length, the stress has historically been on the penult, and its shift to the antepenult is recent or still in progress, as in *acervate*, etc.—all familiar with penult stress to middle-aged men. The influence of the noun of action in *-ation* is a factor in the change. . . . There being no *remonstration* in use, *remon'strate*, supported by *remon'strance*, keeps the earlier stress."

The effect of book-learning on pronunciation is illustrated in the history of the interesting *cony*, which formerly rhymed with *honey*, but has during the present century acquired the long *o*. In Dr. Murray's explanation: "This pronunciation is largely due to the obsolescence of the word in general use, while it occurred in the Bible, and especially in the Psalms, as the name of a foreign animal; . . . the oral tradition being broken, readers guessed at the [pronunciation of the] word from the spelling." *Crocodile* underwent a great variety of spellings and pronunciations in all the modern languages, but especially in English, where, as in most of the others, "the original form after Greek and Latin was restored . . . in the sixteenth-seventeenth centuries." *Critique* was originally spelt *critick*, as by Pope in 1709. "*Critique* occurs in Addison's *Dial. Medals* (published in Works, 1721), and Pope so altered his spelling in 1729. It became general in the eighteenth century, though Johnson and most of the dictionaries to the end of the century adhered to *critick*. Todd substituted *critique* in his edition of Johnson in 1818; the modern pronunciation and stress after French (or German) appears in 1815." The evolution of *corpse* has been curious. In the fourteenth century the spelling of Old French *cors* was perverted after Latin to *corps*, and so made its way into English, with silent *p* till the end of the fifteenth century, and with the final *e* mute but seldom affixed till the present century. The parallel *corse* and *corps* were retained side by side with it, and the *e* mute now serves to distinguish it from the latter, which is still sounded as in French.

The citations have the usual range, from classic English to 'Fables from the New York *World*.' Among American authors, it is gratifying to meet so frequently with Emerson, whose pure intellectual delight in aptness of expression is well known. We have his famous saying, "A foolish consistency is the hobgoblin of little minds" (1841-'4), immediately succeeded by Sir H. Maine's "The doubtful virtue of consistency" (1864). So Disraeli's *mot* in his 'Lothair,' "You know who the Critics are? The men who have failed in Literature and Art," is paralleled by Swinburne's "The rancorous and reptile crew of poeticules who decompose into criticasters." There is an abundance of proverbs under *cooks*, with Garrick's "Heaven sends us good meat, but the Devil sends cooks." To be expected under their respective vocables, and to be found accordingly, are "God made the *country* and man made the town," "Some boundless *contiguity* of shade," "Thus Conscience does make *cowards* of us all," "*Convey* the wise it call," "*Consummation* devoutly to be wished," "For forms of government let fools *contest*." We miss, however, "What *constitutes* a State?" as well as Lowell's "Puts the debit to him, an' to us the *per contry*," and Wordsworth's ill-accented line that sets a trap for mispronunciation, "My head hath its *coronal*."

It remains to say a word about the progress of the Dictionary. The completed first volume (A, B) contains 1,240 pages; the second, of which the present is the fourth part, already fills 1,204, and is to embrace not only the rest of C, but the whole of D. Taking the Century Dictionary as a basis of computation, we reckon that volume ii. will be swelled to nearly 2,100 pages. For the sake of symmetry it seems a pity that D should not rather be bound up with E, of which Part ii. is in the press.

## GEN. ANTHONY WAYNE.—I.

*Major-General Anthony Wayne* and the Pennsylvania Line in the Continental Army. By Charles J. Stillé, President of the Historical Society of Pennsylvania. Philadelphia: J. B. Lippincott Co. 1893.

ANTHONY WAYNE was born in Chester County, Pennsylvania, on the 1st of January, 1745. He early betrayed the military instinct which was hereditary in his family. His grandfather had fought with King William in the battle of the Boyne, his father was a captain in the Provincial service, and young Anthony, even in the schoolboy games of his childhood, delighted to show to his comrades how a squadron was set on the field and how redoubts were stormed. His education was slender, because he never took kindly to the study of the classics, but he attained to proficiency enough in the elements of mathematics to equip him for the tasks of a practical surveyor. He served his novitiate in that profession before he was twenty-one years old, having been sent in 1765 by Dr. Franklin and his associate capitalists of Philadelphia to survey two large tracts of land in Nova Scotia, which, after the peace of 1763, they hoped to open to settlement and colonization. When this scheme of colonization was abandoned in 1767, because of the threatening outlook of political affairs, arising from the disputes between the colonies and the mother country, young Wayne returned to Chester, and soon placed himself at the head of the county people in their remonstrances against the oppressive acts of the British Parliament. He was chairman of the Chester committee which adopted the resolutions of June 18, 1774 (not "July 13, 1774," as Dr. Stillé more than once has it), defining the attitude of the colonies in defence of their constitutional rights at that juncture. On the 20th of December, 1774, he was chairman of the Chester "Association," organized in pursuance of the recommendations of the Continental Congress. On the 20th of March, 1775, he appears to have participated in a meeting of the Chester Committee which directed a petition to be drafted and presented to the Pennsylvania Assembly "with regard to the manumission of slaves, especially relating to the freedom of infants hereafter born of black women in the colonies." We infer his presence and participation (though Dr. Stillé omits all mention of this meeting), because, in the report of its proceedings, we find that Wayne was made treasurer of funds collected for the relief of the suffering Bostonians at that date.

Henceforth he seems to have been the recognized leader of the Chester "Committee" and "Association" in all their deliberations, whether for the purpose of practice in the military art, the manufacture of gunpowder, the collection of arms, the trial of "suspects," or the punishment of regraters. In this troublous period he was appointed more than once a member of the Pennsylvania Committee of Safety, and in July, 1775, was a member of the Provincial Assembly. Yet during all this time he contemplated nothing more than a constitutional opposition to the "aggressions" of the British Crown, as "misled" by the Ministry; and joined in the declaration made by the Chester Committee on the 25th of September, 1775, indignantly denying the report, "industriously propagated" by "some persons evidently inimical to the liberties of America," to the effect that "the military associators of this county, in connection with the military associators in general, intend to overthrow the Constitution by declaring an independency"—a report which, the Committee adds, "could not originate but among the worst of men for the worst of purposes."

In so declaring, the patriots of Chester, with Wayne at their head, were in obvious sympathy at that time with the great mass of their Whig fellow-citizens outside of New England and Virginia. On the 9th of November, 1775, the Pennsylvania Assembly instructed its delegates in the Continental Congress "utterly to reject any propositions, should such be made, that may cause, or lead to, a separation from our mother country, or a change of the form of this Government." In affirmance of this injunction, the delegates from Pennsylvania were bidden to make report of their proceedings to the Assembly. This instruction, partly the cause and partly the consequence of the civic feud then prevailing in Pennsylvania (a feud destined to take still wider dimensions), was the source of woes unnumbered, because it precipitated a violent change in the form of the Pennsylvania Government, and ushered in the Declaration of Independence among Pennsylvanians at a crisis when they were not only "hissing in war," as the poet phrases it, but were also angered against each other with civic spites growing out of irreconcilable dissensions on a capital question in which each party honestly believed itself to be right. Embittered controversialists, writing under the pen-names of the "Pennsylvania Associator," the "Lover of Order," the "Independent Whig," the "Man of Candor," rushed into print and crossed swords in the newspapers of the day.

No pavilion from this strife of tongues could be found by the Pennsylvania soldiery even under their tents. For, during the winter of 1775-'76, Wayne had been organizing and drilling the awkward squad of his Chester battalion. The conservatism of his politics at this crisis did not keep him from arresting "suspects," trying regraters before the self-constituted justices of the Chester court of piepoudre, or making provision for the casting of heavy cannon, though Dr. Stillé, we believe, makes no mention of such activities on the part of his hero during the autumn of 1775. On the 3d of January, 1776, he was appointed by the Continental Congress Colonel of the fourth battalion of the Pennsylvania troops. On the 26th of April, 1776, we find him calling on Congress for arms, as his battalion, composed of friends and neighbors, was "under orders to

march to Canada immediately." His military career had begun.

It has been said by one of Wayne's admirers, with a pardonable exaggeration, that his military biography is a history of the battles of the Revolutionary war. Wayne himself said at the close of the war that he had braved difficulty and danger "in defence of the rights and liberty of America from the frozen lakes of Canada to the burning sands of Florida." Early in the summer of 1776 he fought with the Pennsylvania troops in the battle of Three Rivers, some distance down the St. Lawrence, where, with the aid of Col. Allen, his companion in arms, he claimed to have saved the army in Canada. He commanded at Fort Ticonderoga, with its dependencies, from August, 1776, to the beginning of 1777, and endured there the horrors which made that fort a "Golgotha" and a "place of carnage" in his eyes, not because of losses in battle but from the destitution and pestilence which wasted his troops. On the 21st of February, 1777, he was appointed Brigadier-General, and in April of that year was ordered to join the army of Washington at Morristown. He participated on the 2d of May following in the affair at Brunswick. He fought bravely in the battle of Brandywine, and, a few days later, escaped from the "Massacre of Paoli" to take part in the confused battle of Germantown. He suffered, with the army, the terrors of the winter at Valley Forge. He bore the brunt of the battle of Monmouth. He planned and effected the brilliant capture of Stony Point on the 16th of July, 1779. He checked the revolt of the Pennsylvania line in 1781—baring his breast to the bayonets of his own soldiery. He led the charge at Green Spring which helped to drive Cornwallis under the Caudine Forks of Yorktown. He was present at the surrender, and then hastened to Georgia, where he compelled the evacuation of Savannah, to be followed soon by the reduction of Charleston.

And to these feats of arms in the Revolutionary war must be added the brilliant victory which he achieved over the Indian Confederacy at the battle of Fallen Timbers on the Miami Rapids on the 20th of August, 1794, by which he retrieved the disasters of Harmar and of St. Clair, and by which he opened the Northwestern territory above the Ohio River to the settlement of the whites. The "winning of the West," in a military sense, dates from this exploit, and from the Treaty of Greeneville to which it directly led in 1795.

Dr. Stillé thinks that the general impression with regard to Wayne is that he was simply a *beau sabreur*, "a sort of reckless dare-devil who could be relied upon, and was at all times called upon, to lead with unshrinking courage the most desperately dangerous operations." This impression has doubtless been deepened in the common mind by the sobriquet of "Mad Anthony," which, in the popular legend, has been immemorially attached to his name, and the impression has perhaps been confirmed by the comparative neglect under which he was left to labor and to wait through the whole war of the Revolution, without receiving the military recognition to which he would seem to have been entitled if the quality of his military talents had been deemed equal to the disinterestedness of his services, the constancy of his patriotism, and the undoubted impetuosity of his valor. Performing the actual duties of a Major-General from the time he joined the army of Washington till the end of the war, without receiving the honors of that titular rank; charged with all the responsibilities of that higher station without receiving its emoluments, and even superseded in his command by a General (St. Clair) whom he had good reasons for not esteeming, he swallowed his resentments, though reduced, for a season, from the command of a division to that of a brigade, and remained steadfastly in the forefront of the war, though sorely tempted, as he confessed at the time, "to return to domestic life and leave the blustering field of Mars to the possession of gentlemen of more worth." The untoward fortune which obscured his fame while living seems to have haunted his memory even in the grave, for though he died at last a full Major-General, and the General-in-Chief of the Army of the United States, we find that this splendid page in his annals, and with it the catalogue of subordinate officers in the army while it was under his command, has in some unaccountable way been omitted from Hamersly's 'Complete Regular Army Register.' The reader who shall turn to that publication in hope of finding in it the name and rank of the commissioned officers of the Federal Army while it was known as the "Legion of the United States," and while, as we have said, it was under the sole command of Wayne, will find nothing there but a *hiatus valde deflendus*. For the purposes of such an abbreviated quest the inquirer had better content himself with Gardner's 'Dictionary of the Army.'

## FLORIO'S BETRAYAL OF MONTAIGNE.

*Florio's Montaigne.* With an Introduction by George Saintsbury. Vol. III. The Third Book. London: David Nutt. 1893.

To our previous notices of this edition only a few remarks need be added with reference to the final volume. Florio's translation of the 'Essays' is even more imperfect in this last book than elsewhere. Two causes may be assigned for this—one, that the difficulties of Montaigne's later style are much greater than those of his earlier pages (and these Essays were written many years after the former ones); and another, that a translation, like other things, if it does not improve in its course, almost always degenerates, from the consequences of haste and carelessness. There is abundant proof that Florio "scamped" his work towards the close in a manner that it is criminal neglect in any modern editor not to point out.

A few instances must serve to indicate many. In a passage the translation of which is on p. 260, Montaigne says: "La vérité a ses empeschements, incommoditez et incompatibilitez avec nous. Il nous faut souvent tromper afin que nous ne nous trompions, et siller nostre veuë, estourdir nostre entendement pour les redresser et amender." This "pensée" is of Montaigne's very latest coinage. It was first printed, like many others, in the posthumous edition of 1595; and, like many of the additions which then first appeared, it deserves the careful elucidation which its author did not give to it. The literal translation is this: "Truth has hindrances, unsuitablenesses, and incompatibilities for us. We must often deceive that we may not deceive ourselves, and close our eyes and dull our understandings in order to repair and amend them." Florio starts out with a sentence that has an excellent Elizabethan ring, and that is every way good if it were pointed out that "incomparabilities" is a misprint for "incompatibilities." In the next clause he as precisely as possible gives the opposite meaning from the true one, by the insertion of a "not." His eye was evidently caught by the "ne" of the original, and his mind, probably, by the remembrance of Montaigne's constantly expressed horror of lying. Florio's translation is: "Truth hath her lets, discommodities, and incomparabilities with us. Wee must not often deceive others lest we beguile ourselves. And seele our eyes and dull our understanding, thereby to repaire and amend them."

There is a more comic passage on p. 375. Montaigne, speaking of the length of human life, wrote: "Les hommes se font accroire qu'ils ont eu autres-fois, comme la stature, la vie aussi plus grande; mais ils se trompent, et Solon, qui est de ces vieux temps-là, en taille pourtant l'extreme durée à soixante et dix ans." That is: "Men fancy that formerly as their stature was higher, so was their life longer; but they are mistaken; and Solon, who is of those old days, nevertheless marks the limit of its extreme duration at seventy years." Florio has it: "Men perswade themselves that, as heretofore they have had a higher stature, so their lives were longer; But they are deceived: for Solon, of those ancient times, *though he were of an exceeding high stature* [!!], his life continued but seventy years [!]."

Many noble passages are deformed by Florio: *e. g.*, "Nous vivons et negotions avec le peuple: si sa conversation nous importune, si nous desdaignons à nous appliquer aux ames basses et vulgaires, et les basses et vulgaires sont souvent aussi sages que les plus desliées, . . . il ne nous faut plus entremettre ny de nos propres affaires ny de ceux d'autruy; et les publiques et les privez se demeslent avec ces gens là." Florio's translation (p. 38) is fairly good to "desliées." He then breaks the sentence and begins: "Wee are no longer to intermeddle either with our, or other mens affaires; and both publicke and private *forsake* such kinde of people." Again almost the precise opposite of Montaigne's thought. Further (page 393): "Nothing so humane in Plato, as that which they say, hee is called divine." "Rien si humain en Platon que ce pourquoy ils disent qu'on l'appelle divin." This is in one of the very interesting 1595 passages. Montaigne is maintaining that when men would transform themselves into angels, they do transform themselves into beasts: "au lieu de se hausser, ils s'abattent," and "there is nothing," he says, "so human [that is, so weak] in Plato as that for which they say he was called divine."

By the side of the mistakes of the translator there is in this volume as prolific a crop of the mistakes of Florio's printer as in the previous ones; and for the continuance of these the present editor must be called to task. A very confusing misprint, for ever handed down, is on p. 389: "As for me then, I love my selfe and cherish it," should be "I love my life and cherish it" (j'aime *la vie*). Rightly: "I love life and improve it, such as it has pleased God to bestow it on us." And Florio's following sentence is ludicrously unintelligible from his ignorance of a common idiom of that day. "Avoir à dire" meant (in English) *to lack*. We read in Florio: "As for me then, I love my selfe and cherish it, such as it hath pleased God to graunt it us. I desire not hee should speake of the necessity of eating and drinking." The original is: "Je ne vay pas desirant qu'elle eust à dire la necessité de boire et de manger"—that is, "I have no desire that it [life] should be without the necessity of eating and drinking."

Another strange mistake arising from an idiom has continued through all translations to the present day (it is still in Hazlitt's). This continuance is the stranger because Montaigne

uses the idiom in a modern sense. Speaking of the letter that Tiberius, when old and sick, sent to the Senate, Montaigne, referring to the opinion of Tacitus that it expressed poignant remorse, says that he himself does not see this in it—"aumoins," he declares, "lors que j'estois à mesme, je ne le vis point"; that is, "when *I was qualified to judge*." In his later years he often disclaims an accurate knowledge of Roman history or the Latin language; and this phrase is a little bit of half-sincere modesty. Florio translates it (and the other translators have the same sense, though not the same expression), "at least when my selfe was in the same plight, I saw it not" (p. 183). It is inexpressibly amusing to fancy Montaigne speaking of himself as in "the same plight" with Tiberius!

The sentences are innumerable that from one cause or another are not to be explained without reference to the original. (P. 57) "Plutarke himself bewails his daughter by the fopperies of his childehood." "Plutarque mesme regrette sa fille par des singeries de son enfance," *i. e.*, the little drolleries of her babyhood. (P. 115) "And if constancy be . . . more pardonable in them than in us . . ." should be "inconstancy." (P. 48) "My thoughts are prone to sleep if I sit long. My mind goes not alone as if ledges did moove it." Florio wrote "legges." "Mon esprit ne va pas seul, comme si les jambes l'agitent." More examples are unnecessary.

It would be a kindness in the editor of Florio, if it be not his duty, to give the reader a glossary. It is only from special knowledge that one can understand such words and phrases as the following, which catch the eye in turning the pages: "Caters" (catarrhs), "sance" (French *sans*), "were corrupted in my loss" (*tenoient en compte en ma perte*); "by retayle it spoiles and proules me" (*par le menu, elle me pille*), "flearing," "mumps," "trudding," "sottish" (=foolish), "Kae mee Ile kae thee," "vie" and "a vie," or "avy" (two entirely different words), "A becke is as good as a dew guard" (*Dieu vous garde*), "calivers," "pavesado," "galliotte," "estriges" (ostriches) "evitated" (avoided), "moultred" (mouldered), "climate" (in the sense of *region*), "to konne you no thanks," "attediate" (weary), "demisse" (over humble), "runne at hab or nab," "netifie" (make neat), "imperverseth," "lithernesse," "agnize" (recognize), "smugging," "to take pepper (or take snuff) in the nose" (to be angry), "bemolted" (b *mol*), "good cheap" and "better cheap," "calthrops," "wallowishly tastelesse," "My manners are musty, rather wallowish than sharp," "whit meates," "calipine," "casting-counters," "Argo-lettiers" (*argoulets*), "cost-castle" (a game), "murre" (a hoarse cold), "to nonchion," "pargettings," "mumme-chance" (a game with cards or dice), "podagrees," "to make the pommada" (walk on the hands, *paume*), "sextaine" (sacristan), "summers" (supporting beams), "wherrat" or "whirrit" (a box on the ears), "wrimpled," etc., etc., etc.—to say nothing of all the words like "preallable," "bransles," "bouge," "deffaillance," "perflable," simply left *untranslated*.

---

*Memoirs of My Indian Career.* By Sir George Campbell, M.P., K.C.S.I., D.C.L. Edited by Sir Charles E. Bernard. 2 vols. Macmillan & Co. 1893.

It is not very often that we come across a Radical Indian official—at any rate, in the sense in which the term "Radical" is now used in England. Sir George Campbell was a Radical of the best type; a man whose sympathies were with the masses of the Indian people, and who did not hesitate to defend their interests even at the risk of "spoiling his career." His policy of "governing more actively" had its dangers; but these were minimized by his shrewd Scotch common sense, his intimate knowledge of the details of the husbandman's life, and his passion for facts. When at last he was put in a position, as Lieutenant-Governor of Bengal (1871-1874), in which he could set his mark upon the country, he not only dealt successfully with a great famine, but did much to permanently improve the condition of the great body of the agricultural population. And these 'Memoirs' of his, written in the last two years of his life, are an exceedingly rich source of information concerning Indian problems, and especially concerning the undercurrents of official opinion.

The question of questions in India is the land. Every one who has read Sir Henry Maine knows that the English Government, having to decide, at the end of last century, whom it should make responsible for the payment of the Bengal revenue, chose to deal with the zemindars, or tax-gatherers, and so converted them practically into landlords. Every one knows also that in some other provinces in later times another and wiser policy was adopted, and a settlement made directly with the cultivators, or ryots. Throughout Campbell was on the side of the ryots. He protested in vain, when he was but a subordinate administrative official in Oude, against the "Settlement" of that country in 1860, whereby "alone, of all the provinces of India, the landlords obtained absolute and unqualified property in the soil, and the cultivators were left without any rights at all—with very insignificant exception." The idea that the Mutiny had been in any way due to a previous ill treatment of the "landlords" (or "talookdars," as they were called in that district) he scouted as preposterous: the Mutiny, he declared, had been, what its name implies, a military mutiny, and nothing more. But "the craze for creating landlords in India" was then at its height, and Campbell was got rid of from that branch of the service by being made a judge of the High Court at Calcutta. As good fortune would have it, this gave him a chance of taking part, and doubtless an influential part, in the deliberations on the Great Rent Case, which resulted in the reversal by the whole body of fourteen lower judges of a judgment of their chief, and the final judicial "establishment of the rights of the occupancy ryots of Bengal as privileged tenants holding at a regulated rent." And when, after wandering in the wilderness for some years, he became Lieutenant-Governor of Bengal, he succeeded, in the teeth of many obstacles, in compelling the zemindars of that province to perform some part of those duties in consideration of which they had received their privileges.

It is curious to notice the parallelism—which Campbell was one of the first to perceive—between recent Indian and Irish agrarian history. The period of "enthusiasm for landlordism" after the Mutiny was exactly contemporary with the Irish Land Act of 1860, which attempted to replace custom altogether by contract; and the Irish Acts of 1881 and subsequent years are quite similar in principle to the reforms which administrators sympathizing with Campbell have of late effected in India. Nowhere is the liability of the political economy of the Manchester school to serve as a justification for the oppression of the weak by the strong more apparent than in India. This comes out very clearly in a report from Mr. Wingfield, by whom more than any other man the Settlement of Oude was shaped:

"The claim," he wrote in 1864, "of any interest to protection in its industry has been repudiated in England, but in India it is accorded to the lowest form of agricultural interest. This course of policy the Chief Commissioner believes to be opposed to modern principles. The doctrine that it is the duty of the State to interfere to prevent the owner of the soil from doing what he pleased with it is one that Englishmen will not subscribe to in their own country. Every attempt to legalize it under the guise of tenant-right in Ireland has been defeated in Parliament; and the idea of limiting the power of the landlord has been denounced as communistic by an eminent living statesman."

Need it be pointed out how large an assumption it was to regard the talookdar as "the owner of the soil"? It is amusing to find that the Duke of Argyll, the Liberal Secretary of State for India in 1871, was distressed by the zeal of Campbell on behalf of the Bengal tenants. He doubtless saw in every Bengal zemindar an inchoate McCallum More. It is to be feared that he may in future be still further distressed by the application of Indian precedents to Scotch crofters.

---

*Geology of the Eureka District, Nevada.* With an Atlas. By Arnold Hague. [United States Geological Survey, Monograph XX.] Washington. 1892.

The Eureka district in Nevada has been one of the great lead-silver-producing regions of the United States, and the Richmond and the Eureka Consolidated mines are known to fame. The economical importance of the district has already given rise to one monograph, by Mr. J. S. Curtis, on its mining geology. The scientific interest of the region, however, is by no means confined to its mineral resources, and this fact is no accident. The ore deposits could not occur here were there not lines of weakness in the earth, along which lavas and hot mineralized solutions could penetrate. The fissuring of the rocks was due to dislocating forces, and implies the upheaval of one side of the country relatively to the other. Now the great geological distinctions between areas, as well as the fissuring which is essential to the deposition of ores, are chiefly due to such upheavals. Hence it is no matter of surprise to find that Eureka lies close to a narrow belt along which one of the most important upheavals of the continent has taken place, and near the dividing line between very distinct geological areas.

This line or narrow zone of upheaval was detected by the geologists of the exploration of the Fortieth Parallel, but was not then studied with all the detail desirable; and it was principally for this reason that Mr. Hague's geological investigation was undertaken. One of its fruits was a superb collection of palæozoic fossils, which were described and discussed some time since by Mr. C. D. Walcott. The most interesting feature of Mr. Hague's memoir is the abundant confirmation of the offshore character of the palæozoic rocks. These show beyond a peradventure that, from the Cambrian to the close of the Carboniferous period, a continental area existed to the west of longitude 117° 30′, furnishing great masses of sediment to a sea stretching far to the eastward of this meridian. This sea bore an inland character in spite of its great extent. Though the western continental area seems to have remained above water during the entire palæozoic period, minor oscillations of level took place, as is usual under such conditions. Thus

the waters at Eureka were sometimes deep enough to deposit limestones, and again shallow enough to be marked by coarse conglomerates and sands. Portions of the area even rose high enough to afford space for estuarian swamps, so that coal seams (of no economic value) and fresh-water life mark some horizons. By these observations the existence of the shore line and of the western land mass is definitely established. It is possible that dislocations had occurred along the meridian 117° 30′ before the Cambrian. It is certain that at the close of the Carboniferous the inland sea in eastern Nevada was obliterated by the elevation of its bottom, this upheaval being accompanied by a lateral compressive stress which produced meridional folds near Eureka. In many cases these folds broke as crumpled pasteboard would do, and faults now mark their axes. Mr. Hague's investigations lend no support to the theory of the formation of mountain ranges by the tilting of rigid blocks of rock in an underlying fluid magma—a strange hypothesis which has had several advocates so far as the mountains of southern Nevada are concerned.

Deep wounds in the earth seem never to heal thoroughly, and along these same faults intrusive and eruptive rocks have penetrated at various ages up to the late Tertiary. The eruptive rocks of Eureka are many and interesting, and are described in detail in this volume by Mr. J. P. Iddings. Mr. Hague regards the entire series of volcanic rocks (which do not exactly follow Von Richthofen's famous law of succession) as derivable from a single, homogeneous, molten magma by a process of chemical differentiation. It is satisfactory, by the way, to observe that chemical considerations, which were almost ignored in lithology a few years since, are regaining the attention which never should have been refused them. The hypothesis of differentiation into fractional magmas still lacks precision, but it is a much more hopeful line of thought than the reference, so lately in vogue, of all differences in rocks to differences of temperature and pressure. The idea is that rocks of intermediate composition, representing the original magma, will be ejected first, while the residual subterranean pool will gradually separate into acid and basic portions. These will be emitted at later outbreaks. Bunsen's theory of pyroxenic and trachytic magmas forms the starting-point for all theories of the differentiation of magmas.

The atlas of this monograph is beautifully executed by Bien, and the photographs of microscopic slides, by Bierstadt, are very fine. The proof correction has been careful. The printing-paper is bad, and a discredit to the Government Printing-office.

*Art Out of Doors.* By Mrs. Schuyler Van Rensselaer. Charles Scribner's Sons. 1893.

Before attempting to note the conspicuous merits and deficiencies of this charmingly made book, it may be well to sketch the outlines of that exceedingly broad field of human labor in which Mrs. Van Rensselaer would have us work "artistically." Ever since man became man he has been remodelling the face of the earth. His blind trails through the forests have become highways and railroads. His wigwams and pueblos are now farmsteads and great cities. The prairies are become his grain-fields and the forests his lumber-yards. Purely natural scenery is already a distant rarity, what is called such being generally the distinctly humanized landscape of coppice, pasture, and farm. That all this labor of men is vandalism is the cry of sentimentalists, but men of sense remain of the opinion that the world would be a dull place without its fields and roads, its cottages and mansions, its villages and cities, its rails of shining steel, and all its other grand, lovely, or pathetic evidences of man's toiling and aspiring life. The transformers of the earth have seldom aimed to produce beauty, yet beauty has time and again sprung up under their hands—witness the English churchyard, the Swedish farmstead, the New England pasture or village. There is no mystery about this. Human happiness is not won by giving one's thoughts to the direct pursuit of it; neither is beauty in the surroundings of life. Although man is conscious and Nature is unconscious, the man who hopes for beauty must work as Nature works, and must trustfully obey her laws of purpose, utility, and adaptation to circumstance. Beauty is not to be won as an immediate aim. It is a result, a development, a flower.

It is to be regretted that no general account of either the breadth or the depth of the subject described by its title is to be found in the book before us. Its various chapters deal lightly and pleasantly with such special problems as the grouping of trees and shrubs, the attachment of houses to their sites, roads and paths, formal gardens, piazzas, and so on; the plea of the book being that all such problems should be solved in an "artistic spirit." The advice offered is well put, and the book should have a multitude of readers. Our only fear is lest the author has inadequately warned these readers of the main facts, that good "art out of doors" must be founded in rationality, purpose, fitness, and that its field is not only the garden, the shrubbery, and the park, but also the village, the factory, and the railroad yard. According to this book, landscape architecture is much like house-furnishing: a selecting of agreeably harmonizing elements in the shape of buildings, rocks, trees, climbing-plants, and so on. The essentially virile and practical nature of the art and profession is ignored, together with most of its greater and more democratic problems. But when this has been said and allowance made, the book remains the best book in its field that we have had in many a day. Its style is exceedingly good, and its tone puts it above comparison with the books of the horticulturists which are its only contemporary rivals for the public ear.

*The Treat Family:* A Genealogy of Trott, Tratt, and Treat for fifteen generations and four hundred and fifty years in England and America. Containing more than fifteen hundred families in America. By John Harvey Treat, A.M. Salem, Mass.: Press Publishing Company. 1893. Pp. 637.

This is one of those immense genealogies for which no rival can be found except among American publications. It is a wonderful monument of care, patience, enthusiasm, and wealth, and the author is entitled to a high rank in his art. Richard Treat, the immigrant, settled in Connecticut prior to 1640, as he was of Wethersfield in that year when he bought the farms of John Whitmore, Thurston Raynor, and Matthew Mitchel, who removed to Stamford. His will, dated in 1668, mentions children Honor, Richard, Robert, and James, besides married daughters clearly identified as Joanna and Sarah. As all of these children are recorded as born to Richard Tratt at Pitminster, County Somerset, Eng., between 1615 and 1634, there is not the slightest doubt that the emigrant has been identified. Four generations have been satisfactorily traced in England, under the names of Trott and Tratt, beginning with John Trott of Staplegrove, near Taunton, in 1458. Probably Matthias Treat of Wethersfield was of the same stock; and his descendants are herein traced (pp. 534–566). The three sons of Richard are taken as founders of separate families, and their issue herein recorded, viz.: of Richard, pp. 35–129; of Robert, pp. 130–484, and of James, pp. 488–533. The most noted bearer of the name was this Robert, who was "Governor and Deputy-Governor" of Connecticut for nearly thirty years, as his tombstone still testifies. His granddaughter Eunice Treat married the Rev. Thomas Paine of Eastham and Boston, and their son Robert Treat Paine had the honor of signing the Declaration of Independence.

As compared with some other New England families, the Treats have not been very prolific in the male line, but the roll of Richard's descendants is an honorable one, and is now fittingly recorded for posterity.

---

*Victor Hugo, le Poète.* Par Charles Renouvier. Paris: Armand Colin & Cie.

The articles published, four years ago, by M. Charles Renouvier in *La Critique Philosophique* have been collected and revised by him in book form, under the above title, with much new matter. The result is a useful addition to the small list of good books on Hugo. On first opening it one feels a not unnatural dread lest the volume prove to be another fulsome laudation of the poet, for it is mainly laudation or abuse, exaggerated in either case, to which we have been treated by writers taking the great lyrist as their theme. M. Renouvier starts out with the affirmation that Victor Hugo is the only Frenchman actually and absolutely entitled to the name of poet in the fullest meaning of the word. This is a pretty bold challenge of itself, and, followed up as it is by the assertion that Hugo may further be considered as one of the few world-poets, it is not surprising that the reader should feel instinctive distrust of what at first glance threatens to be a panegyric of the wildest kind. But M. Renouvier, notwithstanding his intense admiration of the poet and the fact that he starts out to prove what will seem to many utterly untenable, has not shut his eyes to the faults of Hugo as a writer. He bases his judgment of the poet on the assumed possession by Hugo of three gifts—the first, the mythological faculty, the second, sublimity, and the third, style. That is, to summarize M. Renouvier's remarks, Hugo probably excels every poet in the power and love of incarnating ideas and things; he has vast force and depth of emotion, and is practically the creator of a new prosody.

These are very wide-reaching claims, and a careful perusal of the evidence in support of them leaves us unconvinced. No one, save bitter opponents, denies to Hugo as a poet a place among the foremost in the nineteenth century; but to rank him with Homer, Virgil, Dante, Shakspere, Milton, Goethe, is an act of blind admiration. One can name the *magnum opus* of each of these rare intellects; what is Hugo's in the mass of verse he has written? Which particular poem, play, or collection of poems of his is to be mentioned with the masterpiece which each of the above names recalls? If there be a French poet admissible to the glorious distinction of a world-poet, most people will say it is Molière. M. Renouvier does not succeed in proving Hugo the

foremost of all French poets, but he comes much nearer his goal in this than in the other case.

Apart from these two contentions, which give considerable interest to M. Renouvier's pages, the study he has made of the poet is a remarkably impartial one, recalling frequently, in its evident sincerity, the masterly *étude* by Faguet. The latter is still the preferable one; M. Renouvier has not surpassed M. Faguet in depth or clearness of insight, and has not placed more effectively before the reader the peculiar beauties and equally peculiar defects of Hugo. On the other hand, he is fuller, he views the poet from a somewhat different standpoint, he places him higher than Faguet does, and accepts as beauties and powers what the other critic at times indicates as weaknesses and defects. In a word, he supplements Faguet where the two agree, and brings out new light where they disagree. His book is one which every careful student of Hugo and the Romantic movement in France will feel it necessary to read and will be repaid for reading.

BOOKS OF THE WEEK.

# Delicious Drink.

**Horsford's Acid Phosphate**

with water and sugar only, makes a delicious, healthful, and invigorating drink.

Allays the thirst, aids digestion, and relieves the lassitude so common in midsummer.

**Dr. M. H. Henry,** New York, says: "When completely tired out by prolonged wakefulness and overwork, it is of the greatest value to me. As a beverage it possesses charms beyond anything I know of in the form of medicine."

Descriptive Pamphlet free.

*Rumford Chemical Works, Providence, R. I.*

Beware of Substitutes and Imitations.

# CROSBY'S VITALIZED PHOSPHITES.

*From the nerve-feeding principle of the ox brain and wheat germ.*

Is an essential Food to the Brain and Nerves. It contains nothing injurious. Formula on each label.

For relief of brain fatigue, nervous debility, dyspepsia, sleeplessness, and night sweats, it is invaluable.

For thirty years used by thousands of brain-workers with such success as a *curative* that now many take it before great mental effort as a *preventive* of mental and physical exhaustion.

This vital nutriment supplies elements to brain and nerves, the loss of which is often the only cause of disease.

Indorsed by leading physicians. Descriptive pamphlet free.
Druggists, or by mail, $1. Prepared only by the *F. Crosby Co.,*
Accept no substitute.
Each label has our signature. *56 West 25th St., New York.*

Letters of Credit. We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make collections and issue Commercial and Travellers' Credits, available in all parts of the world.

**MACH. The Science of Mechanics.** A Critical and Historical Exposition of its Principles. By Dr. ERNST MACH, Professor of Physics in the University of Prague. Translated from the second German edition by Thomas J. McCormack. With 250 cuts and illustrations. Half mor., gilt top, 1 vol., 538 pp., $2.50.

This work, which is now in its second German edition, has attracted by the simplicity, clearness, and profundity of its views the attention of thinkers throughout the world. Its aim is to present the principles of mechanics from the point of view of the theory of knowledge, and to free the science of all metaphysicism.

**CARUS. The Religion of Science.** By Dr. PAUL CARUS. First in the series of the Religion of Science Library. 112 pp., extra edition, paper covers, illustrated, 50 cents.

A clear and popular exposition of Positivistic Monism in its religious aspect.

**The Philosophy of the Tool.** By Dr. PAUL CARUS. 24 pp., paper, illustrated, 15 cents.

**"THE MONIST."** A Quarterly Magazine. Vol. 3, No. 4. July, 1893. Editor, Dr. PAUL CARUS.

## *Teachers, etc.*

*A LADY OF EXPERIENCE WITH* boys wishes to take two into her family, and will give them personal care. Steam and electric cars within three minutes' walk, making Boston schools available. Fine air and country sports. Refers to leading Boston teachers. Address E. M. P., Brookline, Mass.

*A YOUNG MAN (AMERICAN, 19* years' residence abroad) would like to secure pupils in French during the summer months; or would tutor for entrance to a scientific school. No objection to travel. Highest possible references. Address R. N., *Nation* office.

*A RETIRED ARMY OFFICER, A.M.* Princeton, LL.B. Columbia, desires a position in a college or high-grade school, preferably as instructor in military drill. Address "RETIRED OFFICER," *Nation* office.

*AN INSTRUCTOR IN PHYSICS IN* one of the foremost Western Universities (A.B. Harvard, Ph.D. Germany) desires a change. Also tutorship Willing to travel. Address Dr. X. B., care *Nation.*

*WANTED—POSITION AS COM-*panion or Governess. Two years' experience. Can teach English, German, French, and some music. Good references. Address Miss A., care of *Nation.*

*HARVARD LAW STUDENT, A.B.,* Harvard, '90, would tutor one or more boys during the vacation—anywhere. Address
F. H. BROOKS, 52 Weld Hall, Cambridge, Mass.

*CHARLES W. STONE, Tutor for Har-*vard, 68 Chestnut St., Boston.

## *School Agencies.*

*THE ALBERT TEACHERS' AGENCY* always receives many calls for teachers during the months of August and September by telegraph as well as by correspondence. These vacancies must be filled quickly. Teachers with good preparation or good records are now in demand. Address
C. J. ALBERT, Manager,
211 Wabash Avenue, Chicago.

*AMERICAN AND FOREIGN TEACH-*ers' Agency supplies Professors, Teachers, Tutors, Governesses, etc., to Colleges, Schools, and Families. Apply to
Mrs. M. J. YOUNG-FULTON,
23 Union Square, New York.

*THE FISK TEACHERS' AGENCIES,* 4 Ashburton Street, Boston, 371 Main Street, Hartford, 70 Fifth Avenue, N. Y., 106 Wabash Ave., Chicago, and 120½ South Spring Street, Los Angeles. Agency Manual free. EVERETT O. FISK & Co.

*THE NEW AMERICAN TEACHERS'* AGENCY.—Teachers seeking positions and those wishing a change at an increased salary, should address C. B. RUGGLES & Co. (Palace Hotel Building), Room C, 237 Vine Street, Cincinnati, O.

*AMERICAN AND FOREIGN Professors,* tutors, governesses, teachers, etc., supplied to colleges, schools, and families. MIRIAM COYRIERE,
150 5th Ave., cor. 20th St., N. Y.

*NATIONAL BUREAU OF EDUCA-*TION, Miss CROSTHWAIT, Prop., cor. Church and High Sts., Nashville, Tennessee. The Leading School and Teachers' Agency of the South and Southwest.

*SCHERMERHORN'S TEACHERS'* Agency. Oldest and best known in the U. S. Established 1855. 3 East 14th St., N. Y.

*An Agency* is valuable in proportion to its influence If it merely hears of vacancies and *that* is something, but if it tells you about them is asked to recommend a teacher and recommends you, that is more. Ours *Recommends*
C. W. BARDEEN, Syracuse, N. Y.

## FRIENDS IN EXILE:

**A Tale of Diplomacy, Coronets, and Hearts.**

By LLOYD BRYCE,

Author of 'Paradise,' 'Romance of an Alter Ego,' 'A Dream of Conquest,' etc., etc.

**12mo, Extra Cloth, Laid Paper, Price $1.00.**

"A tale which is both audacious and vividly colored, yet apparently faithful to actuality. The tragic incident that concludes the story forms a fitting climax to a very clever and entertaining novel."—*The Beacon, Boston.*

"The author has borrowed very largely from contemporaneous politics to lend interest to his story, and anybody is privileged to put on the cap if it fits. The story is sprightly and interesting."—*N. Y. World.*

"A clever and well told story, with a distinct patriotic ring."—*N. Y. Recorder.*

"Bright, interesting, and instructive. A most admirable international novel."—*Boston Traveller.*

"A lively story of life in Paris and along the Riviera. The chief characters are Americans, Samuel Jackson, the democratic ambassador, being quite a notable creation. The incidents are stirring and wrought out to a dramatic climax."—*Philadelphia Press.*

"At the start the story catches the interest and holds it continuously to the end."—*Philadelphia Item.*

"The author appears to be writing from the inside, when he describes so vividly some phases of society in Paris, and his theme is well handled. He writes a readable story, which will be popular."—*Boston Advertiser.*

FOR SALE BY ALL BOOKSELLERS.

MISS PEEBLES AND MISS THOMPSON'S Boarding and Day School for Girls reopens Thursday, October 5, 1893.

NEW YORK CITY, 423 Madison Avenue.

J. H. MORSE'S SCHOOL Autumn term begins October 2. Thorough preparation for all Colleges. Summer address of Principal—Cotuit, Mass.

## Educational.

NEW YORK CITY, 183 Lenox Ave., near 119th St.

THE MISSES MERINGTON.—French and English School. Resident pupils.

NEW YORK CITY, 15 East 65th Street.

MISS CHISHOLM.—SCHOOL FOR Girls reopens October 9.

NEW YORK, Saratoga Springs.

TEMPLE GROVE LADIES' SEMINARY.—Superior facilities for the higher Sciences, Philosophy. Languages, Music, Painting, æsthetic and social culture. 39th year begins Sept. 20. Address
CHAS. F. DOWD, Ph.D., Pres.

NEW YORK, Tarrytown.

HOME INSTITUTE, A BOARDING and Day School for Girls, will reopen Sept. 19.
Miss M. W. METCALF, Principal.

NEW YORK, West New Brighton.

ST. AUSTIN'S SCHOOL.
Boys passed successfully to Harvard, Trinity, Columbia, Yale, Princeton, and other colleges. Church School of the highest class. Terms, $500. Apply to the Rector, Rev. G. W. DUMBELL, D.D.

NEW YORK, Utica.

MRS. PIATT'S SCHOOL FOR GIRLS. —The next school year begins Thursday, Sept. 21, 1893. Applications should be made early.

NORTH CAROLINA, Asheville.

RAVENSCROFT SCHOOL.—PREPARatory Boarding and Day School for Boys. Head Master, RONALD MCDONALD, B.A., Oxford.

OHIO, Cincinnati, Walnut Hills.

MISS NOURSE'S ENGLISH AND French Family and Day School. It is represented in Vassar, Smith, and the University of Cincinnati. Pupils may take special work.

OHIO, Cincinnati.

MISS ARMSTRONG'S SCHOOL FOR Girls, Liddesdale Place, Avondale. Family limited. Circulars sent on application.

OHIO, Cincinnati.

EDEN PARK SCHOOL FOR GIRLS.—Thirteenth year begins Sept. 26. Resident pupils limited to ten. For circular address Mme. FREDIN.

OHIO, Glendale.

GLENDALE FEMALE COLLEGE, FIFteen miles north of Cincinnati. Best facilities, with special family supervision and care.
Rev. L. D. POTTER, D.D.

PENNSYLVANIA, Bryn Mawr.

BRYN MAWR COLLEGE—A COLLEGE for Women, Bryn Mawr, Pa., ten miles from Philadelphia.—Offers graduate and undergraduate courses in Sanskrit, Greek, Latin, Mathematics, English, Anglo-Saxon, French, Old French, Italian, Spanish, German, including Gothic and Old High German, Celtic, Hebrew, History, Political Science, Physics, Chemistry, Biology, and Philosophy. Gymnasium, with Dr. Sargent's apparatus complete. Fellowships (value $525) in Greek, Latin, English, German, and Teutonic Philology, Romance Languages, Mathematics, History, Chemistry, and Biology. A fourth Hall of Residence will, it is hoped, be opened in the autumn, and will accommodate all applicants for admission.
For Program address as above.

PENNSYLVANIA, Bryn Mawr.

MISS BALDWIN'S DAY, BOARDing, and College Preparatory School for Girls reopens September 28. For circular, address
Miss FLORENCE BALDWIN.

PENNSYLVANIA, Bustleton, near Philadelphia.

ST. LUKE'S SCHOOL.
A HIGH-CLASS PREPARATORY SCHOOL FOR BOYS.
Illustrated Catalogue. CHARLES H. STROUT, F. E. MOULTON, Principals.

PENNSYLVANIA, Chambersburg.

WILSON COLLEGE FOR WOMEN. —Fifty miles southwest of Harrisburg, Pa., in famous Cumberland Valley. Six trains daily. Border climate, avoiding bleak north. Classical, Scientific, and Special Courses. Musicand Art. Large Music College and Art School. Music Department this year, 104, independent of free classes. Full Faculty. College Course, B.A. and B.S. degrees; Music College, B.M. Handsome park, large buildings, steam heat, gymnasium, observatory, laboratories, etc. No charge for board, etc., of distant pupils during Christmas and Easter vacations.
Rev. J. EDGAR, Ph.D., Pres.

PENNSYLVANIA, Chester.

PENNSYLVANIA MILITARY COLlege. 32d year begins Sept. 20. Civil Engineering (C.E.), Chemistry (B.S.), Arts (A.B.). Also PREPARATORY COURSES in Science and Classics, under able instructors. Fine location. Ample equipment. Best sanitation. Pure water. Col. CHAS. E. HYATT, Prest.

PENNSYLVANIA, Factoryville.

KEYSTONE ACADEMY. A refined school home for both sexes. Pure mountain air. Delightful campus. Perfect sanitation. Too-rough instruction. Charges moderate.
F. M. LOOMIS, A.M., Principal.

PENNSYLVANIA, Lancaster County, Lititz.

LINDEN HALL SEMINARY. —A Moravian School for Girls and Young Women. 100th year begins Sept. 13. Careful supervision. Liberal course and rational methods of instruction.
Rev. C. B. SHULTZ, Principal.

[*Continued on page* 90.]

# JUST PUBLISHED:

## The Classic Myths in English Literature.

Based chiefly on Bulfinch's Age of Fable (1855), which has been adapted to school use and to the needs of beginners in English Literature and in the Classics, and in large part rewritten. Accompanied by interpretative and illustrative notes. By CHARLES MILLS GAYLEY, Professor of the English Language and Literature in the University of California, and formerly Assistant Professor of Latin in the University of Michigan.

12mo, half leather, xxxviii + 539 pp. With Maps and Illustrations. By mail, $1.65; for introduction, $1.50.

Special features of this edition are:

1. An introduction on the indebtedness of English poetry to the literature of fable, and on methods of teaching mythology.
2. An elementary account of myth-making and of the principal poets of mythology and of the beginnings of the world, of gods and of men among the Greeks.
3. A thorough revision and systematization of Bulfinch's Stories of Gods and Heroes; with additional stories, and with selections from English poems based upon the myths.
4. Illustrative cuts from Baumeister, Roscher, and other standard authorities.
5. The requisite maps.
6. Certain necessary modifications in Bulfinch's treatment of the mythology of nations other than the Greeks and Romans.
7. Notes, following the text (as in the school editions of Latin and Greek authors), containing an historical and interpretative commentary upon certain myths, supplementary poetical citations, a list of the better known allusions to mythological fiction, references to works of art, and hints to teachers and students.

## Catullus.

(College Series of Latin Authors.) Edited, with Introduction and Notes, by Professor ELMER T. MERRILL of Wesleyan University.

12mo, cloth, l + 273 pp. By mail, $1.50; for introduction, $1.40.

The text of this edition has been prepared with particular care, mainly on the authority of the two best codices, *G* and *O*, the latter having been collated by the editor himself at Oxford in the summer of 1889. The work is furnished with an introduction, in which the poet's life and character, his relations with his contemporaries, his literary activity, and the manuscript tradition of his poems are fully treated, and an exposition of his metres is given. The Appendix contains a complete collation of *G* and *O*, and a reduced facsimile of a page of the latter codex forms the frontispiece of the volume. There are two indexes, one of the proper names mentioned in the introduction or in the text; the other of the matters treated in the notes.

## Die Erhebung Europas gegen Napoleon I.

By HEINRICH VON SYBEL. (International Modern Language Series.) With Introduction and Notes by A. B. Nichols, Instructor in German at Harvard University.

12mo, cloth, x + 126 pp. By mail, 65 cents; for introduction, 60 cents.

There is in German text-books a great lack of notable historical reading-matter for use in the second year. Professor von Sybel offers in his essays material of high historical value, and sound and clear in style. The essay selected deals with a most interesting period, that of the "resurrection of nationalities" at the beginning of the century, and experience in the class-room has shown that it is able to gain and hold the student's lively interest.

The annotation is strictly limited to the real needs of the student. It aims to encourage intelligent rapid reading rather than minute study of the text. Special pains have been taken to explain all historical allusions.

## Graduate Courses.

A Handbook for Graduate Students. With a list of advanced courses given in the chief Universities of the United States. Compiled by a Committee of the Graduate Club of Harvard in co-operation with the Graduate Clubs of Cornell, Johns Hopkins, and Yale.

Square 8vo, flexible cloth, x + 73 pp. By mail, 55 cents.

This handbook consists of two parts. The first is historical and statistical. The second contains, arranged by departments, a list of advanced and research courses to be given in eleven Universities of the United States during the academic year 1893-94, together with a brief account of the instructors giving them. This handbook is specially intended for students who are pursuing or who intend to begin graduate studies and who desire to know what American Universities offer them.

Announcements of the Graduate, Collegiate, and Medical Courses for the next academic year are now ready and will be sent on application.

Letters of Credit. We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make collections and issue Commercial and Travellers' Credits, available in all parts of the world.

Brown Brothers & Co., Bankers,
NO. 59 WALL STREET, NEW YORK.

# The Nation.

NEW YORK, THURSDAY, AUGUST 3, 1893.

## The Week.

THE greatest publicity should be given to the statement furnished by Comptroller Eckels concerning the condition of the national banks. The number of these banks is about 3,900, and only 105 of them have suspended. Of these, 14 have already resumed payments, and several more are in a way to do so, the applications for permission to resume numbering 58. Only 33 are actually in the hands of receivers, and the Comptroller thinks that most of those in the examiners' hands will reopen. The great majority of these banks are small institutions, 36 of them having a capital of but $50,000 each, although five of them were capitalized at a million dollars each and as many more at half a million. Of the failures 55 occurred in the far Western States, and 25 in the South. In 21 States and Territories no failures have occurred, in 7 but 1, in 8 but 2, in 7 again but 3. In only 8 of the States, therefore, have more than 3 failures taken place. In most of the great centres none of the banks has failed, only 1 in New York, 2 in Chicago, and 1 in Milwaukee. This statement ought to do much to restore confidence.

---

The breakdown of the Erie Railroad Company, and the transfer of its finances to receivers, adds another chapter to one of the most sensational among the histories of railroad wrecks. Among well-informed railroad men it cannot be said that this action was a surprise; for the Erie has for years been known as a heavy borrower of money, and its resources have been such as to render very dubious its outlook in a money panic. It has already passed three times through a receivership, and it escaped another such experience in the troubles of 1884 only by remarkably good luck. In times of easy credit a company even with such a record may carry readily enough a floating debt of five to seven millions. It may go so far as to pay interest on junior bonds not of a mandatory character, which the Erie did, with very doubtful wisdom, a few months since. But when, as is now the case, the market for time loans is shut even to borrowers with highest credit and best collateral, a corporation with credit so doubtful and needs so heavy is reasonably certain to go down. As a matter of fact, the company had reached a point where even its small current accounts could not be paid, for lack of money, and it became a question who should first apply for the protection of his interests through the courts. If the management had not petitioned for a receiver, holders of the company's notes or bills payable would surely have done so.

---

On the present management of the company the blame for such a situation does not rest. The Erie has a dark and shameful past. It was the chosen field for the robberies of Gould and Fisk, and the huge load of bonded indebtedness under which the railroad has in later days been staggering is the legacy of those conspirators. Even when the rascals who ruined the company twenty years ago had abandoned the wreck, an era of extravagance and mismanagement under other auspices ensued. The result has been a matter of public knowledge, that the Erie Road has continued as nearly in a state of chronic bankruptcy as a company can exist without actual default. The worst part of the incident, no doubt, lies in the inferences which people are likely, in the present era of fright, to draw in regard to other corporations. It is true, there are other heavy corporate borrowers in Wall Street. The stock of some of them is selling now almost at a receivership level. But it must be remembered that the Erie's past financiering was an exception. Others among the railroad borrowers have prudently placed their floating debt, in anticipation of the present troubles, on notes which will not mature until the present strain is past. Others, again, have used their foreign credit, and negotiated sterling loans whose renewal may be counted on. Others still are possessed of such outlook and resources as to assure them aid from wealthy capitalists personally concerned in their solvency. These are doubtful and troublous times, but they are times when the exercise of coolness and discrimination is the part of clear-headed men.

---

The reductions in wages now beginning to be reported are to be deplored upon general principles, but under the present circumstances they can hardly be avoided. It should be remembered that a steady and very long-continued rise in the value of wages has existed. There has been some rise in money wages at the same time, but the increase in their purchasing power has been within the last twenty years something remarkable. At the present day a mechanic of very ordinary skill can earn a barrel of flour by a day's work, and although bread is no longer so important a part of the diet of working people as formerly, it is a very satisfactory preventive of starvation. In most other articles of food there has not been so marked a decline in price as in the case of the cereals, but there have been few advances; and if the prices of the great staples of consumption were averaged, it would appear that the cost of living had materially diminished. The same conclusion is reached by examining the prices of clothing. The extremely low price of cotton has enabled the common people to provide themselves with cotton goods upon very advantageous terms, and the cheapness of wool has defeated even McKinley in his attempt to make woollen goods dear, however successful he may have been in impairing their quality. The abundance of capital and the ingenuity of our manufacturers have filled the homes of the poor with articles of convenience and comfort at marvellously small cost to the occupants, and in almost every respect, it may be said, they are getting far more for their wages than they were a generation ago.

---

The silver enthusiasts of Colorado are settling down to business at last. Failing to observe any indications of the mountain's coming to them, they are now proposing to go to the mountain. The Attorney-General of the State has given his opinion to the effect that the Legislature has power to authorize the deposit of silver bullion in the Treasury, and to issue certificates of deposit which shall be receivable for taxes. We will not venture to pronounce upon the constitutionality of this plan, but certainly no one in Colorado will dare to raise that question, and no one outside of that State will care to do so. It has always been the custom in many, if not all, of our States to accept labor upon the roads as payment of highway taxes, and there is no reason why the State should not commute taxes in silver or pig-iron or potatoes as well as labor. It is the practice in Turkey to collect the taxes "in kind," and the example of that Power is far more convincing to men affected with the silver craze than that of England, "an aristocratic government, administered by nobles, landlords, bankers, and capitalists in the interest of their own class, whose interest and object is to make money more valuable by the contraction of the currency to a gold basis." By all means let Colorado try this experiment. No time could be better, for any addition to the currency is welcome just now, and must be especially so in a community where the suspension of banks has been so extensive. If the Colorado people will show their faith by their works in this way, they will furnish an object-lesson to the rest of the world which will be far more effective than the frothy declamations of their demagogues.

---

The pitiful exhibition of the "friends of silver" in New York city last week might well be passed over in silence but for one thing. Disgraceful and humiliating as the affair was, it serves for ever to give the lie to the assertion, which has been so fre-

quently made, that there are numbers of respectable business men in New York who favor free silver. After the collection of broken-down labor agitators and stranded promoters and professional cranks that was seen at the Fifth Avenue Hotel on July 26, in answer to the call for an uprising of the business men of this metropolis, the silver-men out West will no longer lay that flattering unction to their souls. Poor Messrs. Colgate and Higgins must have got wind of the unsavory crowd which their "call" was going to bring together, and discreetly absented themselves. They were represented by letters, it is true, which seemed only to add to the disorder of the meeting; but Mr. St. John was heard from by neither voice nor pen. This was a golden opportunity which we should not have thought he was the man to lose. The delegates appointed to the great Bimetallic Convention at Chicago ought to have taken along with them as their fitting credentials verbatim reports of the meeting that chose them. An instantaneous photograph, too, of the quarrelling mob, just before the alarmed proprietors turned off the light to get rid of it, would have conveyed to the Westerners an accurate idea of the kind of "friends of silver" which New York produces.

---

The appointment of Mr. Kilbreth as Collector of Customs for the port of New York is altogether satisfactory. Mr. Kilbreth has, we believe, enjoyed the distinction, during most of his nearly twenty years' career as police justice, of being the only lawyer upon that bench. He has had the further distinction of being a man of high character and a gentleman—traits which their most ardent supporters will scarcely claim for most of our police justices. By some miracle of political arrangement, and actuated by what must be regarded as genuine public spirit upon his part, this graduate of Harvard College and honorable practitioner was brought to occupy one of the least desirable of public offices, and one at the same time in which an upright and benevolent man can accomplish an immense amount of good. In these criminal courts justice is dispensed for the most part as summarily as by an Oriental cadi, and it has been a great piece of good fortune for the poor of this city to have even one such judge as Mr. Kilbreth at petty sessions. It was not to be expected that a magistrate of this character would be retained in power by Tammany Hall, and his retirement must have been a welcome release to himself. If we regard the Collectorship as a "plum," Mr. Kilbreth has certainly earned it by his public services; and if we regard it as an administrative office, we have no doubt that the practice he has acquired in the expeditious despatch of business in the police court will enable him to discharge his new duties successfully. We fear, it must be added, that a familiarity with all forms of fraud and cheating is one of the most important qualifications of a customs collector.

---

The idea has been sedulously cultivated by Republican organs that wholesale changes have been made in the consular service by the Cleveland Administration. The facts in the matter have been fully set forth in a statement furnished to the Boston *Herald* by Assistant Secretary of State Quincy, who has had special oversight of the appointments in this branch of the service. The total number of consuls-general, consuls, and commercial agents is 317, and among these 317 there have been changes in 117 cases. But of the 117 new appointments 18 were restorations to the service of former consular officers, all but one of whom had been displaced for political reasons by President Harrison. Some of these removals by the last Administration were utterly indefensible, and indeed were only made in its closing months when the "pressure" for them had become very strong. Mr. Quincy admits that changes have been made more rapidly under Cleveland than under Harrison, but he points out that at the close of the latter's Administration nearly all of the appointees of Cleveland's former Administration had been removed from the service, only twenty-four such appointees remaining on the 4th of March, 1893, and but fourteen of these holding positions having a salary of $1,500 or more. He also shows that a number of changes were demanded for the good of the service, by reason of the gross partisanship of Harrison's appointees, as in the cases of three consuls in Germany, who united in a letter to the editor of a newspaper in Chemnitz asking him to disclose the authorship of certain articles on the tariff question in his journal which displeased them.

---

Mr. Quincy says that the theory of the present Administration is that it is better for the consular service, as well as for other reasons, "that inevitable changes should be made with reasonable promptness, instead of after a long period of delay and uncertainty," and "that such changes should coincide as nearly as possible with changes in administrations rather than be made near the middle or end of an administration." He points out that this plan "gives the new appointees an assurance of a continuance in office for at least four years, if they perform their duties with efficiency; while the service of a political appointee of a former administration, who necessarily feels that he may be displaced at any moment, is not likely to be of much value to the Government." This theory is a sound one. No feature of our relations with foreign countries is more ridiculous than the custom of a retiring President's handing over a foreign mission or a consulate, between his own defeat and the inauguration of his successor, to a party or personal favorite, who accepts it with the understanding that the appointment is designed only to give him a trip abroad at the public expense. Mr. Harrison carried this absurd practice so far that in two cases last winter he removed good consuls in order to make vacancies for two Republican editors in Iowa who had just married and wanted Uncle Sam to pay the cost of their "bridal tours" to Europe!

---

Of making many Hawaiian treaties there is no end. First there was the one which Harrison drew and Cleveland withdrew. Then there was the one which, as we learned last week from Honolulu despatches, was prepared for the purpose of "covering objections which arose in the United States." This one "will not be forwarded." But a third one is forwarded, and if that doesn't suit, there will be no difficulty in drawing up others. The Provisional Government give out the main articles of their last treaty. It is their treaty because they have agreed to it. But it takes two to make a treaty, and the Constitution of the United States points out the treaty-making power of this country. Wisely or unwisely, that power is not vested in newspapers or in filibusters or in bounty-seekers, but in the President, "by and with the advice and consent of the Senate." It looks, therefore, like a curious piece of inadvertence or audacity for the Provisional Government of Hawaii to publish in advance the terms of a treaty which they propose to submit to the American Executive. The best that can be said of such a course is that it is a case of gross diplomatic impropriety. We are not yet ready to accept the alternative view that it was meant as a studied affront to President Cleveland, and an endeavor to force his hand by newspaper clamor. The latest news shows that the Provisional Government is in a bad way, but we do not believe it is yet reduced to so desperate straits as such a purpose would imply. The articles of the treaty itself, as published, are not worth serious discussion.

---

The demoralization caused by the pension craze is illustrated by a recent incident in Boston. A business man, well-to-do in purse and vigorous in body, who already carried a considerable amount of life insurance, applied for $10,000 more. The medical examiner found nothing whatever to indicate any disease, past or present, and the investigation was almost concluded when the doctor asked the question, "Have you ever been a pensioner?" Thereupon the applicant stammered, and at last owned up that he was drawing a pension of $12 a month. Further inquiries drew from him "a tangled series of admissions that he had never really suffered any injury or illness entitling him to a pension, but he had made out some sort of a case of nervous shock or deterioration, at

the instigation of a pension agent, and had taken his $12 a month from the United States Government, rich man though he was, on the principle that 'they all do it.'" The company very properly refused to grant him insurance, on the ground that a man who had perjured himself to get $12 a month from the Federal Treasury was quite capable of cheating an insurance company if he got the chance, and consequently was not a good risk. More than one life-insurance company now puts the query about pensions on the list of questions which applicants must answer, and this Boston man is not the only individual who will find that he has forfeited the chance of getting a large policy to which his physical condition entitles him, by fraudulently obtaining a petty pension to which he has no just claim.

---

It has occurred to us that the *Tribune* could perform a great public service by frankly publishing the results of its experience in illustrated journalism. It is in its power to make something like a scientific test of the question whether the business has any money in it. Let it faithfully report the approvals and the condemnations of its course in going over to the ranks of the illustrators; let it state whether the respectable subscribers it at first drove away to the *Times*, outnumber those it seduced from allegiance to the *World*, and then tell us how many were shuttle-cocked back to it when the *Times* began its judicious mixture of art and sensationalism; let it give the salaries it pays its talented artists, and state whether filling the space they occupy with composition would not be cheaper. This is really a most important question, and we appeal to the *Tribune* to settle it. Everybody admits that newspaper pictures are bad in art and misleading as to fact; but, of course, if they "pay," we must put up with them. If it could be shown, however, that they cost more than they come to, as there are those who suspect that they do, that would bring them within range of the great principle that a newspaper must not go into anything in which there is not "big money," and so we should get rid of them.

---

Mr. Astor's new *Pall Mall Magazine* lately offered prizes for the best drawings of an imaginary session of the Irish Parliament in Dublin. An instantaneous photograph of the scene in the House of Commons or Thursday night would have taken first prize. It was perhaps the most extensive free fight, with actual interchange of blows, ever witnessed in a legislative body. The French and Italian Deputies have given some disgraceful exhibitions in the past few years, but they scarce ever get beyond howling at each other and shaking innocuous fists at each other across a safe space, or resorting to still more innocuous pistols the next day to settle their personal differences. Passion had doubtless grown so tense on both sides that the break came spontaneously, and it is not in English blood, to say nothing of the Irish vital fluid, to stop with insulting language when recourse to nature's weapons is so much more telling a form of political argument, and when the area for the mêlée is so temptingly limited as that of the House of Commons. The shindy ought to have the effect of disposing of one great argument against an Irish Legislature—that it might be disorderly. But this consideration will not avail to modify the keen regret and sense of personal humiliation which Mr. Gladstone, and men to whom, as to him, the traditional dignity of the House of Commons is something precious, have felt at a scene of turbulence and violence unsurpassed in British parliamentary annals.

---

The mischief resulting from what may be called vicarious beneficence, or the distribution of alms at other people's expense, is complained of by Miss Octavia Hill, known as well in charitable circles in this country as in England. The London County Council has before it schemes for buildings for the working classes, and Miss Hill points out that the advocates of such measures must consider that the bulk of the working people of London either can or cannot be accommodated in such buildings. If only partial accommodation is to be provided, she maintains, the erection of such buildings, or even the possibility of their erection, will greatly paralyze individual effort. Much has been done by societies and individuals, during the last thirty years, to provide good houses for working-people on a self-supporting basis. They are ready to extend the work, but not if they must compete with buildings subsidized by State aid. This is no imaginary danger, for Miss Hill declares that she knows this result to have already followed in specified instances. On the other hand, if private enterprise—as to which she gives it as her deliberate opinion that it bids fair to meet the need—is to cease, and the London County Council is to monopolize the field, three great evils will be encountered. In the first place, the work will be done expensively—no such body as the Council being an economical builder—and the increased cost, instead of being met by rents, will be thrown upon the rates. In the second place, the Council, which ought to be the supervising body over tenements and landlords, will become the landlord itself and be pecuniarily interested in the houses to be supervised. In the third place, the electorate will be in large measure composed of tenants of the body to be elected. The consequences to be apprehended need not be dwelt upon; but at all events, Miss Hill declares, there is no deficiency of good lodging for the poor in London at the present time, although those who are unwilling to pay rent naturally find it hard to secure satisfactory and permanent abodes.

---

Another instance of unforeseen results from State intervention in the supposed behalf of the poor is brought out by an appeal from the London and Northwestern Railway Insurance Society to Parliament against the new Employers' Liability Bill. This measure is intended to improve the condition of workmen that are injured, by facilitating recovery from their employers; but the railway employees connected with this insurance society protest against any such improvement in their condition. They say that the railway, which now pays them a subvention of £16,000 per annum, will be obliged to withdraw this aid on account of its increased liability for damages, while the benefit to be expected by the men is too precarious a compensation for this certain loss. At present, these men say, they get their insurance pay in case of accident with the same regularity as they get their wages, no matter how or from what cause the accident arises. On the other hand, their personal experience and observation satisfy them that in cases of injury not five in a hundred of the injured would receive any compensation under the new bill. The protest of these men bears every evidence of good faith, and it may not improbably be the case that the apparent hardships of the law as it is have been so effectively done away with by the system of insurance that the overthrow of this system would do more harm than a change in the law would do good.

---

It was a maxim of the late M. Thiers (somewhat discredited before his death) that the world is at peace when France is satisfied. At the present moment it is hard to make out from the Paris newspapers whether France is satisfied or not. Siam has acceded to all of her demands, but it seems that France now requires guarantees. She has the country in her grasp—that is, she has all the guarantees that Siam could give, but this is not sufficient. The truth probably is that France is nettled because England had something to say about the blockade. What England did say is not publicly known, but that she should say anything is intolerable to the *Figaro*, the *Voltaire*, and the frequenters of the cafés, the light-headed people who rushed into Bismarck's trap in 1870, from which they were ransomed by five milliards and two provinces. The Government will probably come out of the Siamese difficulty with some plunder, and with what will pass at home for a triumph of French diplomacy; but according to present appearances it will have earned the ill will of Great Britain. This appears to be the opinion of Germany, which already speculates on this addition to her own capital in the next European turmoil.

*PARTISANSHIP AND SILVER.*

WHEN Congress meets on August 7, the first idea the members should try to get into their heads is, that it is not a question of party politics which they are summoned in special session to settle. The second idea is, that no party capital is to be got out of the repeal of the Silver-Purchase Law. That repeal will be a triumph for neither party, but for the sound-money men in both and for the business men of the whole country. Its main party significance will be the confession which it will imply that both parties have grievously sinned and come short in financial matters. If any of the leaders on either side still think that it is good politics to trifle with the silver question, a brief review of the mistakes of either party in the last fifteen years ought to be enough to disabuse their minds for ever of that particular bit of nonsense.

It cannot be denied, and for our part we have never denied it, that the Democratic party since the war has been more disposed, as a party, to fall down and worship the idol of depreciated currency than has the Republican party. This great change from the historic Democratic position was naturally brought about by the party's long years of exclusion from power. It was inevitable that the discontented elements of society should flock to it, and there are no more thoroughly discontented people in the world than those who have more debts than they can pay. To cheat their creditors by paying them in cheap money is the first thought of many such people, and the thousands of them who joined the Democratic party in the South and West came more than once perilously near committing that party to depreciated currency and repudiation outright. It looked in 1874 and 1875 as if the party would surely make the fatal leap, and it was only the strong hand of Tilden, whom it had to take for its Presidential candidate, that held it back. After cheap silver was taken up in place of cheap greenbacks, the Democratic party was again more infected by the heresy than the Republican party, and again was saved from preaching it as an article of party faith only by the firmness and authority of Mr. Cleveland.

Unluckily for the Republican party, at the very time the Democrats were beginning to recover from the silver mania, the over-crafty politicians who had the making of Republican platforms put in a money plank which has proved a fruitful mother of woes to the party and the country. The Democratic platform of 1888 had not a line about silver in it. It was not necessary to have one with Mr. Cleveland as the candidate. But the Republicans, meeting in National Convention two weeks later than their opponents, pounced upon this omission and put in a loud bid for the silver vote by the following plank:

"The Republican party is in favor of the use of both gold and silver as money, and condemns the policy of the Democratic Administration in its efforts to demonetize silver."

It was this unnecessary and fatal commitment of the Republican party that led straight up to the enactment of the Sherman Law, which, the whole country is now convinced, is our financial old man of the sea. Senator Sherman himself tacitly admitted this in his letter of July 8. He said that his party could enact no financial legislation without "the consent of the Republican Representatives from the silver-producing States." Why so? Reference to the debates in the Senate will show. The Republican Representatives from the silver-producing States alleged that the Republican platform had promised them substantially free coinage of silver; that they had been so assured on the spot at Chicago; that Colorado and other Western States could never have been carried for Harrison except on that understanding, and that they were there in Congress to call for the redemption of party pledges. Teller and Jones and Stewart and Wolcott were voluble and vociferous on this point. So were they in their sneers at the man in the White House, who, they intimated, could never have got there at all if he had not been thought friendly to silver, and who the West would take precious good care should never get there again if the party leaders proved unfaithful to their pledges. This explains what Senator Sherman meant when he said the party leaders had no "right" to throw the "responsibility" of a free coinage veto upon Harrison. This also explains the action of the Indiana Republicans, a few weeks after the Sherman Law was passed, in trying to make out Harrison a far better friend of silver than Cleveland. The party trick of 1888 led to the party trick of 1890, and the country is suffering to-day, and the Republican party is discredited, from the combined effects of the two.

We recall these facts of late political history for no partisan purpose. Both parties are tarred with the same stick. If the Democrats have sinned longer, the Republicans have sinned harder since they have been at it, and against clearer light. It is time to cry quits. It is time for both parties to renounce the silver devil and all his works, let bygones be bygones, and resolve to give the country a sound currency with such political unanimity that no party will ever dare again to try to make it unsound. Such a result will be a triumph for neither party. It will simply be a triumph of common sense, of business principles, and of scientific finance.

*THE PANIC OF 1873.*

WHAT the present panic may yet have in store for us, no one is wise enough to predict, but it can be safely affirmed that it has not, up to the present time, been nearly as disastrous as the panic of 1873. That panic had been preceded by a rage of speculation which began soon after the close of the war in 1865. This speculation took its rise in premature and excessive railway-building. During the war the building of new railways came almost to a standstill. The capital and labor of the nation for four years were applied almost exclusively to military and naval operations. When the armies were disbanded and the nation's floating debt funded, the field of enterprise in the West was entered upon with a feeling of high exuberance and enthusiasm. The first Pacific railway was opened for business in 1869. Great numbers of the enterprising and the capitalist classes were enabled, by this avenue, to see something of the vast resources west of the Missouri River. The glimpses thus obtained were very attractive, and the policy which then prevailed at Washington of giving away the public lands to people who would agree to build railways through them, stimulated in the highest degree this speculative zest.

At the beginning of 1869 there were 170,208,000 acres of land available as the basis for railroad bond issues. This was, for the most part, good agricultural land. The world had never seen such a chance to make money. Capitalists rushed in from Europe as well as from America to get some of the profits of this dazzling Golconda. Railway-building took an unexampled start. From 1859 to 1869 the annual increment of new mileage was under 2,000 miles per year. In 1869 it rose to 4,953 miles, in 1870 to 5,690 miles, and in 1871 to 7,670 miles. In 1872 there was a slight decrease from the mileage of the previous year, there being 6,167 miles of new railway completed. Here were nearly 25,000 miles of new railway constructed in four years' time. It was a necessary adjunct to this feat that there should be a great speculation in iron and also in lands and town lots. Mills and furnaces multiplied on every hand, and as these could not possibly supply the demand for rails, cars, and locomotives, there was an enormous importation also. The speculation so rampant in iron and in town lots extended of course to other things, so that the period (1869 to 1873) was marked by one of the most remarkable "booms" that this or any country ever saw.

The appearance of abounding prosperity which distinguished this period was darkened on the 17th of September, 1873, by the failure of the New York and Oswego Midland Railway. There was a tumble in stocks, and this became a panic on the following day, when the banking-house of Jay Cooke & Co. failed. The decline in the stock market, when this event became known, ranged from 1 to 10 per cent. On the next day nineteen other banking and brokerage houses in New York and eight in Philadelphia failed. On the next day (the 20th) the Union Trust Co. closed its doors with liabilities of $6,000,000. This event took away what little reason was left in the Street. Western Union Telegraph shares fell thirty-five points and New York Central eleven points, although

the latter had the powerful support of Commodore Vanderbilt. The Bank of the Commonwealth and the National Trust Co. closed their doors, the Canada Southern Railroad failed, and the Stock Exchange closed its doors and did not reopen them for ten days.

At this juncture an appeal was made to the Treasury for assistance, and Secretary Boutwell, after consultation with President Grant, decided to pay out a large sum in greenbacks that had been retired under a previous law of Congress, but not cancelled. It was decided to consider this a reserve and to use it in the purchase of Government bonds. Twenty-four millions was thus disbursed with great rapidity, but without producing any good effect. The bonds so bought belonged mostly to savings banks, and these banks locked up the greenbacks which they received, and held them in anticipation of a run on themselves, which did not take place. Very little, if any, of this money found its way into commercial circles.

On the 23d there was a general bank suspension throughout the country, except at Chicago. In the latter city five banks failed. In New York, Philadelphia, Baltimore, Cincinnati, and St. Louis the clearing-houses adopted the pooling plan of loan certificates, and the example was followed by all cities which had clearing-houses, and with very good effect, because it allayed public excitement and prevented runs which otherwise would have taken place everywhere, as in the panic of 1857. The banks refused to pay currency, except on small checks or in cases where it was needed to pay wages. All other checks were certified as "good through the Clearing-house." It was one of the phenomena of this panic that currency bore a premium over certified bank checks. On the 26th of September it was from 3 to 5 per cent. This was the highest rate of premium. The total amount of Clearing-house certificates in New York at any one time was $26,565,000. On October 2 the premium on currency over certified checks fell to 1 per cent., then to ½, then to ¼, then to ⅛, and finally, on the 31st of the same month, it disappeared altogether. The last Clearing-house certificates were redeemed on the 1st of November, at which time complete resumption on the part of the banks took place.

The panic proper ended at this point, but the consequences of it, in commercial circles, lasted till 1879. The mercantile failures in the three years following the panic reached $650,000,000, and the railway defaults $563,000,000; and $226,000,000 of such defaults had occurred before the September panic began.

---

*THE EFFECT OF HOARDING MONEY.*

THE concerted action taken by the managers of the savings banks of this State, in requiring notice before paying depositors, has drawn forth some comments which indicate a misapprehension of the situation. That situation is so unusual as to justify a brief review of the course of our financial disorder. It began, beyond all question, in the apprehension felt by long-headed men both here and abroad, after the passage of the Silver Bill of 1890, that the Government would be forced to stop paying gold for its notes, which would bring the country with a terrible crash down to a silver basis. This apprehension was aggravated by the policy of dispelling the surplus by pension acts and other extravagant legislation—a policy which certainly succeeded in its immediate object, but which of course tended to impair the solvency of the Treasury. A disgraceful and disastrous error in the Treasury statistics—a blunder the importance of which has apparently been overlooked in these exciting days—by which our importations were made to appear to be at the rate of $40,000,000 a year in excess of what they really were, coupled with the large exportation of gold, operated to intensify the apprehension. The bold and clear utterances of President Cleveland at last removed its first cause. The business world was assured that gold would be paid by the United States Treasury for all its notes if demanded. It is true that a great deal was staked upon the continuance of a single life, but it may be said that after the declarations of the President the "silver scare" ceased to be reasonable. The Silver Act would remain an evil, but it was certain that the Administration would and could maintain gold payments.

In our judgment the impression was general, after the policy of the Treasury was understood, that the danger of financial disaster was averted. It seems now that several elements were not properly estimated in forming this conclusion. The principal one was the fact that frightened people disregard rational considerations. The cause of their alarm may be removed, but their nerves continue to quiver. That wonderful system of mutual trust by which almost all the enormous business of modern times is carried on—a system under which, practically, all payments are made in promises to pay, which are offset but never actually paid—when once thrown out of gear cannot be quickly repaired. Had there been no untoward event and no one interested in stimulating apprehension, confidence might gradually have returned. But the collapse of the vast schemes of the managers of the Reading Railroad, followed by the startling failure of the National Cordage Company, with their disgraceful revelations of unprincipled business methods, utterly demoralized the stock market and aroused apprehension to an even greater extent than before. And it is clear that an aggressive "bear" campaign had been determined upon by certain speculators who were consequently interested in spreading terror as widely as possible. The fall in prices, it must be remembered, had greatly enriched these speculators. They had sold in expectation of a fall, and their profits had been enormous. These profits gave them a vastly increased power to sell, while the general public had not only a diminished ability to buy, but also a greatly diminished disposition. Many people had to sell stocks to pay their debts, and few wanted to buy when they dreaded still lower prices.

At such times as these the custodians of other people's money are unfortunately compelled to adopt a policy that aggravates the disorder. Our whole system of deposit-banking is based upon the assumption that depositors will not all want their money at once. The profit of banking depends upon the truth of this assumption, for this profit is made out of the interest obtained by loaning deposits. Of course, this assumption is generally true; but it is not always true, and the fear of its proving untrue is always before the prudent banker. In times of financial stringency, therefore, when many people would like to borrow more money, the banks are obliged to lend less. They do not know when they may have to meet a sudden demand from their depositors, and they have therefore to resist the demands of their borrowers. They can check borrowing to some extent by raising the rate of discount; people who were going into new operations will give them up when they find that their interest account will be too heavy. But the people who are already in debt must have money or fail, and if they fail their creditors must have money or fail. Moreover, the diminution of credits, which do the work of money in exchanging goods, throws more work upon the actual money. Just when the banks are most anxious to increase their supplies of cash, the business of the country actually requires more cash. The weak and remote banks succumb to the strain, and, as checks drawn upon them are no longer of use, the country dealers are compelled to use cash. The reserves kept by the out-of-town banks with the city banks are drawn upon, and there is everywhere a great and a perfectly legitimate demand for cash.

Unfortunately there springs up a demand which, to a certain extent, may be properly called illegitimate. This is the demand for the purpose of private hoarding. Many people reason: "There is no telling when my bank may suspend payment, and it would be a terrible thing to have no money to pay the butcher and the grocer. I will therefore draw my money out of the bank while I can get it, and put it into my safe-deposit box, where it is under my own control. Then I am sure not to starve, whatever happens to the country." It is hard to blame people for doing this, and yet if they had a little more courage and public spirit they perhaps would not do so. A "state of barter" is not what we are used to, but if all the money in the country were to vanish, the necessary exchanges of goods would

somehow be made. Fortunately, the number of people who are either sanguine or public-spirited is sufficient to overcome to a large extent the timid and selfish element, but it is unquestionably an element that has to be reckoned with. It is highly probable that the multiplication of safe-deposit companies has increased the danger. In 1873 there were perhaps not a half-dozen such companies in the country, and many people had no safe place to keep money if they took it from the banks. Now there are hundreds of them, and the temptation to hoard is increased.

The savings banks are empowered by law to resist the craze for hoarding. They can insist upon thirty days' or sixty days' notice, and thereby protect themselves for a while. It may seem harsh to refuse depositors their money, but, in the first place, if the depositors all want it, they must be refused, for it is not in possession of the bank; and in the second place, if any depositor is in real need of his money, the officers of the bank will not allow him to suffer. They are, therefore, in the position of protecting people against themselves, and are trustees for the public safety. If the panic were to last indefinitely, of course the savings banks would have to yield. They are liable for enormous sums payable in legal tender, and their resources, if forced upon the market at such a time, would not produce in cash anything like the amount of their liabilities. But panics do not last indefinitely. Everybody may go crazy for a while, but before two months have passed sanity returns.

The action of the savings banks is therefore calculated to check hoarding by a very large class of people. These people may be deterred from depositing as freely as usual, but they cannot bring ruin upon the banks by sudden and frantic "runs." But hoarding by depositors in ordinary banks and trust companies is solely within their own control. Fortunately these depositors are principally men of business, not easily frightened, and anxious, both from generous and from selfish motives, that there shall be no general ruin. Every one knows that if he were to insist upon converting his deposits into cash, he could do so only if others did not, and to do so merely to hoard the cash would be looked upon by most men as a mean and cowardly act. We are all citizens of the same country, all "in the same boat"; and if we are going to be wrecked, let us not add shame to disaster by fighting over the life-preservers. Our financial system is an institution just as worthy of patriotic sacrifice as any other, and its salvation may depend upon the restraint of the hoarding propensity. The wise and honorable course is for every one to draw out no more cash than will suffice for immediate needs, and, if he is concerned about the future, to buy freely of everything that he is certain to require. It is only in this way that the present stringency will be relieved and the wheels of industry again be put in motion.

## *JOURNALISM IN NEW YORK.*

WE have waited with considerable impatience, though in vain up to the present, for some of the "great newspapers" of the city, as they never tire of calling themselves, to tell us what they think of the "inside view" of their business given in the remarkable articles in the August *Forum*. These articles do not easily lend themselves to illustration by portraits or maps, and there is certainly nothing off-color about them, yet even without those prime attractions we should have thought their importance merited notice. For it cannot be denied that they contain an amount of truth which it would be hard to find put so forcibly anywhere else in the same space.

It has long been our contention that metropolitan journalism has tended more and more to put itself upon a mercenary basis, pure and simple. For believing and saying this, and for pointing out the great difference between the papers of thirty and forty years ago, which were vehicles of opinion, and those of to-day, which are merely pieces of property, we have been accused of ill natured jealousy and many other unpleasant qualities. In the current number of *Scribner's Magazine*, Mr. Julian Ralph talks of the "eccentricity" of the *Evening Post* in saying that the modern newspaper has become exclusively a business enterprise. Now, no one will suspect Mr. J. W. Keller of the *Recorder* of being guilty of any eccentricity, or of having his vision blurred by prejudice or fantastic ideals, and it is he who declares in the *Forum*, that "the fundamental principle of metropolitan journalism to-day is to buy white paper at three cents a pound and sell it at ten cents a pound." He adds with equal truth: "In some quarters it does not matter how much the virgin whiteness of the paper is defiled, so long as the defilement sells the paper." Such a confession of faith from such a source is beyond dismissal as a "snarl," or as the attempt of a man, ashamed of his own profession, to vilify it, and for this reason we are thankful to Mr. Keller for having made it. His entire article, in fact, contains a realistic account of actual journalism in New York, which may be denounced as repulsive, but must be admitted to be truthful.

With like remorseless truth, and with even greater effect, does Mr. Speed in his analysis, by facts and figures, of the change which has come over New York journalism in the past twelve years, show whither the mercenary spirit is leading it. It has abdicated the function of a teacher or leader, and, having hit upon the principle of "giving the public what it wants," it has made itself more and more a purveyor of gossip and scandal. No other conclusion is possible from Mr. Speed's statistical exhibit, which shows how editorial and literary and scientific matter has declined, and how gossip and scandal have increased. It may or may not be meant as an "arraignment" of the papers to which Mr. Speed has applied his scalpel, but it is a simple fact which he states: "The gossip this year usurps the place of the literary matter printed in 1881, and articles about crimes and criminals take the places formerly occupied by religious and scientific matter."

He makes another important point, which we have independent evidence to believe to be well taken. This is, that while New York papers have degenerated, Western papers, particularly Chicago papers, have improved. He states it as a fact within his own knowledge that Chicago editors often consider as unfit for publication lurid stories of crimes and scandals telegraphed them from New York from the columns of some great metropolitan daily. Our own experience corroborates to a certain extent what Mr. Speed says when he refers to "those mistaken persons in the East who have believed, without knowing exactly why, that everything in Chicago was more vulgar and more coarse than anywhere else." He adds:

> "It must not be understood that the claim is here made that the Chicago papers are models of propriety and good taste. In my opinion, they are nothing of the kind. They are not even so good as the New York papers of twelve years ago; but they are very much nicer and cleaner than the Chicago papers of that time or than the New York papers of to-day. So, while there has been a distinct deterioration and decadence in the New York newspaper press in the last dozen years, the improvement in Chicago has been steady and noteworthy, and this notwithstanding the introduction and general adoption there of the illustrations that do not illustrate."

This throws needed light upon Mr. Keller's elegant allusion to the "mind" we have seen in the past decade "loom up from the Western horizon and revolutionize metropolitan journalism." That "mind," in other words, brought to New York a vulgar standard which was then current and popular in the West, but which the West has since grown ashamed of and tried to improve. While the standard was thus being repudiated in the place of its origin, it was being embraced in New York as the final and glorious flower of newspaper development, and instead of being improved has been steadily degraded and made worse than its original model. It is as if New York society had gone mad over the manners and costume of a cow-boy, who came to it fresh from the prairies, and had taken to wearing its own trousers in its boots and to letting its hair grow long and greasy, and to spitting tobacco juice in the parlor and riding bronchos down Fifth Avenue, and then had denied that it was acting like a cow-boy, and professed to be exemplifying the ripest fruits of civilization. Meanwhile, the people on the plains, where the captivating cow-boy came from, have really made some advance in civilization, have thrown away their cow-hide boots and cut their hair and washed up in part, leaving it more

and more to be the fact that the commercial and literary capital of the country should take the lead in that exploitation of crime and indecency, and those exhibitions of bad taste and worse manners, which are miscalled journalism.

### *FRUITS OF FRENCH REALISM.*

THE weightiest and most instructive comment we have seen on the recent disorders in Paris, especially upon the outbreak of the students from which the more serious troubles grew, is from the pen of M. Ernest Lavisse. His name is a sufficient guarantee of a thoroughly frank and serious and intelligent discussion of the question which he sets himself to answer, and which is, "Is it just that the young men of the schools should get a bad reputation from the troubles which have just ended, and are older men right in concluding that the youth of the present day are rotten?"

He begins by an impartial setting forth of the facts. M. Bérenger, one of the most honorable and respectable men living, as M. Lavisse calls him, had set on foot a league for the suppression of vice, and was moving, in particular, against the public display of indecent pictures and books. This seemed vastly amusing to certain spirits in the Latin Quarter, and it was as a sort of huge caricature of this excellent reformer that the famous ball was organized where such indecencies were planned and perpetrated that the police had to interfere. Then came the death of Nuger and the intense exasperation of the students against the police, against whom they had borne a grudge ever since the needless severities inflicted upon their class at the time of the Boulanger riots in Paris. Thus the indecent ball, which was the cause of all, was immediately and totally forgotten in the disturbances which came to such head as to threaten the very existence of the Ministry.

Taking up the question of the causes which have made such shameless exhibitions and approval of immorality possible by those in the morning of their days, M. Lavisse asserts that the young men of modern France are in danger of being made blind to all moral distinctions by "the immorality in literature." What is the cause, he asks men of fifty, of the great difference, in point of delicacy, not to say decency, in sexual matters, between the young men of the present generation and their fathers? For answer, he asks them to compare the literature of their youth with that of to-day. They could remember when 'Madame Bovary' was in court on the charge of indecency, but 'Le Docteur Pascal' goes unchallenged now. They would recall the sensation which the mild indecencies of the *Vie Parisienne* of their youth excited; the unspeakable performances of that journal at the present day are only laughed at. They could remember the sedateness of the news-stands and book-stalls thirty years ago; what kind of engravings and what sort of books do they see displayed to-day? They could recall the dubious stories which they used to read in secret; how much worse were the novels now lying openly on the desks of men and on the tables of women!

"Beyond all question," says M. Lavisse, in words which ought to be printed in capitals and posted in every place where pornographic books and papers are put on sale—"beyond all question, this literature makes its victims. It works havoc among the young, who are wearied with the monotony of school life, and who rush out, the moment they are free, in pursuit of those perilous enjoyments which thrust themselves forward at every street-corner, in every wine-room, under the eye of an indifferent police. It does worse: it destroys all freshness of feeling, it corrupts love at its very awakening, and makes a curse of it. It makes woman a vile thing. It is criminally ignoble." It needed not a man to rise from the dead to tell us this, but it is something to have one of M. Lavisse's standing in his own country and out of it avow the truth in this fashion. The fact must be as he states it. Human nature being what it is, psychology and physiology being what they are, the "grossness of the naturalists and the subtleties of the pornographists," to use the words of M. Lavisse, cannot have any other result. The inherited wisdom and experience of all nations must be at fault if the habitual contact of young natures with such a literature does not produce in them something of its own putridity.

But how far has this process of corruption gone in France? Is it, as M. Lavisse asks, the whole body of youth, all of the more than 10,000 students in Paris, who are responsible for the shameless worship of what Matthew Arnold called "the great goddess Lubricity"? No, he answers, and on this point his testimony is doubtless as authoritative as on the other. It is only "the phenomenon of the scum" that was seen in Paris, he assures us.

> "I owe my testimony of regard to a great many young men whom I know, not vaguely, but thoroughly, from seeing their manner of life. For certain ones, for whom life is hard, without, however, impairing their energy, it is not simply regard that I profess; it is respect. I could tell a great many stories which would go far to console worthy people who are now troubled by the calumnies which are spread abroad about young men. . . . No, it is not true. I know of admirable devotion to family duties. I know of wills bent on doing right, of passionate desires to be useful, to do some good in the world, and of the noblest intellectual eagerness."

Here again our instinctive verdict is that M. Lavisse must be right. If the dissolute creatures who inaugurated the ball of the Quat'z' Arts fairly represented the educated young men of France, it would be time not merely to despair of her, but to abandon her, to draw off from her as we would from any other mass of rottenness that might burst into spontaneous combustion at any moment. That the country exists and progresses, that it enjoys as much stability as it has, and pursues art and science with the energy and success we all know of, is a proof that it is indeed a "phenomenon of the scum" which we have been witnessing. Widespread as are the sources of corruption in France, and lamentable as have been their processes and results, we are glad to believe with M. Lavisse that the fibre of the nation has not yet been seriously impaired. Admitting the worst, he says, "let us not rush to the conclusion that the mass of young men are degenerate. If I knew the age of the race, I could tell exactly when that idea was first put into circulation; but, being obliged to content myself with a vague date, I will say that it was fifty years after the appearance of the first man."

### THE COLUMBIAN EXPOSITION.—I.

FINE ARTS: FRENCH AND AMERICAN SCULPTURE.

CHICAGO, July, 1893.

AT the Centennial Exhibition at Philadelphia in 1876, the United States section in the Art Building contained a heterogeneous collection of pictures, a few with good technical qualities, a good many more with interesting subjects but mediocre execution, and a great number that were simply too bad to be judged at all by the standard set by some of the other nations. Our show looked strangely provincial and amateurish beside the creditable exhibitions made by France, Great Britain, and other countries. At the Paris Universal Exposition in 1878, the American section in the fine-arts galleries consisted of one room in which was displayed a small collection of works comprising pictures by a comparatively small number of the artists at home, and a fairly representative exhibition of the work of American artists residing in Europe at that time. But this little collection, although it contained some very good work, was an unimportant, almost insignificant, part of the great art show in the Champ de Mars that year. American visitors hunted it up and looked at it, the jury of awards visited it and distributed a few medals and honorable mentions to the most prominent exhibitors, and, when the Exhibition was over, no impression had been made on the art world by the efforts of the Americans.

Eleven years afterwards, again at the Champ de Mars, when the American artists abroad had increased ten-fold in number, and almost all those who had been in Paris in 1878 had returned and settled in the United States together with a host of others who had completed their studies in the Paris and other schools in the decade between the two expositions, the United States section was one of the most interesting of all those in the vast galleries. It occupied three large rooms and overflowed in the corridors. One room contained the pictures by the artists in New York and other American cities; the other two were filled with the works of those abroad, principally in and about Paris. The collection attracted great attention; the remarkable progress shown by the American school was widely commented upon, and even not over-generous critics conceded that it was second only to the exhibition made by the French themselves in technical achievement and manifestation of artistic purpose. In so far as comparisons of one exhibition with another are valuable, it will be useful only to compare our standing in the Paris Exposition

of 1889 with what it is at the World's Fair at Chicago. Further, as France leads the world in the fine arts, the most interesting comparison will be that of the French and the Americans.

In 1889 France, with her exhibition of the work of the decade from 1878 and the splendid Retrospective Exhibition, including many of the finest works her artists had produced in the hundred years from 1789, was so far in the lead that the United States, while second, was a long way behind. The French collection, too, most complete in all the branches of the fine arts, was by far the largest of any at the Champ de Mars. At Paris there were 5,789 works in the French section and only 572 in that of the United States. At Chicago the United States has 2,863 and France 1,198. Each nation, naturally, has made its best and most complete exhibition on its own ground. At Paris Great Britain had 552 works in all departments, Belgium 450, Italy 327, Holland 288, Denmark 248, Sweden 228, Russia 205, Spain 179, Switzerland 168, Austria 159, Norway 143, and Germany (not an official exhibition) 101. At Chicago (quoting the official catalogue issued by the World's Fair authorities), Great Britain has 1,130 works, double the number at Paris; Belgium 287, Italy 503, Holland 343, Denmark 178, Sweden 188, Russia 135, Spain 185, Austria 147, Norway 154, and Germany 849. The totals for the countries so far mentioned foot up about 1,000 more at Paris than at Chicago; but when other foreign sections are included, additions made for sub-lettering of numbers in the Chicago catalogue and the 125 numbers in the "Loan Collection of Foreign Masterpieces owned in the United States" (mostly works by French artists) taken into the account, the extent of the two exhibitions is found to be about the same. While there is nothing at Chicago to rival the Retrospective Exhibition at the Champ de Mars, and the French collection of the works of living artists is inferior in quality and much less representative than its parallel at Paris, the Chicago exhibition is probably more interesting to Americans by reason of the great excellence of the showing made by our own country. The exhibition at Chicago is not as fine as the one at Paris simply because the French exhibition is so much less complete. It is about two-thirds as good, leaving the Retrospective Exhibition out of the question. The pictures shown at Paris by such men as Dagnan-Bouveret, Cazin, Delaunay, Meissonier, Bonnat, Jules Breton, Aimé Morot, Detaille, Gervex, Carolus-Duran, Guillemet, Harpignies, Maignan, Puvis de Chavannes, and Vollon gave the French section there a character that is lacking at Chicago. In the Retrospective Exhibition, for such pictures as Corot's "Biblis," Millet's "Gleaners," and the works of Baudry, Bastien-Lepage, Bonvin, Daubigny, Troyon, Rousseau, Manet, Courbet, Fromentin, and Diaz there is no equivalent at Chicago. The Loan Collection here, though somewhat mixed, is a good and interesting one, but in no sense does it rival the famous "Retrospective" of 1889. And this disparity is not confined to the pictures. It is the same with sculpture. It is unnecessary, however, to proceed further with the comparison. Let us now consider the Chicago exhibition on its own merits.

I shall review the American and French sections first because of the preponderating importance of the French school in modern art and its great influence for good on our own artists, and because the American exhibition in general interest and, to a considerable extent, in technical achievement is the best of all those at Chicago. Before speaking of the pictures, however, it will be proper to consider the sculpture. In this the French are so far in the lead that no comparisons are possible. The United States exhibition is on the whole excellent. Some pretty bad work has been admitted by some of the juries that made the selections in the various art centres abroad and at home, but the collection shows an unexpectedly high average; and a number of fine works by well-known men that have been exhibited in New York and elsewhere at different times, now brought together, make a creditable, almost an imposing show. It is next in importance and general excellence to the French. The other nations, it may be noted here, present scarcely anything of value.

Most of the French sculpture is placed in the South Court and the Central Rotunda of the Fine Arts Building, with some selected pieces in the smaller rotunda in the East Pavilion, where the French pictures are hung. The splendid exhibition of casts of French sculpture from the eleventh to the nineteenth century, consisting of decorative forms in the shape of façades of cathedrals and châteaux and of single figures and groups, is placed in the East Court. It forms one of the best educational features at the World's Fair apart from its beauty as an exhibit, and the most generous praise is due to the French Government for sending it. Occupying a prominent place in the South Court is a group of heroic size by Bartholdi, representing "Washington and Lafayette," which, like some other patriotic figures in the American section, might well have been left out of the Exhibition, to its improvement in an artistic point of view. Another sculptor, Choppin, has sent a figure whose subject is appropriate to the occasion, a "Volunteer of 1776," but this is spirited and very good. It shows an American youth, gun in hand, and is excellent in action and vigorously modelled. It would be a first-rate thing to buy and set up in some park—a destiny which, it may be hoped, is not in store for the "Washington and Lafayette." Some of the best French sculptors are not represented at Chicago, but many of the best are, and among the finest things are the four figures by Paul Dubois for the tomb of Gen. Lamoricière. They are beautiful works from the hand of one of the greatest sculptors of our time, and only one thing is to be regretted about their exhibition here, that they cannot be seen in the architectural setting of the monument, where their fitness for their purpose could be more justly appreciated. But, detached as they are, on separate pedestals, they are nevertheless admirable in their fine dignity of pose and masterly modelling. Mercié, with his imposing group "Quand Même," symbolical figures of Alsace and a French soldier, and his lithe and graceful figure of "David the Victor"; St. Marceaux, with the mysteriously beautiful "Spirit Guarding the Secret of the Tomb"; Falguière, with "Republican France," an allegorical group, and "Diana Shooting"; Carlès, with his admirable recumbent figure of Abel; Idrac, with a lovely supple figure of Salammbô; Gaudez, with a charming conception, "The Nymph Echo"; and Michel, with the well-composed group, "The Blind Man and the Paralytic," are some of the sculptors whose names are fairly well known on this side of the Atlantic.

Then there is Frémiet, whose "Man of the Stone Age," a strange-looking creature dancing, and "Wounded Dog," are admirable from every point of view, and who also exhibits one of the finest things in the galleries, an equestrian figure of Velasquez. By some oversight or delay it has not been catalogued, but the visitor cannot miss seeing it. Horse and rider, elevated on a pedestal, occupy a commanding position in the rotunda, and the group is one of the first things to catch the eye by reason of its splendid style and imposing aspect. This great sculptor, who modelled the celebrated "Jeanne d'Arc" that stands in the Place des Pyramides in Paris, is in this work at his very best, and one can think only of the great Florentine equestrian portraits of the Renaissance in searching for its equal. From Rodin, about whose work there has been so much discussion in the past six or seven years, there is one of his figures for the eccentric group, "The Bourgeois of Calais," uncouth, realistic in the sense of portraying an ordinary type of man in tattered garments of the Middle Ages, vigorously modelled, but absolutely without *allure*, and a "Portrait of a Man." Some other work of his that was late in arriving, I was told, is shortly to be placed in the galleries. By Hannaux, who must be one of the men who have made a Paris success recently, there is a charming figure modelled with great subtlety and exceedingly graceful in line, "Phryne"; and by Barrias, who is a veteran, there is the celebrated group called "The First Burial," Adam and Eve carrying the dead body of Abel in their arms. Cain sends three strong animal subjects, of which the "Lion Strangling a Crocodile" is the most notable; and the "Danish Hound" by Lami is only less good than the "Wounded Dog" by Frémiet beside which it is placed.

Lombard's delightful figure of Diana, Verlet's "Grief of Orpheus," Chapu's "Jeanne d'Arc," Ringel d'Illzach's very modern-looking and realistic "Parisienne," and Puech's beautiful conception, "The Star," are other notable works, and in the middle of the round room in the American section stands Gérôme's "Galatea and Pygmalion," which was one of the great successes of the Champs-Élysées Salon last year. It is admirably composed, charming in sentiment, and firmly and delicately modelled. The only criticism to make on it in a technical sense is that it is a trifle rigid in line. This work is not catalogued, and its presence in the American section may be taken as a delicate compliment to the artists of the United States, for many of whom Gérôme has been instructor and counsellor.

It is unfortunate for the credit of the American exhibition of sculpture that such miserable stuff as "The Dreaming Iolanthe," "Lady Godiva," "Lady Godiva Returning," and "Vanderbilt Group," by Caroline S. Brooks, such cheap and vulgar work as "Love Knows no Caste," by Frederick E. Triebel of Florence, and such mediocrities, or worse, as John Rogers's Lincoln, "The Struggle for Work," by J. Gelert, and Thomas Ball's "Colossal Statue of Washington" were admitted; and neither the big "Buffalo Hunt," by H. K. Bush-Brown, nor the "Plaster Replica of Statue of Shakspere for Lincoln Park, Chicago," by William Ordway Partridge, will add to the reputations of the artists. Mr. Partridge, however, exhibits a number of other works, among them the excellent figure of Alexander Hamilton for the Hamilton Club of Brooklyn.

Augustus St. Gaudens and J. Q. A. Ward, the two best-known American sculptors, have no works in the exhibition, and there is nothing by Frederick MacMonnies, but the latter's great fountain in the Court of Honor in front of the Administration Building is more than enough to represent him worthily. There are

148 numbers in the sculpture group of the United States section, and, as has been said before, it is unexpectedly good in quality. Mr. French's fine "Death and the Sculptor," Mr. Adams's "Portrait Bust of a Lady" and "Primavera," Mr. Bartlett's "The Ghost Dance," "Bohemian and Bears," and "Bust of Mrs. B.," Mr. Donoghue's "Young Sophocles," Mr. Martiny's "Portrait Bust of a Child," and Mr. Warner's bust portraits and medallions, most of them familiar from having been seen in New York exhibitions, set the standard in the American galleries; and in various works by Douglas Tilden (who shows a group called "An Indian Bear Hunt," and a spirited figure, "A Baseball Player," that are very good, and a "Tired Boxer" that is less successful), J. S. Hartley, Leonard W. Volk, F. Wellington Ruckstuhl, Thomas Shields Clarke, H. Le Grand Cannon, Theo Alice Ruggles, and Robert P. Bringhurst this high standard is more or less nearly approached. A fine work, new to us if I am not mistaken, is the bronze equestrian figure, "Signal of Peace," by C. E. Dallin, that is one of the best things shown by the Americans; and Mr. Elwell sends his bronze group of "Charles Dickens and Little Nell" which was first exhibited a year or two ago in London. The figure of the little girl is especially good in this, but Mr. Elwell's other exhibit, which he calls "Intellect Dominating Brute Force, or Diana and the Lion," a group in marble, is better than anything he has yet produced. The nude figure of Diana is modelled with firmness and with a delicate and nervous touch, a lack of character in the head being almost its only shortcoming; and the group is dignified and graceful in composition. Mr. Kemeys's studies of animals, of which there are twelve, complete the list of what is best in the exhibition. It must be most gratifying to Americans to find our sculptors making such an excellent showing at Chicago. The works just enumerated, taken in connection with the decorative groups and figures on the buildings and in the grounds, of which I shall speak further on, prove that we have made as great though not as general progress in this as in painting. An exhibition of sculpture worthy of the name, such as is made by France and the United States at the World's Fair, has not been seen in our country before, and it is to be hoped that visitors will not overlook its importance.

WILLIAM A. COFFIN.

## THE ITALIAN FINANCIAL CRISIS.

ROME, July 13, 1893.

THE *Nation* which comes to-day has an article on the "Happy-Go-Lucky Policy," in which occurs a passage that curiously illustrates the Italian proverb, "Tutto il mondo è paese," for it exactly fits the position here, only exchanging silver for paper:

> "For what is the problem to be solved? Why, the most serious that can be set before a great commercial nation, except the means of repelling a foreign invasion. It is neither more nor less than the provision of a standard of value. We are to-day to all intents and purposes without one. That is to say, we have actually no measure by which a citizen can ascertain with accuracy what the debts due him, or the securities he holds, or the contracts he has made, will be worth in any other commodities one month or five years hence."

Italy is exactly in the position that America would be in if the unlimited silver standard were adopted, with this exception, that *you* would know that you were to be paid in silver which would be worth about 50 per cent. of the now accepted amount of the debt, etc., etc., while *we* should know that the value of our paper money would probably be about 80 per cent. of the same. Our uncertainty would probably be better than your certainty, the depreciation in both cases being in consequence of an excess of the circulating medium. But what was the most curious feature of our case was that, rather more than a year ago, with $20,000,000 more or less of silver money in the country, it was impossible to force it into circulation. No one would willingly accept it, preferring the small notes of the Government ($1 and $2), and if by chance a trader had to offer it in change, he did it with an apology, saying, "I have no notes." If Italy had not had the sentimental malady which came out in the so-called Latin Union (as if French, Spanish, Belgians, or Swiss were any more *Latin* than are the Germans or English), her silver would have stayed in the country, and still no one would have wanted it, except in the fractional coins. When gold was at par, no one wanted it, for the same reason, but it was accepted with readiness, which the five-franc piece has never been, and, except for exportation, is not now.

Silver, as a representative of value, has never been able to force its way on the Italian market; and it is not the want of it, or even of gold, for the uses of the country, that causes the present trouble, but an enormously superabundant currency which is legal tender here, but, being paper, has no definite value out of the country, just as silver would not have if we had more of it than the world had need for. If the Italian loan were an internal loan, even the superabundance of paper money would not, probably, have brought on the present crisis, which at the present moment has raised the premium on gold to 6.40 per cent., with a prospect of going still higher; for as the interest on a considerable part of it is payable abroad and in gold, a very small disturbance of the balance of trade begins a drain of gold out to pay that debt, and of course the demand increases the value. Taking into account the balance of imports and exports, Italy is about thirteen millions of pounds sterling per annum in arrear; the visitors and foreign residents who draw their incomes from abroad bring in about twenty million pounds, so that the gold balance is always in favor of Italy, and the value of the investments takes up the balance, except what may go out as dividends on shares in Italian enterprises held by foreigners, which is not much.

The cause of the grave crisis in Italy is, therefore, bad political economy, for a nation which receives more gold than it spends should grow richer and be lending instead of borrowing, and its paper should be as good as gold or as Bank of England notes. The history of the present crisis is that of the financial, and to a certain extent the political, economy of Italy since 1870. When, on the completion of Italian unity, the Government decided to abolish the legal tender which had been made obligatory by the past embarrassments of an abnormal condition, a gold loan of six hundred millions of francs was contracted for the purpose of taking up the paper, which was mostly the issue of an association of banks. The first mistake of the Government was in not making the resumption of specie payments obligatory at a certain date, and holding the banks to it, *coûte que coûte*. The second mistake was in allowing the banks to issue the paper money, instead of making it an issue of the Government—a mistake which has led to making the banks so completely the arbiters of the financial position that the Government has been controlled by the banks, instead of the banks by the Government. The resumption of specie payments has been prorogued from year to year, and we have always been in the *corso forzoso*, in spite of which, and of both blunders, the premium on gold was, two years ago, merely nominal, the amount of the paper money being not above the daily needs of the country. When, however, the great building fever broke out in Rome and other Italian cities, but especially in Rome and Naples, speculation ran away with the business community, and the amount of capital demanded for the various enterprises which were floated was beyond all that the banks could command. The then Ministry (Crispi being Premier, and Grimaldi and Giolitti in the Treasury and Finance) permitted the banks to overissue, so as to meet the demand for capital, and the Banca Romana went far beyond the permission of the Ministry even. The banks made enormous profits, and, for a time, so did the speculators; and as long as the nominal value of the assets was maintained all went swimmingly. Of course the end came to the increase of the value of the real estate on which the banks had lent their paper, and with the halt in the extension of the building operations, due to the fact that there was not population enough for the houses built, came the reaction and paralysis, with the inevitable failure and extensive bankruptcy. The market was flooded with the unsecured paper, for which no use could be found, and the Government, becoming at last alarmed at the tendency, insisted on the banks bringing up the specie reserve to the legal proportion of 40 per cent. of the paper, at the same time legalizing the extraordinary emission.

The proper course was to have compelled a contraction of the currency to the amount demanded by the usual course of affairs; but the banks are too strong for the Government, and the fear of a general bankruptcy prevented the latter from compelling the former to recall their surplus paper by selling their securities, so that, what with the influence of the banks on the Deputies, and the pressure of public opinion in favor of steps being taken to relieve the embarrassments of the speculators, the Ministry could do nothing but let matters drift. The call for gold to bring up the reserves to the legal point started the premium on gold, which has been ever since rising and menaces to go to 15 per cent. The Banca Romana, the oldest of the Roman institutions, has made a fraudulent bankruptcy, the extent of which is not yet known, but the probable amount of exposure is near one hundred millions, the entire capital of the bank being invested in property which cannot be sold, or mortgages which cannot be foreclosed for want of buyers at any price; and the Banca Nazionale is involved in the same or a similar way to double the amount of its capital and reserves, while the banks of Naples and Sicily are almost as badly off. The country is flooded with paper money, not of the Government, but of private banks, which is legal tender, though if we were to come to a peremptory solution of its value, it would be about where a silver currency in the United States would be—*i. e.*, at about 50 per cent. of the nominal value, the banks holding a little less, all told, than 40 per cent. of the amount of their notes in a three-quarter gold and one-quarter silver reserve.

We are, therefore, in the same position the silverites desire the United States to put themselves in, through the possession of a currency which would be legal tender in the country, but could not go abroad except at a discount

of about 50 per cent., simply because nobody wants paper money any more than he wants silver money, when he can get gold. The Italian public has become imbued with the idea that anything which the Government recognizes as a standard of value is sufficient for trade and commerce; it has come to the confounding of real value (or what all the world accepts as such) with credit, or tokens of value. The American public has not got so far, but the adoption of a silver standard would put the United States in the same position as Italy by establishing a forced currency of silver instead of that of paper which we have. If Italy, however, at the prices of to-day, were to declare silver its standard, it could supply the silver currency with a large profit and withdraw all the notes. But the premium on gold would rise from 7 per cent. to probably 40 per cent., for in a commercial point of view the present Italian paper is worth a larger per cent. of its nominal value than its silver currency would be, independent of the legal tender. Italy has come to grief by allowing a larger issue of money to be made than the needs of regular commerce demanded, or than could be kept in normal circulation, and the substitution of silver for the paper would not make matters better, but rather worse.

How things will end here, no one can foresee. The Government has surrendered to the banks, and the privilege of issuing the circulating medium has been confirmed to the banks for twenty years, with very slight restrictions in the conditions. As the banks will not for many years be able, even if affairs in Europe remain peaceful, to redeem their notes in gold, or sell the securities they have lent their money on, Italy will remain for that period at a disadvantage in the markets of the world, by having a currency which cannot go abroad and take the place of gold, as Bank of England or Bank of France notes do. If a great European catastrophe comes, Italy must suspend payments, and if a great epidemic should cut off the current of tourists from the peninsula for a year, there would be great danger of a smash. We had a splendid period of prosperity through the superabundance of paper money, which made everybody rich; we have the paper money still, but everybody has become very poor, trade and commerce are languishing, and there is great misery where there was great prosperity. We are an object-lesson.

W. J. S.

## PASQUIER'S NAPOLEONIC MEMOIRS.—III.

PARIS, July 20, 1893.

PASQUIER passes very rapidly over the great military events of the Empire; he says little about the battle of Essling, the victory at Wagram. After this campaign Napoleon resolved to be divorced from Josephine, notwithstanding his great affection for her. Pasquier tells us that there was a superstitious instinct in this attachment: Napoleon believed that Josephine had something to do with his good fortune, what he called his "star." Pasquier was at Fontainebleau when Fouché took upon himself to announce Napoleon's decision to Josephine, and to obtain her consent. He was also a witness of a last soirée in which Josephine did the honors of the court.

"It was the day before the official dissolution of her marriage. There was a great throng. A supper was served, as usual, on a number of small tables. Josephine sat in the middle, and the men went round her, waiting for that graceful nod of the head which she used to make to the persons she knew. I remained a few minutes at a short distance from her, and I could not help being struck with the perfection of her attitude before all those people who still surrounded her with homages, and who knew that it was the last time—that, in an hour, she would descend from the throne and leave the palace which she would never reenter. Only women can surmount the difficulties of such a situation, but I doubt if a second one could have been found to do it with such perfect grace and measure. Napoleon's countenance was as good as that of his victim."

Pasquier was appointed Councillor of State on the 7th of February, 1810. In that capacity he took part in all the ceremonies of the marriage of Napoleon with the Archduchess Marie Louise.

"Accustomed to all the favors of fortune, Napoleon would have liked the Princess whom fortune brought to him to join to the advantages of her high birth those of an exterior at least agreeable. He mistrusted the representations which had been made to him on this score, even the portraits which had been sent to him. I have it from M. de Laborde, who accompanied the Prince of Neuchâtel to Vienna, and who returned a little before the arrival of the Empress, that he was subjected to a rather detailed interrogatory by Napoleon. This was his résumé: 'Sire, save the first look, you will be a contented husband.' This résumé was exact: the worst thing about Marie Louise was her face."

Thirteen Cardinals refused to take their places at the ceremony of the Emperor's marriage. Napoleon was much offended by their absence, which seemed a sort of protestation against his new alliance and an accusation of illegality. The Cardinals were arrested, exiled to various cities, and forbidden to wear the external marks of their dignity. Napoleon's conflict with Pope Pius VII., whom he kept prisoner, and the union of the Roman States to the French Empire, were the true reason of the attitude of the Cardinals; it must be said, however, that the Pope found means to send to the metropolitan chapter at Florence a brief in which, among his grievances against the Emperor, he spoke of the annulment of Napoleon's first marriage by the *officialité* of Paris, and declared this act irregular. "It was difficult," says Pasquier, "for a mind as suspicious as Napoleon's not to see in such an allegation a premeditated intention to contest some day the legitimacy of his children and consequently their right to the crown."

Pasquier was a very laborious Councillor of State, and, under Napoleon, the Council of State had much to do. It prepared all the laws and the minute Regulations explanatory of the new laws. Napoleon appreciated his services, without showing him any special favor, and Pasquier felt much surprise when, being one day at Fontainebleau, walking in the great gallery and waiting for the passing of the Emperor, who was going to mass, M. de Semonville whispered in his ear, "You are Prefect of Police." "For the first moment I only laughed; then I was seized with trembling, thinking that, after all, the thing was not impossible. A moment afterwards, M. de Cambacérès, approaching behind the Emperor, told me that, after the mass, I should be called into the Emperor's Cabinet and should have to take the oath as Prefect of Police." Pasquier struggled for an instant, and said to Cambacérès that he could not accept functions for which he felt himself unfit and which did not suit him. Cambacérès made him understand that it was very dangerous to go against the Emperor's wish. Pasquier entered the Emperor's room still undecided. "I represented to him that, being a stranger to all the men and the intrigues of the Revolution, I was very unfit for functions which required a profound knowledge of these antecedents." The Emperor replied that all that part of the work would remain in the department of the Duke of Rovigo; what he wished of Pasquier was to reëstablish the Prefecture of Police as a magistracy, such as existed under Sartine and Lenoir. "You have been a magistrate, and I have chosen you as such." "It was difficult," says Pasquier, "to resist such words, spoken by such a man, and an hour afterwards I took the oath."

The Duke of Rovigo was Minister of Police and Pasquier Prefect of Police; notwithstanding what Napoleon had said and wished, it was difficult always to draw the line between their attributions. There was something in the very word police, especially under an absolute government, which naturally alarmed Pasquier's friends. "I could not," he says, "conceal from myself the fact that old society ties would be sundered. Friends whose sentiments and opinions I had shared would not forgive my entering so intimately into an order of things which they had not completely accepted." Pasquier felt no drawing towards the Duke of Rovigo; he had never exchanged words with him before they dined together for the first time at the Duke of Bassano's. When he entered upon his new duties, he ascertained that the worst elements left by the Revolution had already been driven out; there were exceptions, however. One of the men of the Prefecture, who had played a very bad part during the Terror, was in direct relations with Napoleon, through Constant, the first valet of Napoleon. This man sent a bulletin every day to the Tuileries. "I could not flatter myself that the Emperor would renounce his habitual methods."

The quarrel between the Pope and Napoleon continued for several years. There was a great agitation in the Paris chapter against Cardinal Maury. At the beginning of 1811, Napoleon ordered the arrest of one of the vicar-generals of the diocese of Paris. This vicar, M. d'Astros, had among his relations M. Portalis (one of the framers of the Code Civil or Code Napoléon). Pasquier gives us a lengthy account of a scene which took place at the Council of State on the occasion of a communication which M. d'Astros had made to the Pope, who was at Savona. Asking first if M. Portalis was there, the Emperor said to him at once, in the rudest manner: "How do you dare show yourself here after the treason of which you are guilty?" Then, describing this treason, which consisted in having favored a rebellious correspondence with the Pope, with a foreign Prince, he declared that "no worse perfidy had ever been seen; that in all his lifetime he never had known one which had more revolted him, and that this perfidy came from a man who had his particular confidence. Words failed him to express his indignation."

"What I say in ten lines," says Pasquier, "was the theme of a philippic which lasted more than a quarter of an hour. As he went on, the sound of his voice, his gestures, his physiognomy assumed a more frightful character, and when he had ended everybody was dumfounded with fear and stupefaction. M. Portalis could only stammer a few words and express the conviction that he had not failed in his duties in not betraying a relation, a friend of his childhood, whom he had tried to stop in the dangerous path on which he had entered."

Pasquier, to his credit be it said, had the courage to speak and to complete the defence of Portalis. Napoleon, however, was so excited that he ordered Portalis out of the Council: "Begone, sir, and never let me see you again!" Napoleon immediately became calmer. He showed no irritation towards Pasquier. Portalis

was exiled to Aix-en-Provence. A few days afterwards, at the Emperor's levee, everybody was looking at Pasquier when Napoleon approached him. "I am afraid, Mr. Prefect of Police, you have not a very just idea of the duties of a Councillor of State. In this, as in everything, I believe that one runs very little risk of making an error when he follows the voice of his conscience." That was all; the Emperor passed on without adding a syllable, and never again alluded to the subject. Three years afterwards, when Count Molé, Minister of Justice, placed before Napoleon the nomination of Portalis as first President of the Court of Angers, Napoleon made no objection and signed without saying a word. The exile of M. Portalis was followed by numerous arrests of priests. Two cardinals were imprisoned at Vincennes. "One can say with reason that a real terror hung at that time over the clergy of France."

Pasquier enters into minute details as to the administration of the police during this period and the various reforms he effected. At the present day we cannot take much interest in all he has to say on the interior administration of the Prefecture of Police, the reorganization of the firemen of Paris, the policing of the markets, the relations of the Prefect with the Police Commissioners, the gambling-houses, etc. Pasquier is as profuse as Count Chaptal when he speaks of his special duties and occupations; but we prefer to hear what they both have to say about Napoleon.

The King of Rome was born on the 20th of March, 1811. All the court had been summoned to the Tuileries; the accouchement was very long and difficult. Dubois, the famous surgeon, had not concealed the danger from Napoleon, and had told him that there were cases where the surgeon must sacrifice the mother or the child, in order to save one or other. "Behave, sir," said Napoleon to Dubois, "as if you had to deal with the wife of a peasant." Pasquier tells us that Napoleon probably never had a happier day in his life than this 20th of March. His countenance was radiant. He himself brought the child into the room where the most important personages of his Court and of his Government were assembled. "The father had evidently replaced the Emperor. Why did this triumph of nature not last longer!" It seems to me that there is a little naïveté in this exclamation: the Emperor had as much to do as the father in the exhibition of the child. Napoleon now thought himself master of the future as much as he was of the present. The speech which he pronounced on the day of the baptism deserves to be noted: "He never pronounced a prouder speech, his most audacious encroachments were never more bluntly avowed. The annexation to the Empire of the States of the Pope, of Holland, of the Hanseatic provinces, of the Valais, were represented as necessary consequences of his policy." Speaking of the Pope, Napoleon said: "I have given to the Popes palaces in Rome and in Paris. If they have at heart the interests of Christianity, they will often sojourn in the centre of its affairs. Saint Peter preferred Rome even to the Holy Land." He announced the future defeat of England: "A *coup de tonnerre* [he was very fond of this expression] will soon put an end to affairs in the Peninsula; it will avenge Europe and Asia and put an end to the second Punic War."

The first volume of Pasquier ends at this moment, which was the climax of Napoleon's power. It will soon be followed by the others, in which we shall see the downfall of the Empire and its consequences.

# Correspondence.

## OUR CONSUL AT CHRISTIANIA.

To the Editor of The Nation:

Sir: Mr. Gade, for twenty-four years United States Consul at Christiania, Norway, has recently, without having received official notice of any sort, learned from a chance newspaper paragraph of the appointment of his successor, a person from Dakota.

Himself a Norwegian, with an American wife and children educated in America, Mr. Gade has been peculiarly well fitted to assist and entertain Americans travelling in Norway. During a term of service which would, under any Government but our own, be in itself considered the strongest witness in his favor, he has not been content with fulfilling conscientiously the duties of his office. His beautiful country-seat, a few miles outside of Christiania, has been the scene of a lavish and devoted hospitality, extended to Americans of every degree on the simple ground of their nationality. After four and twenty years of such loving service, this faithful officer of the United States has the door of his consulate shut upon him without a word of explanation, excuse, or thanks.

Fortunately the nomination of his successor cannot be confirmed for more than a fortnight, and there is still time for reconsideration on the part of the Department of State. Will not those journals which have been the faithful upholders of Mr. Cleveland in his efforts at civil-service reform help in bringing to his attention this flagrant violation of its principles?

L. W. H.

## A MEASURE WITH A HOLE IN IT.

To the Editor of The Nation:

Sir: While we are all waiting, as well as we can, until Congress shall say to the world in plain words that the people of the United States will continue to measure values and pay debts in money as good as that of other great civilized nations, we might as well amuse ourselves by telling stories. To begin it, I send you a very short story about a milkman.

Our milkman at "The Farms" has for many years done a good business selling milk to a hundred or more families. Some time ago one of his boys punched a hole in his quart measure, and because he thought it would cost too much to have it mended by a regular tinman, he let another boy patch it up. When he got to my house this morning, he found his measure had a hole in it again. He was in an awful state of mind. He said he could not sell any milk without a measure. If he gave too little, people would not buy, and if he gave too much he should lose money. Besides, if he had to haggle over the quantity with every customer, in this hot weather, the milk would spoil before he could sell it.

I told him he ought not to have been so foolish as to keep a broken measure. But I really pitied the poor man, for he is hard-working and honest, so I said, to comfort him, "Well, your cows are not dead, nor your customers either; so if you can get a good quart measure before to-morrow, there will be little harm done, except to the poor sick children who cannot wait a day for their milk." E. W. H.

The Farms, July 31, 1893.

## SIEMERING'S WASHINGTON.

To the Editor of The Nation:

Sir: The headline that so offends Dr. Rösing is not mine, nor have I used the words attributed to me. The context should make it plain that the expression "incongruous pile" cannot imply a want of harmony in the design of the monument, but refers to its incongruity with the aspect and architecture of the old building.

A word as to the origin of the prevailing impression that one statue was suggested by the other. At the public meeting held in the Mayor's office, to consider the question of site, a gentleman speaking for the Society of the Cincinnati volunteered the information that the Washington Monument had been designed "after" that to Frederick. Precisely what meaning he may have attached to the word "after," no one but himself can say, but the impression left upon his audience may fairly be inferred. In the same connection he referred to the similar height of the two monuments. The information was accepted as the frank avowal of a sincere, straightforward, and modest man, such as everybody who knew Prof. Siemering knew him to be. It would have seemed rather an overstrained scrupulosity had we then known that there "is nothing in the Washington Monument that resembles the other" save "the cocked hat worn by Washington and Frederick in the same way."

But unfortunately the popular prints seemed to recall, to persons familiar with it, the Frederick monument, and in the absence of any denial of the assertion of a common motive, that I am aware of, during the long period of discussion, the impression became fixed, and I for one must confess to having taken it for granted, without making sufficient investigation before rushing into print. I accept implicitly Dr. Rösing's assurance that there is no such resemblance, and beg to offer the *amende honorable*, with the expression of unfeigned regret for any injustice unwittingly done.

No one here, I may add, questions the thorough academical knowledge and technical skill that have been brought to bear upon this important work, nor does any one competent to judge doubt that, in a fitting location, its grandeur, grace of line, and justness of proportion will make it one of the wonders of America. It is gratifying to learn that the artist had thought of Fairmount Park, as a statement made at a meeting held in the Council Chamber that, having been shown a map of the city, he had approved of the State-house yard, had caused surprise and disappointment.

My only consolation for having allowed myself to be influenced by the feeling of exasperation aroused by the persistent effort to erect the monument where it would have offended the best taste and sentiment of the people, is the reflection that the words of an anonymous and ignorant writer cannot affect the verdict of posterity upon what Dr. Rösing tells us is, "in sublimity of conception, originality of composition, and perfection in all parts, to be ranked among the *chefs-d'œuvre* of all time."

Help.

Philadelphia, July 28, 1893.

## THE MOST PICTURESQUE PLACE IN THE WORLD.

To the Editor of The Nation:

Sir: From a brief newspaper notice of Mr. and Mrs. Pennell's article in the July *Century* on "The Most Picturesque Place in the World,"

I at once identified the place so mysteriously described as one very vivid in my memory of my wanderings in France many years ago, and a glance into the article and its pictures establishes this locality as without doubt the city of Le Puy in the Auvergne. The wonder is that a place made so famous by its colossal bronze statue of the Virgin, which ranks in size with the Bavaria in Munich and the Liberty of New York, the authors should have thought so unfamiliar to travellers. Its attractiveness is not at all exaggerated by the article in question; and inasmuch as the authors seem to challenge a guess at their unique problem, it can hardly be considered a breach of privacy to reveal to the public where this rare goal is to be found.—Yours very truly,

FRANK SEWALL.

COVENTRY HALL, YORK VILLAGE, MAINE.

# Notes.

ANSON D. F. RANDOLPH & CO. have nearly ready 'Shakspere's Female Characters,' by Helen Faucit (Lady Martin); 'Across France in a Caravan,' by John Wallace, with fifty illustrations; 'Where We Went Gipsying across the Sea,' by Wm. Bement Lent, in two volumes; 'Pictured Palestine,' by the Rev. H. Neill; 'Memoranda Sacra,' by Prof. J. R. Harris; 'Women's Thoughts, from Famous Women,' and 'Men's Thoughts, from American Statesmen.'

D. Appleton & Co. will issue directly 'A Truthful Woman in Southern California,' by Miss Kate Sanborn, and 'From the Five Rivers,' pictures of life in India by Mrs. F. A. Steel.

Among new editions on our table is 'A Catholic Dictionary: Containing some account of the Doctrine, Discipline, Rites, Ceremonies, Councils, and Religious Orders of the Catholic Church' (New York: Benziger Bros.). This is an English work, first published in 1883, and now revised and enlarged with American collaboration. It could not well escape being both apologetic and polemical, and Protestants may consult it profitably for its latter-day reading of such historical topics as indulgences, Inquisition, the Reformation, etc., as well as for its definitions and expositions.

Busbey's biennial 'Biographical Directory of the Railway Officials of America' is issued for the present year by the (Chicago) *Railway Age and Northwestern Railroader*. It is a strictly professional account of railway service in the most condensed form; or, if it now and again deviates a little from this purpose, as when it tells where such an official was educated, who his parents were, or whom he married, this only gives the stamp of authenticity to the data as having been furnished and revised by the subject of them. The well-printed volume consists of upwards of 400 pages octavo, and records the careers of some 4,000 individuals, all living at the time of going to press.

Another well-executed work is the 'United States Official Hotel Directory,' "for the use of commercial travellers, tourists, merchants, and the hotel fraternity" (New York: Hotel Red Book and Directory Co.). The arrangement is alphabetical by States, with information as to local population, accessibility by railway, summer and winter resorts, grade of hotel, price of board, etc. Reference by numbers is made to a very useful list of railroads and water routes, with their terminal points, in this country and in Canada. The typography is excellent.

We should count that week lost which did not produce a new guide to Chicago. Mr. John J. Flinn has subjected his 'Standard Guide' to a thorough overhauling, though it is only in its third year. In that period, he says, "our population has grown from 1,098,576 to over 1,500,000," with corresponding extension of buildings and sections. He now lays out ten daily trips in which to view the city, following these with chapters of general information and with a statistical appendix. The work has been entirely reset in small type, with a substantial reduction in the number of pages. The illustrations have been greatly multiplied rather than improved.

Mr. F. P. Kenkel, Chicago, has had the happy thought to publish 'The Story of Chicago, Told in Pictures; or, From the Log Cabin to the World's Fair." The origins of the city are very interestingly shown by the aid of old prints, and photographic process prints display very well the present features of Chicago's streets and parks. The middle period, embracing the great fire, is rather dreary, and the element of beauty enters but sparingly into the whole series of plates. The legend of the panorama may be read in English, German, and Swedish.

Percy Lindley's 'Walks in the Ardennes,' though a railroad publication, is a minute and useful guide to this part of France and as readable as may be. It is interspersed with cuts. The new edition may be had at No. 30 Fleet Street, London.

Francis Seymour Stevenson's 'Historic Personality' (Macmillan) consists of judicious little comments on the most celebrated works of biography, autobiography, diaries, memoirs, letters, table-talk, characters, etc. It is a charmingly printed book with a tasteful cover, and nice reading-matter to correspond, which nobody need fear will give him a headache by reason of the intensity of the thought.

M. Gustave Reynier has written a book on 'Thomas Corneille, sa vie et son théâtre' (Paris: Hachette), in which he endeavors to show that Thomas is unfairly overshadowed by Pierre, and that the public has not done the former full justice. M. Reynier, it is true, concedes that Thomas Corneille wrote very badly and sought immediate profit at the expense of future glory, and in doing so the author practically acknowledges the justice of the public verdict. He has made an entertaining and a useful book, to which students of seventeenth-century literature in France will be glad to refer, but he will not make any one become a devotee of Thomas Corneille, nor, spite of Nisard's authority to back him, will he induce any man of taste and judgment to prefer Thomas's "Ariane" to Racine's "Phèdre."

Amblard & Meyer have brought out, in the "Collection Lemerre Illustrée," Coppée's 'Rivales,' a story of selfish love on the part of a youthful poet, and of unselfish love on the part of two women. These Lemerre editions are excellent specimens of book-making, with their good paper, wide margins, and clear type.

In *La Réforme Sociale* for June 16, the leading article is a review, by the Comte de Bizemont, of a book entitled 'Les Grandes Compagnies de Commerce,' by M. Pierre Bonnassieux (Plon, 1892). Twenty-five years ago great chartered companies as a means of developing colonies were looked upon as an obsolete idea, worthy only of the mercantile theories of the last century. Since then we have witnessed a remarkable change. An international association of this kind founded the Congo Free State, now a purely Belgian concern; and Great Britain, Germany, and Portugal have followed in the same path. In France, though no such companies have yet been chartered, their advisability has been actively discussed, for no other Power owns so much totally undeveloped tropical land, and French private capital is cautious and unenterprising. The Académie des Sciences Morales et Politiques having offered prizes for the best works on the question, M. Bonnassieux was one of the winners. He describes and discusses the great chartered companies of the past, French and foreign, and his conclusion, as well as that of his reviewer, is in favor of creating new ones, though, like Paul Leroy-Beaulieu, he regards them as only pioneers which in course of time will outlive their usefulness. The success or failure of this revived method of opening up undeveloped territories is a problem of great economic interest. While it is still too early to judge the work of the commercial companies founded in the last ten years, on the whole, the result so far is not encouraging.

The number for June 15 of the *Revue Internationale de l'Enseignement* contains an appreciative and interesting review of M. Gréard's entertaining book, 'Nos Adieux à la vieille Sorbonne' (Paris: Hachette). The famous old school of theology, which eclipsed so long the regular Faculty of Theology, has its story told sympathetically by M. Gréard, who has aimed mainly at a faithful portrayal of the spirit and life of the College from its foundation in the reign of St. Louis down to the present day. Very many students will be surprised to learn that there was much liberality of spirit in the institution, even in the days of Pascal, of Montesquieu, of Voltaire, of Rousseau. If they have not the time to read M. Gréard's book, they will get a succinct analysis of it, and, consequently, a condensed history of the Sorbonne, in M. Achille Luchaire's review.

One often experiences the discomfort of a conflict between his sympathies and his principles when he passes some pitiable specimen of the begging fraternity on the street. This is largely because any individual beggar is a mystery representing possibilities of suffering. If one knew the facts in the case, sympathy would probably be less spontaneous, but few have ever attempted a systematic study of the beggar type. There is, however, a new book just announced from Paris by M. Louis Paulian, with the title 'Paris qui mendie,' one chapter of which is published in the *Revue Bleue* of July 15. Judging from this chapter, the book must contain material fresh even to those interested in social studies. It reminds one of Montagu Williams's books, and especially of what he says in 'Round London' on "Griddlers, or street singers." M. Paulian has evidently made a careful investigation into the methods of Paris beggars, and the stories with which he enlivens his descriptions are diverting.

The French Syndicat pour la Protection de la Propriété Littéraire et Artistique presented, at the Authors' Congress lately held in Chicago, a Note on the International Copyright Act of March 3, 1891. The Syndicate's object is to point out, on behalf of French authors and artists, the imperfections and shortcomings of the act, with a view to their being remedied at a future meeting of Congress. The provisions which bear most harshly upon foreign authors and artists are those which require simultaneous publication in the two countries, and reproduction or remanufacture of the book or other work in the United States, as an essential condition of protection. The Note asks that the former provision be so amended as to allow authors or artists to make the necessary regis-

tration and deposits with United States consuls abroad instead of at Washington, and that a year be granted for this purpose. With regard to the second, the Note recommends that the provision be abrogated as of no practical benefit to American firms, and as being a serious inconvenience and needless expense not to foreign authors alone, but to the American public, which, in the end, has to bear the increased cost entailed by reproduction in this country.

The seventh number in the series of monographs entitled "North American Fauna," published by the Department of Agriculture, relates to the Death Valley Expedition. The first or narrative portion is yet to appear, but Part II. was issued on May 31. It consists of reports on the birds, reptiles, and batrachians, fishes, insects, and mollusks of the interesting region in question, as well as on the desert trees and shrubs and desert cactuses and yuccas—these last being by the director of the expedition, Dr. C. Hart Merriam. The volume closes with a list, by T. S. Palmer, of localities visited by the expedition, with altitudes and descriptive notes. There are fifteen plates, mostly botanical, and a folded map of the route of the expedition.

Two reprints from the Bulletin of the United States Fish Commission for 1893 are Prof. S. A. Forbes's preliminary report on the Aquatic Invertebrate Fauna of the Yellowstone National Park and of the Flathead Region of Montana, and Bashford Dean's report on the European Methods of Oyster-Culture. Both pamphlets are illustrated, the latter profusely from photographs, showing Italian, Dutch, Belgian, and English modes of cultivating the oyster.

The salt and gypsum industries of New York form the subject of the Bulletin of the New York State Museum for April, 1893. The text has been prepared mainly by the Assistant State Geologist, Frederick J. H. Merrill, with the aid of F. E. Englehardt for the local section on salt and of William C. Clarke for that on gypsum. A colored map shows the extensive tract embraced by these industries, and there are numerous photographic illustrations, geologic sections, etc.

A correspondent in Baltimore writes to us as follows: "In a book destined to be so widely read by foreigners as Baedeker's 'United States,' it seems worth while to point out all defects. Prof. McMaster, in the introductory historical sketch, gives Greene the credit of winning the battle at the Cowpens. This, of course, was won by Morgan."

Not long ago we commented on a prize translation of Tennyson's "Silent Voices" into Italian by the veteran Antonio Ghislanzoni, author, among divers other literary productions, of the libretto of Verdi's "Aida," in which he had the archæological assistance of Mariette Bey. His own is now among the silent voices, for the Italian press announces his death on the night of July 15–16, in or hard upon his seventieth year.

—Fiction, as might be expected, plays a prominent part in the August magazines. *Scribner's*, indeed, devotes itself entirely to the task of amusing the nomadic summer populace by such means, dropping for the nonce all matters in which serious information is of the first importance—unless we may except Julian Ralph's "catchy" account of the life of the newspaper correspondent, on whose exalted station in the modern world of society and politics he lays much stress. This profusion of stories, however, gives the contemplative reader something more than amusement when he reflects that they represent the kinds and grades of prose fiction which are supposed to meet most surely the midsummer approval of a well-bred but much-bored constituency. The method of Howells and James, it is significant, is conspicuous by its absence, and the subject of the half-a-dozen stories here presented is in each case foreign, unusual, or quaint. A fretful American woman in Florence is aghast at the unending toil and utter penury of a family of Italian artisans, charmed at the quaintness of speech which she finds in their every-day language, and deeply moved by their willing self-sacrifice. A gambler and a variety actress, each masquerading in the hope of making a rich match and leading a new life, fail tragically in their purposes. A dear old granny at the poor-farm, her pocket filled by an unexpected legacy, steals away to the Centennial, and tastes cosmopolitan delights which she had all her life vainly longed for. Fanatic meets fanatic in a remote country district when war wrought enthusiasts to their highest. On a sinking ship the rich maiden confesses, unasked, the love she bears her penniless lover. Evidently romanticism, in forms however widely diverse, still holds the field, and the "truthful" study of the real world about us cannot yet be relied on for amusement in dog-days.

—In *Harper's*, on the other hand, the trend of fiction seems at first slightly less towards studies in out-of-the-way corners of the world and of life, as a means of amusement, and more towards the common ground of familiar experience. A young man about to topple over into indolence and vice is brought back to strenuousness by the very forces that might have fed his laxity; in a florist's shop the rambling conversation of chance purchasers builds up a little plot in which love and death and an afternoon tea are not unnaturally commingled; and two young artists fall in love with perfect ease and with no hint of high tragedy past or to follow. But even here the contrary influence is plainly visible. The gentleman's son loves the prize-fighter's daughter; the Philistine business man is really a hero; witchcraft and vulgar superstition play their horrid parts; and the snobbish wife, who, in serio-comic fashion, despises her husband's peasant mother, is thwarted by heaven-sent means. On the whole, one cannot escape from the conclusion that we are as a people adjudged by the magazine editors not yet ripe, at least in summer-time, for the realism by virtue of which we look seriously and without extravagance at the world that, commonplace or extraordinary, falls fully within the limits of our human and national experience. The more serious articles in the number are all of interest, especially that which recommends to the attention of the Society for Psychical Research the Cock Lane ghost of 1762, about the fraudulence of whose proceedings Dr. Johnson was so vehement; and Mr. Platt's notes on Italian Renaissance gardens, which he thinks may prove useful models in certain portions of our country.

—The August *Atlantic* does not tempt the languor of its summer readers by an excess of fiction. On the contrary, its somewhat old-fashioned solidity of contents is perhaps more than ordinarily apparent. Senator Dawes describes the flippant lightness with which the grave situation of the winter of 1860–'1 was regarded at Washington; the study of Petrarch's correspondence is continued; and other articles deal with the religious and philosophical teachings of the Upanishads—which, the author thinks, lie in the highest planes of thought which the human mind has ever reached—and with the lives of Miss Clough, first principal of Newnham College, and Jonathan Belcher, Governor of Massachusetts from 1730 to 1741. Most worthy of discussion, however, is Prof. Shaler's statement of the relations between academic and technical instruction, and his proposition that isolated technological institutions run great risks of extinction and would do well to seek shelter under the wings of existing universities. It might be argued, on the contrary, that the rapid growth of scientific education does not forbid the surmise that fifty years hence some one may write patronizingly of the advantages colleges might obtain by putting themselves under the protection of technical schools. Even now what might not one of our typical colleges, with its wandering bands of athletes and minstrels, with club life and social life in the ascendency, gain by association with a large engineering school, where constant industry and almost exclusive devotion to routine work are the sole measure of a student's success? And how might not many an introspective and dilettante young collegian of to-day profit by the proximity of a thousand earnest young fellows, already grappling with the difficulties and duties of their unpedantic professions?

—An engraving of Phillips Brooks's familiar and noble face forms the preface to the *Century* for August, and is followed by a collection of a dozen of his letters to his little nieces, written from various parts of Europe and the East. Better children's letters could scarcely be imagined, and they bear witness again to his wonderful power of adapting himself to the point of view of any reader or hearer who could be reached rather by love and human sympathy than by learning or power of logic. Of other famous Americans we get a glimpse in Mr. Stillman's description of a camping-party in the Adirondacks in 1858, of which Lowell, Emerson, Agassiz, and Dr. Jeffries Wyman were members, and of which Emerson recorded his impressions in "The Adirondacks." In the rest of the number the interest centres on foreign rather than on American subjects. An unusually fortunate and venturesome traveller draws a striking picture of Fez, and Jonas Stadling continues an account of the charitable work of the Tolstois in the famine-stricken provinces of Russia, which chills the blood with its evidently veracious details of heartrending scenes of destitution, disease, and death. In another thoughtful letter from Japan, Mr. La Farge describes the majestic statue of Buddha at Kamakura, and Mr. Fenollosa gives a more than usually lucid exposition of contemporary Japanese art, with illustrations from notable paintings and pieces of carving at the World's Fair. Another article is devoted to the etchings of Anders Zorn. The most interesting—on other than artistic grounds—of those reproduced is that of Renan, done in the great man's own study not long before his death, and noteworthy as making him appear the thorough idealist he was.

—Every word of *Mélusine* for May-June is from the indefatigable pen of the editor, M. Henri Gaidoz. His chief article, on "Le Grand Diable d'Argent, patron de la Finance," repeats a service he has recently rendered by tracking one of the colored broadsides sold by colporteurs among the common people of France to its origin in the middle ages or in classical or pre-classical antiquity. The one bearing the above title is, M. Gaidoz thinks,

probably the last of its kind, the illustrated newspaper having undermined the business; but he was able to procure it of the manufacturers, the Maison Pellerin at Épinal. It represents a winged and horned devil with a flowing cloak, mounted upon a sort of altar, and showering money from his hands, his purse, and his hind parts upon types of his favorites—the pastry-cook, the tapster, the baker, the *procureur*, the courtesan. The artist and a vast crowd behind hold the Money Devil by his tail—and get nothing; whence, says M. Gaidoz, the expression "tirer le diable par la queue," meaning 'to be in want.' An old print in the Bibliothèque Nationale, reproduced by *Mélusine*, shows the same allegory, with accompanying verses. Our modern broadside, too, has its verses, but they are older than the design, for there are references to figures which have been eliminated from the picture in the process of counterfeiting earlier designs. A nearer original (pictorially speaking) is the Glémaric print copied from Champfleury, an artistic arrangement of the leading personages enumerated above, with the addition of the poet and the artist among the tail-bearers. Nothing is more interesting than a comparison of this drawing, which dates from the seventeenth century, with the broadside evolved from it say about 1850. The tailor finds a place in neither except in the verse of the broadside; well, M. Gaidoz traces him to a Chartres broadside of the beginning of the present century as described by M. Garnier. Quite another and ancient design is that of the Money Devil, built of coins, in his stronghold, being aimed at by men with all sorts of weapons; and this is echoed in some Belgian and French leaden tokens of the sixteenth century. M. Gaidoz then transports us to a Pompeian mural painting, showing Mercury flitting over the land with purse extended, and, in brief, by text and pictures, connects him closely with the later Money Devil—the superseded pagan gods, he says, having been allowed by Christianity to exist as devils: "for what is more orthodox than the Devil? He is as orthodox as God himself." The whole study is a very brilliant one.

—Sectional sentiment, as well as the stamp of the times, can be discerned in the resolutions whereby two Southern State Universities have decided to admit women. The Board of Trustees of the University of Alabama have resolved that "Young women of not less than eighteen years of age, of good character and antecedents, who are able to stand the necessary examinations, be admitted to the Sophomore class or any higher class of this University, provided that suitable homes and protection have been provided for them, under such rules and regulations as may be prescribed by the President in consultation with the Faculty." This action has met with such unqualified general approval that the Faculty is not expected to make any invidious distinction on account of sex. Almost contemporaneously with the above comes an official announcement from Knoxville that the University of Tennessee "declares its intention to admit women hereafter, of the full age of seventeen years, to all benefits and privileges of this institution." Women properly recommended as to character may enter all the departments, hold the State scholarships, and enjoy all other privileges under the same regulations as men, with the following exceptions: as the University has no suitable dormitories for women, they will not be allowed to live on the grounds, except in the families of the Faculty, but the Dean will provide a list of approved private families where women can board at moderate rates. "Separate homes will be found for male and female students." An association of ladies in Knoxville has undertaken to raise money for a woman's building at the University, but in the meantime the Trustees have set apart a house conveniently situated for the exclusive use of women students, and have directed that it be arranged with "a parlor, study-hall, music-room, literary society hall, and toilet rooms." Qualified women can enter the University and take advanced or special courses. This new departure of the University of Tennessee, in connection with the new State law of 1893, which provides a broad and liberal scheme of State scholarships, will doubtless furnish a healthy stimulus to female secondary education in Tennessee. While the new code of Mississippi authorizes the admission of women to the State University, it is an open secret that the Board of Visitors of the University of Virginia have before them the recommendation of a majority of the Faculty, that women be admitted to this conservative institution of learning. The Board, at a special meeting (July 20), ventured so far as to refer the vexed question back to the Faculty, with a request that they present a suitable plan "for recognizing the rights of women to higher education, . . . in accordance with the teaching plan of their University."

—We are late in taking up vol. i. of Mr. Paul Leicester Ford's 'Writings of Thomas Jefferson' (Putnams), an edition which is to rank on the shelf beside the Washington, Franklin, Hamilton, and Jay published by the same firm, and which, from present appearances, will endure comparison with any of them. Mr. Ford's sources, in addition to the well-used Jefferson MSS. in the Department of State, have been documents in the hands of Jefferson's descendants, the Virginia archives, the papers of the Continental Congress, the private papers of Washington and other Revolutionary writers, the files of the French Foreign Office, etc., etc. Mr. Ford introduces his compilation with a summary view of the paradoxical features of Jefferson's opinions and career, a bibliography, and a minute itinerary and chronology for the period covered by the present volume (1743–1745)—a very useful apparatus. The Autobiography of 1821 is given verbatim, and is annotated in a careful and scholarly manner, with candid corrections of the errors in an old man's recollection. Thus, Jefferson's imagining that he had led off in an attempt to prohibit the further importation of slaves into Virginia is shown conclusively to have been mistaken. Mr. Ford also discusses anew, and again conclusively, the question whether the Declaration of Independence was actually subscribed on July 4 or on any one day. The 'Ana' follows the Autobiography, and then we have the Correspondence, beginning with the youthful letters of 1760, and interspersed chronologically with Jefferson's essays, political resolutions and addresses, reports, declarations, legal arguments, and even advertisements, with ingenious presentation of rough drafts. There is not much else to remark on this stage of the work, but we may quote the sentiment of John Adams regarding the election of Senators (p. 277): "That he thought our Senate as well constituted as it could have been, being chosen by the legislatures, for if these could not support them, he did not know what could do it; that perhaps it might have been as well for them to be chosen by the States at large, as that would insure a choice of distinguished men, since none but such could be known to a whole people." But how could Adams have foreseen that "choice" would in the end be denied to the "whole people" except as Hobson's choice or a choice between evils—nomination and selection having been completely taken away from the electors by interested partisanship?

## GEN. ANTHONY WAYNE.—II.

*Major-General Wayne* and the Pennsylvania Line in the Continental Army. By Charles J. Stillé, President of the Historical Society of Pennsylvania. Philadelphia: J. B. Lippincott Co. 1893.

It seems to Dr. Stillé that something like mildew has fallen on the names of once illustrious Pennsylvanians who bore a leading part in the formative periods of our pre-Revolutionary and Revolutionary history. In an earlier volume, reviewed in these columns, he sought to recover for John Dickinson's civil fame the heritage of which it had been defrauded; and in the volume before us he seeks to recapitulate a "lost," or at least a "neglected, chapter" in the military history of the country, for the sake of doing something like adequate justice to "the achievements of a most distinguished soldier of Pennsylvania." So far from reproaching the author with too much zeal in the discharge of his pious office, we can only wish that he had been still more industrious in scraping lichen from the tombstone of a neglected but unforgotten worthy.

Dr. Stillé sees plainly enough why it was that the "sudden making of splendid names" was arrested in Pennsylvania at the dawn of American Independence. "It should never be forgotten," he says, "that during the Revolutionary war the struggle [in Pennsylvania] was not merely between the rulers of Pennsylvania and the open enemy, the British Army, but also between them and the fierce opposition of a powerful party in their own State." And so it came to pass, he adds, that "Pennsylvania fought in the Revolution like a man with one arm tied behind his back." Even the Declaration of Independence "was looked upon by many at the time as a party triumph, and was followed up here, as nowhere else, by measures that drove from the public service many men of the highest character who had up to that time been regarded as the foremost patriots of the State." Where this dissidence did not drive men from the public service, it threw their names into dim eclipse from which they never emerged.

Dr. Stillé makes no concealment of the fact that his sympathies are with the Pennsylvanian cause that was conquered in the civic feud of that time. He thinks it was hardly to be expected that the "men of high social position who had belonged to the governing class under the old régime in Pennsylvania should give up their control without a fierce struggle." They had their reasons for sneering at the Revolutionary Constitution of that State as "the work of the radical mob." It was no secret at the time that the well-known resolution of May 10, 1776 (declaring that "each one of the United Colonies, where no government sufficient to the exigencies of their affairs had as yet been established, should adopt such government as would, in the opinion of the representatives of the people, best conduce to the happiness and safety of their constituents in particular and of America in general") was pressed in the Continental Congress by John Adams and his coadjutors for the express purpose of forcing the hands of the Pennsylvania Assembly and of making independence a civil

necessity. That resolution marks the watershed of our Revolutionary politics. It virtually proclaimed the *déchéance* of the Pennsylvania Assembly, and the "patriots" of the State took the Congress at its word more literally and precipitately, perhaps, than was either expected or desired. It was said at the time, with much iteration of phrase, that "the proprietary gentlemen" were more solicitous to keep the scabbards of their swords unsoiled than to wield their swords in a battle *à outrance* for the rights of the colonies. The "proprietary gentlemen" (at least those of them who were real patriots and not Loyalists in disguise) rejoined, on the other hand, that it was precisely because they wished to keep their swords sharp and bright for the impending fray that they were unwilling to throw away the scabbard of the Constitution in which their swords were sheathed.

We cannot now translate these rhetorical metaphors into the cold historic facts which they were meant to subtend. The only thing not open to debate in the whole political situation of Pennsylvania at this crisis is the bitter moral which that situation points against too much vacillation in a time of revolution, and against the over-conservatism which leads on to revolutionary radicalism. Goethe has pointed for us the same useful moral in that idyll of a troubled epoch in the border wars of the French Revolution, his 'Hermann und Dorothea,' where he says that

> "The man who wavers in a wavering time
> Does but augment the evil which he fears,
> And wider, wider makes it spread."

The "proprietary gentlemen" sought too sedulously to restrain and moderate the rising tide of the popular revolt, until at last the tide, incapable of control, swept away the dikes of the old Constitution. Whether in all this we should see, with John Dickinson, the *civium ardor prava jubentium*, or, with John Adams, the irregular but righteous overthrow of "cowardice and Toryism," will remain matter of opinion among men of equal candor and intelligence, according to the varying weights they may give to the elements involved in their calculus of historical probabilities.

Aside from disputed questions of this kind, which have shaded the fame of others in Pennsylvania, it will be cheerfully conceded by every candid reader that Dr. Stillé has established the claim of Gen. Wayne to a higher repute for military capacity than it has been common to ascribe to him. It is abundantly shown that Washington reposed confidence in his military insight and discretion, as well as in the *élan* with which he "stepped among the first for glory," to use one of his own favorite expressions. The epithet of "Mad Anthony," it seems, was not attached to him till late in the war, and originated from the random and misunderstood remark of a camp-follower, "subject to fits of insanity." Dr. Stillé thinks that the way in which the sobriquet adhered to his name "is a curious illustration of the manner in which certain nicknames become fastened upon illustrious personages." But such military nicknames as the "Iron Duke," "Marshal Vorwärts," "Rough and Ready," "Stonewall" Jackson, carry with them their own explanation. When the Indians of the Northwest gave to Wayne the nickname of *Sukachgook*, "the Blacksnake," they meant to point the secrecy and celerity of his movements and the tenacity with which he wound his military coils around his Indian foe. It is not so certain, then, it seems to us, that there was nothing in the psychology of Wayne which lent itself to such fantastic characterization. It is admitted by his biographer that he had his weaknesses. He was "constitutionally vain." He had that perfervid genius which wreaks itself on expression. "He was somewhat addicted," says Graydon, "to the vaunting style of Marshal Villars." He was as irascible and *pundonoroso* as a Spanish grandee. A certain devil-may-care *insouciance* and slap-dash grandiloquence of speech crop out in his familiar letters, as being native to his mental structure and peculiar idiom. The idiosyncrasy meets us everywhere, as when he writes to his wife from Ticonderoga that he hopes soon to lead on his men "to death or glory"; or as when he writes to his brother-in-law that Ticonderoga "appeared to be the last part of the world that God had made," and that his soldiers there, "for want of other vessels," were drinking out of the skulls left on the spot by Abercrombie's men, and were "making tent pins of their shin and thigh bones"; or as when he hinted, for the benefit of Lieut.-Col. Sherman, that "he [Wayne] would put up with no man's insults," and so brought that gentleman to his marrow-bones; or as when he wrote to Major Posey that if in a certain communication he meant to intimate that he (Posey) had "supplied" at Stony Point a certain "prowess" which had been wanting in the General commanding in that exploit—"then I know that you will have candor enough to acknowledge it—not to me as your superior officer, but to me as a private gentleman *very tenacious of my honor*, which honor is now pledged to meet you *on that ground only*." *Hotspur*, though much more fastid ous, could not have been more testy in speech than was Wayne.

It would be a mistake, however, to infer, even from such expressions as these, that the military genius of Wayne was of a headlong sort, or that, as was said of the Numidian cavalry in ancient times, he was "all spur and no bridle." When duty called, he could be of "iron nerve to true occasion true," whether that occasion called him to do or to endure. It would be ridiculous to find in him all the lineaments with which Wordsworth has portrayed his "Character of the Happy Warrior," and we must take the liberty of thinking that Dr. Stillé deals in gold-leaf rather than in the beaten gold of the sanctuary when he says that, after Wayne's campaign in Georgia, "he was no longer spoken of as 'Mad Anthony,' for his achievements made him worthy to rank as a strategist with Turenne or the Duke of Marlborough." If something is due to the loyalties of biography, something is also due to the perspectives of history.

We have left ourselves no space for the review of Wayne's campaign against the Indians. But we could wish that Dr. Stillé, in tracing the nexus of historic events, had dwelt more at length on what he apparently deems an incident of the battle of Fallen Timbers, but which, in fact, proved to be the pivot of the whole subsequent transaction had with the defeated Indians. It is known that the battle was fought almost within the range of the guns of a British fort. The Indians had expected that their British allies would interpose for their succor, but though Maj. Campbell, the commander of the fort, was loud with his pen in the way of protest, he was reticent with his cannon. The Indians were moved to wrath at being left so unexpectedly in the lurch. It seemed to them an act of treachery, and, with a new love on where the old love was off, they turned to make the Treaty of Greeneville with the warrior who, as they said, "never slept," and who kept his word of promise as well as his word of threat. The story is well told in Stone's 'Life of Joseph Brant.' And besides, the study of this campaign, with a view to its place in the larger logic of events, would have thrown a clear light on what seems to Dr. Stillé so obscure, viz., why it was that the leaders in the American Revolution made such "prodigious efforts to induce the Canadians to join us in the revolt against the English Government." If the biographer had turned to the correspondence of John Adams in 1776 ('Works of John Adams,' vol. ix., p. 399), he would have found a clear exposition of the strategic value of Canada in the eyes of the Continental Congress. Under date of June 16, 1776, John Adams writes:

> "The Regulars [of the British Army], if they get full possession of that province [Canada], and the navigation of the St. Lawrence River above Deschambault, at least above the mouth of the Sorel, will have nothing to interrupt their communication with Niagara, Detroit, Michilimackinac; they will have the navigation of the five great Lakes quite as far as the Mississippi River; they will have a free communication with all the numerous tribes of Indians extended along the frontiers of all the colonies, and, by their trinkets and bribes, will induce them to take up the hatchet and spread blood and fire among the inhabitants; by which means all the frontier inhabitants will be driven in upon the middle settlements, at a time when the inhabitants of the seaports and coasts will be driven back by the British Navy. Is this picture too high-colored? Perhaps it is, but surely we must maintain our power in Canada."

It is precisely because all the expeditions against Canada had failed at the beginning of the Revolution that the campaign of Gen. Sullivan against the Six Nations and their Tory allies became a hard military necessity in 1779. And it was not until the Indian power had been effectually broken by the blow delivered on the Miami Rapids that the path of empire, leading westward, was opened to the United States. What was there accomplished in 1795, the Fathers of the Revolution had sought to secure by the occupation of Canada at the outbreak of the Revolution. Other motives there were at the bottom of the movement, but the military strategy was clear, and that strategy sets in only a clearer light the significance which should be attached to the victory of Wayne. What he had sought to accomplish at Three Rivers near the Sorel in 1776, without knowing, perhaps, the full drift of the Congressional policy, he brought to a successful close in 1795, when the drift of the American policy was no longer dark. This logic of events gives a singular unity to the military career of Wayne, and it seems a pity that Dr. Stillé should have missed it, from not perceiving the strategic position of Canada at the beginning of the Revolution.

We can, in conclusion, but hint some slight dissent from a few of Dr. Stillé's biographical appreciations. He mistakes in supposing that the murmuring letter of October 14, 1778, in which Wayne threatened to leave "the blustering field of Mars," was written only in draught and was "never sent." It was probably addressed to Gen. Charles Lee, and may be found in the papers of that officer, as published by the New York Historical Society in the "Collections" of 1873. Wayne, it is known, received a scalp-wound in the assault on Stony Point. Dr. Stillé thinks it "worth remarking that Gen. Wayne in his official report [to Washington] makes no mention of his wound." It would seem, therefore, "worth remarking" that he referred to it three or four times in a supplementary report to the President of Congress and other communications. If it was worth remarking that the House of Representatives struck out his name from the resolution of

thanks voted to the army for the victory over the Indians, it would seem worth mentioning that the Senate retained his name with honorable mention in the Address to the President, though there too an effort was made to strike it out. That the Chester County Committeeman, whose soul was vexed within him by the presence of slavery in Pennsylvania in 1775, and who wrote, when he heard in 1777 that his wife was intending to "send Rachel [a domestic slave, we suppose] to the market," that "he would not have it done for one thousand guineas," should have borrowed four thousand guineas at the end of the war in order to "stock his Georgia plantation with negroes," belongs doubtless to the "ignorance of the times," at which we must wink; but none the less must we deplore such a strange inconsistency in a Pennsylvania hero who might have learned better things from familiar association with his Quaker neighbors. The debt incurred by Wayne in "stocking his plantation with negroes" was to him the beginning of financial sorrows—from which he found relief only by abandoning the whole rice plantation which Georgia had given to him in testimony of her gratitude for deliverance from British domination.

Wayne was elected a member of the First Congress under the Constitution by a portion of the people of Georgia, but the election was unanimously vacated by Congress because of manifold informalities in the election and in the returns. Even when he was nominated by President Washington in 1792 as General-in-Chief of the Federal Army, we are told by Madison (the passage seems to have escaped the notice of Dr. Stillé) that the nomination, "it was said, went through the Senate rather against the bristles." On the whole, it would seem that Wayne carried through life what the poet calls an "importunate and heavy load," but he bore it with fortitude and he laid it off at last with the soldier's crown of rejoicing. He died on the 15th of December, 1796.

---

*The Meaning and the Method of Life:* A Search for Religion in Biology. By George M. Gould, A.M., M.D. G. P. Putnam's Sons. 1893.

An accord between scientific and religious thought must come about, when it comes, chiefly by the natural, unforced development of each. We may hopefully strain all our efforts to find out the truth about special questions, but here we have to do with a great historical rearrangement of ideas, in which no single individual can count for much, and in which it is very undesirable that mere individual characters should have any influence. The most that volition can hope to accomplish is to turn the attention of scientific thinkers to those subjects of science, and the attention of religious thinkers to those aspects of religion, the study of which seems likely to moderate their antagonistic tendencies. It would seem, for example, that through biological studies science may be led to modify the existing mechanical theory of the universe, which is not at all requisite to its progress, but is merely the coloring which scientific thought acquired during the period beginning with Galileo and ending with Helmholtz's great dynamical memoir, when mechanics and allied branches of physics were the chief subjects of thought, and which in the new period that opened with Darwin is already beginning to be corrected. Many biologists are pleading to-day for the admission of genuine spontaneity. On the other hand, it would seem that studies of historical criticism, in an age in which truth can not only no longer be plugged up or stanched, but cannot be prevented from quickly filtering down from the great scholars among the clergy even to the most Philistine among the laity, must surely lead the churches to great retraction in the matter of infallibility. Now, these two things, mechanicalism and infallibilism, are the great obstacles to any common understanding between religious thinking and scientific thinking.

There is such a thing as mechanical infallibilism. Büchner's 'Kraft und Stoff' affords an example of what we mean. Scientific workers do not insist on anything as absolutely certain. There is not a more marked characteristic of the true scientific investigator than his perfect readiness to entertain any question which there is any possibility of settling by experiment. Indeed, "science" is an unfortunate designation for the department of civilized life that it denotes. It implies a body of knowledge. But it is not half so much knowledge that makes the scientific man as inquiry—the effectual wanting to know that involves the acknowledgment one does not know already. In the days of our childhood, before the present jargon came in, people talked of natural *philosophy;* and philo-sophy, or wanting to know, much better than science, describes the most precious endowment of the physicist or naturalist. But people who have learned the conclusions of the natural philosophers out of books are very proud to be called "scientists"; and a good name it is for them. They do not want to know, for they are cocksure already. We hear them reason every day as if natural selection, as the exclusive agency, not only in the development of animal and vegetable species, but of everything else, were a self-evident truth. The discovery of the conservation of energy may well be considered as the greatest achievement of natural philosophy. Yet, after all, we know nothing about it except what experience teaches us; and the experiential verifications of it, except in a few simple cases, do not attain any extraordinary degree of precision; while in regard to muscular work and brain activity there is little but analogy to lead us to think it so much as a close approximation to the truth. Every physical determination of a continuous quantity has its "probable error"; and the probable error of the equation which expresses the conservation of energy is large in comparison with those which express, for example, the three laws of motion. Nevertheless, we often find the "scientists" treating the law of the conservation of energy, in its extremest applications, the most remote from anything we can measure, as something it would be absurd to doubt. Such an opinion, which on the one hand sets up certain propositions as truth infallible and past all doubt, and which on the other hand leaves no possibility for motions not produced and completely swayed by blind mechanical force, may properly be termed mechanical infallibilism. It would seem a strange basis for any reconciliation between religion and science, being deeply hostile to the spirit of both. Yet it is upon this basis, in part at least, and by giving the name of God to an abstraction which it is not pretended has any sort of consciousness or exerts any sort of agency, that some of those who are endeavoring to bring about that reconciliation hope to effect it. Others, again, are aiming at a kind of compromise which would hamper science and mutilate religion, without at all furthering the purposes of either.

In strong contrast to all this is the genuine biologist's religion set forth by Dr. Gould in the book before us. To begin with, it is truly a religion, and no sham. Whoever believes anything like it must, no doubt, be filled with the spirit, if not of worship, yet of devotion, hearty, tender, and passionate; and for how many confessions can we say as much? Next, whether we accept the doctrine or not, we cannot but grant that it does truly spring, by methods of thought analogous to those of natural philosophy, out of observations of nature. Insisting upon the absolute distinction between living and lifeless things, Dr. Gould sees in the former an invisible Life, purposeful and intelligent. This is his god. He names him Biologos. He is a regular Aryan nature-god, very wise and clever, but existing in nature, not the creator of matter, and very far from being omnipotent.

"Every expression of Life we know shows process; difficulties unconquerable and difficulties conquerable, mastery by fate or ingenious partial conquering of fate—never a suggestion of omnipotence. The inference is quite clear, that if life were a worker in matter in all the past eternity, it would have been a more successful conqueror of it than is pathetically evident. The most patent aim of life is to win itself a home in worlds of inorganic matter, and to obtain progressive control of purely physical matter and forces. The fact that the success is only partial in our own world, that it has been attended with such difficulty and such expense (suffering, evil, death, reproduction, etc.), and that not more than two or three worlds of our solar system can possibly allow life a home in them, together with the certainty that like conditions exist everywhere else—all this points to the finiteness, if one may so speak, of God, and His struggle with adverse circumstances. But it also gives blessed reasons and incentives for sympathy with Him, and makes duty clear, unravels a thousand mysteries of our being here, makes religion a psychical as well as a biological necessity—indeed, forms the ground of an indissoluble and necessary identity of religion and biology."

Dr. Gould believes in his god without one shade of doubt, and with a fervid joy that would render his book delightful reading even if it were not filled with interesting suggestions gracefully and strikingly expressed. He really makes his doctrine decidedly attractive, at least for some of our moods. Doubtless, everybody has, at some time, envied the condition of our domestic animal pets. A mother's love is passionate, physiological, forced upon her. But a man's love for his dog is at once disinterested and voluntary. Though the dog does not reflect much, he does so enough fully to understand his relation to his master. Great comfort he takes in his master's love; but his greatest delight is in the reflection that, despite the man's incomparable and incomprehensible intelligence (of which the dog is quite aware), he is yet neither omniscient nor omnipotent, so that he, dog, is, or may be, positively helpful to the man. Now, the Biologos religion makes of a man God's dog.

It is little to say that there must be some truth in Dr. Gould's idea if there is any truth in religion; for every religion worthy the name represents a struggle between the god and some dark and baleful resistance. Faults in the theory are easily found. The first condition to which a hypothesis should conform is that it should be such that from it definite, verifiable predictions can be deduced. To deduce definite consequences from Dr. Gould's theory, it is requisite that the purpose of life should be formulated. Dr. Gould says this purpose is to conquer and govern matter. But is there no ulterior design? Is the barbaric delight in triumph all? The purpose of vitality should be discoverable by considering what growth in general, or the process of vitality, accomplishes. Certainly growth is not

mainly an operation upon something outside; it is a development of the organism itself. Whatever be its formula, it is this that describes the great struggle of the universe, and it is this that the greatest myths seek to embody. But there are besides sundry other processes which have to be considered in any full philosophical study of the question.

*Annals of My Life.* 1847–1856. By Charles Wordsworth, D.D., D.C.L., Bishop of St. Andrews and Fellow of Winchester College. Edited by W. Earl Hodgson. Longmans, Green & Co. 1893.

Bishop Wordsworth's first intention was to publish his Memoirs in two volumes. Two would have been better than three, and one would have been better than two. All that is valuable in this volume and the 'Annals of My Early Life,' published a year ago, could have been compressed into a volume of half the size of this. Now another is promised detailing Dr. Wordsworth's life as Bishop of St. Andrews. The present volume was ready for the press before his death, December 5, 1892; for the next another will edit his materials, and perhaps more judiciously than he would himself have done it.

The volume before us offers much less to the general reader than the former one. It has an elaborate preface, in which the adverse critics of the previous 'Annals' are confronted with the conventional praises of critics who had perhaps kept their minds from prejudice, after the manner of Sydney Smith, by not reading the book. It also contains a lame attempt to make out some appreciable relation between the Bishop and Cardinal Newman. During the period from 1847 to 1856 Dr. Wordsworth was Warden of Trinity College at Glenalmond, Scotland, a new training school for Episcopalian boys, with ambition as much in excess of its proportions as that of the Western college of which Mr. Bryce has written, whose faculty consisted of "Mrs. Jones and myself." The charge was not a bed of roses. Dr. Wordsworth institutes a comparison between the Scotch and English boy. The Scotch boy has much less awe of his masters: one of them consulted the Doctor as to the best way of getting some good worms, as he was going fishing. Corporal punishment was administered, but the Scotch boys were squeamish about the exposure of their persons to the rod—as the English boys were not! The Bishop is at much pains to set forth the grounds of his refusal to vote for Gladstone to represent Oxford after his favoring the Roman Catholic College at Maynooth. He foresaw the beginning of the end—the disestablishment of the Irish Church. Gladstone, it will be remembered, was one of his Oxford pupils; one of a remarkable set.

Quite the most valuable part of this volume is its minute account of the circumstances of Dr. Wordsworth's election to the bishopric of St. Andrews. It is an extremely serviceable memoir for the students of ecclesiastical practices and amenities. There were seventeen electoral votes, including Dr. Wordsworth's as a presbyter of the diocese. Eight were cast for him and eight for another candidate. He decided the matter by voting for himself. Of course, he did not desire the office, but he had to be faithful to his friends, and not permit a party whose success would be injurious to the Church to triumph. Only the most inordinate vanity could set down the details of literary performance, private subscriptions, and friendly approbation that we have here. The future Thackeray or Trollope will find in this volume and in 'Annals of My Early Life' good material to work up into an ecclesiastical character.

31 Union Square, New York.

## *Educational.* | *Educational.*

How we go to our athletic grounds in the afternoon. our day's work done. There are no lazy or disobedient boys in that wagon; they get left behind.

# THE SIGLAR SCHOOL,

## Newburgh-on-the-Hudson.

We add five years to boy life. We take the five years that are lost at home and fill them with work and play that he likes; we keep him busy and let him grow in the natural way.

We want him at 8 or 9 or 10. At 15 he has the habit of happiness, industry, study, success; he tackles a job quite as well as the usual greenhorn just out of college.

Do we actually accomplish that? No; we can't get him in time. His father wants to neglect him at home; his mother wants to pet him and scold him—they call it "bringing him up." We get him when they have got through with him; then we do the best we can with what is left of his chances.

Every crop has its enemy; boys have parents. The better the father and mother, the harder it is to "send their little boy away from home alone."

I can't discuss the question here, but I want to send my pamphlet to every parent who thinks he or she can learn to be wise enough and faithful enough to do what is best for the boy.

My rate is $600 a year; no extras.

HENRY W. SIGLAR.

Address Newburgh, N. Y.

## UNIVERSITY OF VIRGINIA

**CHARLOTTESVILLE, VA.**

**Session begins 15th Sept.** Full equipment and corps of instructors in Academical, Engineering, Law, and Medical Departments. Excellent Climate. New Gymnasium, with baths free to all students. For catalogues address
**WM. M. THORNTON, LL.D., Chairman.**

# Good Cooking

is essential to

# Good Digestion—

in pastry you cannot have either without a good shortening. Lard has always had very objectionable features, causing indigestion and many other dietetic troubles. Science has come to the assistance of the cook, and of weak stomachs, with the new shortening,

# Cottolene

It is composed of the choicest beef suet and highly refined vegetable oil, in many respects as good as the finest imported olive oil. Physicians endorse it, cooking experts recommend it, and thousands are now using it in preference to any other shortening. Refuse all substitutes.

Send three cents in stamps to N. K. Fairbank & Co., Chicago, for handsome Cottolene Cook Book, containing six hundred recipes, prepared by nine eminent authorities on cooking. Cottolene is sold by all grocers.

Made only by

**N. K. FAIRBANK & CO.,**

**Chicago, St. Louis, Montreal, New York, Boston, Philadelphia, San Francisco, etc.**

# MACMILLAN & CO., Publishers, New York.

# The Nation.

NEW YORK, THURSDAY, AUGUST 10, 1893.

## The Week.

PRESIDENT CLEVELAND'S message is a model of sound common sense on the money question. It presents the plain truth to the two houses of Congress, and places upon them the responsibility of action for the rescue of the country from its present deep affliction. He does not mince matters at all. He tells the Senators and Representatives that the present trouble has come about from a loss of confidence in the standard of value, and that the only way to restore confidence is to assure our own people and the world in general that we intend to pay our debts now and always in the money recognized by civilized nations. If there be any chance of enthroning silver as a money metal without dethroning gold at the same time, he says that it can be done only by international action, and that such action is postponed, if not defeated, by our attempt to do the whole work ourselves. There is no suggestion of compromise in the message, no project for a substitute for the Sherman Law. On the contrary, the recommendation is for absolute repeal. The reform of the tariff is touched upon as a measure which will hereafter profitably engage the attention of Congress, but for the present the President declares the financial question paramount and above all party considerations. There is a suggestion at the close of the message that further steps may be necessary to enable the Government to keep its existing silver currency at par with gold, but there is no specific recommendation to that effect. The message as a whole is well conceived. It can hardly fail to stir the country and bring a sharp return-stroke of public opinion upon Congress.

---

The canvasses of the Senate and House which the *Herald* and the *World* published on Tuesday are very reassuring. The *Herald's* canvass shows 39 Senators for unconditional repeal of the Sherman Law, 20 for conditional repeal, 14 opposed to repeal, and 10 non-committal. This is only six short of a majority for unconditional repeal. According to the same paper's canvass, the House has 137 members openly in favor of unconditional repeal, 125 in favor of conditional repeal, 24 non-committal, and 16 opposed. The *World's* canvass of the House shows 143 members in favor of unconditional repeal, 84 for conditional repeal, and 91 non-committal. This is 36 short of a majority for unconditional repeal, but it is large enough to confirm the general belief that the House will pass the repeal measure by a safe majority. The significant feature of the canvasses of both houses is the small number of those who are willing to stand openly against unconditional repeal. The weight of numbers is on the side of repeal, and as public sentiment is overwhelmingly on the same side, the inevitable tendency of the vacillating members will be in that direction.

---

The bimetallists will probably be encouraged by the speech of Mr. Balfour, the Tory leader in the House of Commons, who has at last pronounced in favor of the double standard. They should bear in mind, however, that what Mr. Balfour means is international bimetallism, and that the only way to make that effective is for the United States to stop buying silver and stop trying to go it alone. All the instructed bimetallists in the world agree on this point. Gen. Francis A. Walker, President Andrews, and S. Dana Horton in this country, Mr. Balfour and Mr. Houldsworth in England, Mr. Cernuschi in France, and Mr. Allard in Belgium are all at one upon this subject. Most of them have been urging the suspension of silver purchases by the United States ever since the experiment was begun in 1878. They believe that the stoppage of silver purchases here would put a pressure on the countries of Europe—and es pecially on England—so severe that the latter country would be the first to call for an international monetary conference. It would be well worth while to try that experiment, even if there were no other reasons for repealing the Sherman Law. In no other way can the services of Mr. Balfour as an auxiliary to the silver cause be made available. If Mr. Bland and his dwindling cohorts do not pursue this policy, it is because they are not really in favor of bimetallism, but are in favor of the single standard of silver. That this is what Mr. Bland individually favors was made very clear by his sneering article in the *North American Review* a few months ago on the Brussels Conference. We observe that Mr. Bland is still confident that the Sherman Law will not be repealed unless a free-coinage bill at the ratio of 16 to 1 is passed simultaneously.

---

Almost all predictions of the length of time that the existing commercial depression will continue are based on comparison with the depressed period which the country last experienced, namely, the one beginning in 1873. We have pointed out some of the differences between the conditions existing then and now, prominent among which was the great inflation of business during and immediately after the war, an inflation which finds no counterpart in recent years. Nothing can bring this out more clearly than a comparative statement of the transactions of the Clearing-house in this city, which are accessible for a long period. In 1861, the year of Lincoln's first inauguration, the clearings amounted to $5,915,742,758. In 1866 they had increased to $28,717,146,914. By 1873, the advance had gone on until the total amounted to $35,461,052,826. The effect of the hard times was shown in a reduction of these figures in 1876 to $21,597,274,247. With the return of confidence there was again an increase, and in 1881 the total amounted to $48,565,812,212. In 1885 the total ran down to $25,250,791,440, and in 1892 it had advanced again only to $36,279,905,236. We find, therefore, that, in the period from 1861 to 1873, there was an increase in the clearings amounting to about 700 per cent., while the increase in the year 1892 as compared with 1873—covering a period of almost twenty years—amounted to only 2 1-3 per cent., and is a gain of only 70 per cent. over the depressed year 1876. This comparison, after making allowance for the premium on gold in 1873, ought to go a good way towards allaying the fears of those persons who have been declaring that the country must be as long in recovering now from a "period of inflation" as it was after the collapse of 1873. It also goes a good way towards proving that what is the matter with the country now is a nervous fright, added to the natural effects of our silver legislation, and not any deep-seated disease.

---

One of the earliest acts of Congress should be the passage of a law authorizing the issue of gold certificates of any denomination, from one dollar upwards. In no other way can the gold now coming to us from Europe be put into convenient form for circulation. As the law now stands, no gold certificates can be issued smaller than $20. The result is, that very few of them are ever seen except in banks or in passing from one bank to another. There never was any reason for restricting them to high denominations except in order to give the field of circulation to silver certificates. But the Treasury notes issued under the Sherman Act of 1890 are of all denominations from one dollar upwards, and these are redeemable in gold. So if there were any reason at first for giving the field of lower denominations to silver certificates, the spell has been broken. There is an additional reason for having gold certificates of small denominations, and that is to familiarize the sense of the common people with gold. Let them read the four letters composing that word on their paper currency occasionally. It will inspire confidence, and will be part of a good education.

---

In no way do the three crazy Governors of the West—Waite and Pennoyer and

Lewelling—more conclusively show the nature of their lunacy than in their insistence that the "legal-tender quality" of silver dollars should be "restored." This is nothing but the "pure ignorance" of Dr. Johnson. The legal-tender quality of silver dollars does not need to be restored, as it is already established by law. If the three Governors have found anybody foolish enough to lend them money, they can pay off their debts in silver dollars with no law to hinder or make them afraid. When they say legal tender, however, they mean making fifty cents, by resolution of Congress, equal in value to one dollar. That is a kind of legal tender which never existed, as regards silver, and never will be restored.

---

The result of the queer silver convention at Chicago last week was a set of resolutions which consisted mostly of preamble, the proportion of the latter to the former being about as six to one. The preamble consisted largely of falsehoods that have been many times exposed. The one relating to Ernest Seyd is repeated. This notable bimetallist is charged with the crime of bribing an American Congress to vote for monometallism. To criticise the resolutions is quite impossible. The speeches were in keeping with them. Gov. Waite of Colorado delivered his lecture on the "sea of blood," which had already accomplished such wonders in the way of closing banks in Denver. This achievement appears to have made some little impression on the Committee on Resolutions, since we find, instead of the usual demand for the abolishment of banks, a mere request that they "attend to their legitimate business," although no attempt is made to show what their legitimate business is. Their legitimate business is the payment of their depositors' checks, and they are prevented from doing so by panic-breeders of the school of Waite, Warner, and Donnelly. The effect of this Convention, so far as it has any, will probably be to hasten the repeal of the Silver-Purchase Law.

---

The figures concerning the values of our importations furnished by the Government during the last fiscal year, which were recently reported to be in error to the extent of $40,000,000, prove upon further investigation to be still more incorrect. Mr. Ford, the Chief of the Treasury Bureau of Statistics, now announces that the discrepancy is probably $75,000,000, the excess of the value of imports over that of exports for the last fiscal year not being $93,650,000, but only $18,000,000. The cause of the blunder was the entering of imports from countries having depreciated currencies at their value in those currencies instead of at their gold value. Prior to February, 1892, it was the practice of our consuls to issue to merchants shipping goods to this country not only a consular invoice, but also a certificate showing the gold value of the goods described in the invoice. This certificate was a convenience to the customs officers here in assessing ad-valorem duties, but as it was not necessary for that purpose in the case of goods not subject to duty or subject only to specific duty, a protest against it was finally made by an importer. The protest was referred by the Department of State to the Treasury Department, and, the Treasury reporting that, in the case of imports free of duty or subject to specific duty these certificates were not needed, the Department of State issued a circular to all consuls abolishing these "currency certificates," as they were called, in the case of all such importations. This circular was issued, it seems, in February, 1892, and the errors of the Treasury Bureau of Statistics date from that time.

---

It is, of course, a gratifying thing to find that the foreign trade of the country is in a more satisfactory condition than had been supposed, and we may say at least that the blunder would have been worse had it been discovered at this time to be upon the other side. This, however, is an extremely short-sighted view to take of the matter. No one can tell how far this blunder has contributed to the alarm which has pervaded the financial world. One of the phenomena preceding the panic of 1873 was the large excess of imports over exports, and it is not to be supposed that our bankers and those of other countries disregarded the heavy adverse balance of trade. On the contrary, they watched it with the gravest concern, and it was very generally inferred from it, in connection with the gold exports, that European investors were not putting their money out in this country or were selling their American securities; the natural result of the inference being that American investors wanted to do the same thing. It was well understood that the Silver Law was a sufficient cause for the phenomena, but the excess of imports was also a sufficient cause. The elimination of the latter cause leaves the responsibility where, according to all available indications, it belongs, and adds overwhelmingly to the weight of the argument for repeal.

---

The revival of talk of cholera, which seems scarcely justified by the circumstances, gives an interest to the figures concerning immigration recently published by the Bureau of Statistics. In spite of cholera, quarantine and the threatened exclusion of all immigrants, over half a million of them entered the country in the year ending June 30, 1893, to say nothing of the large number coming from or through Canada. It is true that in the previous year the number was considerably larger, 623,000, but the decrease was no more than has taken place before when no "cholera scare" existed. In 1890-'91 the figures were 560,000, in 1889-'90 they were 455,000, and in 1888-'89 nearly the same. But in 1885 '86 they were but 334,000, while in 1886-'87 they were 490,000. The cholera reduced the number of immigrants very much in September, October, and November, but after that the numbers rose until in May there came 95,000, or 3,000 more than in May of last year. The *Financial Chronicle* calls attention to the extraordinary increase in the immigration from Italy. In the year just closed there arrived 72,000 Italian immigrants, or 10,000 more than in the previous year. Prior to 1890 only 388,000 of this nationality are reported as having landed on our shores, while since that time their number has been 210,000 Much the same is true of Russia and Austria-Hungary, while from all other countries the immigration is falling off, notably so from Germany. But possibly some of the classifications would bear examination.

---

The *Tribune* printed on Friday a long talk with a Tammany "collector" who frankly described the method by which the "organization" levies blackmail upon business houses and corporations in this city. The account is antecedently probable, and bears the marks of truthfulness. It is in perfect keeping with instances which have come to our own knowledge. Of course the great trouble is that no names are mentioned. The men who privately inform us of the way Tammany has compelled them to pay tribute always insist that their identity shall be concealed, lest a worse thing befall them. If men could be found courageous enough to expose the villany, there might be some hope of ending it. Now, why will not the *Tribune* help in bringing the evil out into the daylight by printing the names of some of those "Republican business men and heads of corporations" who, it says, "do not turn these collectors away empty-handed"? With its great influence with the men of its own party, and with the opportunity of striking such a blow at Tammany, it surely could find some Republican head of a corporation who would frankly tell how much he had paid, and under what circumstances, for "protection." The fact that so many men unquestionably do lie down under Tammany domination, and pay their blackmail year by year, is one of the best arguments to show that we really have as good a city government as we deserve. We reserve all our enthusiasm for Hampden fighting the ship money, and have none left to make us resist the "stand and deliver" of our own Tammany tyrants.

---

The opening of the Corinth Canal, which took place on Sunday with imposing ceremonies, is one of the milestones of the world's progress. The work of cutting a passage for ships across the Corinthian

Isthmus was first undertaken by the Emperor Nero, the traces of his work being still visible when the present canal was begun on the identical site of the old one. The canal which is now open has been under construction nine years, or eleven, if we count the two years in which work was suspended by reason of the bankruptcy of the French company which first undertook it. This bankruptcy was one of the consequences of the great copper speculation headed by M. Secrétan. The copper syndicate pulled down the Comptoir d'Escompte, which pulled down the canal company. The work, after an interval of two years, was resumed by a Greek company, whose labors have now been brought to a successful close. It remains to be seen whether the canal will pay interest on its cost. All commerce passing between Adriatic ports and those of the Aegean and Black Seas, including Constantinople, will naturally use this new route, which saves about forty eight hours' steaming. Ships from Mediterranean ports farther west, which pass around the southern coast of Italy, will save only eight hours by taking the canal, but they will save some very heavy gales of wind which frequently blow around Cape Malia. The canal is really a stupendous work, for although it is only four miles long, the cutting has a depth of 265 feet at its highest point. The engineering genius of this enterprise has been the Garibaldian Gen. Stephen Türr, a native of Hungary.

---

The new French tariff appears to be working much more to the gratification of protectionists than is our own, which has sadly disappointed its framers in the amount of importations which take place under it. But in France the imports, which, in the first six months of 1891 under the old tariff, were 2,292,000,000 francs, fell during the corresponding period of 1893 under increased duties to 2,049,000,000 francs. At the same time the exports rose from 1,697,000,000 francs to 1,701,000,000 francs. It is true that this is not much of a gain in exports, but a substantial check was given to the unpatriotic business of importation. Unfortunately the imports of manufactures continue to be nearly as large as before, while the diminution takes place in the food products. Then when drought comes and gives a genuine protection to agriculture by raising the prices of food, a pernicious demand for suspending the duties upon such products is raised, and the agriculturist is remorselessly exposed to foreign competition. Still, the cause of protection is strong in France, and those who remember Bastiat's celebrated petition of the chandlers and lampmakers of Paris for the exclusion of sunlight will be amused to learn that the Budget Committee in the Chamber of Deputies have approved a bounty to the producers of mineral oil from French shale, as well as a larger one to the makers of lamp-oil from colza seed.

The critical phase of the Siamese difficulty is apparently at an end. There may be squabbles about details, and the London and Paris newspapers may continue to snarl at each other for some time, but there no longer seems to be danger of serious trouble, at least for the present. The French have got much of what they wanted, the English have escaped what they most feared, and who cares for the Siamese? The whole incident is of the kind that naturally takes place every now and then between Powers with colonial aspirations; and though a good deal of bad blood has been stirred up, this would gradually disappear, and the relations would be as friendly, or as little unfriendly, as before, if there were no grounds for new incidents of the same sort. Unfortunately, there is plenty of reason to expect fresh disputes between France and England in the near future. Whoever hopes for really good feeling between the two nations must find the outlook most discouraging. Not only is the general and traditional jealousy between them still active, but all over the world their interests collide, often giving rise to questions which, if now latent, may any day become acute.

---

Looking at only the chief ones, we see that in eastern Asia Bangkok will henceforth be a regular battleground of English and French diplomacy, while the efforts to tap and monopolize the trade of southern China will be increasingly vigorous. In Oceania the joint protectorate of the New Hebrides works poorly, and cannot last for ever. In America the situation in Newfoundland is slowly but surely becoming worse; on one side we have admitted hardship, on the other clear treaty rights. In the interior of Africa no attempt has yet been made to divide the Hinterland of the Gold Coast and Dahomey or the whole enormous region between Lake Chad and the Nile; the ambitions of the two claimants hopelessly conflict, and the treaties that have been concluded are interpreted in widely different ways. But it is in and about the Mediterranean that the rivalry is most intense. Great Britain looks askance at Tunis, patronizes the Italians and their fleet, and suspects French designs in Syria. France stirs up the Sultan to protest against the occupation of Egypt, to which the French seem as little likely to get reconciled as the English are to abandon it. All of these questions are difficult; many of them must be settled in some way before long; any one of them can easily become dangerous. Although the chances are greatly in favor of a peaceful solution in each particular case, their number and the repeated irritation which they will provoke justify much anxiety.

---

The complete canvass of the vote cast in the recent elections of Germany leaves the Social Democrats in the lead with about 1,700,000 votes—a gain of some 300,000 over their highest previous record. The Centre party come next, casting in round numbers 1,200,000 votes, a loss of 70,000. Then come the Conservatives with 980,000, a gain of 100,000, and the National Liberals with 960,000, a loss of 200,000. The anti-Semitic vote took on enormous proportions, amounting to 340,000, a gain of 300,000. It is to be hoped that this great vote for a stupid and disgraceful prejudice is largely artificial; indeed, it was reported at the time of the elections that many voters cast their ballots for anti-Semitic candidates mainly as a means of expressing their disgust with their own parties. But we shall expect to see Ahlwardt and Stoecker pointing to the great increase in the vote of their party as their sufficient justification and endorsement. One net result of the whole campaign was still further to break up party strength into fragments, making the task of government more and more one of arranging "deals" among the almost endless political groups. This continued cleavage into smaller party sections is one of the unhealthy political developments of both France and Germany, and is something which England and the United States have happily been saved from.

---

The copyright treaty which was negotiated between France and Brazil in January, 1891, has failed of ratification by the Brazilian Congress. The Brazilian newspapers, with but few exceptions, were against it, alleging various arguments in opposition to it, but scarcely concealing their single substantial argument, which was that it would compel them to give up their almost daily pillaging of French writers. The committee of Congress which brought in a report against ratifying the treaty was franker on this point, saying: "Our journalism, which is the main factor of popular instruction, would be deprived of the inexhaustible source whence it seeks the material necessary to the fulfilment of its civilizing and patriotic mission." This is a "hoight of foine language" to apply to the process of butchering French books to make a Brazilian holiday. The committee, in fact, went beyond the terms of the treaty in hand, to denounce, in general, the practice of negotiating treaties between two countries not equal in power and population. "Treaties as a rule are of advantage only to the strong nations, serving them as a pretext, thanks to the niceties of interpretation which they keep in reserve, to override the most elementary principles of international law, and to subject weak nations to humiliations." This is a curious inversion of the profound theory of international trade cherished by some of our most eminent protectionist minds, that a small country trading with a large one was sure to get rich at the latter's expense.

*THE EXTRA SESSION OF 1837.*

THE American Congress has been convened in extra session ten times since 1789, but none of these meetings on the summons of the President bears so close a resemblance to the one that began in Washington on Monday as the Congress which met on September 4, 1837. Then, as now, it was widespread financial depression which led the Executive to convoke Congress in extra session. In 1837, as in 1893, the President was reluctant to call Congress together at an unusual time; in that year, as in the present, it was only his perception that he must place the responsibility where it ultimately belonged that led to the decision to take the important step. Further, and most instructive of all, the measures which Van Buren urged upon the Twenty-fifth Congress aimed, as those now urged by Cleveland upon the Fifty-third Congress aim, at placing the currency of the country upon a stable basis, and at taking the shortest road to recovery from business stagnation by putting the standard of value beyond suspicion.

Every student of our financial history recognizes the fact that the business crash of 1837 was only the bursting of the huge bubble of inflation and speculation blown up in the previous years. Among the earliest and most vigorous prickings of that bubble was the famous specie circular of Jackson, issued on July 11, 1836, which forbade the receipt of anything but gold and silver in payment for public lands. This turned to the right about, as Benton shows, the bales of paper money which were on the eternal speculative round from the West, millions of dollars in amount, and put a depreciated stamp upon them which never could be rubbed off. Congress passed a bill to repeal, in an indirect fashion, this order, but Jackson put it in his pocket. After the expiration of his term every effort was made to get Van Buren to rescind the order, and the burden of Webster's speech in New York city on the 15th of March, 1837, was the need of putting such a pressure of public opinion upon the new President that he would recall the specie circular. This Van Buren flatly refused to do. He even went further, and ordered that all Treasury dues must be paid in gold or silver. With a firmness and clearheadedness that are his best title to fame, he resisted the wild appeals of New York bankers and business men, who protested that they were "adequate judges of all questions connected with the trade and currency of the country," and stood without wavering for hard money and a national treasury entirely independent of speculative banks.

His message to the Twenty-fifth Congress has passages in it which read as if written for the needs of the present day. "It is our duty," he said, "to provide all the remedies against a depreciated currency which the Constitution enables us to afford." He defined his course in connection with the specie orders as designed to "preserve the public faith." It was left for Congress to enact laws which would give "an effectual remedy to the citizen" against the evils of depreciated currency, which would be "at once equal in all parts of the Union and fully authorized by the Constitution." It was Van Buren's resolute advocacy of sound money in 1837, and Buchanan's imitation of his example in 1857, which settled the policy of the Democratic party for a generation, and which make its return in later years to the vomit of depreciated currency one of the marvels of political history.

It is certainly a curious thing to notice how Van Buren was denounced for favoring honest money, just as his latest successor has been. The Whigs took up the cry that the Government wished to set itself up above the people. The money of the people was not good enough for it. "Its aristocratic fingers shou'd touch only gold and silver [silver was then worth more than gold], even if in consequence the money of the people should become worthless scraps of paper." Fearful pictures were drawn of the ruin not only to prosperity but to liberty which would come from discriminating against paper. Even Clay stooped to such a characterization as this: "A Government, an official corps—the servants of the people—glittering in gold; and the people themselves, their masters, buried in ruin and surrounded with rags." But, for a true analogue of the modern shrieks from Colorado, one must turn to the speech delivered in the House by Naylor of Pennsylvania. He is evidently the oratorical and financial model which Gov. Waite has been studying. Said he:

> "My heart shudders, my blood curdles at their recommendations. In every country under heaven where such a system prevails, the people are trampled on and plundered of their rights; ground down to the very dust by the awful despotism of their rulers; bought and sold like cattle. . . . Where am I? Is it possible that here, in this mighty capital of the only free republic on earth, with the deeds, etc., . . . is it possible that we can turn back and affectionately embrace—hug to our bosoms, as jewels above all price—the barbarous institutions of the dark and benighted despotisms of the Old World?"

These lamentable cries sound silly enough to day, when we remember that the legislative proposals against which they were directed shortly became law, and worked so well that all parties acquiesced in them. The independent Treasury, with its operations conducted on a specie basis, soon ceased entirely to be a political issue. So will it be with the gold standard. After it is affirmatively established, there will be no more thought of going back to silver, or of endeavoring to ride silver and gold together, two horses going at different rates of speed in opposite directions, than there will be of going back to the mad banking and inflation and speculation of 1837.

*THE "CURRENCY FAMINE."*

WHATEVER diversities of opinion may be detected in the platforms of different parties and factions, no one can fail to be struck with the unanimity with which elasticity is desired for our currency. Upon this point the "silver lunatic" and the "gold-bug," the Populist and the capitalist are agreed, and it is not until the question how to secure this desirable quality is reached that hostile views are developed. These views vary much, but they may be arranged in two classes. In one class belong all theories that imply that elasticity is to be imparted to currency by legislation; in the other belong those that assume that elasticity will come of itself if the Legislature will not interfere.

The present situation affords much support to the contention that the ingenuity of business men is sufficient to devise ways and means for the transaction of business. The office of a currency is to effect exchanges of goods and services, although it must have a close connection with a standard of value; and what is meant by elasticity in a currency is simply the existence of such a quantity of currency so distributed as to enable exchanges to take place without much friction. Now, it is beyond question that by far the most of our exchanges are effected by a kind of currency the amount of which is wholly independent of legislation, consisting of drafts and checks and promissory notes. The precise proportion is immaterial; it may be nine-tenths, or nineteen-twentieths, or ninety-nine one-hundredths. Whatever its amount, Congress does not fix it, and could not fix it if it would. It will expand and contract in accordance with the needs of trade, and will be regulated solely by the extent to which men trust one another.

The extent to which this mutual trust prevails, however, can be materially affected by Congress, as recent events have shown. Exchanges of goods can be made by using credits, so long as no one doubts that the credits are redeemable in the standard of value. While this confidence exists it may even be possible, as was said to have happened in the case of the Bank of Amsterdam, for bank-notes to circulate when the redemption fund has disappeared. But when the Silver Act came fairly into operation, people began to doubt whether credits could be redeemed in the existing standard of value. As soon as they doubted, credits were contracted, business concerns and banks failed, thus contracting credits still more, and in order to effect the exchanges of the country it was necessary to resort to the coin-and-note currency. The less credit was used the more paper money had to be used, and as this was at the same time hoarded by the timid and held on to tenaciously by the banks, it became and still is relatively scarce. Some frightened people have locked it up, probably, in large quantities, and some cautious people feel more comfortable for having rather more of it than usual in their pocketbooks. No inconsiderable quantity has been put away by people in mode-

rate circumstances to pay their expenses to Chicago. What is, perhaps, most important, in the case of small notes, is the Western demand. Where many banks have failed, it is obvious that money must be used to do what checks did before, and the solvent banks are, of course, obliged to increase their currency reserves, especially as the time for moving the crops approaches.

Any unusual demand for any commodity desired of man, however, as it implies that an unusual profit is to be made by supplying it, stimulates human ingenuity in a hundred ways to furnish the needed supply. One device is the issue of Clearing-house certificates by the banks, and extremely creditable this device is to the intelligence and public spirit of bankers. These certificates have no legal standing as money, but they nevertheless economize the use of money. Another method now actively employed is the practical exchange of Government bonds for national bank-notes, the banks procuring these bonds by agreement with the savings banks or in other ways, and depositing them with the Treasury as security for enlarged issues. In this case it may be said that elasticity has been provided by legislation, but the point that we would make is, that the emergency brings out undeveloped possibilities not contemplated when legislation is adopted Devices of less consequence are brought out by such proposals as that made in Colorado that the State receive silver bullion in satisfaction of taxes, by the offers of enterprising shopkeepers to accept the books of savings-bank depositors in payment for goods, by the policy of the Treasury in accepting less security for Government deposits, and by the increased use of checks in making payments which would ordinarily be made in cash. Some of the large mills in New England, it is reported, are paying their hands in this way, perhaps somewhat to the inconvenience of workmen and the tradespeople with whom they deal, but obviously with an immense saving in the use of money.

But the most natural and most effective method of increasing money is simply buying it. There is no difficulty about getting all the gold we want if we are willing to pay for it. There is a good deal of rather occult ratiocination concerning what the Bank of England will permit to be done about shipping gold to this country, but there is one thing which that Bank always does, and that is, pay a gold sovereign for every pound note that is presented at its counter. Sovereigns are somewhat less valuable for our purposes than our own coins, for which the Bank may therefore charge a corresponding premium. But any one who can get English Bank notes can get gold, and any one who has wheat or cotton or pork to sell can get these notes for it if he wants them. Of course he must pay the price; but if we need gold very much here, the price is worth paying. No "currency famine," therefore, can long endure. If we cannot get notes, we can get gold, and gold is found by other civilized nations to answer the purposes which we have been brought up to think can be answered only by notes. Gold is now coming freely from other countries, and so long as it is needed it will continue to come. There is an abundant supply of gold in the world to impart to the currency of any people all the elasticity which may be required by any financial stringency or "famine."

## *ANOTHER SILVER HUMBUG EXPLODED*

DURING the past fifteen years we have been frequently told by the silverites that the Indian wheat-growers and other producers were gaining an advantage over us in the export trade by reason of the decline in silver. The theory was that the shipper of Indian produce to England, receiving his pay in gold, was enabled to buy nearly twice as many rupees, or the silver bullion of which the rupees were composed, as formerly; and that since prices of commodities had not advanced in the interior of India, he could buy nearly twice as much wheat and other exportable articles with a given amount of gold. Hence the great advantage of the Indian producer and exporter. This has been the strong point of Mr. Moreton Frewen's essays in finance. It was adopted and has been repeated by no less an authority than the *Financial Chronicle* within a month. The *Chronicle* is a little surprised that India should yield this vantage ground by demonetizing silver, but it congratulates the American farmer on his deliverance from such unfair and depressing competition.

If this were the true state of things in India, then, inasmuch as there is nothing easier for a country to do than to lower its standard of value, the wonder would be that other nations, observing the advantage that India derived from the depreciation of silver, did not hit upon the same expedient. It ought also to be a matter of astonishment that our neighbor Mexico, which has had the same advantage as India in this particular, did not find her export trade equally improved. Russia, too, has had the silver standard during the greater part of the time under consideration, but so far has not observed any increase of her exports which she could ascribe to that circumstance.

Now comes the report of the Indian Currency Committee and solves the mystery by telling us that there has been no increase of Indian exports in consequence of the decline of silver, but on the contrary that there has been a relative decrease of exports during the periods when silver was most rapidly declining, and a relative increase while it was steady in value. This is exactly what science would have taught us to expect. Science tells us that trade is most active and prosperous when the standard of value is most stable. This has been the experience of India during the period in question. We quote from the report (section 27):

"It is said that the tendency of a falling exchange is to stimulate exports; that, inasmuch as more silver, *i. e.*, a higher silver price, is received in respect of the same gold price, while wages and the other factors in the cost of production do not increase in the same proportion, production becomes more profitable, and is therefore stimulated. Assuming this to be true, the effect of each successive fall must be transitory, and can continue only until circumstances have brought about the inevitable adjustment. Although one may be inclined, regarding the matter theoretically, to accept the proposition that the suggested stimulus would be the result of a falling exchange, an examination of the statistics of exported produce does not appear to afford any substantial foundation for the view that in practice this stimulus, assuming it to have existed, has had any prevailing effect on the course of trade; on the contrary, the progress of the export trade has been less with a rapidly falling than with a steady exchange.

"For example, from 1871-72 to 1876-77 the gold value of the rupee fell constantly from 23.126d. to 20.508d., or about 11¼ per cent.; the exports of merchandise were actually less in the latter year than in the former, although in 1876-77 their rupee value exceeded by about 10 per cent. that of the exports of either 1870-71 or 1872-73. From 1878-79 to 1884-85 exchange was fairly steady, the average rates varying only between 19.961d. and 19.308d. per rupee, or about 3¼ per cent.; and during those six years the exports rose by no less than 36½ per cent. Again, between 1884-85 and 1888-89 the fall of the rupee was very rapid, from 19.308d. to 16.379d., or over 15 per cent., and the exports increased during these four years by 16½ per cent.; but in the single year 1889-90, when there was a slight improvement in the exchange, the exports increased by more than 6½ per cent.

"It is said, too, that, while a falling exchange tends to stimulate exports, there is a corresponding tendency to check imports. Here, again, statistics do not seem to show that diminished imports have been coincident with the lower exchange. Taking the same periods as before, from 1871-72 to 1876-77, when exchange fell 11¼ per cent., imports of merchandise into India increased by 17 per cent.; from 1878-79 to 1884-85, when exchange was steady, the increase of imports exceeded 47 per cent.; between 1884-85 and 1888-89, when the rupee fell about 15 per cent., the imports were augmented by nearly 25 per cent.; while in 1889-90, when exchange slightly rose, the imports were rather less than in the previous year."

The question may be asked why the results did not tally with the theory. If silver prices have not risen in the interior of India, why has not the exporter obtained the advantage? The answer is much the same as the answer to the question asked by Benjamin Franklin, Why does not a bucket of water with a fish in it weigh more than the same bucket of water without the fish? The answer is that it does weigh more by exactly the weight of the fish. Prices in the interior of India have risen. They had risen to the full height required by the decline of silver as long ago as 1887. Since that time they have risen, not, perhaps, *pari passu* with the decline of silver, but in some near proportion thereto.

India is traversed by railways in many directions, and she has among her population some of the shrewdest merchants in the world. The Parsee trader is unsurpassed in activity of body and keenness of mind. No Yankee, no Scotchman, no Greek, no Hebrew, is more alert to make a profit. To suppose that the prices of commodities in the interior of India could remain for years unaffected by the decline of silver

while such men as these were moving about the country and bidding against each other for bargains, betrays very little appreciation of the common principles of trade. It is true in India, as elsewhere, that wages do not rise in proportion to the rise in the prices of commodities. The movement is slower.

### *CIVIL SERVICE AND HOME RULE.*

It will be a useful service to the cause of civil-service reform if some of its friends will have reprinted and circulated in convenient form some portions of the debate in the Committee of the Whole of the House of Commons on clause 28 of the Home-Rule Bill. This clause contains various provisions intended to safeguard the interests of those members of the Irish civil service likely to be adversely affected by the altered conditions which the grant of home rule will involve. There is much in that discussion to remove the doubts of the well-meaning people whose faith in civil-service reform is still shaken by the stock arguments of the spoils politicians against the merit system. The objection which has more influence than any other, and therefore the one the spoilsmen never tire of repeating, is that good service and loyal coöperation cannot be expected from subordinate civil servants who do not belong to the political party of the President and his Cabinet. A great many people who do not want any offices either for themselves or their friends, and who view the scramble for office which for the last sixty-four years has accompanied every change in the Presidency, are more or less perplexed by the frequent repetition of this argument. Those who have had any opportunity to observe the practical workings of the public service know that if the politics of the subordinates have any effect at all on their efficiency, it is probable that the influence is precisely the reverse of that the spoilsmen so persistently assert, and that civil servants are found most serviceable when they do not belong to the party in power, because in such case they can rely on their efficiency alone for retention in office.

If, however, there is any place and any circumstance which would seem to make it inherently probable that the opinions of the office-holders would induce them to embarrass the administration in power, that place is Ireland, and the circumstances are those which have existed since Mr. Gladstone's Administration took office. Whatever may have been the original political opinions of the members of the Irish civil service at the time when they won their places by their success in the competitive examinations, their duties as part of the "Castle" system of alien rule in Ireland necessarily put the great majority of them in a position of active or passive opposition to the Irish Nationalists. The success of Mr. Gladstone's Government involves the triumph of their foes, and will end by placing in control over them men for whom they have been educated to feel nothing but hatred and contempt, and from whom the service of which they were a part has received little but abuse, not always merited, and never perhaps free from the exaggeration common to political attacks, and not less frequent in Ireland than in other parts of the world. If they entertain fears for their future in the event of the establishment of an Irish Parliament, their apprehensions are not unnatural. Have they, then, used their position to thwart that policy of Mr. Morley's which they so feared and disliked? He has not found the task of governing Ireland an easy one, and if some of the difficulties with which he had to contend could be laid at the door of the Unionists who so greatly predominate in the Irish civil service, there is no reason why he should not say so. Yet we find him telling the Commons: "I have received from all members of that service with whom I have had dealings treatment of the utmost consideration, though to many of them the policy with which I was associated was not altogether welcome. They have shown a Government with which they are only partially in sympathy the same loyalty and fidelity which they have shown to other governments."

Those persons and newspapers who, friendly themselves to civil-service reform, are inclined to feel that the leaders in the reform movement exaggerate the importance of the establishment and maintenance in the service of a regular system of promotion for merit, and who think that the recent tampering in some of the Washington departments with the rules governing promotions is of no special public interest, should ponder the emphatic declaration of Mr. Gladstone, made in the course of this same debate, that the "principle of promotion in the civil service is vital to the welfare of that service." Some very good reformers, who are inclined to believe that such papers as the Indianapolis *Civil Service Chronicle* go too far in their denunciation of the fundamental immorality of the whole wretched spoils system and of each and every particular spoils-mongering job, need only to read that debate through to perceive how the bare suggestion of a return to such practices as unhappily so generally prevail here, and as were formerly no less prevalent in the United Kingdom, strike people who have not had their moral perception blunted by long and close acquaintance with such methods. Every speaker, whether Liberal, Tory, Unionist, Nationalist, Parnellite, or Radical, evidently felt that to dismiss any faithful public servant because his politics did not happen to be the same as those of his superiors, would be an outrage on justice and decency.

Mr. Gladstone, in commenting upon the Unionist fears that the Irish Parliament would inaugurate that clean sweep which Mr. Wanamaker under the last Administration, like Mr. Logan Carlisle under this, apparently considered a necessary and laudable incident of every change of Federal Administration, is reported in the *Times* as follows: "He had never meant to say that there might not be persons whom a new Irish Government would desire to dismiss, but he thought he had limited himself properly when he suggested that they would probably be confined to *two or three persons*. He could not ascribe to the new Irish Government such *fatuity, such gross and wicked injustice*, as the intention, or the possibility of the intention, of its rushing into such a course of wholesale dismissal as had been suggested." The italics are ours.

Civil-service reformers in this country can afford to ignore the charge of spoilsmen that their theories are impracticable, when those theories in their utmost application are thus endorsed by the greatest living practical politician as well as statesman of the English-speaking race. Mr. Gladstone's words are all the more weighty because, for many years after he entered political life, the spoils system still flourished as rankly in England as it does now in America. In reading the debate of which his speech formed a part, it is impossible not to be reminded of that other debate a century ago, as to where, under the Federal Constitution, the power of removal from office is lodged; for it was in the course of that early discussion that James Madison declared that a President who removed a faithful official in order to make room for a political friend of his own, would be "impeachable by the House before the Senate for such an act of maladministration; for I contend that the wanton removal of a meritorious officer would subject him to impeachment and removal from his high trust." While Americans must regret that during the hundred years which have since elapsed our country has fallen so far away from Madison's standard, they can take courage in the reflection that the Prime Minister of a country in which, when Madison spoke, the misuse of patronage was probably worse than it ever has been here, can now say that for his own political friends, under circumstances of extreme provocation, to turn out of office more than an inappreciable percentage of the members of a civil service almost unanimously opposed to them in political belief, would be an act of "fatuity" and of "gross and wicked injustice."

## THE COLUMBIAN EXPOSITION.—II.

### FINE ARTS: THE UNITED STATES SECTION.

CHICAGO, July, 1893.

The great progress made in the art of painting in the United States since 1876 is mainly due to the work accomplished by the Society of American Artists, which was founded in 1877 and includes in its membership the best men who have come from their studies abroad since that time, as well as many of those who

have taken up a permanent residence in France, England, and other European countries; and the excellence of the American exhibition of paintings at Chicago, so far as the work shown by the artists who live at home is concerned, at least, is the direct outcome of the efforts of the younger men in New York and Boston to express, with technical methods of their own, founded on the principles taught in the Paris schools, what they have seen and felt in their native surroundings. The American artists who reside abroad have sent to this exhibition some of their latest and best pictures, and these, mingled with the canvases by the men at home, not hung in separate rooms, as was the case at Paris in 1889, constitute a large part of the best work in the galleries of the American section.

Mr. John S. Sargent, who, although seven of the eight portraits he contributes were painted in the United States, may most properly be included in the foreign contingent, and Mr. Winslow Homer, who affiliates with no particular group in the home school, but is a law unto himself in technical methods and individuality of expression, carry off the honors of the exhibition. The contrast between two great painters could scarcely be more marked. Mr. Sargent, born in Florence, beginning his art studies at an early age under Carolus-Duran and in the École des Beaux-Arts in Paris, is an artist who had been thoroughly trained by academic courses before attempting to paint a picture at all, and who, as his facility increased and his artistic perception grew more personal, developed a style that is irreproachable from the technical standpoint, and marvellous in directness, simplicity, and harmony of form and color. Mr. Homer, with the slightest academical training, but endowed with a temperament that led him to see years ago what other men about him failed to see, and to persevere in his attempts to express what he felt were the great truths in nature, has progressed steadily from a tentative, somewhat uncouth, but always forcible manner in his earliest pictures, to a masterly breadth of treatment and intensely personal style that give to his later work a surpassing interest.

Of all Mr. Sargent's portraits here, the two finest are undoubtedly the "Mother and Child," a large canvas with full-length figures of a lady in black and a boy in a white sailor suit and straw hat, and the bust portrait of Mrs. Inches of Boston in a ball-gown of red velvet. The first is remarkable for its beautiful and dignified composition, for the beauty of expression in the faces of the mother and her son, the splendid swing of the brush which envelopes every part of the picture in a harmonious ensemble, and the fine general aspect of the work, with its sober color scheme of black and white. It was first exhibited at one of the autumn exhibitions of the Academy in New York three or four years ago; and while I have not seen all of Mr. Sargent's portraits since that time, I doubt whether he has done anything any better than this. Certainly no other living painter has painted a portrait any finer, in a technical sense, and none has excelled it in general quality of style and that grand air that so distinguishes the work of the masters. The portrait of Mrs. Inches, also painted some five years ago and first shown in New York, gains in beauty of tone when seen again; and, for frank, simple painting, life-like expression, and luminousness, remains one of the best portraits from the hand of any artist of our time. These two pictures are in themselves quite sufficient to place Mr. Sargent in the highest rank of modern painters, but in other works here there is much to admire and commend. The "Portrait" lent by Augustus St. Gaudens, with the seated figure of his little son and his mother seen in half-light behind him, possesses some of the qualities that make the "Mother and Child" so admirable. The large canvas, "Portrait" (No. 877), of a lady in a black satin gown, is notable for its firm, decisive modelling and the brilliancy of the flesh tones. "Portrait" (No. 882) is a picture of a young woman, in which the white drapery of the gown is delightfully painted, and "Portrait" (No. 883) is an excellent rendering of childish character in the picture of a little boy. "Portrait" (No. 880), another picture of a young woman in a white gown, is distinctly inferior to No. 882, and indeed not at all equal to Mr. Sargent's best work, and the "Portrait of Ellen Terry as Lady Macbeth" is a *tour de force* in carrying out a color scheme of blue with the artificial lighting of the stage lamps on the face and arms of the erect figure holding a crown over her head.

The subjects of Mr. Homer's pictures are various, ranging from the fantastic "Dressing for the Carnival," a party of negroes in bright colored garments—one of his earlier works and remarkable for depth of tone and unity of effect, in spite of absolute falsity in the rendering of values—to such scenes of sailor life and coast views as "Eight Bells," "Sailors Take Warning," "Lost on the Grand Banks," and "Coast in Winter." There are fifteen pictures in all, and four of them present all that is best in Mr. Homer's artistic achievement. They are "Herring Fishing," which shows two men in a boat pulling a net full of fish over the side; "Lost on the Grand Banks," in which two men are seen in a fishing dory riding the long swell-like waves of that part of the Atlantic, with all about them enveloped in the chilly, misty atmosphere; "The Fog Warning," with a man in a rowboat at sea enveloped, as in "Lost on the Grand Banks," in the gray fog; and "Eight Bells," in which two sailors in oilskins, standing by the bulwarks of a coasting vessel on a stormy day, are taking the noon-day observation at the moment when a break in the sky lets the sun shine full on the glistening decks and cordage, and lights up the white crests of the waves—all in a cold raw glare against the rolling black clouds of the sky. This brief description will suffice to show that Mr. Homer, like Millet and other great artists, finds what he most wishes to express in the simplest of subjects. There is no literary sentiment about his pictures, and no trace of extraneous motives in his presentation of the homely poetry of the life he portrays. The whole charm and power of the work lies in the artist's interpretation of what he has seen and imagined. Its force comes entirely from his unyielding individuality in saying what he feels in his own way.

There is a Whistler "cult" in Paris at the present time, and it is the fashion to accept all that he paints or has painted as the last word in what is worth doing in art. Mr. Whistler is without doubt one of the cleverest of living painters, and he has been a factor of very considerable importance in the development of the painting of to-day, especially in London, where he lived for years, pursuing his own ideals, surrounded by all that all is most commonplace and bourgeois in art. The great merit of his work has been fully recognized in Paris of late, and among the artists in New York there is the deepest admiration for his achievements. It is the knowledge of these facts that makes the exhibition of six of his canvases at Chicago on the whole a disappointment. One of them, "The Princess of the Land of Porcelain," was painted, by the way, as long ago as 1864, but this is nothing to its disadvantage except that in an exhibition thirty years afterwards we might reasonably expect to see more recent work. This picture, however, is not one to call for much comment. It is a pale, unsubstantial figure of a woman, in a Japanese gown apparently, and an arrangement of various stuffs and objects as a setting, not remarkable for any charm of color or style. "Portrait" (No. 1104) is the merest *ébauche* of the figure of a boy, lacking in form, and with red patches of color on his cheeks that by no means keep their places; and "The Fur Jacket" (No. 1101) is not much more than an *ébauche*, but, unlike the portrait of a boy, it is a charming conception, delightfully indicated and of real beauty of tone. The "Nocturne, Valparaiso," and the "Harmony in Blue and Silver," again, are suggestions, very pretty suggestions; but if we are to try to find Mr. Whistler's place in modern art, we ought to have more than that. Otherwise we must conclude that he is content with suggestions in painting, and such a conclusion is at variance with the judgment of his work in Paris, where completeness is counted as one of the chief merits in a work of art. Or the doctrine that a clever suggestion is worth as much as a completed work, a doctrine that seems to be finding not a few disciples in the New York exhibitions of late, may have invaded even Paris; but this I am much inclined to doubt. The sixth of Mr. Whistler's pictures is the well-known "The Lady with the Yellow Buskin," and here, fortunately, we have an example to which the reproach of vagueness and insincerity does not apply. The pose of the figure, the arrangement, tone, and general treatment are admirable. It is suavely painted, sober and reserved in its color scheme, and simplicity itself. The only question that arises in looking at it that is not fully met by the merit of the work is whether it was painted as a portrait or not—and this question has more to do with the work of the men who have been influenced by Mr. Whistler's methods than with this picture. The title does not allege a portrait, and in any case it is a charming picture, but its chief charm is in its treatment as a color harmony, an arrangement of blacks and grays and browns and the yellow note; the study of character has not concerned the artist, except, of course, in so far as it is expressed in the turn of the figure and the upper half of the face looking over the shoulder. But some of our painters have seemed to think that something like the way Mr. Whistler has treated this canvas is the way to paint a portrait. It is not the way, and there is a lesson to be learned here.

There are in the galleries six works by Alexander Harrison. The excellent picture of two children in a boat on a smooth-flowing river at sunset, "The Amateurs," which, together with "In Arcadia," formed part of his exhibition at Paris in 1889 and have both been seen in New York; a charming wood interior of yellowish tone, "Misty Morning"; "Marine," and "Twilight"—are five of them; and a new picture, "The Bathers," completes the list. Mr. Harrison is a painter of great ability, a hard-working searcher after truth, and an artist whose temperament is poetic and refined. None of his works in which he has treated the nude figure shows his sympathetic qualities more completely or his technical force more decisively than "In Arcadia." While the figures are not so well drawn as those in "The Bathers," "In Arcadia" quite surpasses the newer picture in the general aspect of truth to nature. It also possesses more depth and quality

of color, and is *gras* and painted with a full brush, while the other, especially in the water, is dry and thin. But I mean this in a comparative sense only. If "In Arcadia" is admirable in almost every respect, "The Bathers" is only less remarkable than some of Mr. Harrison's other work for truthful, conscientious rendering of a most difficult motive. The artistic theorems which he has undertaken to expound in these two pictures are full of the most troublesome questions of detail. The painter has brought to his work a knowledge gained by long observation and patient study of nature. It is not too much to say that very few modern painters who have attempted to paint the nude figure out of doors have succeeded half so well as he, and the conception of his subjects, the arrangement of his compositions, and the execution of the work as it is seen in these two canvases, bear a thoroughly individual stamp. It is especially important, too, to note that all of Mr. Harrison's pictures are distinguished by genuine beauty and veracity of color. WILLIAM A. COFFIN.

## AN ARCHITECTURAL DISCOVERY IN CAMBRIDGE.

LONDON, July 26, 1893.

NOWADAYS, in England, if old buildings are touched at all, it is too often with a view to their restoration—a word which in this case is a synonym for destruction. Therefore, when deliberate effort is made, not to give a new version of old work, but to free that old work from every modern encroachment, the event is one of no small interest to all who are concerned with the history of the past, of no small importance to all who have made a study of architecture. And this is exactly what is happening just now at Jesus College, Cambridge.

The College, it will be remembered, was not an independent foundation, but sprang from the old Nunnery of St. Radegunde. The chief portion of the earlier buildings still remaining is the chapel. Its attraction to the modern tourist, no doubt, is found in the Burne-Jones windows, which, it may be noted in passing, are quite the finest examples of stained glass that artist has yet given us. But, to the architect and archæologist, it is the church itself (so different from the usual college chapel), with its nave and transepts and its beautiful early English piers and arches and arcades. Of course, King's stands alone as the great architectural marvel of Cambridge; but Jesus Chapel, in its own way, is only less fine if at first glance it must seem less imposing, while in historical associations and significance it is supreme. From the records left by the old nuns, and still preserved by the college, the monastic history of mediæval England might well be compiled. But, beyond the chapel, hitherto there have been few visible traces of the original nunnery, except here in a window and there in a hallway. Some forty or fifty years ago, when masons were employed in putting a new coat of plaster on the inner wall of the cloister, one of the Fellows chanced to see what he fancied was the spring of an arch partially concealed in the rough stone work. But the matter then troubled him little. The masons went on with their plastering, and nothing was heard of the possible discovery. Of late years, however, it appears that the same Fellow, now a very old man and no longer a resident in college, has been haunted by the memory of what he had seen—or thought he had seen—so many years earlier; and, at his earnest suggestion, due investigation was begun. At first the masons set to work upon the wall close to the door leading into the chapel, and here absolutely nothing was found. But, still persisting, they next pulled off the plaster at another point a little further from the chapel entrance; and now the Fellow had the satisfaction of knowing that his memory had not played him false, and that he had rendered a true service to his college.

For what was found has proved one of the most important architectural discoveries made in England for many years. The arch, which had been just indicated in the stone work, has turned out to be but one of three, and these, when I was at Cambridge the other day, had been almost entirely set free from the wall during long centuries gradually built up about them. They belong to the purest period of the thirteenth century, good authorities affirming that they date back to 1230, or thereabouts. The reasons for this belief are the capitals, which still show some suggestion of Norman influence, and the beautiful detached shafts, which later architects never introduced, having learned that greater strength, if less charm, was secured by connecting them to the central shaft with bands. The mouldings and the carved foliage of the capitals are in the most wonderful state of preservation, and the stone is of almost dazzling whiteness—a whiteness to be attributed, perhaps, partly to whitewash and destined not long to survive exposure to the foggy English atmosphere and the smoke of Cambridge. Thanks to their chance burial, the arches have escaped the restorer; indeed, they have been brought to light at the best moment, now that a few men, at least, begin to understand the folly of tampering with the none too many relics and monuments of the past still left. Not so far removed is the time when the old *piscina* was discovered in the chapel; then the one idea was to restore it; now college dignitaries are of another way of thinking. The arches form the doorway and near windows of the nuns' chapter-house. Its floor evidently was much below the level of the present cloister, but the necessary excavations have been made to the very base of the central door, so as to show the proportions of shafts and arches in their original grace and purity. Nor will the floor be filled in again. The cloister here is, in term time, one of the very busy thoroughfares of Jesus; but for a little space it will be narrowed, in order that the effect of this beautiful bit of the old monastic building may be seen in all its loveliness and perfection. In the course of digging, the workmen came upon a fine stone coffin with sculptured top—the coffin of an early prioress—and this probably will be left lying exactly where it was found, turned to east and west, even though a part of it must remain hidden under so much of the pavement as utility refuses to sacrifice to archæology.

This discovery rightly has aroused great interest in Cambridge. Architectural innovations, not merely for years, but for centuries, have consisted either in pulling down old buildings completely, or else in restoring them out of all recognition. To destroy comparatively new work so as to make room for the old is indeed an event worth chronicling in the history of the University. N. N.

## IN THE BALEARIC ISLES.—IV.

VALLDEMOSA, June, 1893.

THE road from Palma to the mountain village of Valldemosa is pleasantly diversified, passing through a smiling plain, rich in almond orchards and in fields of waving wheat—said to be the finest in the Mediterranean; the generous earth supporting both grain and fruit-bearing trees in the same field. All along the way are stone aqueducts, originating with the Moors, into which the tardy water is coaxed; and now and then the groaning of a huge wheel, laden with earthen jars, and turned by a blindfolded mule, discovers the means by which the fertilizing streams are turned into the carefully prepared channels of distribution. Wayside washing-wells are provided at convenient points, where the women, arriving from a distance mounted on donkeys, comfortably wash and gossip together. There are few houses, an occasional *venta*, or poor inn, or a small habitation by the roadside, with its dial on the wall marking the sunny hours, or a massively built country house, standing in its walled garden guarded by stately palm and eucalyptus trees. Olives take the place of almonds as we approach the narrow gorge that leads into the heart of the mountains—olives of generous girth, hoary with the weight of a thousand fruitful years, and twisted into shapes so fantastic that the miles of orchards through which we pass seem a vast field of living forms suddenly arrested in the midst of the wildest revels. The peasants have a veneration for these weird old trees, the more ignorant believing them to have been set out at the beginning of the world. It is said that only at Corfu are to be seen olives of such antiquity.

As we ascend, the road narrows and is overhung by precipitous crags from whose crevices hang the long pennants and bright-yellow flowers of the broom, along with lusty olives that seem to find their nourishment out of the very rock; while the dry bed of the winter stream along which the road winds is a tangle of briar, honeysuckle, and white cistus. A last backward look upon the blue gleam of Palma bay, and the wild ravine opens into a valley of delight, encircled by rugged mountains, where the deep-green foliage of fig and citron, with gleams of golden fruit, red-ripe cherries, and the glowing bloom of pomegranate sweep in waves of rich color up the long slopes, meeting the silvery gray of the olive, whose soft bloom blends far up the mountain sides with the sombre colors of pine and ilex. On a plateau far above the valley rise the towers and gray walls of the old Cartuja, or Monastery, a mass of blossoming roses with hanging gardens along its whole façade. Two or three palms add a touch of dignity to all this luxuriance, while the mountains lift their heads high above monastery and valley. The picturesque village of Valldemosa, with its old church flanked by tall cypresses, straggles off to the right of the monastery. There are, perhaps, as charming valleys as Vall-de-Musa, and certainly mountains of loftier height; but in the long, winding way upward the combination of tropic and temperate vegetation, the sharp, broken outlines of the mountains, clothed here with olives, there with dark evergreens, again disclosing sheer and naked precipices—the old Cartuja in its wreath of roses—the silver line of the sea shining beyond the ravine, and, over all, the constant azure of the sky—present an *ensemble* hardly to be equalled.

Our interest in the Cartuja was quickened by the fact that George Sand, with her children and Chopin, had spent a winter here. A winter of violent storms, and consequent hardships, it proved to be, for the old monastery was a poor asylum in severe weather; and the lurking disease of a pulmonary nature, which had been the cause of Chopin's coming to Mal-

lorca, assumed an acute form which threatened his life. But his genius felt the quickening power of his strange surroundings. The old cloisters, the long, echoing corridor, which his fancy peopled with the phantoms of dead monks when the early winter twilight fell, the mysterious harmonies borne to him on the wings of the wind and through tempests of rain, inspired those masterpieces to which he gave the modest name of Preludes. The piano which he used, and which had been sent from France, is still preserved at Palma, and is in the possession of the consul for the United States.

To the more vigorous nature of George Sand the crisp air of the mountains, even the battling with the winter storms, gave a keen zest to life and furnished mental stimulation. The story of 'Spiridion,' begun at Nohant, found a more fitting setting in this abandoned habitation of the monks, and was carried to completion "amid the groanings of the north wind in the ruined cloisters." Her unhappy experiences with the people were due partly to a superstitious fear of Chopin's illness, which does not seem to have been confined to the ignorant peasantry, and partly to the very circumstances of her life here. That she should resent and exaggerate the treatment she received was not unnatural, or that her bitter strictures, which originally appeared in the *Revue des Deux Mondes*, should meet with more than one bitter response. But, making due allowance for her provocations, it is quite certain that she was unjust in her general estimate of the people of Mallorca.

We were loath to pass by Valldemosa, but the Hospederia where we were to find shelter for a few days on our way to the famous orange groves of Soller lay beyond, and the drive of a couple of miles under the shadow of the mountains, with a sea of shifting hues more than a thousand feet below us, was all too quickly accomplished. The Hospederia, a plain stone structure, erected by the Austrian Archduke Luis Salvador within his domain of Miramar, stands on the highroad between Valldemosa and Soller, its generous doors open to all wayfarers. Each traveller brings his own food, but lodging and service are free. The old woman in charge, a characteristic type of the island peasant woman—dark-skinned, with strongly marked features, and independent bearing—receives all comers with equal simplicity, showing favor to none. Happening to be first on the field, we had our choice of dormitories, and, a cloth being laid upon one of the long deal tables in the refectory, the contents of our hamper were served upon native ware of bright, crude coloring. Several parties arrived shortly after—priests, soldiers, peasants, and pleasure-seekers from Palma. Quaint lamps were lighted, of classic design, burning olive oil, and giving a clear, soft light, which left the corners of the refectory in deep shadow, but, concentrated upon a group of peasants about the table, brought out their bronzed features with the vividness of one of Rembrandt's canvases.

Our morning walk took us along a romantic path to the *casa* of Miramar, where there is a collection of fine specimens of the antique products of Mallorca—richly carved chests, bedsteads with tall, spirally fluted posts and openwork headpieces; massive chairs, etc., and the famous majolica ware, the production of which is now one of the lost arts. From a group of people about to enter carriages waiting at the entrance, a tall, athletic figure with a bronzed and pleasant countenance stepped forward as we approached, and asked if we were strangers. It was the Archduke himself, who invited us in and made us welcome, and, after some conversation, kindly planned an excursion to the highest mountain peak above Miramar. This prince, with manners as frank and simple as those of a country gentleman, has been an extensive traveller, is the author of several books of travel, illustrated from his own drawings, and of an exhaustive work on the Balearic Islands. He is a close observer of men and things, and a man of much originality of thought and expression. An enthusiastic lover of nature, he deplores the reckless destruction of the forests, and his hearing the sound of the axe one morning from an adjacent tract of land led to his purchasing the land. Thereupon, so goes the story, vigorous wood-chopping became an all too frequent sound in the clear air of Miramar, with the result that his estates grew far beyond his original intention, until they embrace a tract of sea coast, mountain, and valley about six by seven miles in extent, where the nightingale now sings undisturbed in the thick groves. Everywhere a fine artistic sense has been employed not only to preserve nature's beauties, but to make them accessible. Winding paths lead through arbors of pine, ilex, and carob, along the dizzy edges of precipices, with inviting resting-places under huge, overhanging boulders, to spacious miradors, or outlooks, often built upon the platform of some steep cliff, where the spectator can enjoy a succession of beautiful pictures with comfort and safety.

A good bridle-path leads up the mountain, and the noble view from the summit embraces the plain of Palma—its great cathedral looming up grandly—the fertile valleys of Soller and Valldemosa, and the sea both north and south, with the island of Cabrera lying as it were afloat on its surface; while the orchards and vineyards, the long, wooded hill-slopes, the rocky, broken coast line, and the naked, sea-fretted promontories of Miramar lie at our feet. Another route downward brought us to the interesting and extensive old mansion of Son Moragues, which the Archduke, with generous thoughtfulness, is fitting up for a "Museo Balear" of the industrial arts. This estate is also fair to see and under fine cultivation; but what most impressed us was the absence of servility on the part of the peasants towards the Archduke, and their manifestation of genuine affection. When his voice was heard at Son Moragues, young and old crowded forward to greet him, some with offerings of fruit. At parting he was careful to give each a hearty hand-grasp, and it was pleasant to see how their faces fairly glowed with delight at the meeting. The next morning, on our way down to the sea, where a carriage road has been constructed along the shore leading to the *estacca*, or private residence, of the Archduke, we visited a beautiful little chapel, on an isolated pinnacle of rock reached by a light but lofty arch, containing a fine full-length statue, in Carrara marble, of Ramon Lull. This was erected, in 1877, to commemorate the sixth centenary of the founding by Lull at Miramar of a college for the study of the Oriental languages, with a view to the peaceable conversion of the infidels. It was, perhaps, by the following of some subtle law that here also should be set up, in 1485, the first printing-press in the islands, being the second in Spain.

June days are long, but the three days allowed to each visitor at the Hospederia vanished like a dream, and we found ourselves on the road to Soller, with Miramar fast disappearing from view. For some time we kept along by the sea, though still high above it, then, passing round the picturesque, mediæval-looking village of Deyá, perched upon a bold rock rising out of the valley through which the road wound, soon the spicy perfume of orange groves gave token that we were approaching Soller. But it took many turns of the road to allow us a view of the village lying deep down in the valley. This valley, menaced, almost overpowered, by lofty mountains, hidden from the sea, and with only a narrow outlet, is one of the most fertile in the world, yielding not only fruits and vegetables in great variety but of fine quality, its oranges especially being of exquisite flavor. The village has crowded its nine thousand inhabitants into small space to leave room for the gardens and orchards, which are marvels of careful cultivation, watered by unfailing fountains having their source in the summits above. Although the village itself is uninteresting, there are many beautiful walks around about, and the ascent of Puig Mayor, the highest point on the island, is well worth the effort.

It was on Sunday, and the festival of Mary, that we first saw Soller; and a procession bearing the figure of Mary, rose-crowned, preceded by chanting choristers and followed by a crowd of reverent women, was making the round of the village. The Soller women, who are much more beautiful than those of Palma, have an element of pathos in their beauty which harmonized with the feast they celebrated. The harbor, some distance from the village, is small and difficult of entrance except in smooth weather. It was from this port that the preaching friar who had had occasion to admonish the Conqueror, and was by his order refused passage to Spain, embarked on his own mantle and landed safe in Barcelona. Returning to Palma by the direct road which climbs over the mountains and reaches a great altitude by innumerable zigzags that furnish many vantage points of beauty, we wondered at and admired this grand piece of engineering—an enduring monument to the skill and intelligence of its constructor. S. G.

## THE EBB TIDE.

To the Editor of The Nation:

Sir: That "there is a tide in the affairs of men" is a fact which must always have been noticed and counted upon by sensible people, at least since the days of Noah; but that the ebb tide as much as the flood "leads on to fortune," for the community as well as for the "bears," is a hard saying to those who are suffering.

From temporary suffering we have now no escape. Even Congress cannot stop the ebb and flow of values which is due to material causes and to natural alternations of hope and fear. It can, however, and therefore it must, help by providing for the people of the United States a measure of value as accurate and as fixed as that of other great trading nations. By so doing it can make even this ebb tide lead us on to fortune. H. C.

Cambridge, August 7, 1893.

## A DIAGNOSIS OF THE CASE.

To the Editor of The Nation:

Sir: The story of "E. W. H." about the farmer who had "a measure with a hole in it" is paralleled by a recent occurrence here, in

which at least one professional gentleman saw the light of an illustration.

Dr. Y. has been much depressed of late about the bad times and stringency in the money market, and one day, in a vein of semi-humor, he accosted a neighborhood wag and asked for his solution of the financial situation. The philosopher scratched his head reflectively for a few moments, and then gave vent to his wisdom as follows:

"Well, doctor, if you knew a man who was not content to let his processes of digestion and assimilation go on in a free and natural manner, but must needs be taking a kind of drug that caused some parts of his system to be nourished while other parts were impoverished, would you be greatly surprised after a number of years of such practice if he had a severe fit of sickness?"

Tariff-reformers will be interested to know that the good doctor saw the cat.

CHARLES E. BENTON.

NEW BEDFORD, MASS.

## REMOVALS IN OUR FOREIGN CIVIL SERVICE.

TO THE EDITOR OF THE NATION:

SIR: I have just read in the *Nation* of the 3d inst. the letter concerning the United States Consul at Christiania, who, "L. W. H." informs us, "has recently, without having received official notice of any sort, learned from a chance newspaper paragraph of the appointment of his successor, a person from Dakota." Evidently your correspondent is not aware of the fact that it is the rule, and not the exception, for a "faithful officer of the United States" to have "the door of his consulate shut upon him without a word of explanation, excuse, or thanks."

A somewhat similar case came under my notice about ten years ago in France. Mr. Albert Rhodes, who had been in our consular service for several years, who had even acted for a short time as chargé d'affaires in Holland, and who had been made a chevalier of the Legion of Honor by the French Government, suddenly learned one morning from the newspapers that he was removed from his post at Rouen and banished to an out-of-the-way consulate in Germany. I have known more than one Secretary of Legation who first heard of his dismissal through the cablegrams of the Paris edition of the New York *Herald*. I recall the incident of one of our ministers who wished to entertain at dinner the delegates to an international congress in which our country was represented. But, as a new administration had just come into power, he hesitated issuing the invitations till he should get some assurance from Washington that he would not be humiliated by reading in the evening paper of the appointment of his successor, while sitting with his guests in the smoking-room.

Mr. Gade's case makes it again pertinent to ask the question, how much longer a great nation like the United States means to go on stultifying itself before the world. When we make fools of ourselves at home, it is a family affair, so to speak. But when we insult and belittle our official representatives abroad, we disgrace ourselves in the eyes of all foreign nations. T. S.

NEW YORK, August 5, 1893.

## JOHN DAWSON OF VIRGINIA.

TO THE EDITOR OF THE NATION:

SIR: I am unable to supply any information concerning the parentage of Hon. John Dawson of Virginia, who is mentioned in President Tyler's note in the *Nation* of July 27 and in my own note in a previous issue. There is no Harvard matriculation book of the period of Dawson's admission, and the few references to him in the Faculty Records throw no light on the matter. The brief sketches of his career in the *National Intelligencer* of April 2, 1814—the day after his death—in Grigsby's 'History of the Virginia Convention of 1788' (Va. Hist. Collections), in Lanman's 'Dictionary of Congress,' and in the biographical dictionaries, tell us nothing of his family. C. C. Dawson, in his 'Dawson Family Records,' does, however, offer the surmise—distinctly given as such—that John Dawson, the Congressman, was descended from one of three Virginia clergymen, William, Thomas, and Musgrave Dawson, of whom the first two were the Presidents of William and Mary referred to by President Tyler.

I first mentioned the incident of Dawson's admission as an indication of the good feeling at that time prevailing between Massachusetts and Virginia. It may be worth while to note that the two men first honored by Harvard with the degree of LL.D. were Virginians—Washington in 1776 and Gates in 1779. Moreover, Gates's son Robert, who had been driven away from Princeton by the British, also received an honorary A.B. in 1779; and the letter in which the father returned thanks for both is still in the College archives. Washington seems at one time to have entertained the idea of sending his adopted son, G. W. P. Custis, to Harvard.—Very respectfully,

WILLIAM GARROTT BROWN.

HARVARD COLLEGE LIBRARY,
CAMBRIDGE, MASS., July 31, 1893.

# Notes.

THE W. F. ADAMS CO., Springfield, Mass., have in preparation 'Picturesque Berkshire,' in two parts, northern and southern, with illustrations by Lionel De Lisser and Clifton Johnson, besides a frontispiece view of Greylock by Elbridge Kingsley. The text will be furnished by ex-Senator Dawes, Clark W. Bryan, Albert Hardy, Dora Read Goodale, and others. This volume, coming after the 'Picturesque Hampshire,' 'Franklin,' and 'Hampden,' will complete the illustration of the western half of Massachusetts.

The authorized English version of Pasquier's Napoleonic memoirs, 'A History of My Time,' will be published in this country by Charles Scribner's Sons in three volumes, with portraits. They will also soon issue 'The Adventures of David Balfour,' by Robert Louis Stevenson.

E. P. Dutton & Co. have nearly ready 'The Phillips Brooks Year-Book,' containing appropriate selections from the late Bishop's writings for every day in the year.

'Early Prose and Verse,' edited by Mrs. Alice Morse Earle and Mrs. Emily Ellsworth Ford, is soon to be issued by Harper & Bros., who further announce 'The Private Life,' three short stories by Henry James.

Ginn & Co. promise next month 'A High School Rhetoric,' by John F. Genung.

Sir J. D. Hooker, reviewing in *Nature* for June 29 Capt. Wharton's edition from the MSS. of Captain Cook's Journal, reveals the interesting fact that, since this work went to press, the journal of Cook's distinguished companion on the *Endeavor*, Mr. (afterwards Sir Joseph) Banks, together with his correspondence during the voyage, has been found in the MS. Department of the British Museum, and Sir J. D. Hooker hopes it may now be published uniformly with Wharton's Cook's. The same number of *Nature* tells of "a quantity of the correspondence of Sir Joseph Banks" having changed hands at the recent sale of the library of the late Lord Brabourne.

Macmillan & Co. will publish in September a translation of Prof. Luigi Cossa's 'Introduction to the Study of Political Economy.' The translation has been in hand for a year, and has been brought down to date. The needed revision has been made by the author and by the translator, Louis Dyer, M.A. of Balliol College, Oxford, who has greatly enlarged the index of authors, and has added the subject-index pronounced indispensable for the book in our recent notice of the Italian original.

Following hard upon the heels of *Harper's Quarterly* is *Longmans' Paper Series*, also a quarterly (with occasional extra numbers). The first volume of this new series is Mr. Rider Haggard's 'Nada, the Lily,' with all the original illustrations.

The first or 1840 edition of the 'Madison Papers,' edited by Henry D. Gilpin, consisted of three octavo volumes in very generous typography, the Journal proper occupying 1,624 pages. What is called a "special edition" now appears in Chicago, bearing the imprint of Albert, Scott & Co., and "edited by E. H. Scott." It forms one plump volume, in clear characters, of 763 pages. Mr. Scott's editing is simply the appropriation of Gilpin's labors. He cuts down the latter's preface in a manner very detrimental to the record of the circumstances under which the Journal was made by Madison, and acquired after his death by the Government. He cuts out all the appendix, all the facsimiles of handwriting, and as much of the index as suits his caprice—Washington, for instance, has a page in Gilpin, but Mr. Scott retains only nine items. Yet the index was the field in which a new editor might have shone. We have not compared the text in the two editions: errors in that would be inexcusable indeed.

'Villette,' in two volumes, is the latest in the charming Dent edition of the works of the Brontë sisters (Macmillan), and the same English and American house set before us 'The Adventures of Joseph Andrews,' as the first volumes in a reprint of Fielding's novels, uniform with the foregoing and the Jane Austen series. There will be twelve in all, and Mr. Saintsbury edits them, furnishing at least a biographico-literary introduction, while the pretty photogravures are after designs by Herbert Railton and E. J. Wheeler. It is needless to repeat our encomiums of these specimens of tasteful and handy book-making.

'Angelica Kauffmann,' by Frances A. Gerard (Macmillan), has the merit of being "the first life of the artist written in English," and the further merit of containing at the end lists of engravings after her works, of pictures and their owners, etc., etc. It is compiled from various foreign sources, and contains a number of hitherto unpublished letters. The author makes liberal use of quotations, and allows her authorities to disagree with delightful impartiality, so that a reading of the book is somewhat confusing. Her use of italics is a complete mystery to us. However, if any mortal takes to-day a great interest in the faded and genteelly sentimental ghost of Angelica, he may be safely recommended to this book as one in which he can find about all that is known and a great deal that is guessed about her life.

The celebrated 'Letters of a Portuguese Nun' (Marianna Alcoforado) have been translated anew by Mr. Edgar Prestage (London: D. Nutt). This is the first English translation since 1808, if the American translation of 1890 is left out, and a very good, spirited piece of work it is. Mr. Prestage has made use of Asse's edition (French) of 1889, and has placed immediately after his translation a reprint of the text of the first French edition of the Letters (1669). His work stands the comparison with the French, the original Portuguese being lost. He has caught the spirit and given a faithful rendering at the same time, though one could wish that his English were occasionally a little more quaint and old-fashioned and so nearer in savor to the language of the French version. The book is admirably printed, with red titles and initial letters, and is furnished with an instructive introduction, an appendix, containing a full bibliography, and a rendering into verse of the Letters themselves from a volume of poems published in London in 1713.

Under the title 'A Brief History of Panics and their Periodical Occurrence in the United States' (Putnams), Mr. De Courcy W. Thom offers a translation, or adaptation, of part of an essay upon commercial crises by M. Clément Juglar, with an introduction and comments of his own. In spite of the fact that M. Juglar's essay, which embraced England and France as well as the United States, was awarded a prize by the French Institute, we do not think that it exhibits any clear comprehension of our financial history and the causes of our financial disturbances, nor are Mr. Thom's comments of any particular value. By the cruel irony of fate, his book, which bears the date 1893, closes with a declaration that the circumstances justified "the prediction of the steady development of a prosperous period." But it must be admitted that many other prophets have come to grief within the last few months.

Four volumes of the "Social Science Series," published by Swan Sonnenschein & Co. and imported by Scribners, are before us. 'Ferdinand Lassalle as a Social Reformer,' by Edward Bernstein, may have its interest for those who follow the intricacies of German Social Democracy; 'The New Reformation and Its Relation to Moral and Social Problems,' by Ramsden Balforth, is a serious attempt "on the part of a mind nursed in scepticism to search out the truth and to formulate for itself a constructive religious faith"; 'The Agricultural Laborer,' by T. E. Kebbel, is a new edition of an essay based upon the reports of the English Agricultural Commissions; and 'The Eight-Hours Question,' by John M. Robertson, is a protest by a frightened Radical against too much radicalism.

'Poor's Manual of Railroads' for 1893 includes the usual features of this standard work, and continues the effort to tabulate the companies alphabetically. Such tabulation is obviously rendered difficult by the different dates at which the companies publish their annual financial statements, but the companies are now arranged under two alphabetical lists—the first of companies whose fiscal year ends June 30, the second of those reporting to December 31. This, for convenient reference, is a great improvement over the old grouping by States, but it is unfortunate that a complete and single alphabetical arrangement of names is not practicable. Perhaps the most interesting item in the current 'Manual' is the record of outstanding unfunded debt, which has increased from $5,105,902,025 in 1891 to $5,463,611,204 in 1892. The special danger to large corporations, in this year of tight money, has been the constant maturing and renewal of so vast a volume of time loans.

Prof. Newcomer's 'Practical Course in English Composition' (Ginn & Co.) differs pleasingly from the horde of current text-books on the subject in deserting entirely the field of "rhetoric," with its endless discussions of proper uses of words and approved forms of sentence-structure. Instead, it points out to the student the various ways in which observation and experience may furnish him with themes, and sets forth the general principles on which success in any given *genre* depends. The book is designed primarily for use in high schools and academies, and its general tone is that of adaptation to immature students.

Mrs. Alfred Barton's 'Stories from Waverley,' a fourth edition of which has just reappeared in Macmillan's School Library, deserves its success, for it presents the plots of five of Scott's most entertaining novels not only in a form appropriate for young children, but in a fashion that really preserves some of the charm and vigor of the original. As much can scarcely be said for the 'Tales from Spenser' in the same series, but here the task was a harder one, and, in spite of obvious imperfections, the version will still hold a child's interest and stimulate his imagination.

Thomas Archer's 'The Highway of Letters and its Echoes of Famous Footsteps' (A. D. F. Randolph & Co.) derives its somewhat bombastic title from Fleet Street and its varied literary associations, with which the author finds (or forces) a connection for almost every fact in the history of English literature that could be relied upon to catch the attention of the desultory reader. The book is not for the scholar, who will find in it little or nothing which is new, and will miss any attempt on the part of the author to give his authorities for even the most striking facts which he presents. That *rara avis*, the "general reader," may, however, be interested in turning its pages, and pecking here and there at its hoard of anecdotes. The addition of a good folding-map of London would save American readers many a topographical puzzle.

The *Geographical Journal* for July contains the annual address of the President of the Royal Geographical Society, Sir M. E. Grant Duff. It is an interesting summary of the work of the Society as well as of the progress of geography during the past year. The important statement is made that henceforth the Government of India will furnish the Society with all the historical and statistical information contained in the reports of officers engaged in explorations and surveys. These reports have hitherto been regarded as confidential, and it is only after "long discussions" that this concession has been made. Count Pfeil describes Southwest Africa from an economical point of view. His conclusions are not very encouraging. None of the region visited, which includes both British and German territory, is fit for agriculture; and although there are to be found fine pasture lands, yet a large part is absolutely worthless desert, and the whole suffers from want of water. The climate, however, is "bracing, salubrious, and lovely." Dr. H. Schlichter contributes a paper showing what historical evidence there is as to the Zimbabwe ruins. Although this is of an entirely indirect character, it seems to prove the truth of Mr. Bent's assertion that the buildings were erected by the Arabs some time before the Christian era. Mr. Delmar Morgan summarizes the work of the Russian explorers, Col. Pevtsof and M. Bogdanovitch, in Chinese Turkistan. An excellent map accompanies this paper.

We read in the Paris *Débats* for July 22 of discontent among the inhabitants of Neuilly with their annual fair, which regularly lasts a fortnight, and is apt to be protracted a week by the authorities. So the Mayor has resorted to a voluntary referendum to decide whether the longer or the shorter period has most advocates. Only three or four times has such an experiment been made in French history, says the *Débats*, and it proceeds to argue that the vote is not likely to satisfy, even if a full one. Those least inconvenienced by the fair, by reason of living at a distance, and who will probably, therefore, be tolerant of it, will count for as much as the most interested because the nearest to the scene and the most annoyed. In other words, the dispute is not a proper one for settlement in the manner proposed.

In the *Portfolio* for July (Macmillan), the editor comments on the vote of "French artists already recompensed" by which the majority awarded the medal of honor for *the* picture of the year to M. Roybet, painter of the "Propos Galants." This distinction Mr. Hamerton thinks surprising because the canvas in question runs counter to the New Criticism in so many particulars, as, that the theme is fairly to be called literary; the composition has been carefully studied; "the subject is full of costume, and it is not of the present day"; the technique is strong, honest, and unflinchingly laborious throughout, with "none of those great empty spaces which, in so much recent painting, seem as interesting as deserts in a map"; there is no pretension of a study of values, though the values are plainly right, nor display of execution, though exceptional manual power is exhibited, etc. "The cause for rejoicing in this instance is that once again the sound old principles have triumphed over the vanities and affectations that sometimes win a little temporary notoriety."

M. Henri Rauline, present architect of the Church of the Sacred Heart now building at Montmartre, technically describes the edifice—a patriotic ex-voto of the trials of 1870—with illustrations in the *Architectural Record* for the current quarter (vol. iii., No. 1). Analyzing the receipts up to January 1, 1893 (25,873,000 francs), he mentions (2) "the gifts of from 20 to 500 francs, each donor of which can have his initials marked on a stone set apart for him in the edifice," and (3) "the gifts of from 1,000 to 100,000 francs, to the subscribers of which are conceded columns and pillars, in the capitals of which they can have their names or arms sculptured." In fact, the photographic plate on p. 27, "in the chapel of the chevet," shows several stones in the recessed wall inscribed with private names, and four columns each bearing a name at the foot save one, which is carved "Anonyme." The church does not rest on its own soil, which is a dangerous combination of clay and sands, but on shafts sunk to the gypsum substratum of Paris, filled with rubble and cement, and then connected at the top by arches.

We understand that Miss Mary Proctor, daughter of the late Prof. Richard A. Proctor, is making arrangements to give a series of lectures on astronomy for children all over the country during the coming season. The course consists of three lectures, entitled "The Goblins in Starland," "The Stories of the Stars," and "Giant Sun and his Family." Miss Proctor will also deliver a lecture, specially suitable for normal schools, on "How to Teach Astronomy to Children." She has already given

these lectures at Chicago during the World's Fair.

—Among the all too numerous exhibits at the World's Fair which are either overlooked entirely or fail of just appreciation, is that of a popular library shown by the Bureau of Education in the United States Building. The books composing it form part of a selection of 5,000 volumes (exactly, 5,230) made by a committee of the American Library Association "who passed upon the suggestions of about seventy-five librarians and specialists." They are the gifts of the respective publishers, American and foreign, and will, at the close of the Exposition, be deposited permanently with the Bureau of Education at Washington. A service of this nature would have been sadly deficient without a catalogue, and the "A. L. A." has actually provided three, of which two are given in the recent pamphlet issue No. 200 of the Bureau. These are classed (*a*) according to the decimal classification, and (*b*) according to the expansive classification; a dictionary catalogue is yet to come. Wherever, then, it is desired to found a public library of the size indicated, any benevolent person or board of trustees has ready to hand not only a good working list of books, logically grouped, with date of publication, name and address of publisher, and price, but also "the proper class numbers, dictionary headings, and author entries"—in other words, a model for arranging on the shelves and cataloguing. Women graduates of the New York State Library School at Albany have had the brunt of this disinterested labor. Two sections, Biography and Fiction, on account of their length, have been set apart in advance of the classifications, in neither of which are they repeated. Juvenile publications, it may be well to notice, are not separated from the mass. Standard works, like the more voluminous biographies, are often supplemented by popular abridgments (using the word in a loose sense), *e. g.*, Lanfrey's Napoleon by Seeley's, Curtis's Webster by Lodge's, etc., so that a ready choice is afforded if the full list prove too costly. It only remains to add that owners of private libraries will also find their account, for stocking purposes, in this intelligent selection.

—Mr. Lecky's presidential address before the Birmingham and Midland Institute last October has been reprinted with additions as a thin book (Appletons). Its theme is the "Political Value of History," and it is replete with sound remarks on the danger of superficial comparison of past times with the present—especially as a ground of prediction—on the cherishing of obsolete issues, on the utility of studying the history of institutions, on the two schools (represented by Buckle and Carlyle) of historic fatalism or necessitarian evolution, and of heroic individualism, as determining the course of human affairs, etc., etc. There is one distinct reference to the present Home-Rule controversy, with a suggestion of the lecturer's Unionism; and perhaps we may detect an allusion to the same burning question in his insistence "that there has scarcely been a great revolution in the world which might not, at some stage of its progress, have been either averted, or materially modified, or at least greatly postponed, by wise statesmanship and timely compromise." For this he draws an illustration from our American Revolutionary history, as he had already done in his 'England in the Eighteenth Century,' apropos of the Stamp Act—an argument which shows how little he has comprehended the causes of the Revolution. All these causes existed and were manifested in the contest for the Massachusetts charter resulting in the overthrow of Andros a century before, and made ultimate independence inevitable; yet Mr. Lecky speaks of the project to tax the colonies for a standing army as, "such and so small," "the *original* cause of difference between England and her colonies." All the compromisers of the slavery issue from 1787 to 1861 thought they had averted the inevitable as well as postponed it. But what interest was served by postponement, and what was the penalty for all our wise and timely statesmanship? We may well ask, also, what is the use of seeking to prolong the open sore in Ireland, even supposing it possible?

—Mr. George Moore has gathered together a number of articles on subjects connected with art (most of which seem to have been published originally in the *Speaker*), and the Scribners have published them under the title of 'Modern Painting.' In style they are a singular mixture of preciosity and sloppiness, and in substance they are a jeremiad on the decay of art and "the failure of the nineteenth century." According to Mr. Moore, everything is wrong—French art education is bad and English worse. French artists to-day are divided into "pedants" and "experimentalists," and one group is as wrong as the other, while English art is disintegrated by French influence. He admires a few men, but Ingres and Manet are dead, and Whistler and Degas are not young, and he admits that Manet's example led straight to the latest developments of impressionism, which are detestable. Then there are the Royal Academy and the dealer and the Alderman to complete our ruin. It is really pathetic. "Be sure," he says, "that after five years of the Beaux-Arts you cannot become a great painter. Be sure that after five years of Kensington you can never become a painter at all." But the natural question of where one *should* obtain one's education he "does not propose to answer directly"—they never do. Only he tells the lamentable tale of how Renoir, after attaining a personal style, went to Venice, saw Tintoretto, found that he had forgotten to learn to draw, and went into an art school, and "in two years he had utterly destroyed every trace of the charming and delightful art which had taken him twenty years to build up." It *is* a "tragic story," but how if Renoir had learned to draw in the first place? Of Manet he says: "No one painted better, no one will ever paint better," and then leaves one wondering what he can mean by painting when he confesses that Manet's form is always summary and his modelling insufficient. Is mere ease of hand sufficient when it expresses nothing? If, as he admits, Manet is vastly inferior to Hals, who was a pure painter and nothing else, how is Manet as great a painter as ever lived? The fact seems to be that Mr. Moore cares little for other qualities than beauty of technical handling, and that of only one kind. He is equally inconsequential in his treatment of "subject," which he maintains came into art with the nineteenth century and has ruined it. By skipping from the Greeks to the sixteenth century, he manages to make a plausible case, which would have been utterly ruined if he had considered the Middle Ages and the early Renaissance. The best things in his book are paraphrases from Fromentin, which he uses somewhat freely and with no indication of their origin. And this is what Mr. Moore calls "The New Art Criticism"!

—Prof. Auguste Angellier has set himself the impossible task of making Frenchmen understand and appreciate Robert Burns. It is wrong, however, to say "impossible," for M. Angellier is a living proof that a Frenchman may penetrate the spirit of the Scottish lyrist. His two large, thick, close-printed octavo volumes (Paris: Hachette) seem at first glance altogether too long and too full. What can be said of Burns that requires so much print? But M. Angellier is justified in large measure. To make his compatriots understand Burns he has to make them understand Scotland and the Scotch, the Lowland Scotch, of whom Burns was the poet. To this purpose he has devoted many pages, and has given excellent descriptions of Scottish character, feeling, and peculiarities. It is, indeed, quite remarkable how fully M. Angellier has been able to inform himself on these points and to give, in his voluminous work, a clear and satisfactory account of what he has learned. Certainly he is too minute in his analysis of the poet's life—it often becomes wearisome; but he has not bestowed too much space on his study of the country and the people. That he has succeeded in translating some of the songs with a minimum loss of beauty and truth is infinitely to his credit; that he has failed in many cases to render the peculiar savor and grace of the original is not to be wondered at: broad Scotch is rebellious to translation as much as is Parisian *esprit*. It must be enjoyed in the original. Probably not many Frenchmen will follow in M. Angellier's footsteps, though he hints at Allan Ramsay's work as worthy of notice by aspiring seekers after new fields. What is encouraging in it is the proof that the French are beginning to study other literatures in earnest, and to bring to that study a genuine spirit of inquiry instead of the somewhat amused superciliousness which once characterized them. If Taine had done nothing more for France than this, he would still deserve all the praise which men rightly lay at his feet.

## PERSIA AND THE PERSIAN QUESTION.

*Persia and the Persian Question.* By the Hon. George N. Curzon, M.P. Longmans, Green & Co. 1892.

THESE two bulky volumes are a very creditable record of diligence and ability, for they contain a great mass of information which it must have cost the author many months to collect, and they bear witness not only to his talent, but to the width of his culture. It is satisfactory to see that a young politician who executes rapid travels with the aim of mastering the problems of the day, is also keenly interested in history and archæology, and has the patient industry needed to accumulate and digest a great deal of matter contained in the writings of his predecessors. To some extent the book suffers from the very merit of its comprehensiveness. It contains a mass of information, geographical and historical, which the so-called general reader, whether he reads a narrative of travel for his entertainment, or a discussion of current political questions for his enlightenment, does not require and may not appreciate. On the other hand, its discussions of the present relations of the Persian monarchy to Russia, to the Afghans, and to Great Britain are not needed by the scholar or historian, and will in a few years be out of date. The book is in fact a combination of several magazine articles, ephemeral in manner if not altogether in substance, with a full and painstaking description of the country and people; and although an excellent table of contents and index will enable the reader of the future to make the permanent part of it

available for his purposes, the reader of the present suffers by the disparity of the matter and the treatment. The difficulties of fitting in a record of personal experiences in travel with systematic description are, however, so great that no one will blame the author for the defects we have noticed, though it may be worth his while to try to diminish them in another edition by some changes of arrangement, and to get out of the "leading article" style in which a good deal of the book is written. There remains so much that is interesting and useful that a reviewer ought rather to be willing to express appreciation than prone to dwell upon blemishes.

The picture presented of the actual condition of the kingdom is a dismal one. It could not be otherwise if it were to be faithful. There is still some intellectual life left in the Persian race, as no one who sees the Persians can doubt, and as every one who knows Persian literature will be glad to believe. But there is also not only a detestable and apparently hopeless system of government, but a conspicuous moral decadence. The falsity of the people among whom, as Herodotus relates, education consisted in teaching the youth to shoot with the bow and to speak the truth, has now become proverbial even in the not too veracious East. Everybody is venal, from the Shah downwards. All sorts of repulsive vices are rampant, and the Government sets, by its horrible punishments, an example of cruelty to its subjects. No native Persian can accumulate capital, because he would immediately be plundered by the Government or some member of it, or made to pay ruinous blackmail. Large enterprises, therefore, naturally fall into the hands of foreigners, who of course are usually obliged to fall in with the local standard of integrity, and whose undertakings are at the mercy of a capricious sovereign with just enough knowledge of civilized countries to wish to attain their ends without using the requisite means of economy, perseverance, justice, and good faith.

Mr. Curzon, who seems to have had a friendly reception, and who quite properly seeks, both as an obliged traveller and as an Englishman jealous of Russian influence, to avoid offending the Shah and his Ministers any more than truth absolutely requires, draws for us a melancholy picture of a crumbling Government and a people apparently effete. The resources of the country are believed to be great, but are for the most part neglected. The population is less than five millions, though the area is about 650,000 square miles. The revenue is small and irregular, the army is practically useless. While such a country had only barbarous or semi-civilized neighbors, like the Afghans to the east, the Turkomans to the north, and the Turks on the west, it was able to maintain itself and even occasionally make conquests, as Nadir Shah carried his arms far into Hindustan. But since Russia has crept down from the northwest, and now holds the whole northern border from Mt. Ararat to the Heri-Rud and Merv, the position has wholly changed. It is not too much to say that Persia is now virtually at the mercy of the Czar. Ten thousand Russian troops could conquer the country, and would indeed encounter no serious resistance; nor does anything prevent that conquest being effected to-morrow, except the hesitation of Russia to enter on a course which might involve a breach with England, and which, even supposing that war with England were avoided, would impose a strain upon those financial and military resources which she desires to keep unimpaired in the not improbable event of a struggle with Austria and Germany. To govern the vast area of Persia, to reduce the nomad tribes to some sort of order, still more to develop the country in such a way as to make it pay the cost of administration, would involve a large initial outlay which might seriously add to the already grave financial embarrassments of the great Slavic Empire.

People in Europe credit Russia with a desire to obtain a foothold on the Persian Gulf, and thereby free access to the ocean, from which she is barred on the Baltic and the Arctic Seas by the frosts of winter and on the Black Sea by the Turkish command of the Bosphorus and Dardanelles. But on the Persian Gulf, even supposing she were prepared to attempt the creation of a fortified post and arsenal at so vast a distance from her base of strength in European Russia, she would find herself confronted by the superior naval power of England, which is predominant at Muscat on the opposite coast of the Gulf of Oman. There is, therefore, no reason to apprehend any immediate forward movement on the part of Russia, and it is quite possible (so uncertain are the vistas of the future in everything which concerns Russia) that Persia may never be added to her dominions. Mr. Curzon blames his countrymen for not having given her a more efficient support against Russia, but does not point out how it is possible for England to arrest the progress of Russian advance or seriously to counterwork the Russian influence which he so much deplores, otherwise, of course, than by threats of war, which he does not seem to recommend.

More interesting to the American reader than these political speculations, which recur so frequently in his book, are the descriptions it contains of the character and habits of the people and of the remains of antiquity. Mr. Curzon exerted himself to visit the ruins of Persepolis, the famous rock sculptures and inscriptions of Behistun, and the huge mounds of Susa, which have recently been explored first by the Englishman Loftus, then by the Frenchman Dieulafoy. His description of Persepolis is very minute, and will be found the more useful because it is illustrated by a number of woodcuts and contains a résumé of the various theories advanced regarding the age of the respective buildings and tombs. Speaking generally, the topographical parts of Mr. Curzon's book (such as his interesting account of the Persian Gulf ports) are the best, for he is a painstaking observer and a diligent collector of what others have said. He writes, moreover, with clearness and simplicity, escaping the somewhat florid and declamatory style which pervades his political discussions and reviews of history, and which is especially to be deprecated in a book intended to serve more than a temporary purpose. The same remark applies to the expressions of opinion on recent questions of English party politics. Politicians naturally fall into these, but they are very frigid when read a few years hence, and no one who contemplates more than a short life for his book ought to indulge in them. The solid matter which these volumes contain will, we trust, insure for it a place in geographical libraries.

## ALCOTT'S MEMOIRS.

*A. Bronson Alcott:* His Life and Philosophy. By F. B. Sanborn and William T. Harris. Two vols. Boston: Roberts Brothers.

WORDSWORTH, when asked why he printed his "White Doe of Rylstone" in quarto, replied that it was to do justice to his own sense of the importance of the work. There is little doubt that the biographers of Mr. Alcott have been partly influenced by this same motive in devoting nearly seven hundred pages to his memoirs. It is impossible for the reader not to feel some doubts as to this selection of a canvas so ample, especially when compared with the undue reserve and brevity of Mr. Cabot's memoir of Emerson. The criticism will not be diminished by the discovery in the book of many pages which would, among the world's people, be called padding. Thus, we come very soon upon two pages from Morse's *Gazetteer*, descriptive of Connecticut (pp. 26–7), followed by two pages made up from the Life of Colonel Dabney in regard to Virginia, coupled with a page and a half from an anonymous writer, and followed by nearly a page from Henry Adams, all on the same subject (pp. 60–5). Then there is a page and a half giving Dr. Johnson's opinion of Milton (pp. 173–4), two pages of details about Jones Very (pp. 297–8), a page given to the biography of Garrison (p. 438), a page and a half to Theodore Parker (pp. 367–8), and more than half a page to George of Cappadocia (p. 429), whose connection with the narrative lies in the fact that this mythical saint dealt in bacon, and that Mr. Alcott bought in Concord an old house previously occupied by a pig-driver. It is difficult to avoid some vexation at these digressions, but it is fair to say that they are not really to be regarded as conscious padding, but are part and parcel of the rather desultory way in which Mr. Sanborn likes to tell a story.

We speak of Mr. Sanborn as the responsible author of the main narrative, although another trial to the reader's heart occurs in the tardy postponement of information as to the actual identity of the author. There are the names of two writers on the title-page; and although it was doubtless intended to convey the interpretation that Mr. Sanborn was responsible for the "Life" and Dr. Harris for the "Philosophy," yet this is by no means a necessary inference, and will not occur to the majority of readers until they have read the book. Again and again, in the first volume, we find in the footnotes, "I visited this house," or "I believe" so-and-so; and it is not until page 256 that this first person singular has with it the explanatory parenthesis "(F. B. S.)." It is not until we reach the very last chapter and find it credited exclusively to Dr. Harris that we discover where the real line of cleavage between the authors occurs; but it would have been a convenience to have known from the beginning.

Nevertheless a debt of gratitude is due to those who have made of their work such a labor of love in behalf of one of the most important minor figures of that "Transcendental" movement which had so important an influence on our intellectual development. That the present biographers class him as one of the *dii majores* is perhaps to the advantage of their work; probably the first biographers of an eminent man should always overestimate him in order to present his full case before the world. At the time of Mr. Alcott's death, a ready tribute to his marked and individual qualities was paid in these columns, nor can we see that his biographers have added much to the summary then given, though both have brought out more fully his pioneer work in the educational field; and Dr. Harris has made for him, in the philosophical region, claims such as never before have been fully stated. The stress laid on Emerson's high estimate of him seems a little over-emphasized; it is one of the

most amiable qualities of great men to exaggerate the merits of those around them, as Darwin unquestionably did in the case of Herbert Spencer, and Emerson in that of Alcott. It belonged to the quality of Mr. Alcott's mind to enunciate solemnly a vast number of detached statements, more or less mystical, and given utterly without winnowing. In looking back on these Orphic sayings it is perfectly practicable to select a series which would give him rank, as Dr. Harris suggests, with Proclus and Plotinus; but it is unfair to quote these alone as a part of his history and to reprove his public for not appreciating them, without admitting that he also heaped upon that public a vast number of platitudes and some grotesque paradoxes. After all, the merit of a thinker does not lie only in his occasional glimpses of high thought, but in his power to impress those thoughts upon at least a selected public. Emerson and Theodore Parker stamped themselves upon their time; it is impossible to write the history of American thought without reckoning with them. Alcott, Hedge, W. H. Channing, and Margaret Fuller Ossoli also contributed in a very important way to the total influence of Transcendentalism; but it is quite impossible to place their work on the same plane, historically speaking, with that of the others.

So far as Messrs. Sanborn and Harris have provided materials for this interesting phase of history, their work is of great value; and it is, from this point of view, easier to pardon them for giving too much than the biographer of Emerson for giving so little. In Cabot's Emerson we had one reticent man describing another; in this case we have a man who had no reticence described by writers habitually discursive and possessing a wealth of detailed information which almost, though not quite, condones that fault. It is further to be noted, however, that in books, as in conversation, the man who pours upon us a good deal which we do not want is apt at the same time to omit accidentally the very things we most needed to know; and this book is no exception to this common experience. There are one or two points of the greatest interest in connection with Mr. Alcott's individuality upon which those who knew him will seek information with great eagerness in these volumes, but will seek it in vain. One of these points, for instance, was Mr. Alcott's peculiar views and habits as to the use of money. He is credited by his main biographer with "austere principles" (p. 355), and yet there is enough revealed in these pages to suggest in action the kind of austerity attributed to Harold Skimpole rather than that of Cato the Censor. So far does this go that his biographer seems rather swayed by this same attitude, and speaks with a certain contempt (p. 319) of "the Boston money-lender" whom Mr. Alcott himself describes as "N——, a dapperling who treads 'Change, and once lent me a round thousand during my days of prosperity." A jocose description is then given of the despicable moral position of this man, who had committed the high offence of lending the reformer, apparently from sympathy alone, the money on which his enterprise was based, and who had ventured so far as to ask Mr. Alcott, in a bookstore, how his affairs prospered. The diarist sternly adds: "I resumed my reading without selling my thought to the Mammon King." But not a word is given to show whether the Mammon King ever again saw the "round thousand," or, if so, who paid it; or, above all, whether it ever occurred to the debtor as a burden on his conscience. When Emerson, with his unequalled gift for characterization, described Alcott as "a haughty beneficiary," he hit nearer the mark than those who apply the word "austere."

Nevertheless, in these very passages the biographer at least hints at one of Mr. Alcott's weak points, if he fails to elucidate it. But the most curious feature of his book is the absolute omission of that singular reversion to his early beliefs which took possession of Mr. Alcott's latter life, and made him, alone among the leading Transcendentalists, an absolute deserter at one main point from their camp of faith. It is a serious reproach to this memoir, in respect to candor and accuracy, that the name of Joseph Cook does not appear in the index. It must be remembered that no one, among all the Transcendental leaders, took so early or so aggressively the humanitarian or non-Christian view as did Mr. Alcott. As is shown in this work (p. 99), he firmly assumed this position in his Diary in 1827, when Theodore Parker was a boy of seventeen; and the tone in which he habitually spoke of "that fair Hebrew youth" was one of the points which most scandalized the good church-goers among his auditors. Nay, he made it almost a test among his contemporaries that they should hold firmly to this attitude, he being in this respect more consistent than his comrades. It was an infinite amazement to his early friends and perhaps proselytes when, under the profuse and cordial flatteries of Mr. Cook, he was wont to hold forth as the favored guest in that gentleman's hospitable parlors—being habitually introduced to new-comers as "Mr. Alcott, the American Plato"—frankly admitting that he had returned to his early Trinitarian and Calvinistic position, and speaking with some superior censure of those who still held the views which he himself had taught them. He was still, no doubt, the hardest man in the world to keep to any definite doctrine; but of the utter reversion of attitude there was no question. To omit it is to leave out the most curious and perhaps most instructive phase in his whole career. This change is admitted, though insufficiently, by Dr. Harris (p. 627), whose treatment of the whole theme is more judicial than that of his coadjutor; but Mr. Sanborn does not once allude to it. Yet without it the description (p. 530) of his marvellous Western journey of seven months, at the age of eighty-one, when he made addresses or held conversations at the rate of more than one a day, Sundays included, conveys a wholly false impression. The wonderful fact, as there stated, that he brought home $1,000 of his own earning was largely explained by the fact that he now had the evangelical endorsement behind him, given with all the more ardor because Trinitarians claimed him, not without seeming reason, as the captive of their theological bow and spear. It was not, in their estimate, that they had come to him, but that he had come to them. As the friend of Emerson, he had returned from a tour of Western lecturing with a single dollar in his pocket (p. 476); as the friend and supposed convert of Joseph Cook, then at the height of popularity, he brought back a thousand dollars (p. 531).

With all the merits of this book, it must be said that to omit from the main narrative all reference to this extraordinary change of attitude in Mr. Alcott is a defect hard to pardon. Yet the biography, as a whole, adds much that is interesting to the body of material which is slowly being collected for the future author of a literary work which ought to take its place on the shelf with Boswell's 'Johnson' and Lockhart's 'Scott'—the history of Emerson and his friends.

## RECENT NOVELS.

*Ansel's Cave:* A Story of Early Life in the Western Reserve. By A. G. Riddle. Cleveland: The Burrows Bros. Co.

*Marked "Personal."* By Anna Katharine Green. G. P. Putnam's Sons.

*In Blue Uniform:* An Army Novel. By George I. Putnam. Charles Scribner's Sons.

THE story of 'Ansel's Cave,' as told by Mr. Riddle, affords an hour or two of reading not entirely without interest. In spite of careless writing, there is a constant progress of the narrative to its end. A plot of considerable improbability is rapidly developed by a generous disregard of points of minor importance, while the author's evident impatience with the necessities of art, which require skilful transitions and deft introductions, results in a "reportorial" breeziness and an absence of digression that insure safety from dulness. The Western Reserve was a portion of northern Ohio reserved by Connecticut from the grant of Charles II. to the Duke of York. It was settled largely by New Englanders, and the story gives one something of an idea of the task required to prepare a forest country for the plough. Mr. Riddle does not take advantage, however, of the possibilities afforded by fiction for making a picture full of life and ideality. His local color is but bare facts, after all, and one will find them equally well observed and set down in Horace Greeley's book; and in Grant's Memoirs, we take it, the glimpses one gets of that pioneer life from the story of Grant's boyhood are clearer and truer than could be had by any effort at romancing. The cave which gives a name to the story really plays a very unimportant part. It is described with a precision which leads one to believe that it actually exists; but as far as the need of the tale is concerned, it is an extraneous "property." What wit there is in the book, like the style, smacks of the newspaper. There is an evident appreciation of humor on the part of the author, but he lacks the touch which is capable of suggesting the remote analogies and essential incongruities which Lowell says alone deserve the name of humor.

The world of the imagination, in spite of utilitarianism, still has its advocates. The popularity which sensational novels frequently obtain is due to the fact that they are really strongly imagined. This is true at least of Anna Katharine Green's novels. 'Marked "Personal"' is of a piece with the other stories in this author's constantly growing list. It is full of incident, mystery, and wonderful coincidences. The characters are not without some resemblance to human beings, and they are constantly "on the go." They are either doing something or having something done to them from the first page to the last. But, after all, the chief element which attracts the bulk of the readers who enjoy such stories is that of the imagination. It is only in the realm of the imaginary world—imaginary in spite of the names of Washington streets and New York avenues—that men either take or keep such dreadful oaths as the one which furnishes the key to all the mystery of 'Marked "Personal."' We should hardly be true to our office if we neglected to warn the jaded novel-reader that he will meet once more, for a hero, the young man who is forced by circumstances into marrying a certain woman; for a heroine, that woman; that he will see them fall in love and flounder about in miserable ignorance of the kindness fate has in store for them until the proper moment arrives for their enlightenment.

It is refreshing to read the first novel of a man who is not entirely devoid of the literary sense, and who approaches his task with the vigor and energy of one who is bent more on telling his story than on filling so many pages. If, besides, the story turns out to have been worth the telling, and the scenes somewhat novel and amusing, a grateful reader can forgive the introduction of a few worn-out artifices and worked-over surprises which surprise no one. The young lady who leaves her art studies in Paris and New York to visit an army post in Texas, her inevitable love affair with the young lieutenant, the martinet colonel and the drunken soldier who proves eventually to be the colonel's abandoned son, are necessary, perhaps, as machinery to carry along Mr. Putnam's panorama of army life. But Capt. Lyndon, with his theories and his fatal shot at the escaping Burton, is a revelation to the civilian mind. His disappointment in regard to Millicent and his lieutenant's success in the same quarter are perhaps a rather palpable seeking for contrast; but the pictures of army life in time of peace, the easy characterization of brother officers, the pleasantly narrated incidents—in fact, the larger portion of the book, which seems to have almost written itself, is excellent.

---

*An Historical Sketch of Bookbinding.* By S. T. Prideaux, with a chapter on early stamped bindings by E. Gordon Duff. London: Lawrence & Bullen. 1893.

*Les Relieurs Français* (1500–1800); Biographie Critique et Anecdotique. Par Ernest Thoinan. Paris: Paul, Huard et Guillemin; New York: J. W. Bouton.

*Catalogue des Relieurs de Style* et objets artistiques en cuir ciselé, exposé par L'on Gruel, relieur. Paris. 1893.

THE catalogue of the extraordinarily rich loan collection of bookbindings shown at the Burlington Fine Arts Club in London two years ago was preceded by a brief sketch of the history of the bibliopegic art by Miss Prideaux. This sketch she has now somewhat expanded, appending her most valuable bibliography of bookbinding and three ancillary essays, on embroidered book-covers, on the use of metal in bound books, and on book-edge decoration. In spite of a certain want of proportion in her treatment of the subject, this is probably the best English summary of the history of the art. If only it were illustrated, however simply, it would be just the book to recommend to the book-lovers who have a vague general liking for binding without any exact knowledge on the subject. A discussion of the successive epochs in the development and decadence of any of the arts of design must needs be illustrated. No description of a decoration is a tithe as effective as the baldest sketch.

In this respect M. Thoinan's study of the growth of bookbinding in France is far superior to Miss Prideaux's. Nowhere else can one get so complete a bird's-eye view of the successive changes and transformations of the art as can be had by turning over the pages of M. Thoinan's book and comparing the series of thirty outline drawings of carefully selected typical bookbindings. The text, also, is more carefully prepared than Miss Prideaux's, and M. Thoinan has a firmer comprehension of the underlying principles of art and of the close interrelation of the decorative arts. This last quality is one which every student of bookbinding must cultivate, although very few writers on the subject have as yet seen its full importance. The art of bookbinding is only one of the decorative arts, and it was influenced again and again by its sister arts. The arabesques of the Oriental tile-makers reappear in the ornaments of the Aldine printing-house and on the covers of the books bound for Grolier; the graceful curves and interlacings of the Henry II. pottery reappear on the covers of the books of Diana of Poictiers; the tools of Derome were copied from the intricate patterns of the very skilful workers in wrought iron who were his contemporaries. These are relations which M. Thoinan sees clearly, as M. Marius-Michel had seen them and set them forth before.

In another respect Miss Prideaux's sketch is inferior to M. Thoinan's. She cannot help being British. Again and again she admits the justice of the assertion of M. de Laborde, taken by M. Thoinan for his epigraph: "La reliure est un art tout français"; on pp. 26 and 71, and elsewhere, she is as frank in acknowledging French supremacy as any one could ask; but none the less does she insist on discussing the bindings made for this or that British sovereign as though these rude efforts were of any consequence. On the other hand, her treatment of Roger Payne, a topic in the discussion of which British writers on binding generally lose their heads, is eminently sane. A bookbinder herself, with a craftsman's knowledge of the craft, and a careful and loving student of the great French binders, Miss Prideaux knows that Roger Payne's is not one of the great names in the history of bookbinding. "He was the first English binder," she says, "who endeavored to make his ornaments appropriate to the character of the book on which he put them, and his designs, though not important in composition, are distinctly original, and look well on the straight-grain morocco then in fashion." In other words, he was a conscientious artisan, but he was not a first-rate artist.

In fact, the British had never developed any real originality in bookbinding until Mr. Cobden-Sanderson revealed to us the possibilities of novel and modern beauty which still inhere in the art so many had called outworn and dead. Mr. Cobden-Sanderson is not only original, but he has a distinct style of his own—a style which others can and do borrow. There are in New York to-day half-a-dozen books bound by Mr. Zaehnsdorf in London which are not copies of any one of Mr. Cobden-Sanderson's bindings, but which are obviously the result of an attempt to imitate his style and to assimilate his method. No doubt certain of the Englishman's earlier efforts, in which the whole work of "forwarding" and "finishing" had been done by himself and his wife, are deficient technically; they do not open easily, for one thing, and it is difficult to use the books without breaking their backs. But these defects are not to be found in the later books from "The Doves Bindery," as Mr. Cobden-Sanderson now calls the workshop which he directs.

If it were not for Mr. Cobden-Sanderson in England, and for M. Marius-Michel and two or three others in France, one might despair of the bibliopegic art, for nearly all the rest of its practitioners are content to copy the old masters. Here, for example, is M. Léon Gruel, the catalogue of whose exhibit at Chicago is the third book on our list. M. Gruel is a devout student of the history of the art; to him we owe the important suggestion that the mysterious Gascon is perhaps Florimond Badier. He is a most accomplished craftsman. The bindings he displays in Chicago are most beautiful in execution; and fine as are the photographic reproductions in this catalogue, they scarcely do justice to the originals. But they are wholly lacking in originality; they are modified copies, or sometimes exact copies, of the works of the bookbinders of the past. They have no note of their own; they bear no impress of their own time. Miss Prideaux tells us how the commercial bookbinders of the sixteenth and seventeenth centuries made blocks to copy mechanically the hand-wrought designs invented for book-lovers of fine taste. In this last quarter of the nineteenth century the commercial bookbinders are more original than the custom-binders—or, at least, the designs prepared for the leading publishers of America are more original, more interesting, and of a truth more artistic than those copies of old decorations which the best binders of Paris are now putting on new books.

It remains to be noted only that M. Thoinan's book, besides the history of the successive styles of binding, contains also a full account of the corporation of Parisian binders, based on laborious studies in the archives. It includes, further, a dictionary of binders and of writers about binding. Especially noteworthy in this dictionary are the articles on the unknown Gascon and on Florimond Badier.

---

*The Silver Situation in the United States.* By F. W. Taussig. [Questions of the Day.] G. P. Putnam's Sons. 1893.

NONE can question the propriety of labelling the subject treated by Prof. Taussig as one of the questions of the day; and as he brings the history down to the close of 1892, his work is not yet out of date. Within the year, it is to be hoped, he will have to add to it another chapter, equal in interest to any that it now contains, and far more comforting to those who desire the honor and stability of our Government. But at present there is nothing to add. The great exportation of gold has taken place since Prof. Taussig wrote, it is true, but it is sufficiently foreshadowed in his book; and as to the causes that brought it about, experience has added nothing to the teachings of theory. The Silver Law is still in force, and though the action of the Indian Government in stopping the coinage of silver is momentous, the change in the situation due to this cause cannot be estimated until Congress has debated and legislated.

We do not hesitate to say that this book is in all respects as excellent as it is opportune. It is extremely concise in statement, numbering only some 130 pages, but everything that is necessary is here. It cannot be read without close attention, but neither can the subject be understood by those who are not willing to give it close attention. The book is divided into two parts, the first, entitled "The Economic Situation," being devoted to an account of our silver legislation and its financial results. This portion is a model of lucid narration. For the events preceding 1878, the year of the Bland Act, reference is made to Prof. Laughlin's 'History of Bimetallism in the United States,' but these events are now of merely historical importance. The succeeding events are divided into four periods, according to the variations in the volume of our silver currency. From a careful study of the quantity of our circulation during these periods, Prof. Taussig reaches the conclusion that the growth of the country is such as to make an annual addition of $30,000,000 to the amount of our currency not more than will be, on the average, required to transact our increased business. He very properly, however, emphasizes the

importance of reckoning as money the transfers of credit indicated by checks, not only because the volume of money of this kind very far exceeds that of all other kinds, but also because its volume is subject to far more violent fluctuations. The proper recognition of these facts gives to Prof. Taussig's exposition here the highest degree of scientific accuracy that the subject admits of.

In the second part of his essay Prof. Taussig enters upon the field of controversy concerning the use of silver as money, and with excellent judgment he dismisses from consideration the long-exploded fallacies which play so prominent a part in current discussion. He is thus enabled to concentrate attention upon the really valid arguments in favor of bimetallism, and we do not think that any rational bimetallist can complain of the manner in which the arguments against the exclusive use of gold as a standard are stated. In our opinion, also, he gives to these arguments their full weight in reaching his decision, and we do not observe the slightest evidence of bias in his reasoning or of intolerance in his attitude. He concedes to the bimetallists their great contention, holding, in opposition to many writers of authority, that gold has appreciated, which in his view is only another way of saying that prices have fallen. He admits, too, that in itself this would increase the burden of debts, and even that many farmers may have actually suffered from this cause, in connection with certain others that have come into operation. But he argues with overwhelming force, upon the other hand, that improvements in production have more than compensated debtors. His argument is so compact that we can indicate it by a few quotations.

"If A borrows from B a hundred dollars, repayable in five years, and if at the end of the five years prices in general have fallen to one-half of the previous rates, B, in paying back to A the one hundred dollars, clearly returns twice as many commodities as he got. But if, at the same time, the efficiency of labor has been doubled by improvements in production, B can produce with the same labor twice as many commodities as before; and he returns to A the product of the same quantity of labor as he received. . . . It is true the creditor gets more commodities than he gave; but he gets the product of the same amount of labor as he devoted to the commodities originally lent; and why should he not share with the rest of the community the benefits of a general increase in the productiveness of labor? . . . The case clearly differs fundamentally from that of a simple rise in the value of money or general fall in both prices and wages. In the latter case, money incomes as well as the prices of commodities fall, and the debtor really pays back more than he got, not only in terms of commodities, but in terms of labor or sacrifice of income."

Such a case occurred when specie payments were resumed, or rather when resumption was approaching, after the civil war. Such has not been the case, however, since the demonetization of silver in this country. The case for bimetallism, therefore, fails for lack of proof. But there are positive arguments on the other side sufficient to dispel all apprehension of "the bare and jagged rocks of gold monometallism" which have so affected the imagination of President F. A. Walker. These, however, we will not rehearse. We have said enough to show our readers that in this little essay Prof. Taussig has furnished the materials not only for a complete understanding of the present silver situation, but also for a sufficient estimate of the bimetallic theory. The book deserves to be read by the learned as well as the ignorant, and the times should insure it the widest circulation.

*The Skeptics of the Italian Renaissance.* By John Owen. London: Swan Sonnenschein & Co.; New York: Macmillan & Co. 1893. Pp. xvii, 420.

Mr. Owen has chosen a first-rate subject, and he has succeeded, in spite of limitations to which we shall refer hereafter, in producing a noteworthy book. The Renaissance is a period which has been treated from many points of view, and yet we cannot feel that any writer has exhausted its interest or summed up its significance. Indeed, the importance of that period cannot be overestimated. In antiquity mankind emerged from barbarism to civilization, as a child emerges from ignorance and becomes an educated man; but after the age of Attic and Latin culture, mankind receded into a condition of semi-barbarism, which lasted for many hundred years. Then followed a reawakening, a genuine new birth of culture and civilization. This is an experience for which no parallel can be found in the case of individual men. It suggests that the progress of the race is not uniform and regular, but fluctuating, and that the tide of reaction may flow far back towards ignorance. That a Renaissance should have been needed is one of the most startling facts in human development.

What were the conditions from which the race had to emancipate itself, and what the means by which it won freedom? The answer to these questions varies according to the estimate which each historian puts on the several phases of the Renaissance. Mr. Owen is right, we believe, in studying the Renaissance not merely as the period when the study of antiquity was revived, or as an æsthetic efflorescence, or as a readjustment of theological, political, or philosophical standards; he regards it as the period when men once more sought for truth. Dogma, tradition, superstition during nearly a thousand years had reduced the human mind to a state in which advance was almost impossible; in which fantastic notions passed for science, knowledge was a matter of quibble, and religion an unspiritualized routine. In the Renaissance, men came once more to use their reason. So Mr. Owen's sceptics are not simply "atheists," or deniers of the conventional creed, or wicked rebels against custom, but they are seekers after truth. Starting with this elemental conception, one possesses a criterion by which to judge the effects of the Renaissance in the domain of thought and religion, of art, politics, and science.

Mr. Owen introduces his subject by an examination of the general causes which led up to the new birth. He shows how commerce and the Crusades, by extending the acquaintance of Italians with the Orient, gave them a standpoint from which to compare their own ideals with those of alien peoples. The crusader, for instance, could not fail to perceive that his Mohammedan enemies, who, according to the narrow assumption of mediæval Christianity, lay beyond the pale of salvation, were usually not inferior to him in public or private virtue. Saladin was more than the peer of any of the Christian sovereigns who fought for the sepulchre of Christ. Mr. Owen well says that "the history of Islamism, taken as a whole, must be regarded as a powerful propaganda of free thought and liberal culture" (p. 64). He traces the influence of Arab philosophy, chiefly through the contact of the Christians with the Saracens in Spain, on Western Christendom. He follows the course of the secularization of literature from the rollicking parodies and naturalistic poems of the Goliards, through the mysteries and moralities, through the productions of troubadours and jongleurs, to the thoroughly unecclesiastical novels of Boccaccio. He shows the threefold reaction against the asceticism, the sacerdotalism, and the dogma of the Church. He might also with profit have indicated how the rise of the spirit of nationality tended to loosen the authority of the Papacy; because, while this feeling for national life did not then result in the establishment of a united Italian nation, it did help to break up the arrogance of the hierarchy, and elsewhere—as in France, England, Bohemia, and Hungary—it asserted itself against both the temporal and the spiritual encroachments of Rome.

Passing from general causes to leaders, Mr. Owen devotes ten pages to Dante, whom he regards as too great a dogmatist to be included in the list of truth-seekers who have contributed to human progress. The very vividness with which Dante painted the terrors of a material Hell, prolonged, Mr. Owen thinks, the belief in the monstrous doctrine of eternal damnation. We cannot agree with this opinion, for we should lay stress upon a spiritual interpretation of the 'Divine Comedy' that makes that epic of the soul as significant to-day as when it was written, although its readers may have outgrown the mediæval superstition concerning Hell and Purgatory. At least, Dante's influence as an intellectual solvent of literary and political thought deserves to be set forth more fully than Mr. Owen has done. To Petrarch, however, he does full justice; and if any scholar still thinks of Petrarch as merely a writer of matchless love-sonnets, he can here be enlightened. For Petrarch is one of those rare men who, like Bacon in the sixteenth century and Goethe in the eighteenth, take all knowledge for their province, and he summed up, better perhaps than either Bacon or Goethe could sum up, the knowledge of his time. It is interesting to note that Mr. Owen agrees with De Sanctis and others in holding that Laura, though at first addressed as the object of sensuous passion, came at last to be transfigured in Petrarch's imagination, as Beatrice was transfigured in Dante's. "Laura, the unattainable object of his youthful aspiration, became the object of other unattained desires, *e. g.*, undoubted Truth, unalloyed happiness" (p. 124). We must pass over Mr. Owen's chapter on Boccaccio, simply remarking that it is excellent, and his criticism of Machiavelli and Guicciardini. These are all men with whose work English-speaking readers are familiar. But Pulci is too little known, and therefore many persons will learn here for the first time his importance as a disseminator of liberal thought. His comic epic, the 'Morgante Maggiore,' resembles 'Don Quixote' in that it contains, under the cloak of playful satire, a profound meaning. Mr. Owen has done well in assigning Pulci to a high place among the sceptics of the Renaissance.

More than half of the book is taken up with the three thinkers who best represent the philosophical thought of the Renaissance. These are Pomponazzi, Giordano Bruno, and Vannini. The achievements of these men have been almost wholly neglected until this century, owing to the Catholic reaction in Italy, which suppressed their works, and to the fact that the movement in which they were pioneers was taken up in France, Germany, and England, whereby later men have inherited renown which belonged by right to them. Pomponazzi, as Mr. Owen shows, was the first to set up ethics, in opposition to the mandates of supernatural religion, as the guide of conduct. His discussions on the immortality of the soul have now perhaps a greater value his-

torically than essentially, but no one will dissent from such a proposition as this: "Whether the soul be mortal or immortal, death must be despised; and by no means must virtue be departed from, no matter what happens after death" (p. 201). The account here given of Bruno is superior to any other in English, and, if space permitted, we should like to examine it in detail. Of Vannini, too, we have an adequate description. He was by no means so noteworthy a thinker as Bruno, but many pregnant sentences—*e. g.*, "Miracles mark the youth and old age of a religion, not its mature vigor," or, "Evil is the result, not of supernatural and spiritual, but of physical causes" (p. 387)—establish his claim to our thoughtful consideration; and his early martyrdom for his opinions insures him our sympathy.

We spoke above of Mr. Owen's limitations: these are in the form rather than in the substance of his work. He knows thoroughly the literature of his subject; he selects wisely, and presents many admirable suggestions of his own; but he has chosen to intersperse his essays with dialogues in which two women and three men discuss not only the subject in hand but almost everything under the sun. This mixture of conversation and history is a mongrel; we despise mongrels of all kinds. In a second edition (and the merit of the book ought to carry it beyond one edition), we hope to see that these dialogues have been omitted, and that the body of the work has been somewhat trimmed; and further, that the innumerable misprints have been corrected. Thus improved, it ought to have a wide reading, for Mr. Owen is more profound than Symonds and more personal than Burckhardt.

BOOKS OF THE WEEK.

Annual Summaries from the *Times*, 1851-1892. Two vols. Macmillan. $2.50.

## *Teachers, etc.*

*A LADY OF EXPERIENCE WITH* boys wishes to take two into her family, and will give them personal care. Steam and electric cars within three minutes' walk, making Boston schools available. Fine air and country sports. Refers to leading Boston teachers. Address E. M. P., Brookline, Mass.

*AN INSTRUCTOR IN PHYSICS IN* one of the foremost Western Universities (A.B. Harvard, Ph.D. Germany) desires a change. Also tutorship Willing to travel. Address Dr. X. B., care *Nation.*

*A YALE GRADUATE (1890) WISHES* a position the coming year as teacher of Classics, German, or English in preparatory school. Address
C. E. ROBBINS, Ruskey, Dutchess Co., N. Y.

*CHARLES W. STONE, Tutor for Harvard,* 68 Chestnut St., Boston.

## *School Agencies.*

*THE ALBERT TEACHERS' AGENCY* always receives many calls for teachers during the months of August and September by telegraph as well as by correspondence. These vacancies must be filled quickly. Teachers with good preparation or good records are now in demand. Address
C. J. ALBERT, Manager,
211 Wabash Avenue, Chicago.

*AMERICAN AND FOREIGN TEACHERS'* Agency supplies Professors, Teachers, Tutors, Governesses, etc., to Colleges, Schools, and Families. Apply to
Mrs. M. J. YOUNG-FULTON,
23 Union Square, New York.

*THE FISK TEACHERS' AGENCIES,*
4 Ashburton Street, Boston, 371 Main Street, Hartford, 70 Fifth Avenue, N. Y., 106 Wabash Ave., Chicago, and 120½ South Spring Street, Los Angeles. Agency Manual free.
EVERETT O. FISK & Co.

*THE NEW AMERICAN TEACHERS'* AGENCY.—Teachers seeking positions and those wishing a change at an increased salary, should address C. B. RUGGLES & Co. (Palace Hotel Building), Room C, 237 Vine Street, Cincinnati, O.

*AMERICAN AND FOREIGN Professors,* tutors, governesses, teachers, etc., supplied to colleges, schools, and families. MIRIAM COYRIERE,
150 5th Ave., cor. 20th St., N. Y.

*NATIONAL BUREAU OF EDUCATION,* Miss CROSTHWAIT, Prop., cor. Church and High Sts., Nashville, Tennessee. The Leading School and Teachers' Agency of the South and Southwest.

*SCHERMERHORN'S TEACHERS'* Agency. Oldest and best known in the U. S. Established 1855. 3 East 14th St., N. Y.

*An Agency* is valuable in proportion to its influence. If it merely hears of vacancies and *that* is something, but if it tells you about them is asked to recommend a teacher and recommends you, that is more. Ours *Recommends*
C. W. BARDEEN, Syracuse, N. Y.

# IMPORTANT EDUCATIONAL PUBLICATIONS.

*OTHER ARTICLES ON*

REFORMATORY PRISONS AND LOMBROSO'S THEORIES; RECENT SCIENCE, II.; GRANDFATHER THUNDER; PREHISTORIC JASPER MINES IN THE LEHIGH HILLS; ORIGIN OF LITERARY FORMS; THE PSYCHOLOGY OF LIZARDS; SKETCH OF HENRY CARRINGTON BOLTON (with Portrait). Several of the articles illustrated.

*50 cents a number; $5.00 a year.*

D. APPLETON & CO.,

NEW YORK.

## D. Appleton & Co.'s New Books.

### The Life of Sir Richard F. Burton.

By his Wife, ISABEL BURTON. With numerous Portraits, Illustrations, and Maps, and two colored Plates. In 2 vols. 8vo. Cloth, $12.00.

"Few men of our time have led a more romantic and adventurous life than the late Sir Richard F. Burton. A consummate linguist and intrepid traveller, without a rival in his varied knowledge of men, races, and religions, the hero of innumerable adventures and of more than one almost impossible undertaking, Burton stands forth in these humdrum days as a rare and almost unique personality."—*London Times.*

"The volumes abound in interest of every sort, and they constitute an almost perfect course of modern geography and travel for those children of a larger growth who will insist on having their knowledge of this kind in an entertaining form."—*London Daily News.*

"Will doubtless and deservedly attract a large circle of readers. . . . Many engravings enhance the value of Lady Burton's portrait of one who must undoubtedly be classed among the most remarkable men of his age."—*London Morning Post.*

### Camp-Fires of a Naturalist.

By CLARENCE E. EDWORDS. The Story of Fourteen Expeditions after North American Mammals. From the Field Notes of LEWIS LINDSAY DYCHE, A.M., M.S., Professor of Zoölogy and Curator of Birds and Mammals in the Kansas State University. With numerous Illustrations. 12mo. Cloth, $1.50.

"The adventures are simply told, but some of them are thrilling of necessity, however modestly the narrator does his work. Prof. Dyche has had about as many experiences in the way of hunting for science as fall to the lot of the most fortunate, and this recountal of them is most interesting. The camps from which he worked ranged from the Lake of the Woods to Arizona, and northwest to British Columbia, and in every region he was successful in securing rare specimens for his museum."—*Chicago Times.*

"It is not always that a professor of zoölogy is so enthusiastic a sportsman as Prof. Dyche. His hunting exploits, told in this book by another hand, are as varied as those of Gordon Cumming, for example, in South Africa. His grizzly bear is as dangerous as the lion, and his mountain sheep and goats more difficult to stalk and shoot than any creatures of the torrid zone. Evidently he came by his tastes as a hunter from lifelong experience."—*N. Y. Tribune.*

### The Health Resorts of Europe.

A Medical Guide to the Mineral Springs, Climatic, Mountain, and Seaside Health Resorts, Milk, Whey, Grape, Earth, Mud, Sand, and Air Cures of Europe. By THOMAS LINN, M.D. With an Introduction by T. M. COAN, M.D. 12mo. Cloth, $1.50.

"The volume is rich in practical information from actual experience and scientific investigation."—*Chicago Inter-Ocean.*

"Dr. T. M. Coan, who furnishes an introduction, speaks highly of Dr. Linn's competency, and we may well trust his assurance in view of his own extensive studies in the same line, especially in France, of which our columns have borne witness."—*The Nation.*

### General Greene.

By Colonel FRANCIS V. GREENE, author of "The Russian Army and its Campaigns in Turkey," etc. The fourth volume in the Great Commanders Series, edited by Gen. JAMES GRANT WILSON. With Portrait and Maps. 12mo. Cloth, gilt top, $1.50.

"Col. Greene's name is not new to literature, nor did it stand in any need of the fresh testimony to his talents that is here afforded. An interesting and workmanlike volume he has placed before the public. No volume in the Great Commanders Series deserves wider reading."—*N. Y. Times.*

"A worthy and modest contribution to American history."—*Chicago Times.*

"Of all the bright lights that flamed so brilliantly at the opening of the Revolution Greene was the only one who with Washington endured to the very end. . . . The story of his life is told clearly and well. There is no rhapsody over his public or private life, but the simple narration of facts is wisely left to stand for itself."—*Boston Commercial Bulletin.*

"In every way worthy a high place in this valuable collection of biographies."—*Philadelphia Bulletin.*

*RECENT ISSUES IN*

### Appletons' Summer Series.

Each with specially designed cover.

**TRUE RICHES.** By FRANÇOIS COPPÉE. 12mo. Cloth, 75 cents.

The charm of François Coppée's style has become familiar to American readers, who will find that the author has not fallen below his highest mark in this entertaining and sympathetic book. "True Riches" is bright, wholesome and interesting, and, although the author is too true an artist to insist upon his moral, he suggests one which perhaps has a peculiarly timely value

**A TRUTHFUL WOMAN IN SOUTHERN CALIFORNIA.** By KATE SANBORN, author of "Adopting an Abandoned Farm." etc. 12mo. Cloth. 75 cents.

In her vivacious and picturesque account of Southern California, the author of "Adopting an Abandoned Farm" shows the quickness of observation, delightful humor, and originality which made her former book so popular with the reading public. Her book furnishes facts as well as amusement, and it will have a permanent value as a truthful picture of Southern California.

**A BORDER LEANDER.** By HOWARD SEELY. 12mo. Cloth, 75 cents

"Howard Seely writes stories that one may read in a short sitting, but they contain the material out of which longer narratives might be spun. . . , We confess to a great liking for the tale Mr Seely tells. . . . There are pecks of trouble ere the devoted lovers secure the tying of their love-knot, and Mr. Seely describes them all with a Texan flavor that is refreshing."—*New York Times.*

*RECENT ISSUES IN*

### Appletons' Town and Country Library.

Each 12mo, paper, 50 cents; cloth, $1.00

**AN INNOCENT IMPOSTOR, and OTHER STORIES.** By MAXWELL GREY, author of "The Silence of Dean Maitland."

**FROM THE FIVE RIVERS.** By Mrs. F. A. STEEL.

**THE TUTOR'S SECRET.** By VICTOR CHERBULIEZ, author of "Samuel Brohl and Company," "Saints and Sinners," etc

**LUCIA, HUGH, AND ANOTHER.** By Mrs. J. H. NEEDELL, author of "Stephen Ellicott's Daughter," etc.

**SUSPECTED.** By LOUISA STRATENUS.

**SINGULARLY DELUDED.** By the author of "Ideala."

*For sale by all booksellers, or will be sent by mail on receipt of price by the publishers,*

# THE SIGLAR SCHOOL,

## Newburgh-on-the-Hudson, N. Y.

This picture of how our boys go to their athletics every afternoon when the weather and ground are suitable, is put here to ask you to read what is more important. I can only tell enough here to get you to send for my pamphlet and read the rest.

My school has been eminently successful for many years in this way: my boys go to college, enter well, go through well, come out well, and succeed in the world. The reason is: we start them right, get them into the way of steering themselves, and they stick to it.

I have been trying several years to get my boys younger. They come at twelve to fifteen, even older. I want them to begin at eight to ten.

When a boy begins to be hard to keep busy agreeably to himself and others, he is outgrowing home; no family home is adapted to him after that. The happy and wholesome place for him is with other boys of his age and older, in a school-and-play home.

It is perfectly clear to me (and I think it is to most parents, too) that the years from eight or ten to fifteen are tedious and profitless years for a boy at home; and yet fond parents object to sending him away.

Will you send for my pamphlet and read it?

My rate is $600 a year; no extras.

HENRY W. SIGLAR.

Address Newburgh, N. Y.

GERMANY, Berlin.

*FRAULEIN ANTONIE STOLLE'S* Superior American Home in Berlin for Tourists and Students.
Special care of Young Ladies.
Highest American references.

GEO. W. ROSS,
Minister of Education.

EDUCATION DEPARTMENT (ONTARIO),
TORONTO, 12th July, 1893.

[*Educational continued on page v.*]

# The Nation.

NEW YORK, THURSDAY, AUGUST 17, 1893.

## The Week.

THE President's departure from Washington, to spend the remainder of August on the Massachusetts coast, drives home the responsibility which now rests upon Senators and Representatives. The duty of calling Congress together and recommending the course of action which the exigency required was Mr. Cleveland's, and he has discharged it in a manner which commands the warm approval of good citizens, without distinction of party. He has done all that the Constitution and our theory of government require of the Executive in such an emergency. There is now only necessary "a wise and patriotic exercise of the legislative duty with which the people's representatives in Congress solely are charged"—to quote the apt words employed by the President in opening his message last week. Pending the discharge of this duty by the legislators, there is no call for the Executive's presence in Washington, while his absence puts an effectual embargo upon the stories that would otherwise be sure of circulation as to his attempting undue influence of Congress by the use of the appointing power.

---

Large bodies proverbially move slowly, and it is quite as much as anybody could reasonably expect that the House of Representatives should agree to take a final vote on the silver question three weeks from the opening of the session. No room whatever is left for doubt that repeal of the purchase clause of the Sherman Act will be carried by a good majority when the roll is called a week from next Monday. The advocates of repeal do well to allow two weeks for debate, since the displays which the free-silver men will make in that time must result in making their cause all the more ridiculous and hopeless. What Lincoln said to Congress about the slavery issue is true of the currency issue: "This is essentially a people's contest." We have no doubt that they will make their wishes known in Washington with such emphasis and unanimity that they will have their way now as they did in 1861.

---

One great advantage of the form fixed upon for the silver debate in the House is that it involves voting only on definite and intelligible propositions. What a ratio of 16 to 1 would mean we know, and so we do what one of 20 to 1 would be, and what a revival of the law of 1878 would be, and what an exclusive gold standard would be. By thus bringing the decision down to distinct terms we shall get rid of a great deal of the nebulous stuff that has passed current on the stump. A "currency adequate to the needs of commerce" might get the votes of many Representatives, on the ground that that was surely a harmless thing which all good men were in favor of, if it were not now necessary for the users of this fine phrase to come out from cover and say they mean by it putting fifty cents' worth of silver in a dollar. So with the various "per capita" and "poor man's money" disguises. They will all be stripped off, and the simple choice of a currency more or less depreciated and unstable brought out to be voted upon in the successive amendments. It will conduce to clearness of thought and to the right decision, but it will for ever make an end of a great many beautiful circumlocutions, like Senator Hill's "free bimetallic coinage."

---

The proposal of Mr. Bland and a faction of his faction to change the legal ratio of gold to silver in our coinage to some other figure not yet determined, has been received by the Populists with high indignation. They say that a change of ratio from 16 to 20, or any other change, would give away the whole principle for which they have been contending. They say, furthermore, that such a change would add one-fourth to the national debt and to all private debts. They add that the "dollar of the fathers" would vanish with the change of ratio, and that all the magic appertaining to it would vanish with it. They also say that they are fighting for a larger volume of circulation, and that they have no interest in a fight which is merely for a larger dollar. We think that Mr. Bland has weakened his cause materially by entertaining the suggestion of a change of ratio. The loss of support among the Populists is not of much consequence. They number less than a dozen members, and their moral support, if that phrase is allowable, is even less than their numerical strength. But the moment the silver men leave the anchorage of 16 to 1 they will be dashed on the rocks. New questions will come up immediately upon which they can never agree among themselves. In the first place, the question *What ratio?* contains the germs of controversy lasting for years. In each international monetary conference the bimetallists have been balked by this question. So, too, in the British Monetary Commission of 1886 the bimetallist section could not agree. Perhaps it would be more accurate to say that, knowing they could not agree, they did not try. They were gently taunted by their adversaries on the Commission, but they gave no answer except to say that it would be time enough to agree upon a ratio when the principle was settled in favor of bimetallism at some ratio. The rejoinder of the other side is, and always will be, that the numerical expression of the ratio is the very essence of the question, and that a decision in favor of bimetallism would be impossible unless the ratio were satisfactory. But, of course, we must know what ratio the other side propose before we can say whether it would be satisfactory. So the scientific pursuit after the double standard takes a circular motion like the chase of a kitten after its own tail.

---

Senator Stewart of Nevada carries about a great fund of misinformation for the confusion of himself and others. Here is a sample of it. Senator Dolph was making a speech last week in favor of the repeal of the Silver-Purchase Act, and against free coinage, and against State bank-notes, and Mr. Stewart interrupted him to say:

> "Let me ask the Senator from Oregon whether he is aware of the fact that the French Government has $260,000,000 of silver in its treasury and $700,000,000 in circulation, and all its obligations are payable the same as ours, in either silver or gold."

Senator Dolph was not able to admit that the French Government had $260,000,000 of silver in its treasury, or any other amount, but he was prepared to admit that the Bank of France had a considerable amount in its vaults. Then the Nevada Senator proceeded to affirm: (1.) That nobody could obtain gold for exportation from the Bank of France. (2.) That nobody could obtain gold for exportation from Germany. (3.) That no government except that of the United States had "robbed the people of gold and given the creditor the preference when the option belonged to the Government." This last saying is rather obscure, but is supposed to mean that Secretary Carlisle ought to have redeemed the new Treasury notes in silver and kept his gold, and that when he paid out gold for Treasury notes he "robbed the people." These are very strange words coming from a man who contends that silver is as good as gold, if not better. Why is it "robbing the people" to pay out one metal instead of the other? It appears to us that Mr. Stewart has, in this extraordinary splutter, betrayed the same preference for gold that he showed when he required the buyers of his town lots to give notes and mortgages for the deferred payments in the yellow metal exclusively. It should be added that the representatives of Germany in the recent Brussels Conference denied flatly that any obstacle had ever been interposed by the Reichsbank to the withdrawal of gold for exportation or for any purpose whatsoever. Moreover, the cable says that $1,000,000 gold was drawn from the Bank of France on Friday for exportation to America.

---

The Ministerial Alliance of Denver has prepared a memorial addressed to the Pre-

sident, asking that he proclaim a day for national fasting and prayer in view of the existing financial distress and "the great legalized sins of the nation." The only legalized sin we know of that bears on the financial distress is that of endangering the standard of value by the silver purchases. If the Denver clergy mean that, we are heartily with them in thinking it a national humiliation and danger, though we cannot believe they are recommending the surest way to remove it. As far as fasting is concerned, the natural operation of the Silver Law seems to be taking care of that, especially in Colorado, and the kind of prayer which the situation calls for is best summed up in the old saying, *Laborare est orare.* The men with whom the Denver ministers should labor are Senators Teller and Wolcott; and the ministers and other professional men, and particularly the business men, of the rest of the country should see to it that their representatives in Congress are left in no doubt as to what the people need and want. Then in a few weeks the Ministerial Alliance will feel more like calling for a day of national thanksgiving and rejoicing, and to such a call, or to a plan for making the regular Thanksgiving Day in November one of devout commemoration of our escape from a depreciated currency, we should have no objection whatever.

---

The action of the Ohio Democratic Convention in sustaining President Cleveland's position on the silver question is a significant illustration of the power of public opinion. There is little doubt that there was a strong free-coinage sentiment in the Convention. The Chairman was so confident that this sentiment would prevail that he made a furious pro-silver speech, borrowing his economic ideas mainly from the school of Peffer, Bland, Jones & Company. He would not have done this, it is reasonable to suppose, had he suspected that the Convention would repudiate him and his views by adopting with practical unanimity a platform in favor of the repeal of the Silver-Purchase Law. What he did not take into account was the force of public opinion among the people of the State. The delegates felt the pressure of that so strongly that they had no alternative but to sustain the President. What happened in the Convention will happen in Congress when the time for action arrives there. Public sentiment will make itself felt so imperatively that every Representative and Senator who hopes for a political future will discover that he can find no excuse for voting against repeal. There is really only one side to the question, and the pretence that there is more will not be able to survive public discussion. The business interests of the country know what they want Congress to do, and Congress will be forced, willy-nilly, to do it.

It is now becoming plain that the money market has emerged from its recent chaos, obtaining relief, as a panic market always does, by wholly unexpected means. This monetary relief is visible and tangible; it has already influenced the market for time-loans—though movements in this quarter should still be reckoned on with caution—and it has been reflected by a partial recovery in stocks. We refer again to these developments, however, for the purpose of warning people against reasoning too boldly from them. There is a disposition, most marked, as usual, on the mercurial Stock Exchange, to conclude that since temporary relief has come without the restoration of a sound currency, the problem of the vote at Washington is no longer the foremost financial issue. People who argue thus are reckoning sadly without their host. The $22,000,000 new gold imports have been obtained from London; how? Partly through sale in advance, at panic prices, of our agricultural produce; but chiefly, as all close observers understand, through sale or loan to English capitalists of huge blocks of American securities. Does any reasonable man suppose that London would keep such investments if it were known that United States finances were to be plunged into the abyss of free silver coinage? Why was the twenty or thirty millions currency which this new gold replaces hoarded in safe-deposit vaults? Clearly, for the very reason which would make timid people and hard-pressed banks hoard the new money if Congress were to threaten ruin afresh. We state the case thus plainly, not to revive alarm, because we believe that Congress will act wisely and as promptly as possible. Europe apparently believes so too, hence Europe is no longer selling on our market. But then she is no longer buying, and is seemingly following the prudent policy of watching. Our own investors having faith in the action of Congress, their liquidation, too, has ceased. But neither are they accumulating fresh lines of securities. It is a "room-traders' market." This is a situation very easy to understand, and it can be hardly overlooked that its chief, if not its sole, basis is belief in sound legislation.

---

Under the title, "Wrong Conceptions," the Republican editor of the *American Wool and Cotton Reporter* rebukes his fellow-Republican editors who have been endeavoring to read a dread of tariff changes in the present financial disturbance, and who have been representing the great industries of the country as on the verge of ruin. In regard to the textile industries at least, for which, he says, he can "speak by the book," he affirms that they are "not suffering depression because of any inherent condition of the market—the cause is external, it comes from the monetary disturbance; and, the cause removed, the recovery is only a question of a short time." He gives the highest and most unqualified praise to the President's message, and even walks up calmly to the tariff paragraph of it, without any of that snorting and backing and rearing in which the old party war-horses feel compelled to indulge. Settle the currency question, says the *Reporter*, and "a brisk business will be done."

---

The showing of the Fall River mills for the quarter ending July 31 is more favorable than would have been supposed. Thirty-one corporations, representing nearly $19,000,000 in capital stock, have paid out in dividends during the three months almost $415,000—an average of 2.21 per cent., while five paid 3 per cent., one 4, and one 5. This is partly accounted for by the fact that the mills were working largely during this period on contracts which had been booked at higher prices than have ruled during the last sixty days; but, even after making this allowance, the showing is exceedingly satisfactory. That the existing depression is due to the lack of confidence caused by the silver situation, rather than to the fear of tariff changes, is proved by the fact that the Fall River mills did so well many months after the election in which the country declared against the McKinley tariff. Thomas Dolan, the well-known textile manufacturer of Philadelphia, cites the experience of that city to the same effect. "In the woollen business," he says, "everything went along swimmingly until the 1st of July. Orders came in good and strong for fall goods. The situation was like this: Manufacturers had the benefit of the McKinley Act, which kept out foreign competitors, while they were able to buy raw material at lower prices than during the previous year. Conditions were thus favorable, and, with the good demand, everything was prosperous until the silver craze upset the country." Mr. Dolan, who is a Republican in politics, declares his belief that "the depression is almost wholly due to the silver policy," and that "confidence will be restored to the financial community by the repeal of the purchasing clause of the Sherman Act."

---

Some months ago Mr. Edward Atkinson proposed that all outstanding arrears of pensions, which the Commissioner estimates will all be audited before the end of 1894, should be treated as "a part of the existing public debt," and provided for by the issue of exchequer bills at 3 per cent. interest, which would at once ease off the Treasury by $48,000,000. The Hartford *Courant*, Senator Hawley's newspaper, now comes forward with a scheme looking further in the same direction. Premising that from 1861 to 1892 the Government paid out the enormous sum of $1,418,348,212 for pensions, and that the appropriations on that account for the current fiscal year are $144,956,000, with an estimated deficiency of

$10,508,621 besides, the *Courant* characterizes these payments as "a legacy of the war," and "part of the cost of the Union," and asks, "Why should the immediate present bear the whole of this heavy burden, whose benefits are not for now alone, but for by-and-by as well?" It suggests that we divide with posterity future pension payments, and issue bonds enough to pay say half the cost of the annual bill. The *Courant* urges not only that such a plan would be sound and just in the long run, but that its early adoption, and the issue in the near future of $70,000,000 to $75,000,000 of low-rate gold bonds, would not merely relieve the present situation, as the banks would be quick to pick up such bonds and issue currency against them, but would also take so much off from the taxes. The principal and fatal objection to this plan is, that it would be made the groundwork for an enlargement of the pension list to the extent of the borrowing powers of the Government.

---

We are having a practical demonstration of the usefulness of the new quarantine regulations passed by the last Congress. Surgeon General Wyman of the Marine Hospital Service is present in person almost daily at the Quarantine Station in the lower bay, and is coöperating harmoniously with Dr. Jenkins in the work of examining the passengers from incoming ports suspected of cholera infection. The Surgeon-General has on duty also Dr. Young of the Marine Hospital Service, and is making it very clear that he looks upon the new law as conferring both responsibilities and powers upon him which he is determined to exercise to the full extent of his ability. The whole country has reason to feel safer than ever against a cholera invasion because of this conduct. The Surgeon General's presence will diffuse a stronger feeling of confidence in the New York Quarantine than has hitherto been possible.

---

The appointment by a Democratic President of a negro as postmaster in an Ohio town is a sign of the times. George Harding is the man, and Wilberforce the town. Wilberforce is the seat of a college devoted to the education of colored youth, and the county in which it is situated has the largest negro population, proportionally, of any in Ohio, though of course a large majority of the people in both county and town are white. But it never occurred to the Republicans to make one of the negroes postmaster, and we are under the impression that this is the first time a black man has been given such an office in Ohio.

---

It must occur to the Hon. Patrick Egan that his final return from Chili now presents a more or less melancholy contrast with his temporary return during the Presidential campaign of last year. Then he was received with great favor by the Republican potentates, and was taken out to Ophir Farm to be dined by the candidate for the Vice-Presidency and to address the yeomanry of Westchester County at a spontaneous serenade, followed by a collation in the evening. Those were glorious days for the Hon. Patrick. Everything he said and every movement he made was chronicled with deferential carefulness, for there was a profound conviction in the mind of the Republican Vice Presidential aspirant that an innumerable host of Irish voters was following close upon the coat-tails of Mr. Egan. When election day arrived, it was evident from the figures of the returns that there had been some mistake about the Irish vote, for there were no signs of it in the Republican total. It happens, therefore, that when Mr. Egan reappears among us now, the most that he gets in the way of attention is a very bad wood cut of his features, and a few lines of space for his views on the monetary crisis. Small wonder that the announcement is made that, after a brief sojourn here, Mr. Egan will go to his former home in Nebraska, and will, at the same time, we feel authorized in predicting, pass away for ever from American politics. He was the last of the Blaine Irishmen.

---

The most cursory examination of the Irish "estimates" would enable any one to form his conclusions as to the costliness of the task of seeking to govern a country without the assistance of the effective public opinion of its inhabitants. The report of the Irish Land Commissioners to the 31st of March last is in truth a review of the complication and cost involved in the tenure of land. The simple system of individual contract prevailing in most countries, in Ireland was untempered by the free play of public opinion, and hopelessly collapsed upon the outburst of the Land League agitation. Upon its wreck has been reared an elaborate system of inquiry, arrangement, settlement, and purchases under a permanent Land Commission. Judicial rents are fixed by chief commissioners and sub-commissioners, by valuers and by civil-bill courts. Fair rents are fixed by agreement and by arbitration, by commissioners, and by civil-bill courts. Appeals are heard. Orders are made for laborers' cottages and allotments. Judicial leases and fixed tenancies are arranged. Leases are inquired into, and if unjust declared void. Lessees are declared permanent yearly tenants. The surrender of holdings by middle-men is negotiated. Ten million pounds was granted for the sale of land to tenants under the Act of 1885, and £30,000,000 further guaranteed by taxes on Ireland, under the extremely complicated procedure of the Act of 1891. The present report is illustrated by ninety-five tables.

Immense benefits have been conferred upon the Irish agriculturists. Altogether, since the inception of the legislation in 1881, 288,054 cases of fair rent have been fixed, dealing with 8,666,151 of the 20,000,000 acres of Ireland. The rental in these cases has been reduced from £5,975,697 to £4,733,262 per annum, or 20.7 per cent. This reduction by law in Ireland, after a fierce agitation and untold suffering, is no greater than the rent reductions brought about in Great Britain by voluntary agreement. About £12,000,000 of the £40,000,000 already provided for has been lent to 30,000 persons to enable them to become proprietors. Of the annual instalments but 1 per cent. is any way in arrear, and an almost infinitesimal proportion can be considered as irrecoverable. So much for the average honesty, under reasonable conditions, of the Irish tenantry. The reductions in rent above noted have induced a perhaps corresponding amount of reduction by voluntary agreement out of court. The report by no means sums up all the benefits (in so far as the breaking down of ordinary economic principles is likely to be of permanently enduring benefit) assured to the Irish people by the agitation from which they are emerging. Laborers' houses by the thousand have been erected over the length and breadth of the country, and a system of registration of title, as yet greatly hampered by legal prejudices, has been instituted. It would be as easy to persuade the French that their great Revolution was not an untold benefit to their country as it would be to persuade the Irish to turn their backs upon the Land League.

---

The present protective laws of France were brought about by a combination between the manufacturing and the farming interests. For the sake of getting duties of nearly 70 per cent. on their wares, the manufacturers conceded to the farmers about half that rate on grain and various other food products, though they still insisted upon free silk and wool as necessary to their business. This combination was entered into rather grudgingly by the agriculturists, one of whom said that a quarter of the products of French agriculture was "outrageously sacrificed to the Mo'och of free trade," and it now seems in danger of being broken up entirely. The severe drought in some parts of France has cut off the supplies of forage, and driven the price of cattle down to about one-sixth of what it was a year ago. The cattle-owners appealed for aid to the Chamber, which reluctantly gave them free entry of hay and straw, but refused, by large majorities, to grant them free corn and oats. The result has been to open the farmers' eyes to the beauties of protection, and it is thought that they will hereafter be found taking much more kindly to the Moloch of free trade.

*THE EXPERIENCE OF FRANCE.*

In his speech in the House on Friday Mr. Bland quoted the British Gold and Silver Commission of 1888 to prove that the bimetallic law of France at the ratio of 15½ to 1 kept the market ratio steady at that ratio for the period of seventy years, from 1803 to 1873. This is one of the fictions of the silverites from which no amount of refutation will suffice to loosen them. But we will try to shake them once more. We might ask, as a preliminary question, why the spell was broken in 1873. The argument, based upon the supposed fact that silver and gold ratio was steady for the seventy years in question, is that there was a peculiar force in the French law causing that steadiness. Why did this magic cease to work in 1873? France did not close her mint to silver until after the market ratio had changed. It was nothing but the change of market ratio, which had begun to drain her of gold, that drove France to stop the coinage of silver. The bimetallists themselves admit this when they throw upon Germany the blame of forcing the hand of France by selling silver in 1873 and later. So it appears, even according to their own showing, that the French bimetallic law of 1873 was good only for fair weather. When a strain came, like the selling of silver by a neighboring country, the bimetallic law gave way. So the real question at issue is, *how much* strain such a law could possibly endure. If we admit all that is claimed for the experience of France, the sum total of the gain is that a bimetallic law has a *tendency* to hold the market ratio at a particular level, but that this tendency may be overcome by the conditions of supply and demand.

Even this is more than we can concede. And first let us glance at the report of the British Commission of 1888. This Commission consisted of men of a high order of intelligence, but, as it happened, it did not embrace a single person who could be called an expert. Not one of the members had any special familiarity with the subject in hand, while all of them had general familiarity with it. Accordingly they were in the mood to accept as true any scrap of misinformation that had passed for a long time unchallenged. Such a scrap of error was the statement that France had had the two metals in concurrent circulation for seventy years, from 1803 to 1873, at the ratio of 15½ to 1. They took this for granted and proceeded to advance certain *a priori* arguments to account for the remarkable steadiness of the market ratio. Among other things they said:

"The fact that the owner of the silver could in the last resort take it to those mints and have it converted into coin which would purchase commodities at the ratio of 15½ of silver to 1 of gold, would, in our opinion, be likely to affect the price of silver in the market generally, whoever the purchaser and for whatever the country it was destined. It would enable the seller to stand out for a price approximating to the legal ratio, and would tend to keep the market steady at about that point."

When their final report was published, Mr. Robert Giffen, the statistician of the British Board of Trade, who is a real expert in monetary science, took up this paragraph, so fraught with mischief, and showed that it was founded upon an entire misapprehension, for the reason that France did not have the two metals in concurrent circulation during the period under consideration, but had had them alternately, first one and then the other. He produced and published the market reports of Paris for each month from 1820 to 1847, during all of which time there had been a premium on gold ranging from ½ per cent. to 2 per cent. Nobody would pay a debt in gold when ½ per cent. could be saved by paying it in silver. On every debt of 1,000 francs from five to twenty francs could be saved, according to the premium of the day, by paying in silver. The literature of the period is full of proofs that gold was not in circulation at this time, although it was coined more or less at the French mint for money-changers and hoarders.

After 1847 a change took place due to the gold discoveries in California and Australia. Silver went to a premium in France, and was exported and melted to such an extent that the country was left with an insufficient supply of small change, and was obliged to adopt a token coinage by debasing the fineness of all coins smaller than five francs to 835 thousandths, instead of 900. After 1867 there was another change. Gold went to a small but increasing premium, which became so excessive in 1873 that the coinage of franc pieces was limited by law, and stopped altogether in 1876, in order to prevent the exportation of gold. In short, the facts show that France did not have the double standard in practice during the period in question any more than we in America had it. Mr. Giffen showed conclusively, too, that the French law of 1803 had no *tendency* to hold the two metals together. It should be remarked that as no reason has been assigned by the bimetallists for the spell coming to an end in 1873, there is as little reason for putting its beginning in 1803. The ratio of 15½ to 1 was adopted by France in 1785, and was continuous from that time, and was merely reënacted in 1803. On this point we will cite what Chevalier, the French economist, says in his celebrated treatise on money. Chevalier, it should be added, was the great champion of silver in his day.

"In the year XI. (1803)), when the law of seventh Germinal was enacted, which established for a temporary standard the ratio of 1 to 15½ between the two metals, this ratio actually existed in the commercial world; but little by little it changed, and soon gold came to be worth ordinarily a little more than 15½ times as much as silver—it has sometimes been worth a little above 16 times as much. This discrepancy, which has usually been about 1½ per cent. (that is, one-half of that which manifested itself from 1726 to 1785) would have had no effect if the prevision of Gaudin had been correct. On the contrary, it had a very considerable effect: *it sufficed to retire gold from circulation.* A few years after the passage of the law of the year XI. gold became so scarce that people had to buy it of the money-changers when they wanted to carry that kind of cash on their journeys. In fact, the circulation of the two metals side by side which Gaudin flattered himself that he should establish by means of the coinage of pieces denominated twenty francs and forty francs, *had ceased to exist shortly after the year XI., and twenty-five years after that date the circulation consisted of silver only*" ('La Monnaie,' p. 216).

*CANADIAN AND AMERICAN BANKING.*

The comparative freedom of the Canadian banks from the troubles now afflicting the American banks and the American people, has been discussed of late. In an interview in the *Evening Post* Mr. Walter Watson attributed the Canadian exemption to its system of branch banks. He pointed out that Canada, with its few leading banks, but with the branches of those banks extending throughout the country, was in a better position than our own bankers to have exact information about the true state of affairs, and could therefore arrange banking matters much better, anticipating and perhaps preventing so great a collapse of credit as we are now witnessing.

That the system of branch banks has great merits cannot be denied. Besides the advantage of more precise and extended information, the system lends itself also to a smaller proportion of reserves. The joint-stock banks of England, with their branches running up into the hundreds, are content with a proportion of reserve to liabilities of but 12 to 15 per cent. Saturday week's bank statement for the New York Clearing-house, though unusually poor, showed a reserve of about 21 per cent. The percentage of reserve, fixed by statute at 25 per cent. for city and 15 per cent. for country banks, is purely arbitrary. It is a high proportion, judged from a foreign standpoint. It is possible for a bank doing a regular business among conservative men to be safe in ordinary times with but half this legal requirement. The actual percentage needed must vary with the kind of business done. Now the low average of London banks is due in part to confidence in English finance and in part doubtless to the system of branches, which seems to require less money in each case, the home banks keeping the reserve for the hundreds of branches. With us to-day our lack of currency is in part due to the wish of each small bank throughout the country, acting independently, to have on hand a larger amount of cash than usual. So long, however, as there exists a popular, though unjust, prejudice against banks, it is useless to discuss the question of establishing branches in the United States.

But granting the branch plan its proper praise, there still remain large differences in national conditions which cannot be ascribed to that cause alone. Branches in Australia, for example, did not prevent disaster there. The want of branch banks did not cause our present disaster. The New York Clearing-house Association has

been, from the day that it began to issue loan certificates, virtually one gigantic institution, larger than any bank with branches in the whole world, except perhaps the Bank of England and the Bank of France, both of which have branches. But the example and weight of the Clearing-house Association had no effect whatever to prevent the hoarding of money when the public began to apprehend a change in the standard of value from gold to silver. The reason is obvious. No bank or union of banks can do more than pay their obligations in the legal-tender money of the country. If causes are at work to change the legal tender, why, the banks are in the stream and must swim with it. Frightened depositors, however, will try to escape. Everybody who can will lay something aside, in order to be provided for the worst that can happen, and, as we all know, the withdrawal of one dollar actual cash removes the foundation of ten to twenty dollars of credit. The primary difference between us and Canada is that the latter is not exposed to a change of standard, and hence her fabric of credit is not impaired.

Moreover, the bank note system of Canada is grounded upon the true principle that the bank's bills receivable shall provide for and redeem the circulating notes. Bank-notes are issued by the discount of commercial paper. A B offers his promissory note at 60 or 90 days for discount. It is for the bank officers to know that this note represents goods produced and actually in the market, either sold or ready to be sold. Any other kind of promissory note is accommodation or speculation. The discounting of the latter is not entitled to be called banking. When the bank discounts the promissory note, it may and generally will pay out its own notes to a corresponding sum. So long as the bills receivable are good the bank-notes must be good, because the one offsets the other. This is the Canadian system. We need not now consider the safeguards employed. They have been found sufficient thus far, although they do not require a deposit of Government bonds. It is obvious that as long as the safeguards are sufficient there cannot be a "currency famine" like that which we are now suffering from.

Another reason why Canada is not suffering like the United States lies in the fact that Canada has not been so progressive as we have. The lack of advancement in numbers and in wealth has long been known to and bewailed by Canadian statesmen. This is due to a circumscribed territory. It has a physical cause and cannot be helped. In a country which advances in prosperity but slowly, banking cannot well be otherwise than slow and cautious. While Canada has been standing still, comparatively speaking, the United States has advanced by leaps and bounds. Faith in American enterprises has in general been well deserved and well kept. If we had been restricted to a humdrum career, we should, like Canada, have been beyond a credit panic. As it is, it is not the industries and railroads of the United States which are unsound, generally speaking. Suspicion has indeed reached them, but only because of the distrust of all values first engendered by the fear of our currency. Great Britain itself would be in a panic if a law were enacted there throwing doubt upon the standard of value. London, with its enormous structure of credit, would feel the effects of such a law at once and disastrously.

Of course we have ourselves to thank for the unfortunate position in which business is placed. Yet, as compared with Canada, our distress is great in proportion to our previous prosperity. Our aim should be to strengthen our credit by a good banking system, though not necessarily by branch banks, so that we may have the old-time prosperity, and yet with safety. It is certainly the duty of Americans to go on utilizing the great advantages which our country offers to the enterprising; but if we are to succeed in this, we must take especial pains to support the credits by which alone great advances in wealth and prosperity are easily possible. We can thus secure our future, while having Canadian conservatism and security too.

---

### *THE BERING SEA DECISION.*

It is clear to any one who will read the official correspondence that the Paris arbitrators have simply put us back where we were in 1890, and have given us, after three years of tremendous shedding of ink and discharge of argument and a costly arbitration, only what we might have had then for the asking. From the very beginning, the British Government showed itself willing to come to an amicable agreement about a close season. Mr. Bayard was in a fair way to secure from Lord Salisbury in 1888 all that was needed, with the additional advantage of having Russia a party to the agreement, when the Presidential election and the request of Canada for delay broke off the negotiations. But the willingness of Great Britain to come to a friendly understanding remained unchanged, and on April 30, 1890, Sir Julian Pauncefote offered to Mr. Blaine what were substantially the same terms that the arbitrators now impose—or what, under the further negotiation that was invited, might easily have been made the same.

Expressing for the twentieth time the earnest desire of his Government for a friendly settlement of the dispute, and for "the preservation of the fur-seal species for the benefit of mankind," Sir Julian proposed (1) "that pelagic sealing should be prohibited in the Bering Sea, the Sea of Okhotsk, and the adjoining waters, during the months of May and June, and during the months of October, November, and December, which may be termed the 'migration periods' of the fur-seal"; and (2) "that all sealing vessels should be prohibited from approaching the breeding islands within a radius of ten miles." The use of firearms and other minor matters were to be settled in view of the further evidence to be brought to light by special inquiries. Thus the United States were freely offered substantially all that they have now secured. But Mr. Blaine replied that the proposals "cannot be accepted," and that the United States could not be expected to be content with anything less than an acknowledgment that their "rights within the Bering Sea and on the islands thereof" are "absolute."

Later on he proceeded to develop his conception of what those "rights" were and were founded on, and on December 17, 1890, stated, as the real "issues" between the two Governments, precisely those five points all of which have now been declared to be untenable, on three of them one of the American arbitrators, Justice Harlan, being unable to sustain the position of his own Government. Mr. Blaine was especially emphatic on our property rights in the seals, in a letter of April 14, 1891, dwelling upon the "homing instinct" of the seals and all the rest of it in the way carried to such ridiculous lengths by the arguments at Paris. Thus it appears that all these points, which he said made up the only "issue," and which he put into the American case, have been thrown out of court. Mr. Blaine's history has been declared, one of his own arbitrators concurring, to be fiction, his geography pure fancy, and his international law a mere whim; and the result of the long and expensive arbitration is to give us what he contemptuously refused in 1890.

The part which Mr. E. J. Phelps has played in the whole affair is not one that he or his countrymen can look upon with complacency. In a letter to Mr. Bayard, of September 12, 1888, he practically advised our Government to go to war with Great Britain, international law or no international law. Nothing else could have been intended by or could have followed from his advice to make a "resolute stand," and his "earnestly recommending that the vessels that have been already seized be firmly held, and that measures be taken to capture and hold every one hereafter found concerned in it [sealing]." This was an extraordinary letter to have come from the American Minister to England, and Mr. Bayard simply filed it away as a curiosity. But when Mr. Blaine came in, he seems to have found it, to have approved of it, and acted upon it. Certainly he published it in 1891 with approval, and certainly he seemed prepared to provoke a war in 1890 in the line of its recommendations. It was only the flat notice, served upon Harrison by Lord Salisbury, that the United States Government would be held responsible for seizing

British vessels upon the high seas, that led to the temporary *modus vivendi* and the subsequent arbitration. Mr. Phelps, however, disapproved of such a weak policy, and his voice was still for war no longer ago than in his argument at Paris, when he said that, had he been President, he never would have submitted the question to arbitration at all.

The result, especially in view of Justice Harlan's judicial-mindedness, is a fresh triumph for international arbitration.

### *OWNED AND RENTED HOMES.*

ACCORDING to the eleventh census, there were resident in New England on the first day of June, 1890, 1,034,262 families. Bulletins giving a summary of the returns of farm and home ownership and encumbrance have been issued for each one of the six States in that section of the country, and from the figures therein contained it appears that, of the total number of families, 461,414 resided upon farms or in houses owned by some member or members of the families occupying them, while the remaining 55 per cent., or 572,848 families, lived in hired habitations.

Among farmers, proprietors are proportionately more numerous and tenants less so than is the case among the non-farming classes of the community. Of the 190,361 New England farming families, no less than 165,455, or very nearly 87 per cent. of the whole, own their farms, while of the 843,901 other families only 295,595, or but a trifle over 35 per cent., were not tenants. It further appears that, excluding the farms altogether, home ownership is much more frequent in the rural districts and in the smaller villages and towns than it is in the cities, and that as a rule the more populous the city the smaller is the proportion of its inhabitants who are the proprietors of the houses in which they live. Thus, the percentage of owning to total families was 46 in the case of non-farming families residing outside of cities of at least 8,000 inhabitants, 31 in cities of from 8,000 to 100,000 inhabitants, and but 19 in the cities of over 100,000 inhabitants.

In other words, comparing the farmers with the people of Boston and Providence, the only two New England cities with over 100,000 inhabitants each, we find that, proportionately, proprietors of their own roof-trees are about four and a half times more numerous among the former than among the latter. Of course it does not follow that, because the general rule is that the more populous the city the smaller is the proportion of its people who own their homes, a particular city of, say, 50,000 inhabitants must necessarily have relatively more home owners than a city of half a million people. Special local conditions may, and in particular cases do, more than offset the influence of the general tendency. Thus, in Holyoke, with 35,673 inhabitants, only 16.16 per cent. of the families own their homes, as against 18 43 per cent. in Boston, with a population of 448,477. No attempt was made by the Census Office to find out how many people owned residences. All it tried to to do was to ascertain how many people owned the particular house in which they lived, and how many did not. Of course it frequently happens that the proprietor of one or many houses does not live in any one of them, but may himself be a renter of an entire house or of a "flat" from some one else, or may live in a boarding-house or at a hotel. In the census such a person figures as a renter.

The reasons why a very large proportion of the inhabitants of cities, and especially of our larger cities, do not own the houses in which they live are many, and not a few of them are obvious. In the first place, the larger the city the more costly, as a rule, is the average house in it, the value of the ground being so much greater. Thus, while the average Massachusetts mortgaged farm is worth $3,158, and the average mortgaged house outside of the cities $2,660, the average value of such a house in cities of from 8,000 to 100,000 inhabitants is $4,167, and in Boston $7,026. In all great urban communities the proportion of the purely transient population is always important. Neither the rich nor the poor persons so situated are likely, except under very peculiar circumstances, to be the owners of the houses in which they happen to be when the census is taken. Practically all of the tenement, apartment, and boarding-house and hotel population will be included in the families who hire their houses. Then in cities there are very many people, quite well enough off to own the houses in which they live, who do not do so because, as they happen to be situated, it is cheaper or more convenient for them to rent.

These and other causes sufficiently explain the very much larger proportion of proprietors among the farmers than among the inhabitants of cities, not only in New England, but throughout the country, if scattered States in other sections for which the statistics on this subject have been published can be accepted as fair samples. It is not easy to explain, however, why it is that, in New England, of the homes other than farms occupied by their owners, so much larger a proportion are under mortgage than is the case with the farms. So much has been said and written about mortgaged farms that it will probably be a surprise to most persons to learn that in New England only 28 per cent. of the farms owned by their occupants are mortgaged, as against 31 per cent. of the homes outside of the cities, 42 per cent. in the cities of between 8,000 and 100,000 inhabitants, and 39 per cent. in the two cities with more than 100,000 inhabitants each.

From the returns thus far published for other States, however, it seems probable that, as a general rule throughout the country, the reverse is true, as it is even in the New England States of Maine and Vermont. Among the six New England States there are some curious differences in the proportion of owned and hired and of free and encumbered habitations. The peculiarities of Rhode Island (in which the tenant farmers are proportionately very much more numerous than in the other States, constituting as they do 25 per cent. of all the farming families, while on the other hand less than 20 per cent. of the farm-owning families have encumbrances on their places—a smaller proportion than in any other New England State) may be passed over as unimportant on account of the small number of farming families in the State, viz., only 5,500 all told. It is not, however, so very easy to dismiss or explain the fact that while in Maine only eight and in New Hampshire only eleven out of every 100 farming families are renters, in Vermont no less than eighteen hire the land they till; or that while only 22 per cent. of the Maine and New Hampshire farms occupied by their owners are mortgaged, in Vermont 44 per cent. are subject to such encumbrance. On the other hand, in respect to the percentage the encumbrances bear to the value of the encumbered property, as that value is estimated by the owners, there is very little variation among these States, the extreme range being from 36.68 per cent. of the aggregate value of the encumbered farms of Maine to 45 03 per cent. of the value of the encumbered homes of Massachusetts. Nor is the range of the average interest paid great, varying from 5.38 per cent. in the cities of Connecticut to 6.26 per cent. on the farms of Maine.

In the value of the encumbered farms and of the encumbered homes outside of the cities, there is a very great difference between the three northernmost States and the three southernmost, as the following table shows:

| State. | Average Value of Encumbered Farms. | Average Value of Encumbered Homes Outside Cities. |
|---|---|---|
| Maine | $1,449 | $1,592 |
| New Hampshire | 1,940 | 2,014 |
| Vermont | 2,405 | 1,831 |
| Massachusetts | 3,158 | 2,660 |
| Rhode Island | 3,581 | 2,786 |
| Connecticut | 3,115 | 2,726 |

### THE COLUMBIAN EXPOSITION.—III.

FINE ARTS: PICTURES BY AMERICAN ARTISTS — SCULPTURAL AND PICTORIAL DECORATION.

CHICAGO, July, 1893.

A MOST gratifying thing about the American exhibition is the large number of good portraits. The two small beautifully drawn portraits of a lady by T. W. Dewing, the stately full-length seated figure of a lady in a black gown by Frederick P. Vinton, the brilliant and remarkably life-like "Portrait of Mr. Joe Evans" by Alfred Q. Collins, the fine picture-portrait of Augustus St. Gaudens by Kenyon Cox, and the excellent full-length figure of a boy in a blue suit by the same artist, the seated figure of a lady in white by E. H. Blashfield, the picturesque "Portrait of Mme. Eames-Story" by Julian Story, "My Sister Lydia" by Edmund C. Tarbell, and "Portrait of Miss E. A. H." by Carroll Beckwith, are some of

those that for one or another merit are conspicuous. Mr. Thayer seems less happily represented than he might have been, with two works that scarcely show his best qualities, "Portrait of a Lady" and "Brother and Sister." Mr. Chase, on the other hand, is seen in one of his best phases in the full-length figure of a little girl in a white dress, "Alice—A Portrait." A very well composed and soundly painted picture is the "Portrait of a Lady" by Samuel Isham, and other notable works in portraiture are those signed by Frank Fowler, Charles Sprague Pearce, Jules L. Stewart, Frank Benson, Charles E. Boutwood, Eastman Johnson, W. W. Churchill, George W. Maynard, Anna Lea Merritt, Cecilia Beaux, and Dora Wheeler Keith.

It would have been much more interesting if, in the American galleries, the pictures by the various painters who are represented there by five or six or more works each could have been hung in groups. Such an arrangement was effectively carried out in hanging the French galleries at Paris in 1889, and made it much easier to form a right estimate of the value and importance of each artist's work than is possible when the pictures are widely scattered, as they are at Chicago. I feel sure, too, that it would have made the walls look better, though it is stated by the officials who had charge of the hanging, that the group system was tried but was found impracticable for several reasons. Possibly the question might have been most satisfactorily settled if the works of two artists—one a figure-painter and the other a landscape-painter—had been selected for groups, and the arrangement carried out as far as the number of works sent by such painters would warrant. It is easy to see by the catalogue (in which we find, for example, that Mr. Homer has fifteen pictures, Mr. Sargent nine, Mr. Dewing seven, Mr. Harrison six, Mr. Cox twelve, Mr. Chase six, Mr. Curran eleven, Mr. Vonnoh twelve, Mr. Eakins ten, Mr. C. Y. Turner eleven, Mr. Melchers seven, Mr. Weir eight, and so on, and that among the landscape-painters there are fifteen pictures by Mr. Inness, fourteen by Mr. Tryon, ten by the late A. H. Wyant, eleven by Mr. Gifford, six by Mr. Davis, five by Mr. Enneking, five by Mr. Twachtman, four by Mr. Dewey, six by Mr. Coffin, and from three to four by a considerable number of others) that the material was not lacking.

Grouping would have shown us better, also, how the work by American artists at home compares with that by those abroad—a question in which all who are following the development of an art atmosphere in New York are keenly interested. So far as the painters of the figure are concerned, the honors are about even, inasmuch as, in the present exhibition, for such men as Sargent, Whistler, Harrison, Abbey, Melchers, Dannat, Simmons, Hitchcock, Walter Gay, Marr, Weeks, Stewart, Vail, Pearce, and Bridgman on the other side of the water, we have here among those at home Winslow Homer, Chase, Dewing, Cox, Thayer, Brush, Tarbell, Collins, Blashfield, Mowbray, Weir, Low, Vinton, Millet, and Wiles. Almost all the landscapes in the exhibition are by the home artists, and the excellence of the work by American artists in this direction seems to be largely due to home influences.

Such pictures as Mr. Thayer's "Virgin Enthroned," Mr. Simmons's "The Carpenter's Son," Mr. Brush's "Mother and Child" and "The Sculptor and the King," Mr. Dewing's "The Days," Mr. Cox's "An Eclogue," Mr. Denman's "The Trio," Mr. Millet's "At the Inn" and "Anthony Van Corlear the Trumpeter," Mr. Weeks's "Three Beggars of Cordova," Mr. Walter Gay's "A Gregorian Chant," Mr. Melchers's "Skaters," "Married," and "The Sermon," Mr. Mowbray's "Evening Breeze," Mr. Blashfield's "Christmas Bells," Mr. Hitchcock's "Tulip Culture," Mr. Ulrich's "In the Land of Promise," Mr. Stewart's "The Hunt Ball," Mr. Low's "Love Disarmed," and Mr. Du Mond's "Holy Family," which have had successes in exhibitions in New York or Paris, and now appear here together, show how diversified are the purposes of American painters and how individual are their technical methods. Mr. Dannat, the painter of the robust and solidly modelled group of Spanish idlers singing in a tavern, "The Quatuor," in the Metropolitan Museum, New York, sends from Paris a picture called "Spanish Women," which shows he has taken a path that leads in the opposite direction from the one he was following when he painted "The Quatuor." As character studies, the five women seated in a row are admirable, but the picture seems to have no more "body" than so much wall paper, and it is strangely pervaded by various tones of blue. The immense picture by Carl Marr, "The Flagellants," shows a great deal of ability on the part of the painter in holding together a large canvas with a great number of figures, and possesses much that is good in the technical sense; "Tea al fresco" and "June Morning," by Mary Fairchild MacMonnies, are large pictures painted in a very high key, and more decorative than realistic; "The Fishermen's Departure" and "Evening," by Louis P. Dessar, large canvases also, show much truth of observation in painting out-of-doors effects and healthy sentiment, and Mr. Bridgman's spirited composition, "The Passage of the Red Sea," presents, among other qualities, some notable drawing of horses in movement.

These pictures and others by the same artists, and by C. C. Curran, Childe Hassam, Robert Reid, H. R. Poore, Theodore Robinson, Eugene Vail, W. S. Vanderbilt Allen, E. L. Henry, J. G. Brown, Louis Moeller, Irving R. Wiles, C. P. Grayson, F. S. Church, Thomas Hovenden, Frederick James, D. Ridgway Knight, L. Lee Robbins, Amanda B. Sewell, R. V. V. Sewell, C. J. Thériat, C. Y. Turner, F. C. Jones, Henry O. Walker, and John McLure Hamilton, together with the portraits previously mentioned, include what is most notable from the figure-painters. To the list, however, should be added, though it is a decoration intended for the Boston Public Library, the section of a frieze representing Galahad brought to Arthur's Court, by Edwin A. Abbey. It shows this artist, who has achieved such a high reputation as an illustrator, in a new field. One decorative work by him, "The Bowling Green," has been in place in the Hotel Imperial in New York for several years, but, excellent as it is, there is little in it to foretell the success he has achieved in this last composition. The first and most important consideration, that such a work shall be decorative, has been well observed; the arrangement of the figures is effective; the double row of angels in white robes close above the congregation of knights is capitally disposed as to line and mass, and the color scheme is agreeable and harmonious. The picture will certainly increase Mr. Abbey's fame, and in all probability it will look even better in its place in the Library hall than it does in the galleries of the exhibition.

Landscapes are numerous in the American section, and no other pictures show more conclusively than they do that American artists are making steady and rapid progress in individual expression. A criticism applicable to many of the exhibits is that form is somewhat neglected in the effort to obtain color quality. There is no lack of cleverness in brush work, and picturesqueness of general arrangement is notable in many instances where sincerity and thoroughness in the comprehension of drawing are not so apparent. Most of the painters seem to be synthesists in method, and that is a tendency in the right direction, but at the same time synthesis without the fullest comprehension of the underlying constructive forms in nature leads to emptiness and lack of character. With the fine feeling for color shown by so many American painters of landscape, more attention to form would do much to raise their work to a level which painters of other schools scarcely attain. Mr. Inness, the dean of the landscape-painters, is well represented by fifteen pictures. They extend over a considerable part of his career as a painter, and include the "Delaware Valley," an early work, some such excellent interpretations of Nature's changing aspects as "Winter Morning," "A Day in June," and a "A Gray Lowery Day," and one picture, "End of the Shower," with a dark sky and a white cow in full sunlight in the foreground, that is certainly equal to if it is not better than anything he has yet produced. It is a beautiful work, quite free from a certain softness and indecision in form that may be noted in some of the other pictures, admirable as a piece of color and most effective in composition. Mr. Tryon, in addition to a number of sympathetic, poetically treated pictures, such as "Starlight" and "The Rising Moon," exhibits a series of decorative panels, a form of landscape art to which his temperament seems to be peculiarly well adapted. They are simple in composition and notable for unity of effect and breadth of handling. A group of ten pictures by the late A. H. Wyant, who was one of the best landscape-painters we have ever had, show very well the charm and personal character of his work; and Mr. Gifford's methods are exemplified in eleven compositions, including moorland motives and coast scenes. A strong, virile landscape is Mr. Donoho's "La Marcellerie," a delightful rendering of morning sunshine on green meadows and tall trees is Mr. Davis's "Summer Morning," and two canvases by T. C. Steele, a newcomer, "On the Muscatatuck" and "September," evince qualities of a high order. E. Evans, another newcomer, shows excellent work in "Harvest"; and "Pasture Land, Connecticut," by Charles H. Hayden, is a direct, frank piece of painting remarkable for good modelling. Most of our well-known landscape-painters are well represented—H. Bolton Jones, Homer D. Martin, R. C. Minor, Charles Melville Dewey, W. L. Picknell, Appleton Brown, C. A. Platt, H. G. Dearth, Leonard Ochtman, C. H. Eaton, C. W. Eaton, R. W. Van Boskerck, G. H. Bogert, J. H. Twachtman, Edward Gay, and J. J. Enneking being the most prominent in the long list; and there are landscapes, also, or landscapes with subordinate figures or cattle, by J. Alden Weir, Theodore Robinson, W. L. Metcalf, R. W. Vonnoh, W. H. Howe, C. Morgan McIlhenny, and H. S. Bisping.

To sum up, the landscapes in the American section are extremely good, and one has but to walk through the galleries of the other nations after looking at them, to feel how good they are. If we have as yet no Corot or Daubigny, it is easy to perceive that the conditions are at least favorable for the appearance of such masters, for, as in all great "art movements,"

surpassing merit comes as a flower of steady, healthful growth.

The exhibition of water colors, pastels, black-and-white drawings, engravings, and etchings by American artists is as complete and comprehensive as that in oil paintings, but space does not permit of a review in detail. The collection of architectural drawings also shows the same remarkable progress in the practice of the art in the United States that is observable in painting. One of the galleries on the ground floor of the Art Building is devoted to a "Retrospective Exhibit of American Painting" from the colonial days when John Smibert (1684–1751) and John Singleton Copley (1737–1815) painted portraits, up to a period of a decade or so ago. It embraces works by Washington Allston (whose "Paul and Silas in Prison" shows how little there was in his painting to justify the reputation ascribed to him by his biographers), Thomas Doughty, Charles L. Elliott, William M. Hunt, Jervis McEntee, the two Peales, Pine, William Page, Gilbert Stuart, Sully, Benjamin West, Joseph Wright, John Trumbull, R. W. Weir, George Fuller, and others. It is much more interesting as an historical summary than as an art exhibition, except in the case of some of the canvases by Stuart, Elliott, Hunt, McEntee, Foxcroft Cole, and two or three others, possibly. It was a happy thought to bring the pictures in this room together, and if, through the difficulties that are inherent in such an undertaking, the collection is not as complete as it might be, it suffices to show that the United States has an honorable if not a brilliant past in art, and that the excellence of the work of American artists in our day dates almost as clearly and cleanly from 1876–'77 as if it were an actual beginning.

When the beautiful buildings in which the World's Fair is held were projected and the plan of the grounds was laid out, means were found by the public-spirited citizens of Chicago to pay for pictorial and sculptural decoration by American artists. Mr. MacMonnies's beautiful fountain, the splendid statue of the Republic by Mr. French, the quadriga crowning the peristyle—a work of great beauty which reflects the highest credit on Messrs. French and Potter, the sculptors who created it—the monumental groups of animals by Mr. Potter and others, Mr. Martiny's figures on the Agricultural Building, and other works, show that their enterprise was justified. How much they count for in the grandeur of the ensemble of the Fair could only be estimated if they were removed, and what has been done here will certainly make it out of the question to attempt to carry out architectural schemes of similar importance on other occasions without the beautifying coöperation of the sculptors. Mural decoration in color has also been provided for in some of the buildings. In one instance, and the only one in which it is an absolute, miserable failure, the United States Government is the sponsor. The Government Building is bad enough outside, but the walls of the rotunda and the interior of the dome are far worse. Unspeakably bad compositions, supposed to typify the arts, sciences, and industries, are framed there between green and brown imitation marble columns, and over these are ugly little bird's-eye views of various towns and places painted in weakly brownish tints. It is all bad beyond words, and presumably visitors to the Fair will give all the credit for the good work in the other buildings to Chicago, and wonder why the national Government, which ought to be foremost in such matters, shows no comprehension of them whatever.

The principal color decorations at the Fair are found in the Manufactures and Liberal Arts, the Agricultural, and the Administration Buildings. In the last-named the ceiling of the dome is decorated by William L. Dodge with a spirited, strongly handled composition that can be seen only by ascending to the gallery from which the dome proper rises. In the Agricultural Building there are figures in the porticoes by George W. Maynard, typifying the seasons, and in eight domes in the entrances to the Manufactures and Liberal Arts Building there are compositions by Carroll Beckwith, E. H. Blashfield, Kenyon Cox, Robert Reid, C. S. Reinhart, Walter Shirlaw, and Edward Simmons. Mr. Maynard in his work shows a full comprehension of the exigencies of his task, and his figures with the Pompeian red backgrounds are eminently decorative and suitable to their environment. Mr. Cox and Mr. Blashfield have been most successful in the treatment of their domes—the one with the simplest of compositions obtaining excellent effect by the apparent sureness of his procedure, very good drawing, and the careful treatment of accessories; the other, with a more elaborate scheme, showing equal ability to cope with difficulties, and a fine sense of unity in binding the different parts of the composition in a harmonious whole. Both are good in color and look well in their places. As everything about the pictures in these domes is white, without even a single note of color anywhere, the artistic problem involved was not an easy one. The domes by Mr. Reid and Mr. Weir are pleasing in color and decorative effect; that by Mr. Simmons is notable for the sturdy, virile character of his design; Mr. Beckwith's introduces a modern note in the use of recent electrical inventions as accessories to his figures, and those by Mr. Shirlaw and Mr. Reinhart are well held together in composition. The work in these domes on the whole, as well as the more ambitious compositions by J. Gari Melchers, Walter McEwen, and F. D. Millet in the same building, and by Mr. Dodge, which has been mentioned above, prove plainly that American painters are equal to undertaking the execution of decorative projects of the most complex character; and it is to be hoped that what has been done here will induce more architects who have public work to design, and individuals who have money to spend on buildings for private use, to invoke the aid of our artists in beautifying them. In the Woman's Building, too, where the decoration of the tympana has been done by Mrs. MacMonnies and Miss Cassatt, there is excellent work. Miss Cassatt's composition is not nearly so effective as it would have been if the figures were larger and the great masses of green which make their background were less vivid in hue; but the decoration by Mrs. MacMonnies is one of the best at the Fair. William A. Coffin.

## DISORDER—THE SPEAKER IN THE HOUSE OF COMMONS.

London, August 4, 1893.

Last week's fracas, although exaggerated in newspaper reports, was unquestionably disgraceful. For the first time in 250 years, members laid violent hands upon each other in the House of Commons. There was, however, no premeditated ill-feeling between individuals, the acute stage did not last for many seconds, and as to blows only three were concerned. For the moment the scene was sufficiently shocking, uncertain as one felt how far it might extend, and how many might become involved. Yet to thoughtful minds it was no anomaly. It was a natural outcome of the contending passions and the irritating language so freely indulged in since the commencement of the session. The promise of a great act of justice, the reversal of the tyrannical policy of the past regarding Ireland, has worked a complete change in the spirit of the country and her representatives. The Opposition, especially the Liberal-Unionist section, have blindly opposed such change. As the past has been, so must be the future. Irishmen must be condemned to continue the hereditary enemies of each other and of the sister island. So every idle word spoken within late years, under most aggravating circumstances, and every crime committed, when crime was almost the only weapon left in the hands of the Irish people, was to be daily and hourly resuscitated, and presented in naked form, stripped of all extenuating considerations and circumstances. An opposition based upon no principle, shameful in its tactics of delay and confusion, has been resorted to. More maddening than all, at least to the Irish members, has been the cowardly parade of present Irish crime, as proof that the Irish are a hopelessly inferior race—cowardly because it has been impossible to retaliate and show by a recital of British crime that crime is not peculiar to Ireland, since such a course would hopelessly alienate British feeling; and so passions were inflamed and feelings dangerously repressed.

Yet in this scene all parties were to blame, and quick as lightning a succession of incidents, many of which, taken alone, might have passed without result, led up to a shameful catastrophe. There had been already excitement and noise enough, as each succeeding Thursday brought the hour for closure of the sections of the Home-Rule Bill appointed for settlement within the week. This was to be the final evening in committee. A few minutes before the hour, Mr. Balfour pulled down one of his own supporters who was speaking, so that Mr. Chamberlain might have an opportunity of being the victim upon whom the closure guillotine should fall. He was even more than usual coolly exasperating and insulting in his language. He spoke of Mr. Gladstone's voice being to his followers the voice of a god, and then compared him to Herod. The Irish, ready enough to thwart Mr. Chamberlain under ordinary circumstances, determined he should be heard no further, and, more wantonly than ever, by shouts of "Judas, Judas!" they indulged in the interruptions by which they have unhappily distinguished themselves, and which the good sense of their leaders apparently cannot restrain. A call to order of a Conservative member failed to reach the Chairman's ear. He completely lost control of the House, which, instead of passing out of the division lobbies on the closure being put, surged up the floor and on the benches. The approach of a Liberal to the Conservative position was construed into a meditated assault, and an attempt was made to repulse him. The approach of an Irish member to mediate was construed in like manner. He was barred by an Ulster Conservative and blows were exchanged.

This scene, and many of the difficulties of the past months, have been due to the choice of an amiable and conscientious but singularly inefficient Chairman of Committees. The moment the Speaker, sent for in hot haste, appeared, an entire cessation of hostilities, a complete lull, an almost painful stillness, supervened. Affairs were temporarily patched up, a sitting

was allowed to pass, and on Monday mutual explanations and apologies were heard, and desires expressed that the incident should, as far as possible, be forgotten. The Irish, whom a large section of the British public had at first endeavored to make the scapegoats, were quite sufficiently cleared; indeed, it would have been more graceful, and even more politic, if their leader, in the few words which in the course of the explanations he so felicitously uttered, had admitted that some of his followers, although not originators of the game, had without doubt used their hands "in the scene which ensued." Deplorable as was the occurrence, inevitable perhaps as some such crisis was, it will not have been altogether regrettable if it has impressed upon the House the necessity of more measured language and greater self-control.

The Speaker's ability, tact, and governing power were never more conspicuously shown than upon this occasion. Much of his influence is due to his splendid voice. Its clarion-like, sonorous swell calls to mind Bulwer Lytton's description of O'Connell's. A man should be very certain of being in the right who would not cower under it in reproof. Yet it is often attuned to tones of the deepest feeling. The splendor of the position of Speaker of the British House of Commons is perhaps not generally realized. The appointment, nominally for the duration of but one Parliament, generally extends over several. The present occupant of the chair, the Right Hon. Arthur Wellesley Peel, the youngest son of the great statesman, is the eighth who has held the office within the present century. Chosen from among the members, subject to the approval of the Crown, the Speaker can be removed only upon an address to the Crown. Besides a palatial residence occupying one wing of the Houses of Parliament, and large patronage, he receives a salary of £5,000 a year. At the end of his labors he is rewarded with a peerage and a pension of £4,000 per annum for two lives. He is a member of the Privy Council, and the first gentleman in the United Kingdom, taking rank after barons. His duties, under ordinary circumstances, extending over only portions of five days of the week for half the year, although apparently light, demand for their proper performance the exercise of trained abilities of the highest order, an unfailing memory, keen eyesight, and a quick ear. The wig and gown which he wears, the state and ceremony with which he is surrounded, doubtless contribute to the isolation and impressiveness of his position.

The profound respect voluntarily and by custom accorded him rest, doubtless, upon those perhaps illogical traits in the British character which have contributed to the continuity and steadiness of British institutions. When, at the opening of proceedings, he makes his way in state from his residence to the Chamber, through the corridors used by members for passing to the committee, library, and refreshment rooms, it is against etiquette for any one to be found therein. When on summer evenings he and his family take the air upon the portion of the terrace which is outside his residence, there is no more thought of approaching them than there would be if he were a Grand Lama. When in the chair, he can be approached only upon strictly business matters. His levees, held twice a year and open to all members, can be attended only in court costume, sword by the side.* The invitations to his state dinners, distributed among men of all parties, are extended only to those who have attended these gatherings. The Irish members and the increasing number of Radicals who will not don court dress are consequently shut out from personal intercourse with him.

Nor are the recollections of their bitter history, and of bitter struggles in the House, sufficiently faded, nor are the hopes of complete amalgamation in feeling through the accord of home rule sufficiently clear, to allow of the former indulging in the same amenities as other members on entering and leaving the chamber. It is not in the power of the present Speaker always to rise above political prejudices; he is perhaps as fair as can be expected under all the circumstances. Those who make immediate and unhesitating submission receive more allowance than those who strive to withstand his decisions. He is a punctilious stickler for the dignity of his office, and is believed to have much resented an appeal recently put forward by Radical members for the simplification of dress at his receptions. The importance and responsibility of the office have of late years been vastly increased. It now rests with the Speaker, as with the Chairman of Committees, to accept or refuse motions for closure. The Speaker can suspend members for the remainder of a sitting. Disrespect to his rulings, punishment for which up to 1882 was merely nominal, may now be visited by suspension for one, two, or even four weeks. Had he been in the chair at ten o'clock on Thursday, the House would not have been disgraced by the scene which then occurred. D. B.

* It shows how completely Quakerism has altered from its former standards that many members of the Society of Friends attend so attired and girded.

## SOCIALIST POLITICS AND PLEASURE IN BERLIN.

Leipzig, July 27, 1893.

Although these are the dog-days in Berlin, as in our own great cities, and although the elections to the new Reichstag belong already to the category of the past, there is no cessation on the part of the more popular parties (Social Democrats and Anti-Semites) to the political activity displayed during the campaign. The Anti-Semites, having only lately become a "people's party" through their repudiation of Stöcker and his conservative contingent of Jew-baiters, have still to reorganize and consolidate, besides squaring accounts with their former allies. For the Social Democrats no such necessity exists, but it is a matter of principle with them that no halt shall be called in the propaganda. During the week and more that I passed in Berlin, every evening had its meetings, usually as many as half-a-dozen, held in different quarters of the town, and generally well attended.

These meetings are invariably presided over by two members of the police force, who smoke their cigars, stare stupidly at the crowd, and affect to take notes of the speeches delivered. Often it chanced that the assembly had nothing more startling to talk about than the result of the recent election; they seemed never to weary of being told over again what all knew within a day or two of the vote. At all of these meetings a *Referent*, or chief speaker, is announced through the party organ in advance; he presents the subject selected for the evening's discussion, a debate follows, and the transaction of such business as may require attention concludes the exercises. It is uncommon for the *Referent* to stint himself as to time, and as the number of debaters, who announce themselves by means of cards bearing their names and addresses during the course of his remarks, is usually large, it follows that the meetings are frequently prolonged until the early morning hours, and seldom or never reach their conclusion before midnight. Yet, although the greater number of persons present will go to their work at six o'clock the following morning, it is uncommon for any considerable number to leave before the end. Indeed, motions to conclude the debate, to limit the remaining speakers to five minutes each, etc., are almost invariably voted down. To see people apparently so much in earnest is in itself a pleasure, and this impression is deepened by the quiet, grave manner in which the German expresses his approval of the opinion advanced. Instead of vociferous applause (which, however, comes too in its place), he punctuates the speaker's periods with the words: "Sehr richtig," "ganz richtig" ("Very true," "quite right"), delivered in low tones and with a strong accent on the first word.

As for the opinions themselves, they are usually the commonplace of Socialism, and do not demand consideration here. Now and then the fresh expression given to an old doctrine by some young workingman thrills one with the thought of what all this agitation is doing for the education of the masses. It is not necessary to be a Socialist to see that what tends to make the people think for themselves, to awaken them to consciousness, has an educational value, and, so far at least, is in itself a good. Socialism reaches the people in Germany (as the close upon 1,800,000 votes cast in the last election prove to us), and education, by which alone society advances, spreads unconsciously in the trail of such a movement.

Before taking leave of such a meeting, it is worth remarking that there are women present. This is, in the meetings of the other political parties in Germany, never the case. Their presence may be, and has been, used by the police as a pretext for adjourning the meeting. A short time ago some spiteful police officers availed themselves of this idiotic and shameful regulation, but the storm that was raised about their ears will not lead them quickly to renew the attempt. At a large meeting of some two thousand people held quite lately, not only were women present in large numbers, but three or four took part in the debate, and one was subsequently elected a delegate to the international Socialist Congress at Zürich. In beginning a speech the customary form of address is "Genossen und Genossinnen"; the male and female forms of the word meaning "comrades," somewhat resembling the French "citoyens" and "citoyennes," though corresponding more closely to the French "compagnons." How revolutionary this public recognition of woman in politics seems in Germany, one must have been there to know.

But there is another, non-political, side to the present social-democratic movement in Germany which has not yet received in the press the attention it deserves, and it was of this that I proposed to write in beginning this letter. For about three years now there has existed in Berlin a society calling itself the Freie Volksbühne (People's Free Theatre), composed of workingmen and women who have had for their aim the development in themselves and in their class of a taste for literature, poetry, and art—all that æsthetic side of a man's nature for which so little opportunity has been left under the crushing exigencies of modern industrial life; and, secondly, perhaps the bringing to the light (or only to the footlights) some of those plays written by their brethren of the so-called "literary proletariat" embody-

ing the newer socialistic ideas. In this latter respect the success, I believe, has not been brilliant; one or two such dramas have been produced, but the members are willing to admit that the kind of play they seek is not yet to be had, and they have been obliged to fall back upon the classics of all time. Performances during the season (which lasts until the middle of July) are given on Sunday afternoons, and are open only to subscribers. It costs, however, only thirteen cents to become a subscriber, with twelve cents more for initiation fee; and the payment of this small sum entitles the subscriber to entrance to all the performances. Once inside the theatre, the distribution of the seats is secured by lot, so that all have an equal chance of occupying the boxes and front orchestra chairs, and invidious distinction is avoided.

It was not my good fortune to attend one of these performances in Berlin, but I was able to be present at the festival and country party in commemoration of the third anniversary of the society's founding, held at Schloss Schönholz, near Pankow, a suburb of Berlin. For this a long programme, containing some interesting features, had been prepared. The exercises began at seven o'clock in the morning (Sunday) with a concert in the wood. Schönholz is one of a hundred recognized places of popular resort in the immediate neighborhood of Berlin, and is justified of its name by the pretty pine and birch woods with which it is surrounded. The musicians upon this occasion, instead of belonging to a military band, were all civilians; even in their hour of relaxation the Social-Democrats would not seem to encourage the military, against which, they fully recognize, the primary fight in Germany is to be directed. Everywhere entwined among the branches of the trees were the red flags of the Socialistic Republic. People began coming early in the morning, and the crowd steadily increased until evening, when there must have been several thousand present. Three bowling-alleys were kept constantly in use, besides all the other popular amusements, carrousels, lung-testers, ring-tossing, etc., which one can see at Coney Island or elsewhere. In the afternoon there were games for men, women, and children; masked races, in which the men ran blindfold, causing general merriment when they stumbled and fell or ran deliberately into the crowd; egg races, where each must run carrying an egg in a spoon which must be held out in front of him; and private parties of puss-in-the-corner under the trees. Besides the physical enjoyments of racing, dancing, beer-drinking, etc., the Committee had made provision for the intellectual entertainment of the people with a *Festspiel*, a kind of allegorical drama, and with a rough scenic representation of the *Zukunftstadt*, or City of the Future, as it is pictured in a satirical brochure written by Eugen Richter, the radical leader, which recently created a mild sensation in Germany.

A single street of the new city is represented by means of some bits of outworn theatre scenery, and the different houses are labelled with the names of the institutions that are supposed to have survived. Among these are a theatre, a museum (containing instruments of culture in use during the nineteenth century, viz., guns, swords, pitchforks, and other similar weapons), a Home for Young Ladies belonging to the Upper Classes, and a prison (both empty), and a Stock Exchange (utilized by the community as a bath and wash-house). The boot-blacking establishment of "Comrade" Richter, who wrote that in the absence of servants members of the Reichstag would have to neglect the public service in order to attend to the blacking of their own boots, is represented, and the dropping of a ten-pfennig piece in a slot causes a mysterious hand, armed with a blacking-brush, to emerge ready for business. Ahlwardt, the ridiculous *Judenfresser* (Jew-devourer), is represented in person by a "comrade" who somewhat resembles him; and his activity, to judge from his remarks, seems to be unabated in the city of the future. The sale of "sausages of the future," "cigars of the future," and even "schnapps of the future" is permitted in the streets of the new city.

The name of the *Festspiel* which is played every half-hour in the great hall of the "Schloss" is "Empor zum Licht" ("Upward towards the Light"), and it sets forth the struggle of a young man (the people, *i. e.*, the working classes) to escape from the counsels of Egoism (the doctrine of modern political economy) and Care, and to follow the beckonings of Truth, Love, and the Muses, who stand ready to help him on his way. In Paul Carlow, the actor who plays the part of the hero, the People's Free Theatre has a young man who, in beauty of figure and nobility of face, is a worthy representative of humanity personified.

Before the day is over, the inevitable lottery is held, for which chances are sold at five cents apiece. The prizes are displayed in a booth to the public gaze: there are portraits of the Socialist leaders Marx, Lassalle, Bakunin, etc., but most of the prizes are the books, in cheap editions, of Schiller, Shakspere, Byron, Heine, Ibsen, Darwin, Dickens, Zola, Tolstoi, Dostoyevsky, etc., an effort having been made, as you can see, to be international.

Such a festivity as the one I have tried, in a few words, to describe, may be accepted as typical of the non-political activity that exists as an adjunct of the Socialist movement in Berlin. Its influence is assuredly great, for it tends to bring the amusements of the people into direct relations with their political aims and ideas. It is difficult to believe that any result tending to effect a unification in the conception of life is in itself an evil.

# Correspondence.

## GO STRAIGHT QUICKLY.

To the Editor of The Nation:

Sir: We all know that when a man who must cross a yawning abyss feels dizzy, his best chance is to fix his eyes on some firm thing on the other side and go straight towards it quickly. Most of us common men, in the present confusion of business affairs, feel dizzy, and we cannot therefore safely gaze over the precipice, as Mr. Bland courageously urges us to do. Because silver has fallen and lies dead, it surely is not our duty to die with it.

Ever since we were born, the silver to be coined by the United States has been bought as merchandise, first at a premium in gold and then at a discount. For more than fifty years gold has been in fact our only measure of values. Even during the terrible confusion of war and of panics, the people of the United States have kept the gold standard clearly in sight, and always found safety by doing so.

No man, unless he has lost his head, can really think that a great nation which has passed through the experiences of war and of the panics of 1857 and 1873 without changing from the gold standard, will now, at the dictation of silver-miners, adopt another standard, in defiance of the expert opinion of the whole world.

To put off final action on this silver business any longer, while everybody is suffering, is, if honestly done, a frightful blunder, and if done for personal or party gain, a crime. Our only chance now lies in fixing our eyes steadily on the gold standard, and in urging Congress to let us go towards it quickly. The President has done his part well, and the House of Representatives has promised speedy action. We now have a right to demand that the Senate also shall help us to save ourselves by going straight quickly. H. C.

Cambridge, August 14, 1893.

## CHEAP MONEY IN ITALY.

To the Editor of The Nation:

Sir: I am neither a financier nor an economist, but a plain man; but my experience here has provided me with an illustration of the doctrine, persistently preached by the *Nation*, that cheap money drives out dear, and that a silver standard would drive all the gold out of the country. Here paper money is at a discount, and there is no gold and hardly any silver, even as small change. Twice to-day, after selecting what I wished to buy, I have left a shop without completing my purchase, because the shopkeeper could not or would not give me the change for a five-lire note! As yet I seem to be making money, getting 7 or 8 per cent. discount in my favor when I draw on my letter of credit, but how is it with the natives, and how long will it be before prices go up in proportion?

When one asks the reason for the state of things here, the answer is that it is all the fault of the speculators, who have been wicked enough to make a penny by shipping silver to France. Verily, "popular political economy" is everywhere the same. Casey.

Venice, August 2, 1893.

## OUR CONSUL AT CHRISTIANIA.

To the Editor of The Nation:

Sir: The letter of "L. W. H.," published in the *Nation* of August 3, came under my observation only to-day. If not too late, I should like to add my own experience to the statement of the writer, that Mr. Gade is ever ready to extend to Americans of every degree kind hospitality.

Some years ago, while travelling abroad for purposes of visiting the universities and other scientific institutions of the north of Europe, my steps were directed to Norway. During the sea journey one of the ship's officers spoke in warmest praise of Mr. Gade, and assured me of the Consul's readiness to give information, or assist in any way desired those of our countrymen who applied. I had not anticipated that the Consul's hospitality would extend beyond a pleasant talk at his office, but this was not the end; later, I received an invitation for myself and maid to spend the afternoon at his country-seat, a few miles out of Christiania. Those hours passed in the society of himself, wife, family, and a few of their Norwegian friends remain in my memory as one of the pleasantest of my Norwegian experiences.

I remember an incident that occurred which showed his disinterestedness and kind heart. A lady, stranger to Mr. Gade, had written from the States asking him to purchase for her a particular kind of silver object not to be had outside of Norway. His prompt efforts to exe-

cute the commission impressed me then as showing that Mr. Gade, beyond the customary office duties of his position, willingly and conscientiously devoted his time to serve, even in details, the best interests of our country.

I trust with "L. W. H.," if the newspaper paragraph has not been proved an error, that there may still be time to bring this matter before the Department of State for reconsideration. I am sure there are other women who could unite with me in thanking Mr. Gade for kindness received at his hands. For myself and them, I express regrets for this summary dismissal. HELEN ABBOTT MICHAEL.

PHILADELPHIA, August 9, 1893.

---

TO THE EDITOR OF THE NATION:

SIR: Allow me to add my testimony to that of "L. W. H.," under date of July 23, published in your issue of August 3, 1893, as to the peculiar fitness of Mr. Gade for the position of United States Consul at Christiania, in Norway. During a residence of several years on the Continent, I came in frequent contact, official and social, with our consular officers in various cities of the different European States. Nowhere did I meet a consul so prompt and efficient in the discharge of his official duties, nor so ready and willing to devote himself and his time to the furtherance of the comfort and pleasure of visiting Americans. Of an eminent social position among his countrymen, noted for his distinguished courtesy and hospitality, and married to one of our most charming countrywomen, Mr. Gade has made a personal friend of every American who has had the good fortune to meet him. The income from the office is small, the official dignity valuable only to a resident of Christiania, and no American sent over there can begin to fill the office of Consul so thoroughly to the credit of our Government and so acceptably to visiting Americans as does Mr. Gade. He should not be removed.—Respectfully,

EDWARD W. TAYLOR.

KANSAS CITY, MO., August 11, 1893.

## EARLY PROFESSORSHIPS IN MEDICINE AND LAW.

TO THE EDITOR OF THE NATION:

SIR: In your issue of July 27 Prof. Lyon G. Tyler of William and Mary College speaks of the professorships of Medicine and Law established in that college in 1779 by Jefferson, as the first of their kind in America. In Prof. Thorpe's 'Franklin and the University of Pennsylvania,' issued recently by the Bureau of Education from the Government Printing-office at Washington, in the chapter on the Medical Department by Prof. H. C. Wood, at p. 273, it is stated that Dr. John Morgan was elected in May, 1765, "to the first medical professorship in America, namely, the chair of the Theory and Practice of Physic," and "the following September Dr. Shippen was elected Professor of Anatomy and Surgery." These were in the College of Philadelphia, which subsequently became the University of Pennsylvania. Dr. Cadwalader gave courses of lectures on anatomy in Philadelphia in 1751, and Dr. William Shippen, jr., in 1762, so that the Medical School really dates back to the former year. In 1768 Dr. Adam Kuhn was made Professor of Materia Medica and Botany, and in June of that year the College of Philadelphia conferred the degree of Bachelor of Medicine on ten candidates, the first of some ten or eleven thousand doctors who have since then been sent into practice from the Medical School of the University of Pennsylvania. In 1769 Dr. Benjamin Rush was added to the Faculty of the Medical School as Professor of Chemistry. In 1779, when the chair of Medicine was established at William and Mary by Jefferson, the charter of the College of Philadelphia was abrogated, on the score of the disaffection of some of its trustees to the new Government, and its property was transferred to a new institution chartered under the name of the University of the State of Pennsylvania. Can any of your readers, by the way, point to any American instance of an earlier use of the title "University" than that of 1779 in Pennsylvania? In 1789 the Legislature repealed the act of 1779 depriving the College of Philadelphia of its charter, thus permitting it to be revived, but in 1791 the two institutions were united under a new charter creating the University of Pennsylvania.

In 1790 Mr. Justice Wilson was elected Professor of Law in the college department, and delivered his introductory lecture in the presence of President Washington and the other chief representatives of the Federal and State and city Governments. A reference to Prof. Thorpe's volume will show that English and modern languages, French, Spanish, and especially German, so largely spoken in Pennsylvania, were included in the broad plan suggested by Franklin in his first scheme in 1749 and elaborated by Dr. (later Provost) Smith in his plan of a college in 1753. J. G. R.

BAR HARBOR, ME., August 12, 1893.

## THE COMPETITION FOR THE *PRIX DE ROME*.

TO THE EDITOR OF THE NATION:

SIR: The strong interest that is felt in the United States in matters pertaining to art—an interest that has received new impulses during the last eighteen months—makes it possible that some of your readers may like to hear of the last result attained in painting in this country under the influence of academical training and Government patronage.

The works of the competitors for this year in painting for the *Grand Prix de Rome* have just been put on exhibition, and it is of these that I speak. The subject given for representation this year—for the competitors do not choose their own subject—was Samson grinding the corn of the Philistines; and one would think that with such a prize as four years in Rome to strive for, and such suggestions as the words "and he did grind in the prison-house" might give them, the competitors would be inspired to their utmost, and would display at least some power, however little, of conception and execution. The first feeling one has, however, on inspection of the works of the ten competitors, is of the poverty of ideas displayed in them. That the story of Samson at work in the prison should suggest to no one of the competitors anything more than a clumsy prize-fighter, straining at the millstone, while a crowd of brutal-looking enemies maltreat him and jeer at him, is surprising. No one of them has recognized the poetic capacity of the story. In not a single case is Samson more than a somewhat brutal athlete, or the Philistines other than coarse, low people. Every one of the pictures seems to be an attempt to catch the attention of the public by means of cheap mental stimulant, and to deceive the untrained eye by the false semblance of non-existent power. To the untrained eye lurid color and quick, sketchy execution give more pleasure, because they are more easily understood, than the color that is quiet, and the finished, though oftentimes hasty, execution of a master. The technique of these paintings gives the impression that the artists have taken one of Rembrandt's roughest and most incomplete sketches for their model, but, having none of the Dutch painter's unerring instinct for putting his simple strokes where they ought to be, have trusted largely to luck in the laying on of the paint, with the result that those parts of the work where the form is intended to be merely suggested are little more than masses of blur. Examples of this can be found in the hair of many of the figures, as in M. Trigoulet's Samson, where it is more like pieces of felt than hair, or in that of the same figure in M. Thierot's work, where it resembles small bits of tape. The faint and shapeless feet of the Samson of M. Maxence are absolutely incapable of performing the work assigned to them.

Carelessness of execution might be overlooked were there any beauty suggested, but instead of beauty one finds composition that is commonplace, color that is either muddy or, as I have said before, lurid, and, worst of all, faces and figures that are of a low type. If the Philistines had faces similar to Michelangelo's caricatures, as M. Rouault seems to think, still, why draw them as deformities and their children as abortions? The effects of hazy light that M. Foreau shows are clever in the extreme, and the dogs with which the chained prisoner is baited are well drawn, but the hideousness of every figure, their diseased-looking skins, and Samson's bloody eyes make a whole that is revolting. Again, in M. Mitrecy's work, combined with slightly more care in painting, one sees similar ugliness reproduced in figures that look like yelling idiots or human devils. Like M. Foreau, M. Laru is clever in his rendering of light, but chooses models almost as ugly as the worst.

Glaring realism and attempted dash seem to be the order of the day, and the realism is of the kind to please the uneducated. Not one of these men has sought to represent the elements of beauty or splendor that are to be found in the tale, or to make the beholder of his work conceive the significance of the story more truly than he had before done, but, instead, the painter has satisfied himself with showing such things as bleeding eye-sockets or hair dripping with sweat, which require no imagination to conceive or represent. If this is the best result of the teaching young men receive now in the Paris schools, the prospect of the art of painting in France is not brilliant.

R. N.

PARIS, July 24, 1893.

---

# Notes.

AMID the unfailing supply of reprints, Scott and Shakspere again come to the front. 'The Monastery' is the tenth volume in the Dryburgh edition of the Messrs. Black (New York: Macmillan), and as to its illustrations—each volume's being by a new hand—can hardly be ranked above that number. In the International Limited Edition (Boston: Estes & Lauriat; New York: Bryan, Taylor & Co.) Vols. 13 and 14 are 'The Legend of Montrose,' and Vol. 15 comprises 'The Bride of Lammermoor' and 'The Black Dwarf.' Here, too, the etchings are not remarkable in the series, and it is somewhat misleading to speak of two copies of steel engravings as photo-etchings "from painting," as if at first hand. From the Messrs. Putnam we have the second group in the pocket Ariel

edition with its separate volume bound in leatherette for each play. This group embraces seven of the histories, viz., "King John," "Richard II.," "Henry IV." (first and second parts), "Henry V.," "Richard III.," and "Henry VIII." The typography will injure no eyesight, and this is not the least recommendation of a series that has found a ready welcome.

"The Last Slave Ship," which is one of the four 'Stories of the Sea' in the new volume of "Stories from *Scribner*," is a really valuable contribution to the history of a now universally infamous traffic. As if to satirize a pseudo-philanthropical act, the ship in question cleared from New Orleans on its kidnapping errand by the lucky facility offered it as conveyer to Liberia of John McDonogh's freedmen, whose liberty was conditioned on their expatriation. It went hard with the slavers not to put into Cuba on the way and sell the Christianized product of American slavery—thus clearing a profit at both ends of the voyage.

A personal note is sounded in 'Other Essays from the Easy Chair, by George William Curtis' (Harpers), through such a sketch as "Bryant's Country" and such obituary appreciations as those of Emerson, Beecher, Sherman, and Francis George Shaw. The portrait of Emerson is particularly just and felicitous. Other Easy Chair Essays of the familiar type are "The New Year," "The Morality of Dancing," "The Hog Family," "Decayed Gentility," "The American Girl," "Statues in Central Park," and a dash of politics, as "Tweed" and "National Nominating Convention." A pleasing likeness of Mr. Curtis forms a frontispiece.

"Mr. Gladstone had in the previous year [1860] exhausted his peculiar faculty of devising obnoxious reasons for questionable measures." "The separation of the United States into two independent Republics will make the first year of the decade conspicuous in the annals of the century." These extracts from the 1861 chapter in 'Annual Summaries, Reprinted from the *Times*' (2 vols., Macmillan), show what we must look for in the Thunderer's review of the period 1851–1875, 1876–1892: nothing dispassionate, and not the perspective of history. Nevertheless there is a certain convenience in having such annals close at hand, and of course the *Times's* own political meanderings are reflected in its yearly comments on the wisdom of rulers and the fate of peoples.

The 'Popular History of Astronomy during the Nineteenth Century,' by Agnes M. Clarke, has reached a third edition (Macmillan), and bears evidence of unremitting and very intelligent study of the subject since the first edition of 1886, to which we gave a hearty welcome. It is a plump volume of nearly 600 pages, illustrated and indexed, provided with copious references to authorities, and brought down to date.

We observe that Mayor Matthews, whom some think Boston's greatest Mayor since the elder Quincy, did not approve within the legal limit—and hence did not defeat—the order of the Common Council for the printing a sixth edition (1,500 copies) of the Old State-House Memorial. We infer, therefore, that if he thought the expenditure doubtfully prudent, he was not averse to a still larger circulation of one of the best of the best sort of municipal documents. In fact, even a rescued historical monument needs, in this age and country, to be still defended, and the citizens of Boston cannot too widely be informed of the treasure they possess in the Old State-House. The new edition, like the old, is beautifully printed, and contains two more cuts, besides a profile likeness of the present City Registrar, Mr. W. H. Whitmore, whose historical address was the main feature in the rededication proceedings of July 11, 1882 (and so of this volume), and to whom more than any one else the city is indebted for the restoration of the ancient seat of the State Legislature, the city government, and the Federal postal service.

A little group of book-lovers in Cleveland founded the Rowfant Club a few months ago, modelling themselves on the Grolier Club of this city and calling themselves after the library of Mr. Frederick Locker-Lampson. Although the name they chose is British, the first book they issue is American. It is the 'Culprit Fay, and Other Poems,' by Joseph Rodman Drake; and it is printed at the University Press very like in style to Mr. Francis Wilson's privately published translation of Horace by Mr. Eugene Field. The book needed editing. An introduction and a few notes would have doubled its value; and for these last the Bradford Club's reprint of 'The Croakers' could have been drawn upon.

'Elementary Geography of the British Colonies,' by George M. Dawson and Alexander Sutherland, in Macmillan's Geographical Series, can be recommended to any one who feels the need of a handbook of this kind. It is well enough written, and may be of service in teaching. The paper and print are good, the illustrations are cheap; there are no maps. It is a mistake to say (p. 189) that the language of the Maltese is a "kind of corrupt Italian." It is rather Arabic corrupted by Italian.

MM. Édouard Noël and Edmund Stoullig have at last published the eighteenth volume of their 'Annales du Théâtre et de la Musique,' the most solid and spacious of all theatrical annuals. To this record of the French drama and music during 1892 M. Jules Lemaître contributes a preface on "Le Mysticisme au Théâtre," in which he shows that the recent revival of religion in Parisian play-houses is but a passing manifestation of an abiding literary epicureanism.

At last the great edition of Molière in the sumptuous and conscientious series of "Grands Écrivains de la France" (Paris: Hachette; New York: F. W. Christern) draws to its conclusion. Begun twenty years ago with the late Eugène Despois as its editor, and continued by M. Paul Mesnard, this edition will be complete in thirteen volumes, of which nine devoted to the text and one to the biography had appeared in 1889. Now we have an appendix to vol. x., and also a vol. xi., containing the bibliography, far fuller than that published sixteen years ago by the late Paul Lacroix, being enriched with all the suggestions gathered by the monthly *Molièriste* during its ten years' existence. The twelfth and thirteenth volumes, containing the lexicon, are in preparation; and so is an album of portraits, views, music, etc., like those which accompany the splendid editions of Corneille and Racine in the same series.

Of the two first volumes of Prof. D'Ancona's 'Manuale della Letteratura Italiana' (Florence: Barbèra) we have already spoken with approbation. The third, a stout octavo of nearly 750 pages, beginning with Tasso and ending with the close of the seventeenth century, is no less praiseworthy than its predecessors, and may be relied on not only for a wide selection of representative passages from a large number of authors, but for a great deal of important historical and critical comment.

F. T. Perrens, well known as the historian of Florence, is the author of a new volume in the "Bibliothèque d'Histoire Illustrée," entitled 'La Civilisation florentine du XIII^e^ au XVI^e^ siècle' (Paris: Quantin). The style is sprightly and the aim of the book confessedly that of a popular presentation of the subject; but this does not prevent the writer's sound scholarship from being everywhere apparent. The illustrations are numerous, well chosen, and, as a rule, good, and the work altogether deserves the attention of any one who wishes to fix clearly in his mind, without much research, the great debt that civilization owes to Florence.

The *Revue Hebdomadaire* of Plon is now printing a French translation of the overrated and bogus 'Englishman in Paris.' In the number of this otherwise excellent weekly for July 15, M. Paul Bourget has an interesting paper on his friend the late Guy de Maupassant.

If, as Englishmen remark, we Americans have a habit of confining the term Congressmen to members of the lower house, "Member of Parliament" has the same restriction in England, and the usage dates, according to Mr. S. R. Gardiner's observation, from June 27, 1650, when this reference to the House of Commons appears first in the order-book of the Council of State. Mr. Gardiner's note is to be found in the current number of the *Historical Review*.

Westermann & Co. send us the first part of the first division of the Spruner-Sieglin Atlas of Ancient, Mediæval, and Modern History. This enterprise is a revision and extension of Spruner by Dr. Wilhelm Sieglin, and the portion devoted to antiquity is wholly the work of the latter scholar, for it is wanting in the Spruner-Menke edition of 1880. It alone contains 34 sheets, divided among two or more maps. There are five such sheets in Part i., relating to Egypt, Palestine from David to Hadrian, the Persian Empire in the time of Darius, Italy after the Second Punic War, and Britannia and Hibernia. The Egyptian sheet has no fewer than ten maps, the Palestinian eight, the Italian five, the Britannic six (including the Roman walls of Hadrian and Antonine). The cartography of these early periods is of course plain and open. In the middle era there will be something to say by way of comparison with previous editions of Spruner.

We have also received from Westermann the eleventh part of Vogel's Maps of the German Empire, with the Cologne and Augsburg sheets—the latter showing not a little of Switzerland and the Austrian Tyrol; and the third and fourth parts of Langhans's German Colonial Atlas, showing the variegated sphere of the New Guinea Co. and the Marshall Islands protectorate.

The Atlas illustrating the official records of the civil war has reached the fifteenth and sixteenth parts, and keeps up the high quality in cartography which has marked the work throughout. As heretofore, the Board of Publication, of which Major Davis is Chairman, have reproduced all the topographical sketches which accompanied field reports, making it their good rule to save all authentic contemporary maps, since these are often essential to the comprehension of the reports, and show more clearly than any description could do the point of view and the understanding of the officer who made the written statement. Many of these sketches are small, and a large number are frequently united on one sheet, yet there is no undue crowding or lack of clearness. The general maps are, of course, of larger size, and can hardly be excelled in beauty of drawing and coloring. In the numbers before us some of the greatest movements and engagements of the war are

depicted, particularly those at the winding-up—the Twentieth Army Corps's march from Atlanta to Savannah and Goldsborough, Howard's winter campaign in the Carolinas, Hood's defeat before Nashville, the battle of Franklin, Sheridan's campaign in Central Virginia, the Army of the Potomac's advance to Appomattox, the battle of Dinwiddie Court-house, the Petersburg mine. Of earlier date are the maps of Pittsburg and Corinth, of Gettysburg, of Fort Fisher (as captured by Gen. Terry), etc.

—That the home field of Washington story is unworked and rich in possibilities is again proved by President Lyon G. Tyler, who publishes in the *William and Mary Quarterly* some interesting and novel facts about John Washington, the immigrant. This worthy has lain under a serious charge—of cruelty and treachery—in connection with his campaign against the Susquehannocks. Five of the Indians were murdered in cold blood, and in a way that called out the reprobation even of Gov. Berkeley. The records of Westmoreland go far towards exonerating Washington of all blame in this matter, and leaving the commander of the Maryland force, Maj. Trueman, the real culprit. Washington is even represented as being properly shocked at the atrocious deed. One more incident in his life is displayed. When he had fled from his plantation in the time of Bacon's rebellion, his servants were prohibited by the insurgents from sending stock or produce into Maryland. The tables were soon turned. Stephen Mannering, who issued the warrant, on bended knee "heartily and unfeignedly" confessed his acts in the "late horrid rebellion"; and one White, who undertook to execute the warrant, was caught in a suit with Washington, driven to the wall, and most abjectly pleaded for mercy. On the whole, the more we know of this ancestor, the better is his position in the colony. In the same issue Mr. Brock speaks of a portrait of Gen. Washington by Alexander Campbell as a fact. We have always understood the Campbell portrait to be fictitious. Certainly no one who has seen the Campbell engravings can trace any resemblance to Washington, and the General himself made fun of one that was sent to him. If Mr. Brock has any authority for his statement he ought to give it.

—Apropos of the recent revival of interest in the Cock Lane ghost and the possible verity of its manifestations, it may be worth while to put on record certain events which took place in the early sixties at Fort Yukon, the outermost post of the Hudson Bay Company, in Alaska, north of the Arctic circle. At this lonely fort, half-a-dozen men from the northern isles of Scotland traded for furs under the command of Strachan Jones, post trader of the company. Once a year a party ascended the Rat River, and crossed to La Pierre's House, at the head of navigation on the Porcupine River, bringing a supply of trading goods, one sack of flour, and a little tea and sugar for the commander, with the mail of the past six months, and receiving in exchange the bales of furs which had been purchased during the previous twelve months. The bateaux from the fort then returned down stream with the goods. In midwinter a courier on snowshoes brought the half-yearly instructions from the chief factor at York factory. At other times the little community vegetated among the tundra, or was busied with the hunting and trade which supplied the business and subsistence of the post. About a year after Jones relieved his predecessor, strange rumors prevailed among the residents at the fort. Singular noises were heard during the still arctic night. Raps on the door were responded to, but, the door being opened, there was no one there. Utensils hung on the walls of the log huts in which the company's servants lived, fell down or were moved when nobody was near them. Jones had a house to himself, as commander, and around this house the uncanny doings seemed to concentrate. Jones himself preserved a dignified silence, or professed ignorance of anything out of the common. But in spite of this the noises and turmoil continued, and were experienced by every one at the post, even by visiting Indians.

—When spring came, the bateaux started, as usual, for La Pierre's house with the bales of furs, Jones commanding the party. At the nightly bivouac, to the astonishment of the voyageurs, the noises continued. The man who slept in the boat as a sort of guard reported that he heard raps and a curious scratching on the mast. Men who slept around the campfire ashore declared that they heard Jones talking in the night to some one who answered in a voice unknown to any of the party. On meeting the party from Fort Macpherson at the portage, the voyageurs naturally compared notes, and the doings of Jones's familiar were soon discussed by every camp-fire and at every trading-post throughout the Northwest Territory. A visitor at the fort in 1866 was assured of the reality of these manifestations, which remained without explanation, as Jones had retired from the post and carried his secret with him. The same visitor, while waiting the return of the officer then commanding, had the curiosity to look through a little library which, in the course of years, had accumulated in the commander's quarters. Among the worn novels and less dilapidated volumes of Scotch theology, of which the collection was made up, was a copy of Dr. Johnson's account of the extraordinary history of the Cock Lane ghost.

—The thirty-fifth volume of Sidney Lee's 'Dictionary of National Biography' ends with Maltby, and is filled with every variety of Mac, beginning with MacCarwell. An unusually large number of the persons commemorated had relations of some sort with the United States and British North America; such as Madog, the reputed Welsh discoverer of this continent; Sir Alexander Mackenzie, the explorer whose name is attached to the great affluent of the Arctic Ocean; Sir Robert McClure, who discovered the northwest passage; the Canadian Premiers Alexander Mackenzie and Sir John A. McDonald; D'Arcy McGee; Allan Napier MacNab, who cut the *Caroline* adrift and sent her afire over Niagara Falls; John Francis Maguire, who visited these shores in 1866, and who is recorded as having elicited from Mr. Gladstone the first declaration against the Irish establishment; and Charles Mackay, who came among us in 1857 as the apostle of the brotherhood of man, and again in 1862–'65 as the pro-Southern war correspondent of the London *Times*—his sympathies being concealed in the present notice. Few think of the Pretender's Flora Macdonald as having lived three years in this country (1773–'79); fewer still of "Ossian" Macpherson as having held a Government appointment in Florida under British occupancy in 1764. Further, we are reminded by the sketch of Rear-Admiral Maitland of the *Bellerophon* that Napoleon prayed to be taken to the United States rather than to England. Sir Henry Sumner Maine (a tutor at Cambridge, by the way, of the American Charles Astor Bristed) and Sir James Mackintosh have Mr. Leslie Stephen for their biographer, and there are few more eminent names in this volume, which embraces also the actors Macklin and Macready—the one the object of Garrick's jealousy, the other of Forrest's; the painter Maclise; Sir Morell Mackenzie; the contumacious Mackonochie; the inventive Charles Macintosh, whose weatherproof fabric has made him immortal; "Rob Roy" MacGregor, the patron saint of the canoeist, and so forth.

—An unusually large number of woman students (17) appear in the list of the Oxford modern-history honors published on July 22. Two, Miss Ewart of Somerville and Miss Lees of Lady Margaret Hall, are placed in the first class, and the distinction is the greater because only three men out of more than 100 attain it. Six women take seconds; eight thirds. This list, with one candidate in each class of the final Science School, and two in each class in the School of Modern Languages, completes the honors record of the term; and it is on the whole a very satisfactory one. It is to be expected that, as the practice grows of giving daughters equally with sons the advantages of a university education, a larger number of women of average ability will offer themselves for examination, and that the proportion of high honors to the whole body of candidates will probably decrease; indeed, this tendency appears already to have affected the Oxford History School. The average in the Modern Language School has been remarkably high in both Oxford and Cambridge. In the latter university, where men as well as women entered for this examination, two women had the first class to themselves. This year no candidate came forward at Oxford to be examined in English language and literature. This is probably an accidental neglect of a study whose importance at Oxford has brought and is bringing many Americans under the direction of Profs. Napier and Wright. It will be useful for women intending to study at Oxford to know that the Association for the Education of Women will henceforward have official quarters on University premises in the Clarendon Building. We will add that the new statute affecting women students in Oxford to which we called attention some weeks ago, will come into operation for the next examinations. It provides that the name of the educational body to which a student belongs shall be appended to her name in the examiners' lists. It has been somewhat modified since its drafting, and now gives this privilege indiscriminately to all educational establishments whether in Oxford or elsewhere, so long as they are accepted by the delegacy which receives the candidates' names.

—News comes from Paris that Rudolphe Salis has sold the "Chat Noir," the paper which was its organ, the little theatre, and the whole company of tame poets and artists. This sale means the disappearance of a café, or cabaret, which, though of comparatively recent origin, had become one of the literary and artistic landmarks and centres of Paris, and, therefore, should not be passed over lightly in silence. Salis, in his way, was a genius, though it must be confessed a genius with a Yankee shrewdness where his own profit was concerned. The building, which, in time, came to be one of the stock sights of the capital, and the remarkably clever performances for which the hall on the second floor served as theatre, had their beginning in a little nightly reunion of

young and aspiring (but unknown) poets and ar ists and journalists who met in an unpretending wine-shop, of which Salis was proprietor, in the Boulevard Rochechouart. There, the company—as is the fashion in all such companies—recited their own verses, sang their own songs, exhibited their own talents as draughtsmen. Among them were a few of genuine distinction. As a natural result, the place became known, the assembly grew ever greater in number and the performance more ambitious, until a move to larger quarters was necessary. From the Boulevard Rochechouart, poets and artists passed to the Rue Victor Massé, and established themselves in the house hanging out the sign of the Black Cat.

—Salis now organized matters on a sounder basis. A regular show—it can scarce be called by any other name—was given; this was duly advertised; a fair price of admission (five francs) was charged; the café was decorated and furnished in a style eccentric, but also in good taste, enough to draw. The Chat Noir developed into no mean rival of the *café chantant*. It deserved success. Salis and his poets drinking beer in the room decorated by Willette were, after all, worth looking at, and it was in the little theatre up stairs that Caran d'Ache's "Épopée," Dauphin's "Ste.-Geneviève," the irresistible "Phryné," were first seen; while the poets, now tamed, continued to recite their verses, the musicians to sing their songs. But the old genuineness, the old spontaneity, had gone for ever, just as it has departed already from the *Mirliton* of Achille Bruant, the fine singer of "Dans la Rue." The last step in the gradual downfall came last summer, when Salis took theatre and poets on a tour through the provinces. One felt then that the end was near. But if the Chat Noir at the last was but a money-making enterprise, it cannot soon be forgotten; it was in connection with it that their reputation was first made by Caran d'Ache, Willette, Steinlen, draughtsmen of unquestioned talent, who have had a wide and, on the whole, beneficial influence on the illustration of the day. And it was there, too, that poets of the standing of Jean Rameau and Paul Roux, Clément Privé and Georges d'Esparbès were first heard. To the credit of Salis must these facts be recorded. He has shown his cleverness not more in organizing the Chat Noir at the start than in disposing of it at the right moment. Its glory was fast going from it.

## FINCK'S WAGNER.

*Wagner and his Works:* The Story of his Life, with Critical Comments. By Henry T. Finck. Charles Scribner's Sons. 2 vols., 8vo.

SURELY no other composer of the higher music, not even Sebastian Bach or Beethoven, has been brought before the world so conspicuously in literature as Richard Wagner. Biographically, analytically, critically, polemically, offensively, and defensively—in all these modes the number of the works pertaining to the man of Bayreuth is legion. There are many respectable libraries smaller in contents than the array of books and pamphlets, not to mention newspaper and magazine articles, that have been written for and against him. There has been recently concluded (1891) a catalogue of a "Richard Wagner Bibliothek," compiled in three bulky volumes of the sturdy German sort by Nicholas Oesterlein, containing no less than 9,462 distinct items. There might be added to this colossal catalogue enough pieces to carry the list well towards 12,000, the large majority published during Wagner's life. The casual reader may well ask the question whether there is anything left to say concerning this daring innovator who flashed in among the musical planets, with their regular orbits, like the most erratic of comets; and yet among these thousands of publications there has been scarcely a first-rate biography of Wagner until the appearance of the work whose title is given above.

Mr. Finck was well equipped for his task. No one is more familiar than he with the music and the writings of the genius he celebrates. No one has explored more industriously the entire field of biography, panegyric, and hostile criticism on which his Life of Wagner is based. His profound admiration for the composer is notorious; his pity, scorn, contempt for those who, early and late in Wagner's career, ranked among his opponents, are relentlessly exhibited in these volumes. It is true, as Mr. Finck says, that duty required him to record the contemporary failure to understand the new musical evangel, and to indicate how great a mass of unintelligence, jealousy, and malevolence thwarted the production of Wagner's works upon the stage and checked his creative energy, while fatally aggravating the struggle for mere existence. It must, however, be felt that the pillory is too often introduced, and the exposure too often accompanied with missiles. Time had sufficiently avenged itself on those whom Mr. Finck holds up with heat instead of a tranquil humor, and his excess in this direction is unfortunately calculated to make the impression of blind partisanship on the other side. But nothing could be more unjust to our author than such an impression. We have only to refer to his cardinal ground of difference with Wagner in the matter of 'Judaism in Music,' and the passage which we now cite proves that Mr. Finck's too constant belaboring of the anti-Wagnerites is an error of taste and perspective rather than of candor. Controverting the famous tract just named, Mr. Finck says (i., 333):

"The opposition to his [Wagner's] works had various sources, prominent among which were the inability of conductors and singers to interpret them correctly, and the slowness of hearers (especially critics) in assimilating not only new music but—what is much more difficult (and to some people impossible)—*music in a new form*. In regard to the *virulence* of the attacks on him, however, Wagner was partly right in his argument. He was attacked by the critics because he had criticised or attacked their favorites—especially Meyerbeer and Mendelssohn. But these composers were thus savagely defended and avenged because they were fashionable idols, and not because they were Jews; for among their fanatic worshippers there were more Christians than Jews."

Again, on a later page (369):

"He [Wagner] had composed three operas with a pen dipped into his heart-blood, and these were now being mutilated by conductors, misinterpreted by singers, misrepresented by critics, misunderstood by the public, while he, the exiled father, had to witness from a distance this prostitution of his noble offspring. . . . You might say, therefore, that the musical world was not to be blamed for not receiving these operas as we now think they ought to have been received—with open arms. True, we may absolve the public from blame, but we cannot absolve the musicians and the critics. It was their duty, on meeting with a new form of operatic art, to study, learn, investigate, before they misperformed and then condemned."

This is both temperate and rational and free from hero-worship.

Rare literary skill has been shown in handling the formidable amount of material available for this biography, in which there is hardly to be found a dull page. A strictly chronological progression was, if not out of the question, certainly extremely difficult. Mr. Finck has preferred an episodical treatment, and he would, in our opinion, have left nothing to be desired if he had provided at the end a table of dates, by which the memory would be assisted in retaining Wagner's several places of residence, and especially the interlacing periods of conception and composition of his masterpieces. The chapter titles in volume i. reveal the method adopted: A Theatrical Family; Richard Wagner's Childhood; The First Operas; Königsberg and Riga; First Visit to Paris; Rienzi in Dresden; The Flying Dutchman; Wagner as Royal Conductor; Tannhäuser in Dresden; Revolution—Artistic and Political; Lohengrin at Weimar; Literary Period; Welding the Nibelung's Ring; Was Wagner a Great Conductor? As each music-drama makes its appearance thoughout the narrative it is analyzed in an admirable manner, well fitted for standard reference, and this is not the least of the services to both amateurs and connoisseurs which Mr. Finck has rendered. Another, not so conspicuous, but involving far more labor, is the translation from original sources of a large quantity of interesting passages, along with, in the case of Wagner's own writings, pithy abstracts for which the reader of either nationality may be grateful—for Mr. Finck is a very discriminating critic of Wagner's prose style. His opinion of Wagner as a poet to be weighed in the same scale with dramatists like Shakspere, Goethe, and Schiller, seems overstrained, but could in the nature of things not readily be substantiated because of the impossibility of making an adequate translation. Still, one not a German can see that verse shortened or lengthened to suit the musical expression cannot give the pleasure afforded by the conventional poetic rhythms, all the more where archaisms or alliterations are purposely resorted to. And in fact Wagner might as well have objected to having his librettos read in and for themselves as much as he did to having his pieces performed in the concert-room. It is not a question of poetic quality, but of poetic rank, and if one concedes that Wagner's gift was sufficient for his need, both in conception and in expression, it will not, perhaps, be heretical to rate his musical gift a great deal, even immeasurably, above it.

The conjunction of the two is the marvel, and marvellous is the account of Wagner's rapid musical development after a non-precocious infancy, during which his inability to play the piano was taken as one sign of his incapacity to be a musician even of a very ordinary sort. The shortness of his studies when he had determined his career for himself is amazing, and in the very middle of his term of life we find that he has already laid out all that can be accomplished in the remainder. We cannot differ from Mr. Finck in thinking that Wagner had a just appreciation of his own powers, and that this fact relieves his dependence on others, on Liszt above all, of a degrading character. He found his true sphere in the music-drama. None of his concert compositions, early or late, says his present biographer, "quite equal the best parts of his music-dramas, with the exception of the 'Siegfried Idyl,' in which, however, the chief themes are borrowed from the *Siegfried* drama." His "Centennial March" of 1876 was "the weakest thing Wagner had written in forty years." Praise is accorded to his "charming settings" of certain French songs, with an exception in the case of Heine's "Two Grenadiers"; and of course to the Faust

Overture. His overmastering preference prevented his being "a safe and infallible critic."

"He judged almost everything from the standpoint of the music-drama, and whatever is one-sided and exaggerated in his verdicts must be placed to this account. Some of the greatest and most original composers are, moreover, not mentioned at all in his writings, or only incidentally—for example, Chopin and Schubert, whom Rubinstein very properly classes among the five greatest masters the musical world has seen. . . . Here [in admiration for Schubert] Schumann and Liszt doubtless had a keener scent for genius than Wagner and Mendelssohn."

In another place (ii., 146), Mr. Finck writes, apropos of composers "who *create*, *i. e.*, provide new harmonic, melodic, and rhythmic *material*": "In this sense, the four greatest composers the world has ever seen are, in my opinion, Bach, Schubert, Chopin, and Wagner. And if we take single works to compare in point of originality and creativeness, the palm must, I am convinced, be given to *Tristan and Isolde*." This sentence is a measure at once of Mr. Finck's catholicity and of his extreme Wagnerism. We have already quoted evidence of his independence towards the Master, and if more is needed, his readers will find it in the second volume in the remarks on Wagner's change of mind and recantation as to choruses (pp. 233, 235), on the defects of the *Walküre* (p. 337), on the shortcomings of the hidden orchestra at Bayreuth (p. 287), on the "foolish libretto" of 1870 *à la* Offenbach (p. 254). Equally frank is the judgment on the metaphysical portion ("nebulous stuff") of the masterly treatise on Beethoven (p. 250). "In philosophy Wagner was almost as much an amateur as Schopenhauer was in music; and the disposition which is at present being shown by some fanatic admirers in Germany to worship him as a great philosopher is absurd" (p. 251). "Tedious," with "turgid, metaphysical phraseology," is the essay of 1868 on 'German Art and German Politics.' Mr. Finck speaks plainly also about Wagner's violation of the laws of health in eating and working, and makes light of his squint at vegetarianism in the essay on 'Religion and Art,' on the strength of which "some of the foolish Wagnerites, who took every utterance of the Meister as gospel law, started a vegetarian club at Bayreuth." The apology for Wagner's foibles for luxurious surroundings seems to us justified; as Mr. Finck points out, a genuine painter would never be blamed for the same thing, and Wagner too had a color-sense to cultivate. The separation from his wife, and his relations with Frau von Bülow ending in marriage, are treated leniently, but apparently without any suppression of the essential facts.

On the whole, we conclude that this painstaking biography will enhance the author's reputation as a maker of entertaining books, and, subject to the limitations set forth at the beginning of this notice, as a musical critic; and that it will do more to make the genius of Wagner comprehensible to the lay mind than any other work on the same subject ever written or perhaps likely to be written.

## HALE'S NEW ENGLAND BOYHOOD.

*A New England Boyhood.* By Edward Everett Hale. Cassell. 1893.

Dr. Hale was born in 1822. His memoirs begin about 1826. In 1835, at the age of thirteen, he entered Harvard College, and duly graduated in 1839. He mentions only one or two incidents after the last date, and little about Boston after his entrance to college. Thus, the memories are those of a child, affording no insight into the ways and thoughts of men, nor even picturing in detail the external aspect of anything, but taken up with the all-important doings of the boy. The swinging signs before the old Boston auberges (if Dr. Hale won't let us call them inns) did attract his attention —"The Indian Queen" in Bromfield's Lane, "The Bunch of Grapes" in State Street, "The Lamb" in Washington Street; and he mentions that when the Tremont House was built, it seemed to the boys wonderful that there should be a "tahvern" with no sign before it and no stable behind it. While he was at the Latin School, between 1831 and 1835, the first omnibus appeared on the streets of Boston—a very long affair, drawn by four horses, and blessed with a name, the "Governor Brooks." Dr. Hale says "the first omnibus in the world was put on its work in Paris. It was called 'La Dame Blanche' from the White Lady of Scott's novel of 'The Monastery,' about the year 1821."

The old Latin School of this book stood on School Street (christened after it), opposite the little green just below King's Chapel. The boys began the study of Latin—boys nine years old—by learning the Latin Grammar by heart in English. Such stupidity seems almost incredible, at a time when Hoole's 'Visible World,' a translation of the instruction-book of Comenius, had gone through numberless editions in English. It was quite a different thing at an earlier date to make boys commit the Latin Grammar to memory *in Latin*. That taught them a great deal, just as learning any other simple Latin book by heart would have done. It was a method somewhat similar to those of Comenius and of Robertson. Yet, doubtless, the substitution of the grammar in English for the grammar in Latin was conceived to be a reform. No wonder the language was never conquered. Many of Hale's afternoons were spent sailing toy boats in the neighborhood of Beach Street (so called because it ran down to the beach); he made magic lanterns, dabbled in chemistry and electricity, went to Papanti's dancing-school and to the swimming-school, coasted from the foot of Walnut Street to the head of West Street, flew kites and invaded houses to get on the roofs to recover the twine, played marbles on the malls and baseball on the parade ground, shook props (deepest of crimes), and doubtless battled with Fort Hill boys, though that is more than he will confess to—in short, did everything that boys did fifteen years later. He also went to the gymnasium in Washington Gardens.

Dr. Hale notes many vestiges of Puritanism in those days. We should like to have been informed whether, in a house like the Hales', a great deal of theology was talked, and whether most people passing the evening casually together would be likely to talk about the points of Calvinism. According to Dr. Hale, the settlement of the Massachusetts Bay colony was due to the insistence of the Puritans upon their Thursday morning religious lecture, which was prohibited in England; and he attributes the preëminence of Boston in population to people being attracted by Cotton Mather's preaching—rather narrow causes for such broad effects. Mr. Palfrey, he tells us, at the Brattle Square Church would frequently break off his long morning's sermon with the words, "I shall continue this subject in the afternoon," entirely sure of having the same hearers. He notices the high pews in that edifice; but he does not say whether those along the sides were square, nor whether the deacons faced the congregation. He does not recall much about the drama, although it must have been within the period of his memories that the Tremont Theatre was built only a few doors from his home. Fanny Kemble is mentioned, not J. B. Booth, nor even Fanny Elssler. The subsequent forswearing of the drama by the good people of Boston was a curious movement, which we wish somebody would describe. Of the early secular lectures we learn something here, but that would be a subject for a volume. It was Dr. Webster's on chemistry that most attracted the boys. Emerson's were nowhere in comparison.

Dr. Hale does not represent Boston as being so pretty as one would think it must have been, with its many fine old gardens, with the superb orchids and exotics in the greenhouses of his classmate Boott's father (where the Revere House now stands), with much of Beacon Hill blooming with roses, with Summer Street an enchanting alley of verdure and peace, with Franklin Street's pretty park and fountain, with Winthrop Place and other delightful nooks. But neither does he say anything of the beauty of Cambridge, which was then so rural. Nor do the imposing buildings which were put up in those years seem to have made any impression—the Quincy Market, the Custom-house, the Court-house, the Merchants' Exchange, and other buildings in State Street, etc.

The most interesting person in the book, by far, is the author's father, Nathan Hale, editor of the Boston *Daily Advertiser*, chief promoter of the early railways, especially the Boston and Worcester Road, and a man of much wisdom about education. Indeed, we may perhaps say that only two other characters are brought clearly before us, Fulham, an old family servant, and Prof. Peirce. The evidence of Nathan Hale's great good sense in the bringing up of his children, and the little glimpse that we catch, when the corner of the curtain is momentarily pushed aside, of the Hale interior, are so attractive that one is annoyed that there is so little of them. But, indeed, this boy was as unobservant of the inside of the house as he was of the outside. All kinds of interesting people must have frequented it, yet we hear nothing of them. There was Edward Everett, a man who had the art of charming boys as well as he did everybody else. Mr. Webster and Judge Story were there. The railway engineers are mentioned in a general way. Those men, Daniel Treadwell and Maj. Whistler, for example, were as strong and striking personalities as ever walked the earth; but for this boy they were mere abstractions—railway engineers, in a general way. As for the anti-slavery movement, or the temperance movement, or Transcendentalism, they did not exist for him.

Of course, it would be unreasonable to complain of this. Yet the history of Boston during those times is so fascinating, and it so clearly appears, as we can see now, that all the culture and all the good in it sprang out of philanthropy, while all the fogyism, and all that caused the city's overthrow in certain departments, came from the love of money, or "intelligent selfishness," that we are naturally a little impatient to see the real Boston so closely approached without ever being touched upon. There is some description of the Broad Street riot of 1837, but the important anti-anti-slavery riot of two years before and the burning of the Ursuline Convent are not so much as mentioned.

There is a pretty good account of a student's life at Harvard College from 1835 to 1839, the

Navy Club parade, the exhibitions, the long Commencement exercises under the auspices of the Governor, the commons in University Hall, with the bill of fare for each day of the week, indelibly stamped on the author's brain, etc. The following shows how the custom of dancing on the college green on class day arose:

"Class day seems to have originated as early as the beginning of the century. The class itself chose a favorite speaker as orator, and some one who could write a poem, and had its own exercises of farewell. There grew up side by side with those farewell exercises the custom by which the class treated the rest of the College, and eventually treated every loafer in Cambridge. As I remember the first class days I ever saw, they were the occasions of the worst drunkenness I have ever known. The night before class day some of the Seniors—I do not know but what all—went out to the lower part of the plot, where there was still a grove of trees, and 'consecrated the grove,' as the phrase was, which meant drank all the rum and other spirits that they liked. Then, on the afternoon of class day, around the old elm tree, sometimes called Rebellion Tree and sometimes Liberty Tree, which stood and stands behind Hollis, all the College assembled, and every other male loafer who chose to come where there was a free treat. Pails of punch, made from every spirit known to Cambridge innkeepers, were there for everybody to drink. It was a horrid orgy from end to end, varied, perhaps, by dancing round the tree.

"With such memories of class day, President Quincy, in 1838, sent for my brother and one or two others of the class of that year in whom he had confidence, to ask what could be done to break up such orgies. He knew he could rely on the class for an improvement in the customs. They told him that if he would give them for the day the use of the Brigade Band, which was then the best band we had in Boston, and which they had engaged in the morning, they felt sure that they could change the fête. The conditions, observe, were a lovely July day, the presence in the morning at the chapel, to hear the addresses, of the nicest and prettiest girls of Boston and neighborhood with their mammas, and the chances of keeping them there through the afternoon. Mr. Quincy gladly procured the band, and when the day came it became the birthday of the modern 'class day,' the most charming of fêtes. Word was given to the girls that they must come to spend the day. In the chapel Coolidge delivered a farewell oration. Lowell, alas! was at Concord, not permitted to come to Cambridge to recite his poem; it had to be printed instead. When the ode had been sung, the assembly moved up to that shaded corner between Stoughton and Holworthy, the band people stationed themselves in the entry of Stoughton, between 21 and 24, with the window open, and the dancing on the green, of which there are still traditions, began. The wind-instrument men said afterward that they never played for dancing before, and that their throats were bone dry; and I suppose there was no girl there who had ever before danced to the music of a trombone. When our class came along, in 1839, we had the honor of introducing fiddles. I shall send a copy of this to the charming lady—the belle of her time—with whom I danced in the silk gown in which I had been clad when I delivered the class poem of the year. Does she remember it as well as I do?"

Although we cannot help regretting some omissions, yet, after all, these very omissions demonstrate that the book is made up of genuine living recollections, without resort to documents, and the same is true of some little errors of detail; thus, when Dr. Hale informs us that he spouted at the Latin School a poem of Tom Moore's containing the line

"If there lingers one spark of their fire, tread it out!"

instead of

"If there lingers one spark of her light, tread it out!"

we see that the whole is a faithful record of the actual state of the author's memory—and a very pleasant memory it is.

## LADY DE ROS AND WATERLOO.

*A Sketch of the Life of Georgiana Lady de Ros.* With some Reminiscences of her Family and Friends, including the Duke of Wellington. By her daughter, Hon. Mrs. Swinton. London: John Murray. 1893.

THE Personal Recollections written for *Murray's Magazine* in the first months of 1889, when Lady de Ros was in her ninety-fourth year, are well supplemented by the "sketch," as Lady de Ros's daughter calls the account which she has compiled of a very remarkable woman. Georgiana Lennox was the third daughter of Col. Charles Lennox, and was born at Molecomb House in Goodwood Park, Sussex, England, on September 30, 1795. Her mother, Lady Charlotte Gordon, was the eldest daughter of the beautiful and witty Jean Maxwell, wife of the fourth Duke of Gordon. Lady Georgiana's father became Duke of Richmond in 1806, succeeding his uncle as fourth Duke. He was Lord Lieutenant of Ireland from 1807 till 1813. In 1819, when Governor-General of Canada, the Duke died of hydrophobia, caused by the bite of a tame fox. Lady Georgiana, when a child, was often allowed to play with the Princess Charlotte. The Princess, a merry and frank young girl, talked without restraint to her companions, and would openly avow that the two things in the world which she most hated were "Boiled mutton and — Grandmamma [Queen Charlotte]."

The life-long friendship between Lady de Ros and the Duke of Wellington began when her father was Viceroy of Ireland. Sir Arthur Wellesley was Chief Secretary for Ireland, and it was the delight of the young Ladies Lennox to ride every morning with "great Sir Arthur," as they called him, from the Vice-Regal Lodge in the Phœnix Park to the Dublin Gate; Sir Arthur going on to his official work in Dublin Castle. Lady de Ros saw the jubilee of George the Third at Dublin in October, 1809; and in June, 1887, she saw the jubilee procession of Queen Victoria. On that occasion she presented to the Queen a beautiful illumination on ivory, the work of her own hands. The Duke of Richmond, on leaving Ireland, lived at Richmond House, London, now Richmond Terrace, Whitehall. His daughters used to run down the garden to the river with a sixpence in their hands, with which they would buy a flounder from a Thames fisherman, in order to propitiate their very cross Swiss governess. As the girls grew up, they were presented at court, being carried to St. James's Palace in the evening, each in a sedan chair attended by running footmen. When Lady Sarah Lennox, the sister of Lady de Ros, was to be presented, inquiry was made if she had any other name. Lady Sarah's great-aunt, the beautiful Lady Sarah Lennox (afterwards the mother of the three heroes, Sir Charles, Sir George, and Sir William Napier), had been the early love of George the Third, and it was feared that the announcement of the name might seriously affect the aged King. But Lady Sarah had no other name. When the blind old man, then over eighty, heard the name once so dear to him, he, like Isaac, "trembled very exceedingly," and asked if there was any resemblance to *his* Lady Sarah. On being told that there was a likeness, he begged the young girl "to allow a blind old man the privilege of passing his hand over her features. This," adds Lady de Ros, "he did, making no remark."

Lady de Ros had been acquainted with no fewer than nineteen Prime Ministers of England, beginning with Mr. Pitt. Of Lord Salisbury she was wont to quote his mother's opinion, that "Bobby would some day be a very clever man." In 1814 the Duke of Richmond settled with his family at Brussels. They lived in a large house in the Rue de la Blanchisserie, and the Duke of Wellington always called it "The Wash-house." This house was afterwards pulled down, and when Lady de Ros visited Brussels in 1868, she could find no trace of it. The controversy in 1888 as to the street in which the celebrated ball-room had been situated led, most fortunately, to the publication of Lady de Ros's 'Recollections.' In a letter she indignantly complains of the persecution she had undergone about the ball-room, and that correspondents of newspapers would neither believe her nor allow her to know the name of the street in which she had passed those eventful days. A large garden extended from the house to the ramparts, and when the Duchess of Richmond was sitting under the trees on the afternoon of June 15, 1815, Gen. Lord Hill called. He was in command of the Second Corps at Waterloo, but to the Duchess and her daughters he "disclaimed any knowledge of a move." There seems to have been no certainty, but much uneasiness. When, at the request of some young officers, Lady de Ros asked the Duke of Wellington's leave to get up a picnic outside Brussels, he answered, "'No; better let that drop.' For he knew we should all have been probably taken prisoners by the French." There were constant reviews of the troops, and to many of them Lady Georgiana Lennox accompanied the Duke of Wellington, often riding his celebrated charger Copenhagen. She describes Copenhagen as "a most unpleasant horse to ride, but he always snorted and neighed with pleasure at the sight of troops." Copenhagen, it may be observed, was nearly the death of his master after Waterloo. The Duke, on dismounting, gave his favorite a flattering slap on the quarters with his gloved hand. Copenhagen did not appreciate the honor, and lashed out with such force that the Duke narrowly escaped serious injury.

On May 22, 1815, Lady Georgiana Lennox rode with the Duke of Wellington to a review of the Brunswick troops, commanded by the Duke of Brunswick. As she returned rain fell, and she rode back wrapped in a soldier's greatcoat, and escorted by Gen. Alava. Gen. Alava had been in Spain with the Duke of Wellington, and used to say that he asked the same three questions every day and got the same replies: "When do we start?" "Daybreak." "What do we have for dinner" "Cold beef." "Where do we sleep?" "Don't know."

Most people will recollect the description of the state of Brussels in June, 1815, which is given by Thackeray in 'Vanity Fair.' Much anxiety was felt lest the Duke of Wellington should not return from the Congress of Vienna in time to take the command of the troops. Napoleon was known to be on the point of invading Belgium, and, in the absence of the Duke, the command would have devolved on the Prince of Orange, an inexperienced and possibly somewhat rash young officer. Lord March, son of the Duke of Richmond, was aide-de-camp to the Prince, and when the Prince, rather offended, asked Lady Georgiana why she had no confidence in him, she had the courage to reply: "Well, sir, *you* have not been tried and the Duke *has*." The Duke did return, and the famous Waterloo ball was given by the Duchess of Richmond. The room had been used as a coach-house before the

house was let to the Duke of Richmond, but it was now the school-room and play-room of his daughters, and had a paper, "a trellis pattern with roses." The list of invitations is still preserved. The Duke of Wellington arrived rather late, and Lady Georgiana was dancing. However, she at once asked him as to the rumors of immediate action.

"He said very gravely, 'Yes, they are true; we are off to-morrow.' This terrible news was circulated directly, and while some of the officers hurried away, others remained at the ball, and actually had not time to change their clothes, but fought in evening costume. I went . . . to help my eldest brother to pack up, after which we returned to the ballroom, where we found some energetic and heartless young ladies still dancing. I heard afterwards that it had been said that the Ladies Lennox were *fine*, and did not do the honors of the ball well. In the course of the evening the Duke asked my father for a map of the country, and went into his study, which was on the same floor as the ballroom, to look at it. He put his finger on Waterloo, saying the battle would be fought there. My father marked the spot with his pencil."

Lady Georgiana continues:

"It was a dreadful evening, taking leave of friends and acquaintances, many never to be seen again. The Duke of Brunswick, as he took leave of me in the ante-room adjoining the ballroom, made me a civil speech as to the Brunswickers being sure to distinguish themselves after 'the honor' done them by my having accompanied the Duke of Wellington to their review! I remember being quite provoked with poor Lord Hay, a dashing, merry youth, full of military ardor, whom I knew very well, for his delight at the idea of going into action, and of all the honors he was to gain. And the first news we had on the 16th [the next day] was that he and the Duke of Brunswick were killed."

In 1887, Lady de Ros, then in her ninety-second year, inspected the Queen's jubilee presents at St. James's Palace. While waiting for her carriage, her attention was called to a picture in one of the rooms on the ground floor. This picture represented the death of the Duke of Brunswick. Her companions said that the review on that summer morning so long ago seemed as fresh as ever in her memory, and that tears ran down her cheeks as she described it to them. On the eventful evening of the Waterloo ball at Brussels, Lady Georgiana Lennox went in to supper with the Duke of Wellington, and he presented her with his miniature, painted by a Belgian artist.

The days which followed the Waterloo ball were very sad ones. Everybody was scraping lint or preparing "cherry-water." Lady Georgiana continues:

"On the 18th we walked about nearly all the morning, being unable to sit quiet, hearing the firing and not knowing what was happening. The first sight of the poor wounded was sickening, and each litter, as it came into the town, filled us with intense anxiety to know whom it contained. . . . In the evening of the 18th the brilliant victory was known in Brussels. . . . The next morning we heard that the Duke had arrived in Brussels, so I walked with my father, about ten A. M., up to the Parc, his house being in the Rue de la Montagne du Parc, and my father went into the house to inquire for the Duke, who sent word he would join us in the Parc, which he accordingly did, and took a turn with us. He looked very sad, and when we shook hands and congratulated him, he said, 'It is a dearly bought victory. We have lost so many fine fellows.' The reason of his coming early into Brussels was that he had given up his bed at Waterloo to poor Sir Alexander Gordon, who was dying of his wounds. The Duke tried to sleep on the floor in the next room, but after being called up to speak to Sir Alexander he could not go to bed again, and began to write his despatch; however, poor Sir Alexander's groans were so distressing that he could not get on with it, and so he rode into Brussels, where he was busy with despatches all day, and left on the 20th."

In 1824 Lady Georgiana Lenox married her cousin William, afterwards Lord de Ros. She is described as being small and slight, with beautiful hands and feet, and a transparent complexion. She continued to see much of the Duke of Wellington, and many anecdotes of him are given in her 'Recollections.' He presented Lady de Ros with the Spanish translation of the Book of Common Prayer which had been given to him by Lady Elinor Butler, one of the celebrated Ladies of Llangollen, when he, in 1808, took the command of the troops in the Peninsula. It was from this book alone that the Duke learned Spanish. He always declared that if he had commanded his Peninsular army at Waterloo, the battle would have been over in four hours; and his invariable comment on Napoleon was that "He was not a gentleman." The sudden death of the Duke of Wellington in 1852 was a great shock to Lady de Ros. All readers of 'Pendennis' will recollect the description of Arthur's sensations when he met the Duke out walking in London, and he was treated as a hero to the end of his life. When he dined out, he was received with royal honors, ladies as well as gentlemen rising to receive him. Waterloo Day was always kept by Lady de Ros; her house in London was decorated with laurel, and on the 18th of June she never failed to send a laurel bough to the Earl of Albemarle, who had been the junior ensign of the British Army in 1815. Lady de Ros took the liveliest interest in all that went on around her, and delighted in reading. She was never idle for a moment, and when her failing sight obliged her to give up embroidery and illuminating, she continued to knit. In the last week of her life she was busy over some knitting which was to be sold for the benefit of the Distressed Irish Ladies' Fund. Lady de Ros died in London, December 15, 1891, after an illness of only a few days. She was in her ninety-sixth year.

---

*The Naturalist on the River Amazons:* A Record of Adventures, Habits of Animals, Sketches of Brazilian and Indian Life, and Aspects of Nature under the Equator, during Eleven Years of Travel. By Henry Walter Bates, F.R.S. With a Memoir of the Author by Edward Clodd. D. Appleton & Co. 8vo, pp. lxxxix, 395, illustrated.

Of the first edition of this work there were not many copies; the second was much abridged; this one is a reprint of the more desirable first with the addition of a biographical memoir filling eighty-nine pages. Lapse of time since the material was gathered and since publication has not impaired the value of the book, but rather, as a record of facts, for purposes of comparison and in view of the changes that have occurred in the region traversed, its importance has increased, while it has lost none of its interest and freshness as a narrative of personal adventures on the borders of civilization as they were in the Amazonian forests forty years ago.

The field covered reached from Pará westward to San Paulo, about 1,800 miles, and was widened by numerous excursions up lateral confluents of the main stream. Bates had an ability to see things in their actual relations, and a breadth of view that are rare; he had, besides, the spirit of a true naturalist, one of the few deserving the name as compared with the many who collect, dissect, or toy with nature otherwise, who are not naturalists, but only manipulators. Inclination and previous work and field training fitted him for the task; the eleven years of his stay with independence as to place and time gave him unusual opportunities for observation. Fortunate in his personal characteristics, in his accomplishments as a linguist or with guitar and song, he was enabled to adapt himself to the people, making himself a welcome accession on formal occasions in the best society, as also in the merry-makings and hunting or fishing expeditions of the mixed bloods and the Indians. As a result, his book is packed with information a great deal of which could not have been gathered by an ordinary traveller, pertaining to nearly everything to be thought of in connection with the country—geography, geology, soils, products, weather, drainage, government, society (white or Indian), schools, religious matters, customs, costumes, implements, as well as zoology and botany, or the objects of his more special research. The narrative was written to impart information; it is approximately accurate; there is no padding in it; the amount of speculation is small. It bears evidence of thorough enjoyment in the accomplishments of month by month, bringing together the specimens of the many thousands of species and the mass of notes from a life practically new to science, and yet sufficiently indicates that the privations—lack of suitable food, exposure to heat, cold, storms, swamps, dripping and steaming forests, fevers; attacks of insects that bite, that sting, that burrow in the skin, that house their young in tumors of the flesh; dangers from serpents, wild beasts or wild men, or the perils of travel in the wilderness—were fully appreciated and endured only because unavoidable in the prosecution of our naturalist's undertaking. With so many elements of value and permanence the work is one that cannot be superseded; it is worthy a place in any library.

The preface is too full of compliment: the letters to and from the author are overladen with mutual admiration; one is led to ask whether he might not perhaps get a better idea of Mr. Bates from a more impartial and less enthusiastic pen.

---

*Stones of Stumbling.* By the Hon. Lionel A. Tollemache. London: William Rice.

*Safe Studies.* By the Hon. Mr. and Mrs. Lionel A. Tollemache. London: William Rice.

Now for the first time regularly published in book form, these writings of Mr. Tollemache's have most of them seen the light before either as magazine articles or in privately printed volumes. It was on the receipt of such a volume that Mark Pattison wrote to the author in 1884: "The level of the collected papers stands so high that I now regret the volume was not published—for your credit, that is, since, as a collector, an unpublished volume is five times as precious to me." From the same source we may as well take another tribute to Mr. Tollemache's quality. In a letter quoted, with modest apologies, in an appendix, Pattison wrote to the author: "For my part, I cannot expect ever to see you again; and I must be content with here recording my experience that your conversation was to me more stimulating than that of any man I ever met."

It would be somewhat unfair to the reader to whet his appetite by this high praise from one who never gave praise lightly, without confessing that the books under notice scarcely meet the high expectations thus aroused. Yet they are witty and interesting, and besprinkled throughout with the dew of wide and unusual reading. Particularly in his resort to apt

classical quotation does Mr. Tollemache preserve an honorable literary tradition in a way which now seems a little old-fashioned, though agreeable from its very quaintness as well as its frequent pungency. The 'Stones of Stumbling' consist in the main of essays on certain moral and theological subjects which, as the author himself admits, have lost most of their interest, but in a long appendix of eighty pages we get past that rough part of the path and emerge into the thoroughly delightful "Recollections of Pattison." Based upon a long friendship, and upon a certain affinity implied in Pattison's remark quoted above, they are altogether charming in their mingled analysis and reminiscence, narrative and anecdote. Of the many good things which the reader will find here, we can quote only the following as perhaps peculiarly suited for citation this side of the Atlantic:

"The following abridgment of an account which he [Pattison] gave of his meeting an American young lady at a foreign table d'hôte, reproduces his characteristic sayings almost, if not quite, verbatim: 'She was only nineteen, but she knew everything. She told me the exact amount of affection which the Princess C. has for her future husband; and she gave me a full account of the divorce laws in all the States of America. She appealed to me sometimes; of course I agreed. At last, she asked whether I did not think she could write a book; and I told her that she was the most ignorant girl I ever met!'"

What Pattison's idea of writing a book was, may be inferred from the advice he gave a friend who asked his opinion about a literary undertaking, and who thus reports the matter:

"He suggested that I should edit Selden's 'Table Talk.' The preparation was to be, first, to get the contents practically by heart, then to read the whole printed literature of Selden's day and of the generation before him. In twenty years he promised me that I should be ready for the work. He put the thing before me in so unattractive a way that I never did it or anything else worth doing. I consider the ruin of my misspent life very largely due to that conversation."

At any rate, Pattison was not exposed to the "Physician-heal-thyself" reproach, for had he not followed his own advice, in his Life of Casaubon?

The second volume, 'Safe Studies,' is made up of various literary and philosophical essays and recollections—in much the same vein as those of Pattison—of Grote and Babbage, Charles Austin and Stanley and Kingsley. Mrs. Tollemache's contributions appear at the close in the form of translations and poems. We take pleasure in commending these books for their biographical interest, which, in parts, is of the greatest, as well as for the refinement and learning that pervade them throughout.

BOOKS OF THE WEEK.

### MUSEUM OF FINE ARTS,

**Copley Square, Boston, Mass.**

SCHOOL OF DRAWING AND PAINTING.

The eighteenth year will open October 2, 1893. Instruction in drawing from the cast and from life, in painting, modelling, and decorative design, and also in artistic anatomy and perspective. Principal instructors: F. W. Benson, E. C. Tarbell and Philip Hale (Drawing and Painting), C. Howard Walker and Mrs. William Stone (Decorative Design), B. L. Pratt (Modelling), G. H. Monks, M.D. (Anatomy), and A. K. Cross (Perspective). Pupils are allowed the free use of the galleries of the Museum. For circulars giving detailed information, address Miss ELIZABETH LOMBARD, Manager.

---

*COLLEGE OF PHYSICIANS AND SURGEONS, CHICAGO, ILL.*

Winter term begins September 18, 1893. Course of study covers four years; for Bachelors of Arts and Sciences, three years. Preliminary examination required in English, Physics, Mathematics, and Latin. Fees, $100 a year. Laboratory equipment for students unequalled.

For announcement and further information, address

Dr. BAYARD HOLMES, Secretary,
Venetian Building, Chicago, Ill.

---

### ROCKFORD COLLEGE FOR WOMEN.

45th year begins Sept. 13, 1893. College course and excellent preparatory school. Specially organized department of Music and Art. Four well-equipped laboratories. Good, growing library. Fine gymnasium. Resident physician. Memorial Hall enables students to much reduce expenses. For Catalogue, address SARAH F. ANDERSON, Principal, Rockford, Ill., Lock Box 10.

---

### OGONTZ SCHOOL

**For Young Ladies.**

Established in 1850. Twenty minutes from Philadelphia, two hours from New York. Opens September 27. For circulars and reports apply to Principals,

OGONTZ SCHOOL P. O., PA.

---

### WASHINGTON AND LEE

*UNIVERSITY, Lexington, Va.*

Academic, Law, Engineering. Opens Sept. 14. For Catalogue, address

G. W. C. LEE, President.

---

### THE CLAVERACK COLLEGE

**AND HUDSON RIVER INSTITUTE**

FOR BOYS AND GIRLS, will open its 40th year Sept. 18. For Catalogues, address

Rev. A. H. FLACK, A.M., Prest., Claverack, N. Y.

---

### THE YOUNG LADIES' SEMINARY,

FREEHOLD, N. J. Admits to Smith, Wellesley, and Vassar on certificate. Graduates from the Seminary Course. Preparatory Class, Art and Music. Home care. Miss EUNICE D. SEWALL, Prin.

---

### ASHLEY HALL

Home School for 20 young ladies. Ten miles from Boston. Music, Art, Languages. Thorough preparation for college.

Miss WHITTEMORE, Principal,
Montvale, Mass.

---

### St. John's Military School,

MANLIUS, N. Y.

Rt. Rev. F. D. HUNTINGTON, Prest., WM. VEEBECK, Supt., 1st Lieut. W. P. BURNHAM, 6th Infantry, U. S. A., Commandant. Apply to Superintendent for circular.

---

### RIVERVIEW ACADEMY,

POUGHKEEPSIE, N. Y.

58TH YEAR. Prepares thoroughly for College, the Government Academies and Business. Military organization. BISBEE & AMEN, Principals.

---

### The Misses Ely's School for Girls,

RIVERSIDE DRIVE,
85TH AND 86TH STREETS, NEW YORK.

---

### LAKE ERIE SEMINARY

FOR YOUNG WOMEN,

**PAINESVILLE, OHIO.**

Early application necessary for September, 1893.

---

### BUFFALO SEMINARY.

THE FORTY-THIRD YEAR. For circulars, address

Mrs. C. F. HARTT,
284 Delaware Avenue, BUFFALO, N. Y.

---

PENNSYLVANIA, Philadelphia, 1924 Chestnut Street.

**MISS BOYER'S**

**English, French, and Music School**

FOR BOARDING AND DAY PUPILS.

---

**CLASSICAL AND HOME INSTITUTE,**

POUGHKEEPSIE, N. Y. Young ladies may pursue the graduating course, prepare for college, or select their own studies. A pleasant home with good care.

SARAH V. H. BUTLER, Principal.

## Educational.

### The Columbian University

**WASHINGTON, D. C.**

*The School of Graduate Studies*

Has Lecture Courses leading to the degrees of A.M. and Ph.D. in English, Greek, Latin, French, and German, in Mathematics, Mathematical Physics, Solar Physics, Theoretical Astronomy, Astro-Physics, General Chemistry, Mineral Chemistry, Agricultural Chemistry, Bio-Chemistry, Geology, Meteorology, Zoölogy, Comparative Anatomy, Anthropology, Speculative Philosophy, and the Philosophy of History.

Also Lecture Courses leading to the degrees of Civil Engineer and Electrical Engineer.

For Catalogues, giving description of the several courses, address the Registrar.

JAMES C. WELLING, President.

---

### College of Gymnastics.

Extension and Enlargement of former Normal Course of the

**ALLEN GYMNASIUM.**

Thorough Course in Gymnastics, theoretical and practical, including Dancing, Swimming, Bicycling, Voice Culture, Anatomy, and Physiology.

For Prospectus, address MARY E. ALLEN,
42 to 56 St. Botolph Street, Boston.

---

### UNIVERSITY LAW SCHOOL

Thirty-fifth year begins October 2, 1893. Confers LL.B.; also (for graduate course) LL.M.

AUSTIN ABBOTT, Dean and Senior Professor.

Address, for Catalogue,
PROF. RUSSELL,
At University Building, or 120 Broadway, N. Y. City.

---

### WELLS COLLEGE

FOR WOMEN, AURORA, N.Y.

Three Full Courses of study. Location beautiful and healthful. New Building with Modern Improvements. Session begins Sept. 20, 1893. Send for Catalogue.

E. S. FRISBEE, D.D., President.

---

### Kenyon Military Academy,

GAMBIER, OHIO. At this remarkably successful school the masters are all college graduates and teachers of tried efficiency. Cadets given the most thorough preparation for college or business. Much the oldest, largest, and best equipped boarding-school in Ohio.

---

### CHELTENHAM MILITARY ACADEMY

OGONTZ (NEAR PHILADELPHIA), PA. Represented by its graduates in Harvard, Yale, Princeton, Cornell, Amherst, University of Pa., Lafayette, and West Point (Lehigh University and Trinity College added for '93-94.) 23d year. JOHN CALVIN RICE, Principal

---

### WILLIAMSPORT DICKINSON SEMINARY.

WILLIAMSPORT, PA. Both sexes. Regular and elective courses. Degrees conferred. Fits for college. Music, Art, Modern Languages, specialties. Steam heat, electric light, home comforts. $225.40 per year. Catalogue free. Year opens Sept. 4. E. J. GRAY, D.D., President.

---

### Cayuga Lake Military Academy, AURORA, N. Y.

Advantages: A well-disciplined school, experienced teachers. Location near Cornell University. Term begins Sept. 14, 1893. For illustrated circular, address

Col. C. J. WRIGHT, B.S., A.M., } Principals.
or ALFRED K. McALPINE, A.M., }

---

### Excellent Boarding School

Near Philadelphia, will receive daughters of professional men at half-price. Address, for Catalogue,

"PRINCIPAL," P. O. Box 1592, Philadelphia, Pa.

---

## Teachers, etc.

*A LADY OF EXPERIENCE WITH* boys wishes to take two into her family, and will give them personal care. Steam and electric cars within three minutes' walk, making Boston schools available. Fine air and country sports. Refers to leading Boston teachers. Address E. M. P., Brookline, Mass.

---

*MISS ANNA PETERSEN DESIRES* a position as teacher in a school. She is qualified to teach German, French, and Italian. Reference, Prof. C. E. Norton. Address, care of Prof. Norton, Ashfield, Mass.

---

*AN EXPERIENCED TEACHER,* graduate of an Eastern college and of a German University, desires a college position. Specialties, English and German. Address Ph.D., care *Nation.*

---

*AN INSTRUCTOR IN PHYSICS IN* one of the foremost Western Universities (A.B. Harvard, Ph.D. Germany) desires a change. Also tutorship. Willing to travel. Address Dr. X. B., care *Nation.*

---

*A YALE GRADUATE (1890) WISHES* a position the coming year as teacher of Classics, German, or English in preparatory school. Address

C. E. ROBBINS, Ruskey, Dutchess Co., N. Y.

---

*CHARLES W. STONE, Tutor for Harvard,* 68 Chestnut St., Boston.

---

## School Agencies.

*THE ALBERT TEACHERS' AGENCY* always receives many calls for teachers during the months of August and September by telegraph as well as by correspondence. These vacancies must be filled quickly. Teachers with good preparation or good records are now in demand. Address

C. J. ALBERT, Manager,
211 Wabash Avenue, Chicago.

---

*AMERICAN AND FOREIGN TEACHERS'* Agency supplies Professors, Teachers, Tutors, Governesses, etc., to Colleges, Schools, and Families. Apply to

Mrs. M. J. YOUNG-FULTON,
23 Union Square, New York.

---

*THE FISK TEACHERS' AGENCIES,* 4 Ashburton Street, Boston, 371 Main Street, Hartford, 70 Fifth Avenue, N. Y., 106 Wabash Ave., Chicago, and 120½ South Spring Street, Los Angeles. Agency Manual free. EVERETT O. FISK & Co.

---

*THE NEW AMERICAN TEACHERS'* Agency.—Teachers seeking positions and those wishing a change at an increased salary, should address C. B. RUGGLES & Co. (Palace Hotel Building), Room C, 237 Vine Street, Cincinnati, O.

---

*AMERICAN AND FOREIGN Professors,* tutors, governesses, teachers, etc., supplied to colleges, schools, and families. MIRIAM COYRIERE,
150 5th Ave., cor. 20th St., N. Y.

---

*NATIONAL BUREAU OF EDUCATION,* Miss CROSTHWAIT, Prop., cor. Church and High Sts., Nashville, Tennessee. The Leading School and Teachers' Agency of the South and Southwest.

---

*SCHERMERHORN'S TEACHERS'* Agency. Oldest and best known in the U. S. Established 1855. 3 East 14th St., N. Y.

---

*An Agency* is valuable in proportion to its influence. If it merely hears of vacancies and *that* is something, but if it tells you about them is asked to recommend a teacher and recommends you, that is more. Ours *Recommends*

C. W. BARDEEN, Syracuse, N. Y.

*NEW YORK, THURSDAY, AUGUST 24, 1893.*

## The Week.

THE most important feature of the committee appointments in the House is, of course, the constitution of the Ways and Means Committee, which must frame the new tariff bill. Speaker Crisp has made the wisest possible selection for the chairmanship of this Committee in Representative Wilson of West Virginia, who is a thorough student of the subject, a vigorous and able debater, and a man of the highest reputation with both parties. The restoration to this Committee of Breckinridge of Arkansas and Bynum of Indiana, who were formerly members of it, strengthens it, and it seems to be admirably framed for its work. The retirement of Holman from the chairmanship of the Appropriations Committee is a great gain to the cause of good government, his ridiculous ideas of "economy" having brought much discredit upon the theory of frugal administration, while his successor, Sayres of Texas, is, by the confession of his political opponents, a man of broad views, without any tendency to extravagance. Having disregarded precedent as to these two committees by refusing to reappoint their former chairmen, it is a great pity that Speaker Crisp did not do the same thing by deposing Mr. Bland from the head of the Coinage Committee. It is some consolation that Bland has among his Democratic colleagues such sound-money men as Tracey of New York, Rayner of Maryland, and Harter of Ohio, but a man of Harter's type ought to have been the chairman. Fortunately, the importance of this committee will be greatly diminished after the passage of the pending bill repealing the Purchase Act.

---

Senator Vest's coining ratio of 20 to 1 has received a fatal blow from Secretary Carlisle, who has prepared a statement showing that it would cost $89,741,900 to give effect to it in merely recoining the standard silver dollars, and that it would cost $23,124,421 to recoin the subsidiary silver so as to make it bear the same proportion to the new silver dollar that it now bears to the existing one. These two items of cost foot up $112,866,321, which it would be necessary for Congress to appropriate. Without this recoinage, Mr. Vest's bill could not be carried into effect. We could not have two silver dollars of different weights under the principles of free coinage. We might have any number of such under the present system of limited coinage and gold redemption of silver. The metal in the present silver dollar is worth only 56 or 57 cents. That of the Vest dollar would be worth 72 or 73 cents. We might have as many varieties as there are Senators as long as the coinage is only on Government account. But if the mints be opened to unlimited coinage for private individuals, all silver dollars must be alike. Hence the gravity and seriousness of Secretary Carlisle's letter. It would require years, moreover, for the mints to do the work, and meanwhile free coinage would be in abeyance. Meanwhile we should have neither the benefits of the gold standard, nor those of free silver coinage, if there are any. Of all the devices called out by the present crisis, this "20 to 1" scheme is the most impracticable, and, when closely examined, the most ludicrous. If it had the advantage of conforming to the market ratio, that would be something in its favor, as it would afford some basis for an international agreement, but it has not even that advantage.

---

Secretary Carlisle's service in the cause of sound money has been recognized on all hands as particularly effective. What he has practically done is to assume the right of a Cabinet officer to a seat and a voice on the floor of Congress. Yet in what a roundabout and handicapped manner he has had to do it, by writing letters to the Chairman of the Committee on Finance and giving out statements to the press. These have been particularly telling, it is true, and his volleyed figures have gone like grape and canister through the ranks of the silver men; but how much more deadly execution he could have wrought, and how much more surely he could have caught and influenced public sentiment, if he could have been really, as he made himself constructively, on the floor of the Senate, driving the truth home in the give-and-take of debate. As it is, Senator Vest will probably take a few days to bind up his wounds, and will then make some sort of reply, which will have to go unanswered until Mr. Carlisle can go through the process of getting another letter published. Face to face with an opponent, and with equal right to free speech, he could not only smite the enemy through the midriff, but could twist the spear in the wound until there was an end of the business. By an instructive coincidence, on the same day that Secretary Carlisle was doing his long-range shooting in this country, the Chancellor of the Exchequer in England was at close quarters in the House of Commons with his opponents on the Government's silver policy, and was putting them *hors de combat* on the spot. He was doing directly and by warrant of custom and law what the American Secretary was doing indirectly and by a tacit and awkward overriding of custom if not of law. If we are to have the system at all, and are not to condemn our Cabinet officers to absolute silence and nullity, on all pending questions of legislation, it is only common sense to have it in its best form. Perhaps if we oftener had members of the Cabinet of Mr. Carlisle's effective debating powers, we should become ashamed of compelling them to dodge about committee-rooms and write letters in order to get their views before Congress and the country.

---

Senator Vest says in his speech on the silver question:

> "It is a favorite expression now to talk of the 'silver lunacy.' Mr. President, I am willing to follow that great lunatic, Thomas Jefferson, on this question."

This shows how necessary it is for a Senator to know the history of the subject he is talking about. There are few events in our monetary history better known than the fact that Thomas Jefferson, when President of the United States, in the year 1805, gave a peremptory order to the Mint to *stop coining silver dollars*, and that this order remained in force until 1836, although Jefferson had long ceased to be President and had long been dead. The reason why he gave this order is thus stated by Mr. Upton, in his work entitled 'Money in Politics':

> "He desired that gold should circulate as well as silver, and *to prevent the expulsion of gold* he peremptorily ordered the Mint to discontinue the coinage of the silver dollar."

Whatever the motive, he certainly gave the order, and that is the reason why there is a blank in the coinage statistics of the silver dollar from 1805 to 1836.

---

The bill reported by Senator Voorhees from the Finance Committee is sufficient for all purposes, and if passed will stop the panic and bring out of its hiding places the money now locked up by frightened depositors. There is a great deal of mischief done which cannot be undone, but the bill when passed—and we have little doubt of its passage—will *restore confidence*, which is the great desideratum and *sine qua non*. The clause which declares it to be the policy of the United States to continue to use both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, etc., is of no consequence one way or the other. It is what Thomas H. Benton called, on another occasion, "a stump speech in the belly of the bill." If anybody can be brought to vote for the measure by reason of the stump speech who would not otherwise do so, then, in Heaven's name, let him have it. The declaratory clause is a nearly verbatim copy of the Chicago platform. If it will help the bill along to put in the Minneapolis platform also, let that be done. The two are so nearly alike that no incongruity would result.

The statement of the condition of the banks of New York city published on Saturday, which was awaited with so much interest, proved in several respects encouraging. The gain of $4,500,000 of reserve is satisfactory, as showing that the condition of the banks is stronger, and as demonstrating that their solvency is above suspicion. Taken by themselves, the shrinkages in the amounts of the loans and of the deposits are not cheering, but taken together some elements of hope may be extracted from them. The loans have decreased over $5,000,000, but the deposits have decreased less than $2,000,000. This may be considered to indicate that we are reaching that stage in our financial crisis when deposits increase faster than loans—the period when stagnation succeeds panic. At first the banks cannot contract their loans as their deposits contract, and a long process of pinching has to be gone through with until something like an equilibrium between deposits and loans is brought about. Then follows a period when depositors are more disposed to put their money in the banks than the banks are to lend it—a period of general business depression but of gradual recuperation. When loans begin at last to expand, we may be tolerably sure that prosperity is returning.

---

The fact that the India Council in London has sold bills on Calcutta at the rate of 1s. 3¼d. per rupee, thus confessing its inability to maintain the rate of exchange at 1s. 4d., has been construed by some uninformed people as tantamount to a failure of demonetization in India. Even the London *Standard* has fallen into this error. The truth is, that this contingency was carefully considered by the financial authorities of India before they decreed the demonetization of silver. Their original programme did not contemplate the fixing of a rate of exchange between the rupee and the sovereign. Their plan was simply to stop coining silver, and then to leave the rate of exchange to find its own level. The idea of fixing a rate of exchange at 1s. 4d. came from the Herschell Commission. It was seen by competent financiers to be a blunder the moment it was announced. It is now proved to be such. But the Indian Government, in accepting the suggestion, was careful not to pledge itself to maintain the rate of exchange at any particular figure. Its members foresaw that it might be impossible, under all circumstances, to make good such a pledge. So they limited their undertaking by the following words:

> "Arrangements will be made to issue rupees from the mints in exchange for gold and sovereigns at the rate of sixteen pence per rupee *until further notice.*"

Therefore the only argument to be drawn from the sale of India Council bills at fifteen and a quarter pence per rupee is that the Herschell Commission made a mistake. That Her Majesty's Opposition should make the most of this is to be expected. Fortunately for the Gladstonians, Mr. Balfour, the leader of the Opposition in the Commons, committed a greater mistake the other day by making a speech in favor of bimetallism.

---

This squall will soon blow over. It will then be seen that the demonetization of silver by India is an accomplished fact, and that the maintaining of a rate of exchange has no necessary bearing on the main question. All persons who expect the Government of India to take the back track will be disappointed. Our problem will continue to be exactly what it has been from the beginning. Our silverites will get no help from the Asiatics. They will get no help from any quarter. Their favorite metal will fall to the level required by its cost of production. And so it would do even if we had free coinage. Free coinage in India did not prevent silver from declining in value there. Free coinage in Mexico does not prevent its declining in value there. The only thing it would accomplish here would be to cheat creditors and wage-earners, including all bank depositors, savings depositors, and pensioners, and persons who have fixed incomes. After this had been accomplished we should have two kinds of money—gold and silver—the latter being at 40 or 50 per cent. discount. The *Times* seems to be the only London paper taking a calm and accurate measure of the fact that the arbitrary par of exchange cannot be maintained. It warns speculators not to risk money on any theory that the India mints are to be reopened to silver.

---

The absurd attempt to make apprehension of tariff changes responsible for our business troubles was all along so devoid of support from any commercial body that when the Tacoma Chamber of Commerce was reported to have come to its support, many despairing Republican editors thanked God and took courage. It now turns out that the resolutions bewailing the "threatened overturning of the protective policy" were so laughed at and repudiated in Tacoma itself that the Chamber had to recall them. They were originally adopted on August 1. On August 5 they were reconsidered, and everything about the tariff left out, to the satisfaction of all concerned except one lonesome member, who could see nothing but tariff on every bush. This leaves the record clear again, and we can still challenge the high-tariff organs to produce the testimony of a single respectable commercial or financial organization to sustain their view.

---

Secretary Carlisle has notified the North American Commercial Company, the lessees of the Pribyloff Islands, that the reduction in their rental made in 1890, 1891, and 1892 was without warrant of law, and that they are liable for the full amount. This involves a question of law which the courts will undoubtedly be called to pass upon; but as far as the equities of the case go, there will be a general agreement that the company ought to pay for the trouble and expense it has put upon the Government to maintain its monopoly. The whole controversy arose out of the wrath of the monopolizing company at the invasion of its preserves by the impudent Canadians; and whatever advantages have been won by the Paris arbitration will inure to its benefit solely. No American citizen can do any pelagic sealing in the close season, or venture within the 60-mile zone, any more than a British citizen. The whole result is to confirm and establish a monopoly of the sealing industry in the hands of this San Francisco company. That is what it has been after from the beginning, and all the tears shed over the suffering seals, and the talk about the "crime against nature" in killing the gravid females, and the pictures of the absolute despair and misery of the human race when deprived of sealskin cloaks, had their origin in the fears of an endangered monopoly. The company has kept the country in hot water for seven years, has drawn us to the verge of war, and saddled the taxpayers with heavy expense; and if now it can legally be made to foot a part of the bill, there will be no objection from man or seal.

---

There seems to be some misapprehension in regard to the question of damages under the findings of the Arbitration Tribunal. The only precise award of damages which the arbitrators could make, in accordance with the treaty, was for the abstention of British subjects from sealing during the pendency of the arbitration, or for the limiting of the catch by the American Government, in case its claim of exclusive jurisdiction were sustained. This award the arbitrators must now have made to Great Britain, "for the use of her subjects," though the amount fixed upon has not been announced. The treaty only stipulated that the amount "shall be such as, under all the circumstances, is just and equitable, and shall be promptly paid." On the question of the liability of our Government on account of the seized Canadian sealers, the arbitrators were empowered to make a finding only on "any questions of fact involved in such claims"; "the question of the liability of either Government upon the facts found to be the subject of further negotiation." In other words, the Canadians will have to go to work in the usual way to prove their claims, either before our Government direct or before a mixed claims commission agreed upon for the purpose by England and the United States.

---

The action of the Republican State Convention in Iowa last week assures the re-

peal of the Prohibitory Law by the Legislature which is to be chosen in November. It is now about a dozen years since the Republicans in that State took up prohibition as an issue, and they have had enough of it. In the last two gubernatorial contests it lost them the Governorship, and in 1891 one branch of the Legislature as well. It was certain that further adherence to it would lose them the State offices again this year, and probably also the Legislature, which is to choose a United States Senator. So, although in the last contest for Governor they stood by the law and had "no apologies to offer for the Republican record" on this question, the late Convention declared that "prohibition is no test of Republicanism," relegated the subject to the Legislature, endorsed the principle of local option, and nominated an anti-prohibitionist for Governor. In any event, therefore, the election must result in the choice of a Legislature which will repeal the existing law, as the Democratic members will all be on that side. It is not so certain, however, that the Republicans will control the body. It was only by a narrow margin in a total vote of more than 1,200 that prohibition was rejected in the Convention, and a great many Republicans still believe so devoutly in prohibition that they will vote for candidates committed to its support rather than for what they consider "faithless" members of their own party.

---

The figures contained in the fourth annual report of the Statistician of the Inter-State Commerce Commission show that no other region in the world of anything like an equal extent is so well supplied with railroads as is that portion of the United States which extends along the Atlantic Coast from the northern boundary of Massachusetts to the southern boundary of Maryland, and stretches westward to the Mississippi. Of course there are small and densely peopled countries like Belgium, with a land surface about one-fourth that of the State of New York, which have more miles of line in proportion to their total area, as there are thinly peopled commonwealths like the Australian colonies which exceed it in the ratio of railway mileage to inhabitants. But in extent of territory it is with the great nations of Europe, Russia excepted, that this region of the United States can be most fairly compared, covering, as it does, more than twice as much surface as either the United Kingdom or Italy, a fourth more than either France or Germany, and but a few thousand square miles less than Austria-Hungary with Bosnia and Herzegovina thrown in. If the comparison be thus made, it will be found that in proportion as well to area as to population, the eleven American States in the region mentioned lead the world in railway mileage. For every one hundred square miles of their land surface they have 17.97 miles of railway, while the United Kingdom has but 16 42, Germany 12.44, France 11.06, Italy 7.10, and Austria-Hungary 6.30. Relative to population, of course, the superiority is even greater, there being 17.09 miles of line for every 10,000 inhabitants, while in the United Kingdom there are but 5.17 miles, in France 5.91, in Germany 5.35, in Austria-Hungary 3 91, and in Italy 2.62 miles.

---

The net impression derived from the Papal Ablegate's visit to this city is, that he came here for the express purpose of forcing Archbishop Corrigan to what amounts to a public recantation and profession of obedience in the future. This impression is distinctly confirmed by the authorized interview with Archbishop Satolli's private secretary, which as good as said that the object of the visit was to find out whether the Archbishop of New York was "sincere" or not in his loyalty to the Pope. We do not wonder that the friends of the Archbishop are indignant at the terms of this interview, and denounce it as inaccurate, but we observe that the private secretary and the Ablegate are at no pains to correct it. The fresh outbreak of spluttering in the *Sun* by anonymous champions of Archbishop Corrigan shows in what quarter the bolt has struck. We may expect this clanking of chains to go on for some time, but the fact remains that the Pope's representative, with the Pope's full sanction, has ridden over the reactionary extremists of the Catholic Church in this country, and is now exhibiting the chief of them tied to his chariot.

---

The result of the French elections was a foregone conclusion, and it may be considered that the Republic is now established in France upon as substantial a basis as the political capacity of the French people affords. The royalist faction appears to have been nearly extinguished and the question as to the form of government definitively answered. Henceforth the problem to be solved is not whether there shall be a republic, but what kind of a republic there shall be. Upon this subject the approach of the general election naturally called forth many *brochures*, in which the political history of recent years was criticised from various points of view. We have not observed among these any serious attempts at laudation of the Chamber just dissolved, the most ventured in this direction being rather shamefaced apology, while the torrent of invective poured forth upon the members of the expiring body has been terrific. As to the earlier record of the Republic, however, the case is somewhat different. That record has been examined with especial ability and severity by M. Francis de Pressensé in an essay entitled 'La France, les partis et les élections,' which has been received with general admiration, but which has drawn forth some vigorous replies. The best of the moderate Republican journals, the *Temps*, has exerted all its abilities to diminish the force of M. de Pressensé's attack, and, it must be admitted, with some degree of success.

---

Among the two thousand candidates who asked the suffrages of the French electorate on Sunday, but a very small number have gained distinction in any way except in politics, in the narrower sense of the term. This has been made a subject of remark in many quarters, but nowhere more forcibly than by M. Salomon Reinach in an article in the *République Française*. He shows how public life has a diminishing attraction for the intellectual élite of France. The few brilliant exceptions which may be pointed out only serve to make more conspicuous the low level of the great mass of office-holders and candidates for office. Most of them are entirely unknown outside of a limited local circle, and an exceedingly small number have ever gained a name in science or literature or art or education. M. Reinach concludes that "we are travelling towards a state of things such as exists in the United States—the formation of a narrow caste of politicians, side by side with the increasing withdrawal from public life of men who think and make others think." Precisely this result was predicted by Burke a hundred years ago, when he spoke of the "multitudes of the inferior sort" which would be drawn into public life as "the objects of ambition are multiplied and become democratic." The democratic movement, in fact, has brought with it a deterioration of personnel in the official class all over the world. It has brought it in England as well as in France—so much so as to point the remark lately made by John Morley, in answer to an objection urged against the character of the men likely to be found in the proposed Irish Parliament, that if legislation were to wait until a thoroughly nice Legislature could be got together, the wheels of government would be blocked in every democratic country on earth.

---

A minor feature of the recent German elections has been the increase in the Danish vote in Schleswig. While as hitherto but one Danish member was returned, his majority was considerably greater, and the minority votes of the other Danish candidates were without exception increased. In spite of the determined efforts of thirty years, the Germans are no further advanced in their plan of Germanizing this conquered Danish territory than when they began. Danish is still spoken in the homes, Danish papers are still read, and Denmark is still regarded as the people's real fatherland. Nor are the Danes at home more reconciled to the loss of "Southern Jutland." In every possible way they seek to support the cause of their former countrymen and to express their warm sympathy for them.

*GOLD AND CREDIT.*

It is very obvious that most of those who may be called "practical bimetallists"—the owners of silver mines and the politicians controlled by them—are really in favor of monometallism. They demand the free coinage of silver, and they are unable to clothe the assertion that the gold standard could still be maintained with a rag of argument. But it is undeniable that a considerable number of honest people are convinced of the theoretical advantages of bimetallism. Like Mr. Arthur Balfour, they sincerely dread the adoption of gold monometallism. It seems to them to involve the diminution of the "reservoir" of precious metals, and to threaten a serious, and, to debtors, an oppressive decline in prices. So far as we have observed, however, these theoretical bimetallists do not pay sufficient attention to the fact that it is a "condition and not a theory that confronts us." They fix their minds upon a real or supposed fall of general prices that has taken place during the last twenty years, and upon an imagined or anticipated fall that is to take place in the future, and ignore the frightful depreciation of the present moment. That depreciation we attribute to the apprehension not of gold monometallism, but of silver monometallism. However this may be, it shows that there are causes in operation which the bimetallic theorists do not take into account.

These causes arise out of the credit system of doing business, a system which has been carried in this country to an extreme never before witnessed. Until recently it might almost be said that money in the strict sense had gone out of use in the United States. A man would carry on an extensive business for months without touching a gold coin. A silver dollar he would reject, and the only semblance of metallic money that he used was the token coinage, which after all passed upon its credit more than upon its intrinsic worth. There was some gold held by the banks in their reserves and a good deal was held in the reserve of the Government. The only object of holding it was to assure the holders of paper money that they could get gold for it if they wanted to do so. If the holders of this paper were entirely satisfied that the Government had the ability and the will to redeem it in gold, we do not hesitate to say that the banks might keep their reserves in legal-tender notes instead of gold, and the Government might get along safely with a reserve of a hundred millions of gold. It might be formulated as a law that the amount of gold required for the transaction of the business of this country varies inversely with the credit of the Government. If that credit is above suspicion, the amount of gold needed is infinitesimal; but if the credit of the Government is shaken, it ceases to be available as money to the same extent, and more gold is required.

To simplify the matter, we may throw out at once the factor of positive ability to pay. No one doubts that the United States is abundantly able to pay all its obligations without difficulty. But since the silver legislation has prevailed, it is undeniable that doubts have arisen as to the honesty of the purpose of our Government. The political platforms have in many cases not been reassuring. A great many Representatives and Senators have loudly proclaimed that existing debts ought to be made payable in silver, and have voted for free coinage in order to make their intention effective. Rightly or wrongly, those who had lent gold dollars or their equivalent regarded this intention as dishonest. They perhaps had no clear views about monetary theories, but as between gold and the paper promises of a government of suspected honesty they had a practical preference for gold. Hence the contraction of credit; hence the strenuous demand for currency to take the place of the credit that had disappeared; and hence the reappearance of gold as money.

What now would be the effect of a clear, emphatic, and sincere declaration by a substantial majority of Congress that every creditor of the United States should be paid in gold, and that no more silver would be bought or coined? According to the bimetallic theorists, this ought to produce a fall in prices. They think that there would be a greatly increased demand for gold, a struggle among nations for it; that its value would be so enhanced that prices would fall, and the "debtor class" would be ground between the upper and the nether millstone. The facts show that nothing of the kind would take place. There would be a rise and not a fall of prices. There would be a lessened and not an increased demand for gold. There would be no struggle of nations over the matter, for, in the first place, the struggle is not between nations but between individuals, and in the second place gold would be rather at a discount than at its present premium. The "debtor class" would find that its credit was improving, business men would be able to get their notes discounted, timid people would release their hoards, and, in short, by restoring credit to its function as money, the requirement for actual money would come to an end.

To sum up, our existing currency is composed of gold and credit. If there is less credit, there must needs be more gold. If there is more credit, there need not be so much gold. If the bimetallists are logical, they will recognize the fact that credit is a much more important factor in currency than silver, and that their endeavors to force silver upon a reluctant business community depress prices instead of raising them. If we are to have bimetallism, we shall have to give up a large part of our credit. It may be wrong and deplorable, but it is the fact, and sensible bimetallists ought not to ignore it. We think the correctly reasoned convictions of the "financial classes" are against them, but, granting that it is only their unreasonable prejudice, the practical question remains the same. Shall we regard these prejudices and continue to do business on a little gold and a great deal of credit, or shall we defy them, and try to do business on a great deal of silver and what gold and credit the financial classes are disposed to contribute? This is the question that the American people is now asking its representatives in Congress.

*THE REAL AMERICAN RULER.*

"In no country in the world," says Mr. Bryce in his 'American Commonwealth,' "is public opinion so powerful as in the United States. . . . Towering over Presidents and State Governors, over Congress and State Legislatures, over conventions and the vast machinery of party, public opinion stands out, in the United States, as the great source of power, the master of servants who tremble before it. . . . In America opinion is not made, but grows; . . . does not originate in a particular class, but grows up in the nation at large." We commend these utterances, by the most penetrating and friendly student who has ever analyzed American institutions and character, to all persons who have doubts about the action of the Senate on the proposed repeal of the Silver-Purchase Law. We commend them also to the interested advocates of silver who are seeking to create the impression that there is at present a majority against repeal in the Senate.

To any one who has followed closely the history of this country, there are visible in the situation at Washington the very conditions which have usually preceded a great triumph of public opinion and a disastrous defeat for selfish, personal, and private interests. It has happened almost invariably that we emerge from our most momentous crises by a very narrow margin of safety. It is well known that when President Grant vetoed the Inflation Bill of 1874, he was at first inclined to approve it, and had prepared a message to that effect, but that he tore it up and wrote a second one which rescued the country from the abyss of illimitable paper money. Public opinion saved us in that crisis, as it saved us again from the free-silver-coinage peril in 1890. When the Free-Coinage Bill passed the Senate in that year, there was a general expectation that it would pass the House as well, but it was turned back because of popular protest against it. That protest was a very feeble voice compared with the one which is heard now, for the people have been going through a course of compulsory education on the silver question during the past few months which has taught them more about it than they would have learned in a lifetime under ordinary conditions.

Again and again partisan zeal in Congress has brought the country to the verge

of pernicious and dangerous legislation, like the successive force bills and the Blair Educational Bill, only to be turned back at the last moment by the influence of aroused public opinion upon a few of the more conscientious and high-minded members. In the Legislature of New York a few years ago a bill was passed, with arrogant defiance of public opinion, authorizing the disfigurement and spoliation of Central Park. Its advocates had more votes than they needed, and they scoffed at the idea of yielding to "popular clamor." But, within a few days, these same advocates, grinding their teeth in rage, bowed before public opinion and repealed their own measure. They were not converted; they were merely frightened into submission to the only power of which they stand in awe.

The career of President Cleveland is crowded with instances of this power of public opinion to overcome all obstacles, and they are so familiar to everybody that it is not necessary to recall them. How often has it seemed to the political prophets that his public career had been brought to an end because the politicians and statesmen of his party were arrayed in almost solid mass against him. He triumphed over them in every instance because he had public opinion behind him, and they found themselves, when that opinion asserted itself, as powerless as the most insignificant citizens in the land. They could not defeat him in their political conventions, and they were unable to prevent his triumph at the polls.

We are confident that the present contest will result, like all others of the kind, in the triumph of public opinion. The influences which are at work in the Senate to prevent it are the same as have worked against Mr. Cleveland in previous conflicts. How familiar it sounds, for example, to read in the Washington despatches that "in the opinion of many it rests with Senator Gorman to determine the action of the Senate on the question of the repeal of the Silver-Purchase Act." We heard a good deal of talk of that kind at the opening of the National Democratic Convention last year, but the event showed that Mr. Gorman had very little power in the premises. It sounds equally familiar to read in the same despatches that Senator Hill would be glad to aid Mr. Gorman in defeating repeal in the Senate, hoping thereby to show the President that he cannot carry out any policy without the aid of that wing of his party which Hill, Gorman, and Brice represent. But this wing has endeavored to make precisely the same demonstration many times before, and, for various reasons, has not succeeded. What would be the position of the Democratic party in New York and every other Northern State were these anti-Cleveland Democratic Senators to defeat the repeal bill? Every man of them knows that it would be a question only of the size of the Republican majorities after that. They might like to see President Cleveland's policy fail, but they are not anxious to commit political suicide in order to cause its failure. The trouble is that Cleveland's policy is the people's policy, and the two cannot be separated. Cleveland would not be injured by the failure of the Senate to pass the repeal bill, but the Democratic party would be blown so far out of existence by that failure that it would have no voice in directing the government of this country for another quarter of a century, and would deserve to have none. This is why, after all the bluster and bribery that the silver advocates can bring to bear on the situation, the Senate will unite with the House in voting for repeal.

## *BUSINESS AT THE WEST.*

THE passing of the Northern Pacific Railroad Company into the hands of a receiver calls attention to the marked decline in railway earnings and in general business in the States west of the Missouri River. The so-called transcontinental lines report a larger falling-off in traffic than is shown by companies east of Chicago. The losses reported by the Union Pacific for June will be exceeded, it is said, in the July statement. Temporarily at least, the traffic in the States named has on all roads shown a falling away from last year's statistics. Merchants in that section are alive to this fact, for in several instances we are informed that pools in goods have been agreed upon. In these pools the shopkeepers of a town or small city agree not to order goods from the East till the total stock of the town is exhausted. In this way a trader who is out of nails or calicoes will apply to a neighboring storekeeper for those articles with which to supply his customers. The agreement resembles the clearing-house system under which the banks with a surplus reserve assist their weaker brethren for the time. The effect of such agreements is of course for the moment to reduce still further the amount of railway shipments; yet it brings the end in sight, after which, under improved conditions, a more than normal movement of merchandise will set in.

The peculiar situation regarding the movement of the crops also affects the territory in question. Even allowing for the unusual surplus of wheat carried over, we shall be short perhaps 150,000,000 bushels as compared with last year; yet the cash price of grain does not reflect the statistical position. Farmers who have informed themselves will try to arrange their sales so as not to sacrifice their wheat. In ordinary times no planning would be needed, for speculators would borrow from the banks, and, by bidding against each other, would raise the price of cash wheat at harvest to an equivalent of the expected price during the anticipated scarcity of the winter. But the fear of the silver standard has blocked the machinery of exchange. The latest plan for overcoming the difficulty is by the issue of certified checks. This is much better than no plan, for in some way, though at heavy sacrifice, the crops must be moved. Yet it is well to remark regarding the bank-check plan that only the capitalists who have money in bank will be able to avail themselves of it, whereas formerly other brokers, greatly outnumbering the capitalists, could, by borrowing from the banks, aid the farmer in getting the highest cash price for his grain. In short, with the most favorable makeshifts for moving the crops, the producers all over the country, by supporting, or not opposing, the Sherman Act, have given themselves over to the "bloated capitalist," and have deprived themselves of the assistance of those who may believe in higher prices for breadstuffs, but who cannot obtain the credit assistance which in other years was theirs for the asking.

This state of things will no doubt prevent an early movement of the crops from the field to Minneapolis or Chicago—the very shipments upon which the Western roads usually count. This delay is and will be a factor in the shrinkage in earnings which the trans-Chicago lines are now showing or may hereafter report. Well-informed persons declare that farmers are financially able to hold their wheat. After two years of fine crops at good prices the Western producer is in a much better condition than his neighbor the manufacturer. It is said that the money in Iowa savings banks is largely that of farmers; and the general farming situation is the same in other States. The grain-producer may be expected, therefore, to ship his product much more slowly than in previous years, with a corresponding effect upon railways of a smaller traffic now and a better one in grain in the future.

It is not a cause of wonder that the younger States should feel the business depression acutely. Their growth has been phenomenal, but their citizens have forgotten that their prosperity was dependent upon credit. Faith in the profitableness of their mines and fields was the ground of the Eastern or foreign investment of capital, without which such development would have been impossible. The prosperity of the West was owing entirely to the expansion of our system of credit financiering. No doubt Eastern goods were sold there on too long time, and in general the credit system may have been carried too far, but nevertheless the confidence of both lender and borrower was found to be generally justified. As a single instance the railway first mentioned, the Northern Pacific, may be taken. For the year ending June 30, 1887, its gross earnings were upwards of $12,000,000. For the year 1891 those earnings exceeded $25,000,000, a doubling of receipts within four years. Regardless of the basis of their prosperity, the Western States allowed the whole system of credits to be attacked until general distrust ensued. It is a rule in commercial affairs that new enterprises are the first to be affected in a panic;

so we need not be surprised that general business there felt the effects first and heaviest. The situation at the West points a clear moral: that for their own interests and to hasten a return to their former abounding prosperity, the newer States should take prompt steps to restore public confidence in the standard of value.

## THE COLUMBIAN EXPOSITION—IV.

### THE ENSEMBLE.

CHICAGO, July, 1893.

AN article in the *Revue Bleue* last winter contained an account of the buildings of the Chicago Fair as they then appeared. The writer was strongly impressed by the general effect of what is now called the Court of Honor and the design of the buildings surrounding it. His admiration, indeed, amounted to an enthusiasm. There was a trace of proper French surprise that a combination so artistic should have been made at that distance from Paris, but he remembered that much was still to be done. The architects had succeeded in grouping their masses harmoniously, and the buildings were in themselves imposing. He was sure, however, that much of the fine effect then obtained would be lost when each edifice should be disfigured by the coarse and tasteless decoration sure to be lavished upon it. One smiled at the flavor of cockneyism that is rarely absent from the Parisian judgment, but, just the same, one shared the critic's distrust as to those "finishing touches." Favorable testimony came from all sides and from competent witnesses, and yet our incredulity was never entirely dissipated. We owned to ourselves that an equal weight of testimony would have secured unclouded belief had the Fair been in Paris, but, as it was in Chicago, an attitude of reserve was no more than natural.

Our first view from within the grounds was when, from the terminal station of the Illinois Central Railway at the Fair, we passed through the Administration Building to the terrace from which is seen the whole Court of Honor. We remarked by the way that the Administration Building was much more imposing in reality than in the pictures of it we had seen. The colonnade under the dome especially was more stately and had more relief than they had led us to expect. Nor had we looked for anything so majestic in size. As to the interior decorations, seen in crossing under the dome, they were on a higher level both as to conception and execution than the Parisian critic had foreseen. But what would he have said on coming out into the Court of Honor, now that an abundant scheme of decoration supplements the dignity of the masses in general? What *could* he have said, except that he might have trusted those capable of conceiving such a whole to look well after its component parts? As far as we know, there exist no two opinions as to this stupendous spectacle. In detail, as in mass and grouping, it compels admiration from every one, and the scale upon which it is carried out puts it in the very front rank of similar displays. As a complete departure from the conventional exhibition architecture—the endless variations made upon the original Crystal Palace and that of the Champs-Élysées—it is not quite unprecedented. At Amsterdam a few years ago the great feature of the International Fair was the show of products from Java, and the architect of the main building thought fit to give a façade made up from Javanese motives. The result was a great success, though, as far as we know, it did not attract the attention it deserved. It was thoroughly exotic. Amidst the sober quaintness of Amsterdam, its snowy mass was like a palace in a dream, and yet it was quite appropriate to the exhibition it prefaced. It was more original than the setting at Chicago; we had almost said it was more appropriate, but we remembered that if Javanese architecture fits a Javanese show, so does Roman architecture, and its successor of the Renaissance, fit a display of the products and industries of the civilized world. In respect of the choice of an architectural setting for the Fair, it is a great good fortune that the Gothic style, proposed and favored by one, at least, of the architects concerned, was not fixed upon eventually. This we say not less as admirers of mediæval art than as friends of what is meet and suitable.

It might be said that Chicago is not even the second to break away from the conventional world's-fair style, since some of the buildings of the last great show in Paris were architectural feats of a high order. In originality of conception, in bold "modernity," Chicago can show nothing to compete with the combination of the Eiffel Tower and the dome of the Machinery Hall, unless it be an originality to turn back so completely to types consecrated by age. However that may be, Amsterdam could boast of but one palace, unsupported by any group in harmony with it; and, whatever be the relative value of the works of the French and the American artists, in themselves considered, nobody can deny that Chicago has, in the ensemble of the Court of Honor, accomplished something unique and splendid, probably beyond all feats of decorative architecture of our time.

There are two points of view from which we especially loved to gaze at this fine scenic display. From the terrace in front of the Administration Building the eye looks straight down the long basin of water between the Agricultural Hall and that of Manufactures and Liberal Arts to the peristyle with the gilded statue of the Republic in front and the blue of the lake seen between the columns. The sheet of water is vast, the main lines of the surrounding buildings are simple, the general effect is indescribably majestic, though, at the same time, made gay by the gondolas and launches that enliven the basin, and the perhaps too manifold flapping of flags on the roof edges. It is from here that the Manufactures Building is seen to advantage. It is the huge roof, with its really noble lines, which gives it character and goes far to redeem the commonplace, railway-station look it has when one sees it from near at hand. It is splendid in mass, but poor in detail, apart from the decorative paintings, some of which are beautiful, but which do not count in any general view of the hall.

The second point is on the north-side bridge looking across the basin toward the south canal, where the end of the Machinery Building confronts that of Agriculture, and the two are connected, in the background, by a colonnade of exceedingly elegant design. This view is much smaller than the first, and, instead of the breadth and simplicity of that, we have a charming richness, picturesqueness, and grace. The two main buildings are perhaps the most successful compositions of their class at the Fair. The "Palace of Mechanic Arts" is a delightfully rococo combination of belfries and domes with colonnades and porticoes, grouped by a master hand. The Agricultural Hall, which, in the form of its dome and various other features, invites comparison with the Art Building, is in some respects better than that, and inferior to it only in disposition and subordination of masses. It is especially superior in force, variety, and originality of design. This group is enriched by a bridge, by rostral columns, an obelisk and statues, forming altogether a composition as unrestrainedly splendid as the dream of a theatrical decorator—one of the things that seem "too good to be true." It is so bright and exuberant that it strikes one as foreign to the practical American genius, and, we fancy, elicits less general admiration than many less clever but more sober combinations. And yet its festal character is in nowise exaggerated; there are salient points enough to give animation, gayety even, to the scene, but not enough to be confusing.

And just here we would touch upon what, to us, is a defect in the great beauty of this court. Let any one look at the charming MacMonnies fountain from one side, and at a little distance, and he will see what we mean. In a line with one part or another of the fountain—itself rich in figures—are two Corinthian columns with an eagle atop of each, two rostral columns, four stags, all white and all seen against a white background. The effect is bewildering. The multiplicity of forms, all in the same color, makes it difficult to see any one of them in proper relief, and all together make an inextricable confusion. Neither of the peoples whose architecture has suggested all the features of this court would have made such a mistake. Gold and bronze and color would have been employed, not in quantities sufficient to take away the general whiteness of tone, but so that each member of the group would have stood out in needed relief. The delicate tint on the walls of the Agricultural Building adds much to the value of the colonnade in front of it; and, though we frequently heard regret expressed that Mr. French's statue of the Republic had not been left in its original whiteness, the objectors failed to consider that, at the proper distance for seeing it, the statue would then have been scarcely discernible.

Again, it seems ungrateful to quarrel with the abundance of a feast, but six rostral columns exactly alike, and each bearing at the top the same Neptune, give a machine-like character to the decorations, all the more noticeable as the standard of excellence in them is so high. So there are at least six of those stags and four buffaloes; and the fine farm horses and oxen which embellish the landings on the great basin, are repeated on those of the south canal, etc., etc. Of course the temporary nature of the entire spectacle is the excuse for these inartistic economies in profusion. It is, however, due to the administration to add that our surprise is less that such repetitions should have been indulged in than that they should be so few as to be easily lost sight of in the variety, the richness, and, above all, the high level of the work in general. Were the often-expressed wish to be realized, and these buildings made permanent in marble, it would not be necessary to add all the decorative surroundings at once, but then it would be imperative that each one should be unique.

This wish, that the beauty of the Court of Honor might be perpetuated, is the natural expression of the admiration it excites. It is also the protest of the imagination against the ugliness of our cities, their general sacrifice of the aspirations of the educated minority to the supposed wants of the majority; and it is delight in a generous offering to our inner desire for a lovelier setting to our lives. The Chicago people are naturally proud of the splendid work

they have called into existence, and the comparison they invite with the last Exhibition in Paris is excusable. In one way this comparison may be made more wholesome than pleasant, and that is in thinking, as is inevitable, of the surroundings of each. The Paris Exhibition was a jewel in an equally wonderful setting. It was not out of place in, but was worthy of, what is still the most beautiful city in the world. There was no transition from one to the other—one was only the complement of the other. At Chicago you go out of the Fair grounds into a hideous suburb, whence a train whirls you away to a grimy, workaday city. Whatever harmony there may be between Chicago and its superb creation is an inner and moral one. We willingly believe, however, that this harmony is real, and is an earnest of what the Chicago of the future is to be.

Quitting the Court of Honor, one leaves what is peculiar to the Chicago Exhibition—its glory, its *clou*—for a fair like another; a very big one, it is true, but still a fair such as we have seen only too often. The waterways are here also, and serve to enliven the general commonplace. The north end of the lagoon, surrounded with its "samples" of architecture, is a picturesque enough higgledy-piggledy. It is a pity, however, that the south end of the Wooded Island could not have been a formal arrangement of landscape gardening, in harmony with the architectural group about it, consisting of the Manufactures, Electricity, Mining, and Transportation Buildings. No doubt the accomplished artist who laid out the island saw clearly enough how much this part of the basin would have gained by such treatment. That he did not act upon his knowledge is a sufficient proof that the difficulties in the way were not to be overcome.

The Transportation Building is a revelation as to what the Fair has escaped by adopting Renaissance architecture and prevailing whiteness. Close at hand the building is an entertaining salad of styles. The so-called "Golden Doorway" is a successful enough fusion of Romanesque, Arabic, and East Indian motives. The arcades of the sides are Roman in plan with columns of original form. In the spandrils are very modern Byzantine angels, reminding one of Sarah Bernhardt as *Theodora*—altogether, a pleasant building to pass the time with; but seen at a distance, all these details fail of effect, and the epithet "shabby" applied to it by the London *Times* seems justified.

We are now in the region of conventional exhibition architecture, where there is much that is good with some that is bad. Next to the Transportation Building, or nearly so, is the horticultural display. The housing of this is naturally in the variety of greenhouse which has become the exhibition style. But it has been treated well in the spirit of much modern French work. The dome, from any point of view, is pleasing, and the whole merits more praise than it has got thus far, unlike the Art Building, which has got rather more than it merits. Not that this last is not deserving of praise, and of high praise, but scarcely of such as we have heard given it. At least, in its present state, its classicality is suggestive of the cold Munich sort; and parts, as, for instance, the attic and pediment over the main entrance, are distinctly poor. Its dome, too, of beautiful form, would be improved by more vigor in its details. The pediments about it look thin, the decoration about the drum too delicate for a place so far from the eye of the observer. The sister dome on the Agricultural Building is more fortunate in these respects. By the way, the circle of turkeycocks that does duty for the conventional Greek honeysuckle as a crest to the drum, is at once original, appropriate, and pleasing. A similarly happy inspiration made the architect of the Fisheries Building use fishes and aquatic plants and animals for the ornamented mouldings, the capitals and shafts of his columns, many of which are full of spirit and grace. By a mistake of the workmen, who copied the ornamentation on the columns only so far as it was shown in the drawings furnished them, the lower part of the shafts is quite plain. We cannot help thinking the blunder a happy one, as by it a certain expression of freshness, of a first impulse, that marks the work is increased.

Among the State buildings there are two sorts that are especially interesting: those which attempted nothing but a pleasing display of the most rustic forms of construction and decoration—these at least show something of the products of the States and the ideas of their people—and those which reproduce, by copy or suggestion, some historical monument. The others are merely more or less successful architectural compositions without any peculiar appropriateness. Of the foreign buildings, the German is the most important. It is a very characteristic example of the style which the Germans call their Renaissance, very effective in its way and picturesque—but as for their Renaissance, "Bless thee, Bottom! bless thee! thou art translated!" Had they called it *Wiedergeburt*, it would have been all right. Such as it was, however, it had a beauty and a character of its own; which is more than can be said for their structure in the Liberal Arts Building—as commonplace a copy of Italian motives as could well be produced. It naturally provokes comparison with the French pavilion near it, a florid composition, such as the occasion and place warrant, and vigorous, well adapted to its purpose, and thoroughly artistic.

In one respect the impression of beauty generally received from the Fair inspires uneasiness. It is not unreasonable to fear lest the Court of Honor mark the beginning of an outbreak of white classicality over the land, which will make the vagaries of Queen Anne and the colonial style appear the height of good sense and good taste. Roman architecture less than that of the Georgian era lends itself to performances in pine boards and white paint. But we may hope that the Fair will bear good fruit as well as bad, and that its final lesson will be one of reserve and refinement. If American builders once learn that simplicity and good proportion, with ornament remarkable rather for quality than for quantity, are worth more as factors of permanent success in architecture than all the picturesque jumbles of towers, loggias, oriels, dormers, etc., etc., that they now delight in, the Fair will have accomplished a work of lasting value.

S. K.

## THE POPE AND THE AMERICAN SCHOOLS.

ROME, July 27, 1893.

IT is not surprising that the position of the Vatican in relation to the schools in America should puzzle those who are not initiated in the first degrees of the Roman mysteries. To the last degrees no one is initiated except those who can be relied on never to take exception to what is decided there, and never, above all, to reveal it. There is no authoritative declaration of truth as received at the Vatican, except the encyclicals, bulls, rescripts, etc., etc.; and in spite of what is currently believed, the Vatican has no official organ. Information is furnished to certain papers which are held never to publish anything contrary to the views of the Vatican, but which are never admitted to be official further than direct communications are concerned. The matters on which there is no declaration of dogma, or Papal decision (which is not reckoned as dogma, but as no longer subject to dispute), are, like the laws of nature, subject to different interpretation, but, like those laws, more or less authoritatively interpreted; and as Nature has her law-readers, so the matters thus left outside of the decisions of the Church are read with authority which approaches the Papal, more or less.

On all the questions thus left in limbo, the Rev. Father Brandi, famous Jesuit controversialist, is recognized as the highest authority, and he is always put forward to reply to the attacks on the doctrine of the Church, and has the fullest access to the documents and persons giving light on the respective subjects. He is the authoritative interpreter, to whom all outside the circle of the highest illumination, such as Bishops, Archbishops, Monsignore of the various degrees below Cardinal, give respectful adhesion. He was put forward to reply to the articles in the *Contemporary Review*, and has now published, in the *Civita Cattolica*, organ of the order, his dictum on the school question in the United States, headed "A New Pontifical Confirmation of the Parochial Schools in America." It is followed by the text of the Pope's letter to Cardinal Gibbons "on the controversy about the public and parochial schools of the United States," which the Rev. Father says "has been received with grateful mind and applause by all who were and are, here [in Rome] or elsewhere, strenuous defenders of an education strictly Catholic for the Catholic youth in Catholic schools. Nor could it be otherwise, it being known to all that on such an education depends in great part the true and genuine well-being not only of individuals, but also of the family, the State, and the Church."

I will endeavor to give as clear an idea of the article which the Rev. Father has published as the original permits, and where there is a passage in the original which seems subject to any question, I will render it literally, and in the rest will give such a résumé as will not "betray" the author. For him I have all the respect one can have for a man who consistently and with his whole soul sustains the most uncompromising adherence to the rigid doctrine of the Church as it is defined by the Papal bulls and rescripts, defiant of all the temporizing and compromising weaknesses which maintain the nominal boundaries of the Catholic Roman Church at the cost of its discipline and compactness. Father Brandi has no patience with the Catholics who question—he recognizes nothing but the most implicit acceptance of the authority of the Church, and will have none of the modern liberalization of it. Therefore he says:

"Our readers are not ignorant how the bitter struggle for the existence of the Catholic school, and the principles on which it is founded, has been in the United States, especially during the last two years, sustained not only against the attacks of the secret societies, which there not less than in Europe, animated by a Satanic fury, do everything to pervert the education of the youth, but also and chiefly against certain laicizing Catholics, who, under the pretence of patriotism, reach-

ing a friendly hand to the enemies of the Church, seem to desire to subordinate in the school the religious good to the civil good, and fully approve, against the decrees of the Popes and the prescriptions of the Plenary Council of Baltimore, such a method of educating the youth as should be divided from the Catholic faith and from the authority of the Church."

That there exists in the United States such a party among the Catholics he considers a grave and painful fact, and he stigmatizes the *Western Watchman* as a sacrilegious assailant of the true doctrines of the Church, associating with it the *Colorado Catholic* of Denver, the *Catholic Union and Times* of Buffalo, the *Northwestern Chronicle* of St. Paul, the *Freeman's Journal* of New York, and the *Catholic Times* of Philadelphia. To put a stop to the propaganda of the pernicious principles of these pseudo-Catholics, the Father undertakes to comment on the letter of the Pope to which reference has been made; and the readers of the *Nation* may take my assurance, as of one in the most friendly and (as far as is possible to a non-Catholic) confidential relations with some of the most liberal and clear-headed prelates in residence here, that what Father Brandi says is what the Vatican means, and what must be accepted by all who desire to remain in the grace of the Church. The letter, he shows, must be accepted as the sole and indiscussable rule by which all Catholics must be guided on the question involved, being, not the teaching, either theoretical or practical, of a prelate or private teacher, but the decision of the head of the Church, intended to put an end to the dissensions and disputes which have existed on the subject of the schools. These are the authoritative words of the Pontiff:

"For the rest, in order that there may remain in the future no reason for doubt or clash of opinions in a matter of so great gravity, as We have already declared in our letter addressed on the 23d of May of the past year to the venerable brethren, the Archbishop and Bishops of the Ecclesiastical Province of New York, so again, as far as is necessary, We declare that the decrees established according to the rules given by the Holy See through the Councils of Baltimore, in regard to the parochial schools, as well as all that the Roman Pontiffs, either directly or through the Sacred Congregations, have prescribed on the same subject, are to be constantly observed."

Follows a résumé of the history of the Councils of Baltimore, and quotations from their decrees, insisting on the retention in the hands of the clergy of the education of the Catholic youth. "We exhort the Bishops," says the first Council, "and, in view of the grave evils which habitually proceed from a not well-instructed youth, we conjure them by God's bowels of mercy, to endeavor to found in their respective dioceses schools annexed to each church." This was confirmed by the second Council, which further urged that not only the religious, but the literary, education of the Catholic youth should be conducted by the clergy. The third Council, affirming what had been said by the prior ones, adds that "each parochial church should have, in the space of two years from the promulgation of the present decree, its own school where it does not already exist, and keep it up perpetually, unless for serious reasons the Bishop considers that a delay may be accorded." And further, it adds that a priest who neglects to obey this rule deserves to be sent away from his parish. To these decrees of the Councils, Brandi adds a digest of the allocutions and letters of Pius IX. and Leo XIII. confirming this rigid view of the question, concluding with an extract from the Encyclical *Sapientiæ christianæ*, and one from the letter of the past year to the Archbishop and Bishops of New York.

"Here the Holy Father declares that his decision, like that of the whole episcopacy, 'denies the possibility of approving the neutral schools—*i. e.*, those without religion—and asserts the necessity of confessional schools in which the youth shall be instructed in religion by those whom the Bishops shall have judged fit for that office.' After this last solemn declaration of the Holy Father in favor of the parochial schools and the decrees of the Councils of Baltimore, illustrated by the documents to which he refers and which we have desired to quote at length, we believe that, according to the expressed desire of the Pontiff himself, all controversy on this subject ought to cease. In another of our works published apropos of the decree of the Holy Congregation of the Propaganda, we concluded with the words of St. Augustine, 'Jam de hac causa duo Consilia missa sunt ad Sedem Apostolicam: inde etiam rescripta venerunt. Causa finita est.' We now add the remainder of the sentence, which we then omitted: 'Utinam aliquando finiatur error.'"

Father Brandi is right, and those who live in Rome and are daily witnesses of the struggle going on between the Church and its opponents are perfectly aware that there is no compromise possible and no "liberalizing" of the Roman Catholic Church, in the way that so many non-Catholics and lukewarm Catholics are desirous of seeing it liberalized. The very foundation of the organization is the principle of authority of the Holy See, and Father Brandi sees, as the Pope sees, that any weakening of this authority is simply the beginning of a schism. Private judgment no longer exists on any matter on which the Church has spoken, and it must be remembered that it is not merely the opinion of the person who holds the papacy in hand, but the deliberations of the highest authorities of the Church, as expressed in its conclaves and councils, of which he is the mouthpiece. We who maintain as the vital element of human progress the absolute liberty of human intelligence and the inherent wisdom of doubt, consider as a theological fiction the authority of the papacy and the dogmas of the Church, under whatever form; but, if the Church is to stand, it must stand by authority, and every member who doubts and claims liberty of judgment is an illogical Catholic and an enemy to the Church, and it is far better for it that he should be excised from it than that he should air his liberalism in it; that the Church should be diminished in numbers rather than weakened by want of cohesion and homogeneity. This is the feeling of the great body of the churchmen who live near the head of the Church, and it is the logical conclusion of Roman Catholic doctrine. X.

## NAPOLEON, AND NO END.

PARIS, August 3, 1893.

WHAT may be called the Napoleonic revival continues, and I can offer as a proof the great success obtained by two works of M. Henry Houssaye, '1814' and '1815.' M. Henry Houssaye is the son of Arsène Houssaye, well known in the literary circles of Paris, who was for a few years Administrator of the French Theatre at the end of the Second Empire. M. Henry Houssaye devoted himself in his youth to the study of Greek; he speaks modern Greek; he wrote a 'History of Alcibiades and of the Athenian Republic from the Death of Pericles to the Period of the Thirty Tyrants,' and several other works on the Hellenic world.

Finding, probably, that Hellenism has retained but few adepts in our day, he turned himself to modern times; he wrote a short account of the campaign of France in 1870, and afterwards betook himself to the study of the downfall of Napoleon. He worked in the modern fashion, trying to forget all that had been written on the subject, and searching for original documents in the rich archives of our Foreign Office and the unexplored archives of our War Department. He says in a note to his last volume that 200,000 letters and reports came under his eyes. According to the modern historical fashion, he never advances a fact without mentioning in a small-print note the document or documents relative to this fact. The method has been justly criticised, not in itself, for the historian cannot consult too many documents, but in its excesses, when the historian merely counts the documents without criticising and weighing them. An innumerable mass of small strokes do not make a picture; the historian need not take us into the recesses of his library and the recesses of his own mind. The great public is satisfied if it is interested, and the interest suffers somewhat by perpetual annotations and references.

It must be confessed, however, that M. Henry Houssaye has used his documents artfully, and has thrown as much as he could into notes which the general public may read or not; and he has not overburdened himself in his narrative. In fact, I confess having read his '1815' as rapidly as I could have read the most thrilling novel. Yet is it not fiction, this extraordinary and miraculous "vol de l'aigle" of Napoleon from the island of Elba to the Tuileries? There is nothing in the history of the world more romantic, nothing which has so much the character of an epopee. The return from Elba assumed the character of a legend almost immediately after having marked its date in history. It is eminently dramatic. It has painted itself in the popular imagination in a succession of tableaus such as remain for ever engraved on the mind.

First we have the departure from Elba, the small flotilla carrying "Cæsar and his fortune"; Napoleon on the deck of the *Inconstant*, watching the English and French cruisers, with his battalion of Elba, composed chiefly of old grenadiers.

"Towards four o'clock, the *Inconstant* had rounded Cape Corse, when a war-ship was signalled, coming right on her. The Emperor gave the order to clear for action. 'Let her approach,' said he, 'and if she attacks us, we will board her.' After a few moments Taillade [the captain] recognized the brig *Zéphyr*, which he had often met in this part of the Mediterranean, and which was commanded by one of his old comrades, Capt. Andrieux. The Emperor, who wished to avoid a fight, ordered the grenadiers to take off their high bear-skins and to lie on the deck. The two brigs passed each other. Accustomed to see in these waters the flag of Elba, Capt. Andrieux showed no hostile disposition. By the Emperor's order Taillade took the speaking-trumpet and hailed the commander of the *Zéphyr*. 'Where are you going?' asked Taillade, repeating the words of Napoleon. 'To Leghorn; and you?' 'To Genoa. Have you any commissions?' 'No. And how is the great man?' 'Very well.' And the two ships left each other."

Second tableau: The ships of the little flotilla had met in the deserted Golfe-Jouan. Napoleon had taken his column, composed of about a thousand men, directly to the mountains, thus avoiding the royalist region of Provence, and striking for Dauphiny. The details of his march are most interesting, but let us come at once to the critical point, to his first meeting with troops sent against him. This took place in a narrow passage, on the road to Grenoble, at Laffrey. Commander Delessart had been sent to dispute the passage of Laffrey with a bat-

talion of the line and a company of engineers. He had with him Capt. Randon, an aide-de-camp of Gen. Marchand, who commanded at Grenoble. "The Commander recognized Napoleon by his gray redingote and saw him dismount. The Emperor seemed very much agitated. He walked on the road, then stopped and looked at the battalion with his glass." There was a moment of uncertainty, of anxiety: would the soldiers sent against Napoleon fire on him, his soldiers of the Old Guard, his Polish lancers? The captain of artillery, Raoul, aide-de-camp of Napoleon, first rode alone towards the front of the battalion, and said: "The Emperor is going to march on you. If you fire, he will be the first struck. You will answer for it before France." Mute and motionless like statues, the soldiers seemed insensible. The Polish lancers rode on, and Delessart, seeing his men hesitating, ordered the retreat; he was almost immediately ashamed of retreating, and, the lancers having had the order not to charge and returned towards Napoleon, Delessart stopped and turned the head of his battalion again towards Napoleon.

"Then the Emperor ordered Col. Mallet to have all his men keep their guns under their left arm. Mallet having objected that it would be dangerous to come thus disarmed before a troop whose disposition seemed uncertain, the Emperor said: 'Mallet, do as I say.' And, alone, before his old chasseurs, bearing their guns low, he marched towards the Fifth of the line. 'There he is. Fire!' screamed Capt. Randon, beside himself."

The unfortunate soldiers were livid, their legs shook, their guns trembled in their hands. When he was within pistol-shot, Napoleon stopped.

"'Soldiers of the Fifth,' said he with a strong and calm voice, 'know me again.' Then, advancing two or three steps more and opening his redingote, 'If there is among you a man who wants to kill his Emperor, he can do it. I offer myself to him.' The trial was too great for soldiers. A long cry of 'Vive l'Empereur!' so long repressed, burst forth. The ranks were broken; the white cockades covered the road. The soldiers threw themselves towards their Emperor, surrounded him, knelt before him, and touched, like idolaters, his boots, his sword, his redingote."

Third tableau: Napoleon has gone on, he has entered Grenoble, he has entered Lyons; as he said on landing, the eagle has fled from spire to spire to Paris. The soldiers join him wherever he goes; the peasants follow his ever-increasing army and look with amazement on him. Marshal Ney, who had forced him almost brutally to abdicate at Fontainebleau, the year before, who had left Louis XVIII., saying that he would bring back Napoleon in an iron cage, has gone over again to the captain with whom he had fought so many battles. Let us see the end of the triumphal march. Napoleon is approaching Paris; Louis XVIII. has fled. All who composed the Imperial Court have gone, one by one, to the Tuileries—councillors of state, chamberlains, masters of ceremonies, all in their uniforms, generals, ladies in court dress, with all their diamonds, as on a great gala day. They meet each other, like ghosts, in the Salon des Maréchaux. Somebody perceives that on the carpets the fleurs-de-lis have been put over the imperial bees. The ladies go on their knees with scissors, and the bees are seen again. Time goes on; they are all waiting; the night approaches; the Emperor does not come; perhaps a fanatical royalist has fired at him.

"At last, towards nine o'clock, a distant noise is heard of horses and cries all along the quays. It comes nearer, it becomes formidable. A post-carriage enters rapidly, followed by a thousand horsemen of all arms and of all grades, riding in disorder, brandishing their swords and vociferating 'Vive l'Empereur!' . . . The door of the carriage is opened, Napoleon seized, torn from it, carried from arm to arm to the vestibule, where other arms drag him to the steps of the staircase. All these men are attacked by a furious delirium. . . . 'In God's name,' screams Caulaincourt to La Valette, 'put yourself in front of him!' La Valette braces himself against the avalanche and walks backwards, preceding the Emperor, saying all the time, 'Is it you, you, you?' Napoleon seems to hear nothing, to see nothing. He allows himself to be carried on, with a fixed smile on his lips, as if in a state of somnambulism."

M. Houssaye does not content himself with these pictures; he has an object—he intends to prove that the return from Elba was not a mere military triumph; that Napoleon was not only the idol of the army, that he was as much the idol of the people. But, on his own showing, there were distinctions to be made both in the various provinces of France and among the various classes of the people. Napoleon, after landing at Golfe-Jouan, never dared to cross the royalist parts of Provence, where he had been so ill-received and almost ill-treated when he made his journey from Fontainebleau to the Island of Elba; he traversed the Revolutionary province of Dauphiny, and afterwards that part of the eastern provinces of France which was most chauvinistic. It is true that all resistance in the Gironde, in Brittany, in the southern part of France which was hostile to his enterprise, came to an end when he was once again in the Tuileries; the Duc d'Angoulême, the Duchess, the leaders of the Vendean party, could make only spasmodic efforts against Napoleon. Nevertheless, the middle classes were everywhere alarmed at the consequences of the return of Napoleon. Though Napoleon, urged by his friends to recommence 1793, and to become the true successor of the men of the Terror, said, "I will not be the king of the canaille," he felt himself that he had with him only the army and what M. Houssaye calls the *populaire*—that is to say, the mob. He called Carnot into his Cabinet, he appealed to the interests of those who had bought the *biens nationaux*—the estates confiscated during the Revolution; but he counted really on the army, on his own genius, on the fortune of war. The second volume of '1815,' which has not yet appeared, will show us the end of the terrible drama.

# Correspondence.

## A SUBSTITUTE FOR THE SHERMAN ACT.

To the Editor of The Nation:

Sir: The people of this country have for some time been supplying Senator Jones "and ten thousand gentlemen more" with food, clothing, shelter, and a few luxuries, in return for mining and smelting silver, transporting it to Washington, and coining, counting, and guarding it. The people now show some signs of a disposition to quit this business by repealing the Sherman Act; and their employees, naturally indignant, insist on a substitute. Nothing will answer the purpose but the following: "Be it enacted, That all the silver now in the Treasury be carried back to the West, reconverted into ore, and deposited again in the mines!" The malcontents would be employed; the value of silver would be enhanced; the dreadful calamity of using that precious gold as money would be averted, and Republicans and Democrats would be free to resume their discussion of the academical question: *What function of the duty on one thing is the price of another?* Incidentally, too, the depraved desire of the millions who want to own silver tea-sets would be thwarted. Do we not know, on the authority of an eminent writer on international law, that a cheap tea-caddy makes a cheap man? As for the silver certificates, they might, I presume, remain "based" on the silver, of which "there would be as much in the country as ever there was."

A. I.

New Bedford, Mass.

## PURCHASING POWER OF THE RUPEE.

To the Editor of The Nation:

Sir: The London *Economist* of June 30, 1888, as quoted by Mr. Wells in 'Recent Economic Changes,' has something to the same point as your editorial, "Another Silver Humbug Exploded":

"The argument has been that, owing to the fall in silver, the gold which the seller of Indian wheat here gets for his produce is worth 25 per cent. more rupees than before, and that, as the rupee commands in India the same amount of wheat it formerly did, the fall in silver is practically equivalent to a bounty of 25 per cent. upon shipments hither. But if the purchasing power of the rupee, instead of remaining unchanged, has fallen 25 per cent., as the official record of prices would seem to show, then obviously the argument and the theories that have been based upon it fall to the ground."

I have been told by one who buys Indian products that the price of indigo goes up on the decline of silver, and it is a common argument that the United States people lose millions to silver-standard countries. If silver goes down and the silver price of indigo rises, I do not see why the gold price should go up, too. Can you tell me where this argument is best made and where best refuted?—Yours truly,

Arthur M. Hyde.

Rockville, Conn., August 17, 1893.

[If you mean the "common argument that the United States people lose millions to silver-standard countries," we have never seen any argument on that subject, but merely the private opinion of certain persons that such losses take place. We do not know where or by whom the announcement of this opinion has been "best made." The best refutation of it that we are acquainted with is that of Sir David M. Barbour, the financial adviser of the Indian Government. Sir David, although a strong bimetallist, advised the demonetization of silver by India on account of the losses that India sustained by reason of the silver standard. His paper on this subject was laid before Parliament and published recently in conjunction with the other documents relating to the action of India on silver.—Ed. Nation.]

## THE RELIGIOUS PARLIAMENT AT CHICAGO.

To the Editor of The Nation:

Sir: The most important and far-reaching benefits to mankind from the Columbian Exposition are not those which are most palpable to the ordinary visitor, but those which are hereafter to result from the series of congresses held at the Art Institute in conjunction with

the Exposition. It is only the comparatively small number of the most intellectual class of visitors who appreciate their value while in actual progress, but they are destined to exert a widespread influence when laid open to the world by publication, and they cannot fail to develop further thought and stimulate further investigation. We have already had abundant evidence of this in the papers and discussions of leading minds of the world which have been secured by the wise forethought of the projectors of this feature of the Exhibition. The reports of them in the daily papers have sufficed only to show how rich a treat is in store for those who may hereafter be able to study them with thoughtful care; and doubtless there are many in every community who will derive more enjoyment from their perusal than was afforded by the gorgeous material display in the various buildings and on the grounds.

But of all the assemblies to be convened during the Fair, none can equal in interest, or in the opportunity it will afford for social progress, as a stepping-stone towards universal brotherhood, the Religious Parliament which is to be held at the Art Institute from September 11 to September 27. Its conception was a sublime one, and the manner in which the call has been responded to from every quarter of the globe affords sufficient evidence that the times are ripe for the effort.

The grand underlying spirit which prompted it may be expressed in the words: "Have we not all one Father? Hath not one God created us?" And in this spirit the leaders of spiritual thought of every nation and sect on earth have been asked to come together, and explain the doctrines which they hold to be most favorable to such spiritual development as will be acceptable to the common Father. No such assembly has ever been seen on earth as will then be gathered in Chicago. Leading representatives of every existing faith will be present in person or contribute papers, animated by the wish to ascertain wherein they agree, rather than to magnify differences; recognizing the weakness of human nature, and trying to help each other by drawing nearer together and seeking for good wherever it is to be found, in accordance with the words of Whittier:

> "So to the calmly gathered thought
> The innermost of truth is taught,
> The mystery, dimly understood,
> That love of God is love of good;
> That to be saved is only this—
> Salvation from our selfishness."

It is a significant and very suggestive fact that the two most decided and uncompromising opponents of the Religious Parliament are the Archbishop of Canterbury and the Sultan of Turkey! Neither of these magnates will admit a discussion which involves the necessity of recognizing any faith but their own, or that spiritual progress is possible on any but the conventional lines prescribed by the churches of which they are the heads. Comment is needless, and perhaps it is a just cause for congratulation that such a conspicuous example has been furnished to illustrate the effect of bigotry in defeating its own object. Fortunately, neither of them can control the leading minds of their followers, and noble representatives of both beliefs will take part in the discussions.

H. W. S. C.

Minneapolis, August 7, 1893.

## MR. ALCOTT AND HIS BIOGRAPHERS.

To the Editor of The Nation:

Sir: Are you quite sure that, as you say, "it is a serious reproach to the *candor and accuracy* of the Memoir [Mr. Alcott's] that the name of Joseph Cook does not appear in the index"? What is there in that particular name which accuses Dr. Harris or myself as inaccurate or uncandid if we omitted it, either in the index or the Memoir? Might we not, by possibility, have forgotten it, or have failed to see that it had any more claim to be inserted than a hundred other names in the Boston Directory?

But you then proceed to tell your readers that, without this name and some events that you say are connected therewith, Mr. Sanborn's description of Mr. Alcott's Western journey in 1880–1881 "conveys a wholly false impression." And this, it further appears, is because Mr. Alcott's success in that journey (as you say) "was largely explained by the fact that he now had *the evangelical endorsement behind him*, given with all the more ardor because the Trinitarians claimed him. As the friend of Emerson, he had returned from a tour of Western lecturing with a single dollar in his pocket; as the friend and supposed convert of Joseph Cook, then at the height of his popularity, he brought back a thousand dollars." Now, you either mean to assert that such an explanation was in fact given (though neither myself nor Dr. Harris may have heard of it), or else that the fact, as you state it, was true, whether mentioned by anybody or not. In either case, we have here a question of fact.

May I then ask you to give me the evidence on which you base either of these assertions? Although I was intimate with Mr. Alcott at the time of this journey, and long afterwards —far more intimate, I am sure, with him and his circle than you can have been—and although I should have had no objection whatever to stating your alleged fact, had it been within my knowledge, I must say that I hear of it now for the first time, and do not believe it. Perhaps you can convince me; but mere assertion will not, for I have reason to know that the fact itself was very far from your explanation. Both Mr. Alcott and several of his hearers and reporters on that journey (he was reported in print many times, and I have seen these reports) informed me that the apparent cause of his success (apart from his own eloquence, such as it was) was the universal desire to see the father of the 'Little Women,' and to hear something concerning the circle to which the Alcott family belonged. It was never even suggested, at that time, that his brief and slight acquaintance with Mr. Cook had anything to do with a matter which was quite sufficiently explained by what I have mentioned. Nor do I suppose that either of Mr. Alcott's biographers thought of Mr. Cook as so connected with the substantial facts of the remarkable career they had to describe that he came into their minds at all, except as an illustration of that generous courtesy which it would be too much to expect from all critics—but not, I hope, from those of the *Nation*.

F. B. Sanborn.

Concord, Mass., August 11, 1893.

[The evidence on which our opinion was based, upon the point at issue, was that of personal observation as to the demeanor and expressed opinions of Mr. Alcott at some of the repeated *séances* held for him at the rooms of Joseph Cook in Boston during at least one winter; and the corresponding change of tone among the evangelical clergy of that region. Mr. Alcott himself was wont to exult over the increased readiness of clergymen, during his later Western trips, to receive him into their pulpits and houses; and it is idle to deny that this must have made a great difference in the expenses and profits of his lecture tours. It is to be noticed that the explanation now given of his increased success—the popularity of his daughter's writings—is one which, however probable, is not mentioned in the biography. To call his acquaintance with Mr. Cook "brief and slight" simply shows that his main biographer did not follow him up so eagerly, during that important digression of his later years, as at other more satisfactory periods; and it was precisely this omission that we regretted. The vagaries and inconsistencies of a prominent man are by no means the least instructive parts of his career. Dr. Harris sets, in our opinion, a good example to Mr. Sanborn when he admits, during the last twenty years of Mr. Alcott's life, "a growing compromise with things as they are"; and this certainly took, at Mr. Cook's rooms, a form very painful and disappointing to the few of Mr. Alcott's earlier friends who were present. —Ed. Nation.]

## MADISON'S JOURNAL.

To the Editor of The Nation:

Sir: In your note on Madison's Journal of the Constitutional Convention in No. 1467 of the *Nation*, you do not distinguish between 'The Madison Papers' and Madison's 'Journal of the Constitutional Convention.' The latter is only part of the former, the Journal occupying 939 pages in the original edition, instead of 1,624, as you state. The index is not "cut to suit the editor's caprice," but adapted to this edition, as is clearly stated on the title-page. If the writer of your review will take the pains to make comparison, he will find that every reference in the original edition to matter in the Journal is retained.

The book is exactly what it claims to be, a reprint of the Journal of the Constitutional Convention, invaluable to every student of American history, and not accessible in any other single-volume edition.

Yours respectfully, E. H. Scott.

Chicago, August 19, 1893.

[We must apologize for our too hasty comparison, though we cannot think that the separation above described should be dignified by the name of "editing."—Ed. Nation.]

## EARLY USE OF THE TITLE "UNIVERSITY."

To the Editor of The Nation:

Sir: Your correspondent, J. G. R., in the issue of August 17, asks for an "American instance of an earlier use of the title 'University' than that of 1779 in Pennsylvania." Harvard was first legally styled "University" in the clauses relating to the College in the Constitution of 1780—those clauses having been reported by a committee of the Convention in October, 1779. President Edward Everett, in a paper submitted with his Report

for the academic year 1847-1848, after remarking on this fact, goes on to say:

"But the name, with the supposed exclusive prerogative of a university, that of conferring honorary degrees, had been claimed for the College at a much earlier period. President Increase Mather, in his public address at commencement, in 1692, after his return from England, with other remarks pertinent to the point, says: 'The General Court of Massachusetts, the Governor, Council, and people of New England have named and established Harvard College as a University (academia), with authority to confer degrees, in the manner of the English Universities.' In the title-page to the 'Magnalia,' published in 1702, the fourth book is said to be 'An Account of the University of Cambridge in New England.'"

Various early diplomas are also cited by President Everett to sustain his point that the College had been frequently regarded and spoken of as a university during the colonial period.

Increase and Cotton Mather were both learned men, and ought to have had a conception of a university too large to be filled by the struggling college at Cambridge which they knew. Perhaps the growth of that College into a real university should enable us to entertain hopes concerning the various "universities" throughout some parts of the country to-day, whose diminutive faculties not only lay claim to the title, but vigorously exercise "the supposed exclusive prerogative" of institutions which bear it—the prerogative of conferring honorary degrees.

Very respectfully, WILLIAM G. BROWN.

GORE HALL, CAMBRIDGE, August 19, 1893.

## A HARVARD PARALLEL.

TO THE EDITOR OF THE NATION:

SIR: In your review of Edward Everett Hale's 'A New England Boyhood,' you quote from the book the following sentences descriptive of a Harvard Class Day in 1830-1838:

"Then, on the afternoon of Class Day, . . . all the College assembled, and every other male loafer who chose to come where there was a free treat. Pails of punch, made from every spirit known to Cambridge innkeepers, were there for everybody to drink. It was a horrid orgy from end to end. . . ."

Change in the above the words "Class Day" to Commencement Day, and you have a barely exaggerated description of the day which marks the beginning and end of the present Harvard college year. Immediately after the exercises in Sanders Theatre, there is a general adjournment to the class reunions, at each one of which there is a strong rum punch, a claret punch, with little or no provision for men desirous of less stimulating refreshments or for men of temperance principles. The graduating class, being the guest of every other, is quick to become disorderly, and the younger graduates, as well as many older, are sure to overstep all bounds. A '61 man—a regular attendant—assures me that last Commencement was the worst he has ever seen; an '88 man is equally positive that he can find at his class reunion only the men eager for a "free treat," the better element going to the clubs to seek friends. Nor are some of these clubs one whit better (last year a man was thrown from the first-story window of one of them by a drunken crew). The whole is to-day a "horrid orgy," inexcusable in 1838, still less so in 1893, and calls for immediate action on the part of the proper authorities and the better class of graduates. Viewed in any moral light, it is a gross wrong, a constant temptation, a source of corruption, and a disgrace to an enlightened University. And what a fearful example to set undergraduates and the boys on hand to take their entrance examinations.

Very truly yours, A.B., 1893.

NEW YORK, August 18, 1893.

# Notes.

DODD, MEAD & CO. announce 'Some Old Puritan Love Letters,' of John Winthrop and his wife Margaret, edited by the Rev. Joseph Twichell; a translation of Maxime de la Rocheterie's 'Life of Marie Antoinette'; 'Irish Idylls,' by Jane Barlow; and 'The American Girl at College,' a comparative account of institutions.

Henry Holt & Co. have in preparation 'The History of Mankind,' in four volumes, by John S. Hittell, and nearly ready the 'History of Modern Philosophy,' from the German of Richard Falckenberg, and a 'Minimum French Grammar and Reader,' by Prof. Edward S. Joynes.

Ginn & Co. will publish next month 'A Field-Book for Civil Engineers,' by Prof. Daniel Carhart.

'Jamaica at Chicago' is one of the numerous official publications intended to reinforce the exhibits of foreign States. It is an unpretentious narrative, partly descriptive, partly historical, and a little repetitious, illustrated with a variety of landscape views which one regrets to find disconnected from the text. The writer, Lieut.-Col. the Hon. C. J. Ward, Honorary Commissioner for Jamaica, manifests a humane feeling towards the black population, whose character and progressiveness he vindicates against their traducers. He saves his general picture of prosperity and tranquillity since complete emancipation in 1838 by a mere allusion to the "disturbances of 1865," with which the name of Gov. Eyre is indelibly associated. There is a special chapter on Columbus in Jamaica and a large map of the island. The Boston Fruit Co., we read on page 24, has by its business enterprise "saved the two most easterly parishes . . . from reverting, sugar being extinct, to the condition of primeval forest."

Under what is plainly a pseudonym, Zéphyrin Raganasse, the writer of 'Fabrique de Piono' (Paris: Savine), attacks vigorously and mercilessly the educational system of France, especially that portion of it which is comprised in the École Normale. That there are defects in all educational systems, whether French, English, or American, or even German, no one denies. That the French system is as utterly bad as Zéphyrin would have us believe, is hard to credit, especially in view of the many brilliant *normaliens* at present occupying distinguished positions in art, letters, science, and politics.

M. Hippolyte Parigot has given us, in his 'Le Théâtre d'Hier' (Paris: Lecène, Oudin & Cie.), a series of instructive studies on the dramatists of the nineteenth century. He had already proved his ability to handle such a subject in the valuable analysis of Émile Augier's life and work which he wrote for the collection of "Classiques Populaires." In the present volume he reviews the work done by Augier, Dumas *fils*, Pailleron, Labiche, Meilhac and Halévy, Sardou, and Becque. A general idea of his conclusions may be formed from a perusal of the introduction to the book, in which introduction, by the way, a large place is given to Scribe, in whose behalf M. Parigot also takes up the cudgels. This revival of Scribe is becoming more marked every day, and it is plain that the strong reaction which swept him into the limbo of contempt has nearly spent itself. The main interest of M. Parigot's book, however, lies in the very careful study of each master's work and in the judgment, moderate, usually, in tone, which he has passed upon each author, as well as on the whole drama of the present time.

M. Léopold Mabilleau's 'Victor Hugo' is a valuable addition to the works written about the poet. It contains very little biography, just what is needed to make one grasp intelligently the analysis that follows. That analysis is of the genius of Hugo, of his gifts of vision, imagination, and expression. It is admirably conducted, profoundly interesting, and not to be missed by any one who desires to estimate the great French poet at his real worth. Not the least pleasant feature of the work is the absence of fulsome laudation on the one hand and of mean vilification on the other. The writer manifests an impartial spirit, and gives ample evidence of having simply sought to ascertain and tell the truth.

*L'Année Littéraire*, edited by Paul Ginisty (Paris: Charpentier), has reached its eighth year, and the volume now issued has a preface written by Ibsen. It is disappointing, however, for the great dramatist confines himself to a relation of how he wrote and published "Catilina," a remodelled edition of which was brought out recently.

A list of almanacs in the Boston Public Library is a feature of the July Bulletin of that institution. For the historically minded there are five facsimiles of Revolutionary broadsides issued in 1773 by the Boston Committee of Correspondence, of which Sam Adams was the moving spirit.

At one stroke the Cornell University Library has been endowed by Prof. Willard Fiske with a Dante collection which almost any library might envy, consisting of upwards of 1,800 volumes and pamphlets. A fair copy of the first edition of the 'Divine Comedy' (Foligno, 1472) is among them. It contains a great number of inedited annotations by Luca Pulci. Other quattrocento editions are the first Venetian (1477), that by the printer Scoto da Monza (1484), the Brescian issue of 1487, two more Venetian of 1491, and that of 1497. The first edition of the 'Convito' (Florence, 1490) is also in the collection, which includes nearly all the translations into modern languages and perfect sets of Dante periodicals. The pictorial illustrations are remarkably complete. The collection has been very rapidly got together.

The distribution of parts in the great scheme of the Chicago Fair is authoritatively set forth in Mr. Burnham's address before the World's Congress of Architects in that city. The address may be read in the *American Architect* of August 12.

The account of his journeys in French Indo-China by the Hon. G. N. Curzon, M.P., in the *Geographical Journal* for August, is very timely in view of the events of the past few weeks. In describing the geographical characteristics of this region, the writer refers to the rapid growth of the river deltas which constitute the bulk of the French possessions. Hanoi, the capital of Tonkin, now sixty miles from the sea, was upon it in the seventh century, and Hongyen, a maritime trading port only two hundred years ago, is now thirty-five miles in the interior. In these deltas, traffic is carried on wholly by river boats. The main route through the peninsula to Saigon is by the Mandarin's Road, on which one may travel by pony, palanquin, or chair. In Annam is a very ancient

system of Government postal stations or *trams*, an Annamite word, to which a body of carriers is attached. A slight reference is made to the disputed sovereignty of the Mekong valley, Mr. Curzon asserting that the "French influence can hardly, except in a few places, be said to extend beyond the main crest of the range" which runs close to the sea through Annam. Capt. J. W. Pringle contributes an account of the Government railway survey to Victoria Nyanza, with a map. Incidentally he mentions the depressed condition of the once-dreaded Masai, occasioned by the cattle plague, which has destroyed their herds and reduced them to a starving condition, and suggests that the time may have come to make practical use of their "discipline and soldier-like qualities." In an article on the ancient trade route across Ethiopia, Mr. J. T. Bent describes some interesting ruins in Abyssinia. He found the inhabitants of the "Regio Troglodytica" of classic times still making the mountain caves their granaries and refuges for themselves and their cattle when threatened by marauders.

A sunshine map of the British Isles, in the *Scottish Geographical Magazine* for August, is especially interesting as being the first attempt of the kind. It is constructed from observations taken at various stations during the past ten years, and exhibits the mean annual sunshine by graded colors. Apparently the south coast of England is the most favored part of the United Kingdom in this respect; Falmouth, near Land's End, having 1,700 out of 4,400 hours of "possible sunshine." Jersey exceeds this by about 100 hours, and is the only station "recording in any month, on the mean of the ten years, an average of even one-half of its possible duration of sunshine." The least amount, 1,200 hours, is to be found in the mountain regions and the northwest coast of Ireland. Perhaps the most striking feature in the distribution of sunshine, writes Mr. H. N. Dickson in the article accompanying the map, is that "the greatest percentage of sunshine is attained in districts where the annual range of temperature is least." There is also in the magazine an interesting account of Col. Yate's mission for the demarcation of a part of the Russo-Afghan frontier. He reports a very decided increase of prosperity in parts of the Amir's dominions, particularly in the country about Herat, which is "marvellously improved since 1886, much more populated and flourishing."

Prof. A. H. Sayce argues in the *Asiatic Quarterly Review* for July against the commonly accepted view that the Mt. Sinai of the Old Testament times was situated in the so-called Sinaitic peninsula. The origin of this belief, he holds, can be traced to the Christian anchorites of the second century. The Red Sea of the book of Exodus he identifies with the Gulf of Akaba, and is inclined to look for Sinai "on the borders of Midian and Edom, among the ranges of Mount Seir, and in the neighborhood of the ancient sanctuary of Kadesh-barnea, whose site at 'Ain Qadîs has been rediscovered in our own day."

We are requested to say that an index to Thayer's 'Cases on Evidence' has been printed, which will be sent free to all purchasers of the first edition of the book on application to the publisher, Charles W. Sever, Cambridge, Mass., through the dealer of whom the book was originally obtained.

—The fourth and last volume of Prof. Johnston's "Correspondence and Public Papers of John Jay" (Putnam's) once more suggests the inquiry why the compilation was begun. It cannot be said that the editor has been just to either Jay or his subscribers, for he has added nothing to what was known of Jay, and he has not sought to give his readers so much as an outline of the events in Jay's life that called out his state papers. It is remarkable, too, how many points in Jay's career were subjects of violent controversy, that could be made ex ceedingly interesting. This volume begins with his mission to England, where he negotiated the famous treaty always associated with his name, and closes with extracts from his will. As negotiator of a treaty which gave rise to a controversy that enlisted the ablest writers, that brought forward constitutional questions of grave import, that embarrassed the Administration and strained its relations to the Legislature, and that led to results which have clouded the diplomatic relations between England and America to this day, Jay was surely a subject fit for a historian, much more for a specialist. Why has not the editor given us even a glimpse of this treaty and its relations to the times? Why has he omitted Jay's letters to Monroe, Monroe's caustic and officious comments; Jay's letters to Hamilton, and Randolph's and Jay's correspondence? We are compelled to repeat that this edition of Jay is more remarkable for what it does not contain than for what it reprints. While it proves the respectability of the man, the confidence he inspired in others, and his even balance of thought, these qualities were already known. What was wanted was some light on certain points in his career of political and historical interest—his labors as a member of the Continental Congress; his attitude in the negotiations of 1783; his weakness with Gardoqui, and his surrender of all points in the Treaty of 1794. In passing we must note the omission of Mrs. Jay's letters as printed in *Boogher*, which are worth more than dozens of letters from nonentities, on formally uninteresting topics, that have found a place in Prof. Johnston's work. The proof-reading, again, is carelessly done. Why *John* Hartley (p. 153), when the letter must refer to David Hartley's 'Argument on the French Revolution'? We note Tanken*v*ille for Tanker*v*ille (p. 174), and a probable error in date of the Committee letter (p. 286). The gentleman referred to in the letter of Washington (p. 197) was William Pickman. Hamilton drafted the instructions to Jay (p. 10). Of special interest are Peter Jay's account of a political meeting (p. 238), and Schuyler's opinion of Jefferson (p. 273).

—To the already numerous writings on bimetallism by the famous German publicist and parliamentarian, Ludwig Bamberger, must now be added an interesting monograph entitled 'The Catchwords of the Silverites' ('Die Stichworte der Silberleute'; Berlin: Rosenbaum & Hart). Herr Bamberger looks at the problem, it is true, chiefly from the German standpoint, but his exposition of the sophistry of the bimetallists is none the less valuable to foreigners. In Germany the chief advocates of free silver consist of the large Prussian landowners, who persist in ascribing the agrarian depression to the "accursed gold standard." Herr Bamberger shows that monometallism cannot affect one industry to the exclusion of others, since the problem is one of general prices, and he then disproves in detail the alleged injury to German agriculture through Russian and Indian competition as a result of the monetary situation. Incidentally he shows up the essential selfishness and hypocrisy of the German silver agitators. With the other catchwords —the insufficiency of the gold supply, the fall in prices, and the sufferings of the debtor class—Herr Bamberger makes equally short work. In a striking passage in the discussion of the last point he shows how erroneous it is to suppose that the debtor is necessarily or even generally the poor man. A final part of the work is devoted to the project of international bimetallism. Here again Herr Bamberger shows how politically impossible and economically unwise such an arrangement would be. The Brussels Conference is handled without gloves; and our author couples his frequent not over-complimentary allusions to our own silver situation with the prediction: "Before the six months [after May 1, the time set for the reconvening of the Conference] are up, affairs in America will, no doubt, have taken such a shape that the Americans themselves will have to set seriously to work to solve the difficulty into which their own light-headed legislation has plunged them." Only too sadly has his prediction been fulfilled! An appendix contains a translation of a recent essay on 'Silver and Gold' by the French expert, M. A. de Foville, in which a mass of statistics are collected to prove that it would be suicidal for France to reintroduce free coinage of silver. In fact, in France, as in Germany, there is not the least likelihood of any triumph for "silver."

—The subject of glacial physics in its relations both to the phenomena of the Great Ice Age and to those of glaciers generally is attracting unusual attention among geologists at the present time, and bids fair to become with that class of investigators a bone of contention only less violent than was the Darwinian theory of descent among biologists some thirty years ago. It cannot be said that the two subjects are in any way of equal significance, but they agree in so far as they both represent topics which have been more generally discussed and universally treated than any other in their respective sciences. English and American geological literature is especially fertile in "glacial" contributions, and it has even been remarked by some of the opponents of the United States Geological Survey that its name might appropriately be changed to the United States Glacial Survey. It is somewhat surprising, in view of the attention thus paid to the subject by English-speaking geologists, that no comprehensive work covering the field of glaciology should yet have appeared in the English language, and it is probably equally true of American geologists as it is (as has been recently asserted by a past-president of the London Geological Society) of English geologists, that a large number of them are not even acquainted with the one critical and authoritative work that has been published—Heim's 'Gletscherkunde.' Like the most important general work on geology that has appeared in the last quarter of a century, Suess's 'Antlitz der Erde,' this one still awaits a translator and a publisher.

—We called attention in a recent issue of the *Nation* to a paper by Prof. Bonney in the *Geographical Journal* for June, 1893, entitled, "Do Glaciers Excavate?" in which it is contended, in opposition to the views held by the extreme glacialists, such as Ramsay, Tyndall, and Newberry, and even to those held by the average geologist, that the excavating power of the land ice-sheets, whether large or small, is all but *nil*. They erode, abrade, and polish, and to that limited extent modify the relief of

the land-surface; but they are incapable of removing large obstacles placed or left in their paths, and are entirely powerless as scooping engines. This view is enunciated after a personal study of the principal glacial valleys of the Alps, and it is strongly corroborated by the researches of Douglas Freshfield in the Caucasus and of Mr. W. M. Conway in the high Himalaya. If the data brought forward by these investigators be fully sustained, they virtually deal a death blow to the theory which attributes to glacial scour the excavation of large rock (lake) basins and the fashioning of rock-bound fjords—a theory, indeed, which has always appeared unreasonable to a large body of geologists. Sir Henry Howorth, the well-known writer on the mammoth and the flood, boldly announces in a recent publication that the Great Ice Age, however it may have been represented in the region further to the South, was entirely unknown in the far North—the Arctic regions generally—where the climate has been steadily growing colder. His work, 'The Glacial Nightmare and the Flood; a Second Appeal to Common Sense from the Extravagance of Some Recent Geology,' will certainly attract the attention of geologists, and seems likely to prove a firebrand in the counsels of the glacialists.

—A decidedly new departure in missionary reports is made in a readable pamphlet compiled by the Rev. J. H. De Forest of Sendai, Japan. One hundred and fourteen pages are devoted to the literary, self-supporting, independent, and coöperative work, and six pages only, of names and notes, to "The American Board's Mission." It is rather startling to find a missionary urging that the natives be left to do the main work of preaching, that the foreigner drop the money-reins and financial whip, and "pass over in bulk the money granted through joint consultation about the needs of the field." Yet this is what Mr. De Forest and most, or at least the best, of the American Board's missionaries are ready to do. He argues that they who insist that "so long as we furnish the money we shall control the work," lose in moral influence and power more than they gain. As matter of fact, the step away from the traditional method was taken ten years ago, when, on the formation of the Doshisha University, the money raised in the United States was passed over to the Japanese in bulk. This practice is still continued. A committee of three in consultation represents the American Board, without reserving the right of voting. The pamphlet is entitled 'Brief Survey of Christian Work in Japan, 1892, with special reference to the Kumi-ai Churches.' These fifty-two Kumi-ai (associated) churches are absolutely independent of all foreign control. The natives conduct the services wholly and a foreigner's preaching is the rare exception. During the year ending March 31, 1893, more conversions and baptisms were reported in these native independent churches than in all the other Protestant churches or organizations, though over thirty foreign societies now have representatives in Japan. The list of periodicals and books written by natives and widely circulated, in addition to numerous translations, shows, by the seriousness of the themes and the ability of the writers, how profoundly Christianity is leavening the nation, even while the statistics of extension show curtailment over those of previous years. The notes on Shinto, Buddhism, and Confucianism, philosophy, etc., are very valuable and set in attractive literary form. Some of the statistics summarized are: Roman Catholics, 44,812, in 244 congregations; Greek Catholics, 20,235, in 219 congregations; Protestants, 35,534, in 365 local churches. Baptisms for 1892 numbered 5,354; 952; and 3,731, in the three folds. Whether division or union be more illustrated by Protestants, let the figures decide: The 31 Protestant organizations are reduced to 12 alliances for work. Five of these alliances comprise 33,390 Christians, leaving only 1,644 to be apportioned among the remaining seven bodies, which represent twenty-four names. During this present summer, over four hundred students met in a summer school on the modified Chautauqua plan. Two of the leading men, J. T. Yokoi (son of the Yokoi who was assassinated in 1868 for advocating toleration of Christianity), and Ebina, are on their way to attend the Congress of Religions at Chicago.

## HOUSEKEEPING IN EUROPE.

*A House-Hunter in Europe.* By William Henry Bishop. New York: Harper & Bros. 1893. Pp. 370.

Mr. Bishop has given us a very agreeable book, and one which will commend itself as useful to the large class interested in knowing the conditions of housekeeping abroad—the sort of houses that may be had, their rent and the cost of living in them. A family of two, Mr. Bishop and his wife, "wanted to gratify to the full" the American "taste for antiquity and romantic tradition," as well as to "test personally the cheapness of foreign living, of which we hear so much." There were, at the outset, no children to bring up, no purposes of special study, no social aims to complicate the problem. They simply wanted to enjoy a couple of years in Europe, just as hundreds, perhaps thousands, of young households in America are always thinking of doing, and they continued their experiment for five years, instead of two, actually living in France and Italy, and exploring tentatively Spain, Algiers, and England. They do not seem to have felt drawn towards either Switzerland or Germany, but in the countries named they examined the capabilities of many places. In France, for instance, they kept house in Paris, in Villefranche, and in Nice, but they looked at habitations in Dinan, Versailles, Écouen, Blois, Orleans, Pau, Nevers, Avignon, and a dozen other towns charming in as many different ways, but all, at the time, for some reason or other, appearing desirable. There was, as we see, a certain width and, at the same time, a certain restriction of choice. A flavor of antiquity or of rusticity was what they wanted in their neighborhood, and a bit of garden for their own; as to the sort of house they were not unreasonably exacting, but the price of it must be moderate, and it should be unfurnished.

How many there are who would like to do the same thing, and who will be grateful to Mr. Bishop for saving them so much trouble in a wished-for future! Others would have been glad had so capable an explorer carried his researches yet further. Why did he not go to Senlis, for example, or Grenoble, or Montpellier, and why did he resist the inclination to stop off at Chartres? We wish, too, he had set at naught the foolish people who kept him from going to Palermo. The search would have been worth something to the intelligent house-hunter, even had the upshot been that Mr. Bishop found nothing in Sicily suited to his wants. The ignorance and prejudice of some of his friends had well-nigh kept him away from the Riviera, where, at last, he hit upon what he was looking for. We feel sure that Sicily contains a similar paradise; only, before engaging in a hunt for it, we should have been glad of the experience of so clever an explorer as our author. We all have been captivated by a sympathetic charm in certain towns, and we all have dreamed of the possibility of spending some years of our life in them, away from the trammels and burdens that elsewhere weigh us down. What food for hope, had Mr. Bishop only told us that in one such place there was awaiting us a tenantless house *entre cour et jardin!* As it is, he seems to have increased our chances of finding such a refuge by our own exertions. The writer of these lines has noted more than one page in the book as showing how the author was "warm," and passed without seeing it very near to the object of his search. The Villa des Amandiers was not by any means the only house on the Riviera that might have met Mr. Bishop's requirements of those days; but, as his choice was a matter of taste as well as of opportunity, we should not venture to say that any of the others had that inner fitness for his wants possessed by the house at Villefranche.

For people who have not lived abroad the main interest of this book will be in the light it throws on questions such as those of rent and cost of living. The question of convenience in house accommodation is, at first, not so prominent. Most are sure that, somewhere, the quaint old houses they read of in books are waiting to receive them. Experience may make them impatient of "rookeries"; it will, in any case, put the question of suitableness to your needs in its proper place. But, first and last, you will never cease to be interested as to prices; and, in this respect, Mr. Bishop's book is of great value. He says at the outset that "the promise [of cheap living] was justified, and notable economies were really possible," though we must qualify his belief that he succeeded in doing things so cheaply that it would be difficult to do them for less. We have seen Americans established in Europe, ladies and gentlemen, too, for whom Mr. Bishop's allowance would have meant luxury; nor did they live in squalor. It is only that our author's standard is that of a man who can afford to push his search for a home across Spain, France, and Italy, and even into Algeria. Had he been unable to do so much, he would have contented himself in more modest ways. Without at all knowing how much Mr. Bishop had to spend, we should say, as the result of our own experience, that such housekeeping and mode of life as he describes was adapted for families of two with an income of $2,000 a year—more or less. Exceptionally good management may accomplish it for less; a loose-handed system might require much more.

Rents are certainly cheap in Europe. The houses looked at varied in price between 250 and 2,500 francs a year, some of them being much larger than was needed. The amounts paid were about 900 francs in Paris, less than 400 in Verona, and 600 at Villefranche. The Verona experience was not quite a satisfactory one. The little house proved hot in summer and cold in winter, and was far from the centre of the town; those, however, who know the garden in which it stands and the view which it commands, will not wonder at the choice. Add to this that Verona was the place where, with an excellent market, prices were an exception to what our author calls the "usual price" for provisions. "There seems to be some law by which beef is about a shilling a pound, and eggs from a shilling to a shilling and a half a dozen everywhere." At Verona, however,

"eggs were but fifteen sous (cents) a dozen, milk was four sous a litre, and the best *filet* of beef three francs a kilo—two and one-fifth pounds—as against five francs in France." It might have been added that such a difference is that of Italy everywhere as against France, and that it is even more marked in the case of vegetables and fruits. The teeming abundance of Italy in these products makes them of an almost phenomenal cheapness.

Other things to be noted by the house-hunter are: (1) That houses are more plentiful, more commodious, and often no dearer in places where there is active demand for them, such as Pau or Nice, than in unfrequented cities where competition does not regulate the price. This rule applies to France. In Italy, Florence seemed dearer in respect of rents than Nice, and Rome expensive like Paris. (2) That it is easier to find furnished than unfurnished houses, at least in the less visited towns; and (3) that a cheap rent is apt to be in a quarter where other people live cheaply and are undesirable neighbors. These last two observations are, however, often contradicted by individual experience; in semi-rural places the cheapest rent is often found combined with the best situation—that, by the way, is our remark and not Mr. Bishop's.

In the course of his explorations, the author had his eyes open to many things besides the conditions of housekeeping, and he has thrown in plenty of pleasant pages upon society in Paris, upon Algeria, and various towns in Spain, upon Spanish literary men, and, in general, upon the ouside aspects of all sorts of places. We have noted many good sayings; and the judgments expressed are, as a rule, those of a man who knows the world and is superior to small prejudices. For instance, "There is a word to be said as to the rigid severity with which religious dissent was repressed in Spain, which—now that it all can't be helped—may reconcile the amateurs of art to it. The churches were not racked to pieces by religious wars, as in all the rest of Europe, and have kept their treasures mainly unimpaired." On the other hand, there are those who will think that he need not have taken the Félibres as seriously as they take themselves, and, on the principle of giving "the devil his due," we should say that he has not stated as strongly as he might have done the case for Monte Carlo. It is not pleasant to seem to defend so pestilent an institution, but since people can stake there only what they actually happen to have in their pockets, and cannot engage their other belongings—as they could at a club—cases where the tables bring more than a temporary inconvenience to players are extremely rare. For this and for other reasons, we believe that most of the stories of suicides are apocryphal.

The book is so agreeably written, and Mr. Bishop so well knows what he is talking about, that it would be an impertinence to praise his general correctness in details. He will pardon us, then, if we call attention to a very few slips of the pen, as, for instance, where (p. 353) he spells Emanuele with two *m's*, or where (p. 37) he writes "*arts d'agreement*"; similarly (p. 343), he speaks of St. Zeno and St. Anastasia as being examples of "Byzantine-Gothic," whatever that may be, and (p. 102) puts Verdi instead of Gounod as author of the music of "Mireille" and original of a bust in the house of Mistral. Again, the island of Corsica (p. 279), though it may be only in mirage, *is* frequently seen, not only at Nice, but for a great distance along the Riviera. To see it distinctly at evening portends rain. After all this, it is pleasant to call attention to the fact that the book is furnished with a good index.

"Taking the pros and cons generally, for living abroad, S——, who was no strong enthusiast for the scheme at first, was apt to argue as follows: Vastly cheaper rent; provisions and servants' wages not any dearer (probably, on the whole, less), a brighter, freer life in an agreeable climate (this not till after we had found the agreeable climate), and improving picturesque surroundings.

"'Put in,' she adds, 'that if rich people, with everything to make life enjoyable at home, like so much to come over, it ought to be all the more attractive to those in moderate circumstances.—No, don't put that in. It might bring over some with wholly different views from ours, who would get into all sorts of difficulties; they wouldn't want to give up the friends, local interests and duties to which they are attached; they might not like it *at all*.'

"So I don't put that in. Please consider it not put in."

## W. G. WARD AND THE CATHOLIC REVIVAL.

*William George Ward and the Catholic Revival.* By Wilfrid Ward, author of 'William George Ward and the Oxford Movement.' Macmillan & Co. 1893.

An interest so fascinating attaches to the Oxford Movement, and Mr. Wilfrid Ward's book about his father as related to that movement was such a valuable contribution to the literature of the subject, that the reader coming to this second part, in which the scene is wholly changed, will hardly expect to find himself so well pleased and entertained as in the former part. But he will be agreeably disappointed. If the scene is changed, some of the leading actors are the same, and the gain in novelty more than makes up for the loss of some familiar things. Moreover, here, as in the former book, the personality of William George Ward is always dominant. He continues to be peculiar and eccentric, and the exhibition of his intellectual powers is much more impressive as he attains "the years that bring the philosophic mind." To the intelligent Protestant the book should be a lesson of modesty and forbearance, for here, as in the case of Newman, we have one of the brightest intellects of the time entirely devoted to the Roman Catholic Church, and, to a degree beyond Newman, to the infallibility of the Pope. When, in the same book, we have such men as Mill and Martineau and Huxley allowing the commanding force of Ward's mind and the rigor of his logical procedure, and yet differing from him immeasurably in their conclusions, it is evident that the race is not always to the intellectually swift nor the battle to the logically strong.

Ward was born in 1812; he joined Newman's party in 1838, and straightway set about accelerating Newman's tardy pace towards Rome, instigating him to the publication of 'Tract 90,' and supporting it with two tracts of his own, and finally, in 1844, publishing his 'Ideal of a Christian Church,' in which he maintained that an Anglican could hold all the Roman doctrines in good faith, and for which he was deprived of his Oxford degrees in February, 1845, the Rev. A. P. Stanley furnishing the eloquent conclusion of his speech in Convocation. He made his submission to the Roman Church in the following September, a month earlier than Newman, whom his zeal continually outran. At this point Mr. Wilfrid Ward again takes up the parable. His book is written in an admirable spirit. He is an ardent Romanist, but he treats all sorts of heretics and schismatics with a consideration from which many Protestant theologians and biographers might learn something to the advantage of their own criticism and polemics. Indeed, though Ward and Newman both insisted that the Church still had the right to persecute, and refrained from persecution only on grounds of expediency, it is impossible to read such a book as this without feeling that an immense change has come over the religious mind of Christendom; that an immense gain has been made for toleration when men of such widely different tendencies and opinions can cherish for each other such sympathy and admiration as are here displayed. These seem the real things, and the formal ecclesiastical opinions very unreal in comparison.

Ward did not share the sanguine expectations of those converts who looked for an Anglican stampede into the Roman Church. That amusing mediævalist, Pugin, who was shocked at finding Ward's windows at Oxford without mullions, built him a house near St. Edmund's Roman Catholic College, which presumably had mullions in abundance. Ward was one of those Tractarians who disappointed Newman by marrying; but though he multiplied children after the manner of the poorer clergy, his life was almost conventual. His relation to his children was one sign among many of his lack of sweet humanity. He generally heard, he said, when they were born; after that he avoided them until they were old enough to be his intellectual companions. In general his sense of blood-relationship was a sense of difference and repulsion. He got along with relatives best by arranging not to be on speaking terms with them. Once, having so arranged with his brother Henry, they met at the theatre, and, forgetting the arrangement, had a happy time together, but the next morning they exchanged apologies and resumed their uncordial basis. The death of an uncle in 1849 changed Ward's condition from one of poverty to that of a large landed proprietor. What Tennyson called his "grotesque truthfulness" found here an interesting illustration. When his uncle was sick, Ward was troubled in conscience because he was impatient for his uncle's death. He consulted a priest about his feelings, and was told that it was quite enough that he should feel a certain regret at his uncle's death, though he might be pleased to inherit his property. Ward protested: "I feel no regret whatever at the prospect." "Well," said the priest, "you must have a certain wish, quite apart from other consequences, that he might be spared." "Not the slightest," was the rejoinder; "I never cared for him." "Your poor uncle has been suffering," urged the priest; "your spirits fall a little when you hear that he is worse." "On the contrary, they rise," said Ward; but he allowed that he would not do anything to hasten his uncle's death. He was equally honest when he went to get his life insured. Asked if his general health was good, he answered, "It is deplorably bad." Asked if he slept well, he said, "I have never had a good night in my life." By this candor he secured at thirty-eight the average terms of a man between sixty and seventy, and he reached the latter year.

Mr. Wilfrid Ward divides his father's Roman Catholic career into three parts—the first that of his professorship at St. Edmund's, from 1851 to 1859, during which years he was excogitating the doctrine of his 'Nature and Grace'; the second part, from 1860 to 1870, that of his defence (as editor of the *Dublin Review*) of papal infallibility against Döllinger and others; the third, 1870-1882, that of his polemics against the experience philosophy of

Mill and Bain. The first of these three periods was the happiest of his life. But he was not cordially received at St. Edmund's, to the disadvantage of being a convert adding that of being a married layman. It seemed a paradox that he should be a teacher of young priests. Yet no clerical ideal of the priestly function was more exigent than his. Assured that there was nothing for him to do, he soon made himself felt and needed. He found the Old Catholics of England in a state of "miserable intellectual degradation," not even able to express themselves correctly in the English language. Vaughan, the successor of Manning, was at first suspicious of him, but became one of his strong admirers before long. Living in a world of abstractions, Ward's knowledge of the material and practical side of life was next to nothing. There is a capital instance in his first meeting with Vaughan. Vaughan, it seems, knew a beech tree when he saw it. "Wonderful man!" exclaimed Ward. "You know all the *minutiæ* of botany." A correspondence with Mill was one of the most interesting incidents of the St. Edmund's period. It took its rise in Ward's review of Mill's 'Political Economy.' Each had a warm appreciation of the other's intellectual power and sincerity. Their mutual relations became much more important in the third period of Ward's intellectual activity, when he put forth all his strength against Mill's doctrine of the experiential basis of all intellectual and moral ideas. It was Mill's own feeling that his doctrine had never met with keener opposition. Some falling away from Mill was evident, and the break would doubtless have been much worse if Spencer had not brought up his reserves of inherited tendency. It is good to find Mill and Ward heartily associated against Gov. Eyre, and to find Ward applauding Mill's famous declaration, in his 'Examination of Sir William Hamilton,' that he would "call no being good who was not what he meant when he applied that epithet to his fellow-creatures; and that, if such a being could send him to hell for not so calling him, then to hell he would go."

Already in the St. Edmund's period Ward's eagerness for the exercise of papal authority was greatly in excess of Newman's. Ward would have had a papal bull with his *Times* for breakfast every morning, and he hailed the decree of Immaculate Conception five years in advance with glee, while Newman was indifferent and quizzical. In the interval between his resignation at St. Edmund's and his assumption of the *Dublin Review*, Ward's relations with several of his old Oxford friends, Catholics and Anglicans, were resumed. The pages given to Faber are some of the most interesting in the book. Ward did not like Faber's preaching, and he dearly loved the theatre. Faber's London chapel was turned into a theatre, and Ward, going there to a play, records two thoughts that came to him between the acts: "The first was, Last time I was in this building I heard Faber preach. The second was, How much more I am enjoying myself tonight than the last time I was here." Faber's mind was so much sicklied over with the pale cast of his ecclesiastical notions that it is most refreshing to find him meeting Ward's question, "Shall I go into retreat?" with, "A retreat! It would send you to hell. Go to the play as often as you can, but don't dream of a retreat." There is other evidence that the Oxford set carried themselves somewhat more naturally and humanly after their submission to Rome than when they were on the way to her embrace. So much is said of the elephantine bulk and weight of Ward that we crave to know how much he actually weighed. We are not informed, but infer something prodigious from the fact that, riding for his health, he arranged to have six horses an hour, using up one every ten minutes. But this was partly because he sat his horse as if he were himself a bag of sand.

The second period of Ward's career was less happy than the first because he was the intellectual leader of that "insolent faction," as Newman called it, which was clamorous for a formal declaration of the Pope's infallibility, and thus he was brought into painful conflict with Newman, for whom he had a very real reverence and affection. Mr. Wilfrid Ward's account of the controversy is meant to be extremely fair, and is so with the possible exception of the treatment of Döllinger—an exception to be expected from the radical difference of Döllinger's position from that of Ward, with which the son is in perfect sympathy. He is very careful to distinguish Newman's position from that of Döllinger and the extreme French Liberals, and Ward's from that of the extreme French Ultramontanes, who practically identified the Pope with the Holy Ghost. Their view was not incorporated in the Vatican Definition, nor was Ward's so completely as he could wish, and thus he had an opportunity to subject his personal opinion to the dictum of the Church, and did so with a better grace than his habitual dogmatism would lead us to expect. The matter as finally settled is not so plain that a wayfaring man, though a fool, may not err therein:

> "While the decree condemned the Gallican view that the consent of the Church is necessary to the validity of a definition, the Fathers enforced the share of the Church as represented by bishops, synods, and scientific theologians in its framing, and, by consequence, the practical necessity of their aid in its interpretation, and in determining what was infallibly and irreformably decreed and what was not."

The net result will probably be an infallibility which confines itself pretty closely to mere truism and platitude, or, as in the last pronouncement of the Pope upon American affairs, is so ambiguous as to leave both parties disputing the possession of the field. Ward was nothing if not logical, and his interest in the matter proceeded more from his passionate eagerness for a logical conclusion than from any other source.

The general reader will find no part of this biography more interesting than the chapter on the Metaphysical Society, about which much has been written, but nothing more instructive than these pages, which are all the better for being rich in quoted passages from Hutton, Huxley, Martineau, and others, who have given some account of the most remarkable symposium of modern times. Evidently Ward was one of the most valued members; by none valued more than by those opposed to him most heartily. Huxley was one of these—at the most opposite extreme, but more like Ward than any one else in his skill in logical fence and his quickness to detect the weakness of an opponent's argument. It was Greek meeting Greek when he and Ward crossed swords. One of their encounters at the outset was characteristic. Some one suggested that there should be no element of moral reprobation in the discussions. Whereupon Ward: "While acquiescing in this condition as a general rule, I think it cannot be expected that Christian thinkers shall give no sign of the horror with which they would view the spread of such extreme opinions as those advocated by Mr. Huxley." Then Huxley: "As Dr. Ward has spoken, I must in fairness say that it will be very difficult for me to conceal my feeling as to the intellectual degradation which would come of the general acceptance of such views as Dr. Ward holds." These cloud-bursts cleared the atmosphere, and it was generally perceived that this sort of thing would never do. With his customary frankness, Ward told Huxley in private that he considered him guilty of absolutely unpardonable error. "My dear Dr. Ward," answered Huxley, "if you don't mind, I don't." Huxley complains that the point of the anecdote has been found in his retort, and not in the evidence it affords of Ward's character—"a philosophical and theological Don Quixote, if it were not that our associations with the name of the Knight of La Mancha are mainly derived from his adventures, and not from the noble directness and simplicity of mind which led to those misfortunes."

In the closing chapter there is much entertaining matter concerning Ward's personal traits, habits of reading, and so on. Tennyson was his neighbor and friend, and, after his death, wrote a sonnet on him containing one of his most clumsy lines—"Most generous of all Ultramontanes, Ward." In his love and knowledge of trees, flowers, and birds he was at Ward's antipodes. Ward could not distinguish one tree or flower from another, and hated birds because they made a noise; the nightingales especially keeping him awake. The lesson that came home to him in his last illness—"to make more allowance for the inevitable differences between one mind and another"—is the great moral lesson of his life. His own mind was a singularly interesting one in its passionate hankering for authoritative guidance on the one hand, and its eagerness for free speculation on the other. To have had all the great questions which he discussed with such unsparing logic and such violent rhetoric suddenly settled by a papal edict, would have been for him a dreadful blow. Yet it is difficult to understand why their authoritative solution is not as desirable as that of any question on which the Popes have, so far, infallibly pronounced.

---

*Books in Manuscript:* A Short Introduction to their Study and Use. With a chapter on Records. By Falconer Madan, M.A. London: Kegan Paul; New York: Scribners.

THIS newest volume in the series of "Books About Books" has been fortunately intrusted to Mr. Madan, Lecturer in Mediæval Palæography in the University of Oxford. He has succeeded in meeting the primary needs of the amateur and the student, while at the same time furnishing a lucid survey of the whole field for the general reader, in a style not more scholarly than simple and entertaining. A singular amount of information, brought down to date, is packed away in less than 200 pages of open characters. In the chapter on materials for writing and the form of books, Mr. Madan tells of the recent discovery of a face and back, or a right and wrong side, to papyrus; of the disuse of this material in Egypt after the tenth and in Europe after the eleventh century; of the microscopic proof within a few years that the yellowish paper found especially in Greek MSS. till the fifteenth century was of linen rag like the rest, and not cotton, as the books have heretofore taught. He traces the etymology of paper, parchment, and vellum, assigns the first manufacture of paper outside of China to the approximate date 750 A. D., and notes that water-marks are a

purely Western invention, by the aid of which we may determine the forms of books as folio, quarto, etc. The next section is on the history of writing and (in cursory fashion) of the alphabet, with its summing up:

"We see, then, that readers of the present day [outside of Germany, which, "both in writing and painting, has always stood apart, and lags behind the other nations of western Europe in its development"] owe their eyesight and their comfort to (1) the revival of pure forms of an old Roman kind by Charles the Great; (2) the seemingly accidental fact that the later Carolingian writing of the twelfth century was imitated by the Italian scribes of the fifteenth; (3) the happy natural selection by which printers chose this revived kind of letter. Had any one of these links failed, our type would have failed to attain its undoubted excellence."

In the section on scribes and their work, Mr. Madan finds the evidence in favor of wholesale dictation very scanty, and concludes that individual copying was almost the universal practice. He then deals with illuminations and the extraordinary achievements and influence of the Irish school. As landmarks we may cite the statements that a scene within a letter is not met with before the eleventh century, and a consistent true perspective not before the fifteenth. Further:

"A theory has recently been started (but as its author has not fully worked it out, a reference only is here permissible) that the English, Irish, and French writers and illuminators of this mediæval period used different standards of measurement, so that their work can be tested mechanically by observing to what scale the sizes of written page or painting belong, and that the English scribes used Roman standards, the Irish Greek, and the French their own."

The blunders of scribes are next taken up, with an examination of the sources of error in transcription and the psychological rules of correction. Here we read that, "instead of the corruptions and variations increasing in number in proportion to the distance of MSS. from the author's time," they actually diminish as scribes grow more intelligent, or through the "mixture" of MSS., which results in eliminating the personal equation. The MSS. of Virgil and the Four Gospels are particularly examined, and the number of the former extant (some two to three hundred), sufficiently striking in itself, becomes doubly so when it appears that that of the Gospels alone surpasses it—of course very greatly surpasses it. The succeeding chapter is on famous libraries, beginning with the British Museum, which claims to have "the largest collection of the literature of every foreign country which exists outside that country." Here we must not overlook a passage which throws a flood of light on the recent discussion in these columns concerning books arranged with their backs to the wall:

"In general, the volumes were disposed much as now—that is to say, upright, and in large cases affixed to a wall, often with doors. The larger volumes at least were in many cases chained, so that they could only be used within about six feet of their proper place; and since the chain was always riveted on the fore-edge of one of the sides of a book, the back of the volume had to be thrust first into the shelf, leaving the front edge of the leaves exposed to view. Many old volumes bear a mark in ink on this front edge, and when this is the case, we may be sure that it was once chained in a library; and usually a little further investigation will disclose the mark of a rivet on one of the sides."

We need not specify the famous manuscripts described after the famous libraries, nor the literary forgeries enumerated. These chapters are typically comprehensive and among the most readable in the book. Necessarily dryer and more special are those on the treatment and the cataloguing of MSS. and on public and private records. An appendix gives a list of public libraries containing more than 4,000 MSS. (and it is to be remarked that these acquisitions are by no means stationary: "Libraries which possessed 3,500 MSS. in 1882 may be estimated to contain 4,000 now"), together with a list of printed catalogues of MSS. in European languages in the greater English libraries.

The eight full-page plates have been very carefully chosen and are very minutely analyzed in a table. One misses, in the chapter on writing, any facsimiles in the text, where they ought to be rather copious in order to make an intricate subject intelligible; but Mr. Madan has purposely yielded the floor, in this particular, to Mr. Edward Maunde Thompson of the British Museum, who has just issued his 'Handbook of Greek and Latin Palæography.'

---

*Current Americanisms.* By T. Baron Russell. London: Saxon & Co. 1893.

Of expressions peculiar to the United States, some which once obtained have become obsolete; of others the vogue is circumscribed, locally; and, again, of others, the occurrence is frequent in everyday conversation, but is comparatively infrequent in print. Respecting all such, how can we look for exact information except to one of ourselves? To any one else, obviously, the treatment of Americanisms in a manner at all trustworthy is little short of impossible. And even an American, unless at least conversancy with English literature of the two last centuries and also proficiency in the English dialects are predicable of him, is not equipped, otherwise than partially, to discourse on the subject anything like satisfactorily. That no American who has hitherto essayed to handle it in detail has given token that he possessed in due measure the qualifications just noted could, if it were necessary, be demonstrated copiously. Among scores of words and phrases, unquestionably neither indigenous nor in any way distinguishing us, in using which we are bid to believe that, on some ground or other, we Americanize, Mr. Bartlett, for instance, includes *attitudinize*, *counter-jumper*, *coverlid*, *educational*, *excursionist*, *immigrant*, *immigration*, an *independent* fortune, *once and again*, *over and above*, *prayerful*, *right* hard, *socialistic*, *summarize*, *sundown*, *vegetarianism*, *wastage*, together with *aggravate*, 'vex,' a *bright* lad, *elect* to go, *hard up*, 'short of funds,' *immediately*, 'as soon as,' *let things slide*, *pull up*, 'stop,' *not to be sneezed at*, *staging*, 'scaffolding,' *stop* at an inn, 'stay,' etc., and *upset* price. To exhibit one sample more of Mr. Bartlett's headlong criticism, there is his significantly illustrative assertion that "No Englishman would say 'the boat *has* gone,' '*has* come.'"

Nor, to pass to Professor Schele de Vere, are his errors less numerous or less flagrant than those of Mr. Bartlett, from whom not a few of them seem to be credulously adopted. Whole hosts of his comments are typified in his remark that *at once* "is used in the United States, North and South, instead of the English *immediately*"; and in his considering *back* for *ago* as American. Of Old England, linguistically, he knows, indeed, save at second hand, but little more than he knows, as to its people, of New England, where, he tells us, "perfect social equality has prevailed from the oldest times."

Mr. Farmer's pretentious and misleading compilation we reported on soon after its appearance. In the main, it commands but slight confidence; and of the work now under notice, though its scheme is by no means equally comprehensive, we are compelled to speak in terms still more unfavorable. Personally, as is manifest, a stranger to the United States, its author announces discoveries about matters of language here which would certainly chance to nobody but one circumstanced like himself. For example, he has found out that "'male-sheep,' 'male-hogs,' 'gentlemen-turkeys,' and 'gentlemen-game-chickens' belong to the natural history of refined Boston only." With something of the speech of Great Britain still to acquire, he characterizes as "negroisms," or "negro, originally," the verbs *conflagrate* and *consociate*, with *robustious* and *ruination*, though the second of these words dates from the sixteenth century, and the first and fourth from the seventeenth century, and though *robustious* was sanctioned by the Chronicler Hall, Shakespeare, Drayton, the water-poet Taylor, Milton, Thomas Fuller, Dryden, and Swift. Being, also, still to master sundry items among the initial mysteries of etymological science, he stigmatizes *approbate*, *consternate*, and *infract*, *betterment* and *obtusity*, not one of which, as he should know, had its birth in America, as "false derivatives"; the verbs in the list being, in his view, from *approbation*, etc., by what is now called back-formation. *Hypothecate* was long ago employed by Blackstone, Sir William Jones, Burke, and H. T. Colebrooke; and yet he produces it as an Americanism, and marks it as "German." His article on *authoress* runs: "Pickering regards this word (and any patriotic Briton must wish to agree with him) as an Americanism. Perhaps *manageress*, *tailoress*, and similar abominations are so, likewise—a consolation devoutly to be wished"; as if Mr. Pickering, who wrote in 1816, were an authority for "current Americanisms"; as if *manageress* and *tailoress*, with which rank *mayoress*, *prioress*, and *tutoress*, could be rationally objected to; and, especially, as if *authoress*, or its equivalent, had not been perfectly classical for upwards of three hundred years. Recourse to dictionaries of recent date does not appear to have occurred to Mr. T. Baron Russell as a source of assistance. To no person, however, of a moderate amount of reading, and of serviceable memory, would such recourse be required, in order to preclude the gross ignorance which is betrayed in seeing Americanisms in *abolitionist*, *addressee*, to *advise with*, to *affection*, *alienage*, *allottee*, the *alone* God, to *ambition*, *appetizer*, to *argufy*, *available*, and so on through the alphabet.

To dwell further on a book that teems with trumpery is needless. Besides its shortcomings glanced at above, it fails, for the most part, to discriminate between worn-out expressions and such as are now in use, as also between those which are common to us generally and those which are sectional, while it largely mistakes, as belonging to our popular speech, others which were simply creations for the nonce and have never obtained a foothold. Since we have, at last, a Dialect Society, there is reason to hope that we may look for a thorough and scholarly investigation of Americanisms, and, in course, for a dictionary of them deserving of reliance.

---

*Princeton Sketches:* The Story of Nassau Hall. By George R. Wallace, Class of '91. G. P. Putnam's Sons. 1893. 8vo, illustrated. Pp. 200.

Nassau Hall once meant Princeton. The

one building was the material college. Under its roof the students lodged, studied, took their meals, worshipped, recited, and declaimed. It sheltered their literary societies as well. It still may be taken as the type of the institution. Solid, persistent, well founded, it is the centre about which a whole brood of halls cluster. Its old cupola has become almost a spire, leading further aloft with more grace if not with greater breadth; and as its long brick "entries" (typifying, perhaps, the hard but straightforward way to a degree) have been cut up by partitions into corridors that begin at a spiral stairway and run against a dead wall, so the old courses of arts and letters, approved of gods and revered by men, have been chopped up into electives that begin and end not dissimilarly.

A new Princeton has grown about the old, but the old nucleus is the core and the heart. It is not too much to say that the beautiful campus and the rugged background in some respects reflect themselves in the character of her graduates. Her older men have boasted that Princeton was a national college; her junior sons in somewhat different phrase repeat the claim. We believe it is true that the Princetonian is proud of his college, and that he often justifies the college in being proud of him. They hold, we think with truth, that it is a democratic institution, where in all college matters men stand on their own merits; and it is certainly a delightful feature that the class exclusiveness which marks another latitude is, barring a little discipline of Freshmen, not to be found there.

So far as this particular book is concerned, it is not unkindness to say that its most instructive feature is the illustrations. The village of palaces set forth is still inadequate to shelter the thousand scholars. This is the brick-and-mortar side of the extraordinary development of the last twenty-five years, the fruition of seed sown in President Maclean's later days. The text, so far as it goes, is fairly accurate, but the author in his next edition may care to change some statements. The literary societies after the conflagration of 1802 found their new rooms in the Library, now the offices, built in 1803, not in Nassau Hall again. There is no good reason to suppose that the cannon which is so essential a feature in the outdoor ceremonies of the College, played any part in the battle of Princeton. It was a siege piece, and as such could not have been used by either army in that engagement. It is much more probable that at some unimportant period a broken carriage determined its detention—for example, when the French marched north to return home. The dwelling in which Mercer died, in rear of the critical field of battle, should continue to be known as the Clarke house, in memory of those kindly and patriotic Friends who graced it through several generations, notwithstanding that its ownership is now changed. The enemy in that battle were not Hessians, but a brigade of British regulars under Mawhood. June, 1844, marks the date of the new Commencement; the resolution to make the change may have been in 1843. The writer, brought up in the atmosphere of modern sports, looks upon the play "with balls and sticks" objected to by the Faculty in 1787 as "the first appearance of base-ball at Princeton." That was a sheer guess, and a bad one. "Shinny" was thus aimed at, and it was not suppressed until sixty years afterwards, when the authorities planted the "back campus" with trees, beautifying the quadrangle and preventing the game. There is internal evidence that our author is an American Whig, who inadvertently betrays one of his Hall secrets. These are little matters, but the babes and sucklings in local history should have their milk pure.

Whether calling itself such will make Princeton a university, may be doubted. It called itself a boating college, and "the university boat-house" is among the illustrations. There should be an affirmative born of two negatives, but this may be the exception to that venerable rule. To discuss seriously the influence of enormous classes, of costly dormitories, of multiplied electives, of the weakness that strains after "'varsity" effects, would be placing too heavy a stress upon this slender span that would bridge the space between the graduate of to-day and the polished Jonathan Belcher.

---

*An Elementary Treatise on Pure Geometry*, with numerous examples. By John Wellesley Russell, M.A. Oxford: Clarendon Press; New York: Macmillan. 1893.

*An Elementary Treatise on Modern Pure Geometry.* By R. Lachlan, M.A. Macmillan. 1893.

*Geometry in the Grammar School:* An Essay. Together with illustrative class exercises, and an outline of the work for the last three years of the Grammar School. By Paul H. Hanus, Assistant Professor of the History and Art of Teaching, Harvard University. Boston: D. C. Heath & Co. 1893.

THE two text-books cited above, one from Oxford, the other from Cambridge, are on a subject lately introduced into the university examination papers. Neither is of great merit. The Oxford book shows somewhat more mathematical and geometrical ability, and contains upwards of 1,500 examples, mostly of real interest. The elementary explanations of the Cambridge book are somewhat superior, and it deals with some interesting topics altogether omitted from the other treatise. It is, doubtless, the more convenient text-book for the teacher, though the less profitable for the earnest student. The great arbitrariness of the arrangement of both books is well shown by comparing them together in this respect. The theorems are pitchforked together upon no principle, and as for the examples, it is really curious to remark under what diverse heads one and the same proposition may be treated. The leading propositions of each book are mere illustrative examples for its rival.

The reason why analytical methods are more easily handled than the synthetical geometry is chiefly that the former arrange the whole subject in a perfectly definite and unmistakable manner. No wonder a pupil is puzzled to apply a theory consisting of some thirty fragments not connected by any intrinsic bonds. As long as this state of things exists, notwithstanding the infinitely greater elegance of the pure geometry, its great practical use will be to serve as a guide in the reformation of analysis. The older treatises upon modern geometry did not exhibit this loose articulation, for the reason that they dealt chiefly with projective properties, and introduced what little metrics they gave as corollaries to the projective theorems. This could no longer be thought of, yet it suggests the proper way of arranging the subject. No text-book of either synthetical or analytical geometry omits that grand proposition of Cayley, that every metrical fact is a projective fact about a certain fixed quadric, or in plane geometry about the section of this quadric by the plane; nevertheless, writers of text-books put them together as if they did not really believe this. If it be true, surely an eternal fitness requires that the projective geometry of rectilinear diagrams and conics should precede all metrical matter, and that the Euclidean geometry should be taught as a particular case of the non-Euclidean.

Prof. Hanus's want of acquaintance with geometry, beyond what everybody knows, is very apparent. He applies general principles of pedagogy to give a few maxims too vague to be of much positive value, and upon that basis proceeds to pronounce *ex cathedra* upon perhaps the most difficult problem of intellectual education—the question of what, when, and how to teach in the first instruction in geometry. The illustrative exercises exemplify some methods in teaching applicable to many subjects and widely used in our schools. The course laid out could not well be much worse than it is, and is calculated to impart to the scholar ideas of geometry as confused as those of Prof. Hanus himself.

---

*William Kitchen Parker*, F.R.S., sometime Hunterian Professor of Anatomy and Physiology in the Royal College of Surgeons of England: A Biographical Sketch by his Son, T. Jeffery Parker. Macmillan & Co. 1893. 8vo, pp. 145.

RESEARCHES on the foraminifera and on the vertebrate skeleton have made a limited group of scholars familiar with Prof. Parker's name. A multitude of future students will owe him their gratitude and respect. His splendid series of monographs have prepared a welcome for the opportunity given by his son of knowing the man more intimately, of learning how it was he placed himself among the great men of science. The story is that of a dissatisfied farmer boy who became a druggist's clerk, a village physician, and ultimately a Fellow of the Royal Society. It is a record that might be cited in support of Dalton's conclusions "that no man can achieve a very high reputation without being gifted with very high abilities," and "that few who possess these very high abilities can fail in achieving eminence"; yet, from what we learn of his farmer ancestry, it is not an instance to support the theory of hereditary ability in general. Religious fervor, lasting from his fifteenth year till the end, and scientific enthusiasm, were most prominent characteristics of a truly amiable man. Our sympathy goes out to him in his struggles, his ill-health, his hours of depression or exaltation; and such particulars as how unsystematic he was or how talkative, detract nothing from our esteem. Some one, we are told, was reminded by the Professor's style of a dog going home, firm in his purpose and sure to get there, now on this side of the road, now on the other, now scratching at a rat-hole, and now dashing across the field for a friendly or hostile sniff at another dog. There is also a lively anecdote of a visitor who, at mention of a skull, was carried off to the study, and, unable to get in a dozen words, was overwhelmed by explanations, illustrations, and sketches for the entire evening, then accompanied to the door for a ten or fifteen-minute conclusion, and finally allowed to depart, while the Professor sank into a chair, ejaculating, "That's a most intelligent young man, but I thought he'd never go; I'm dead tired."

The author has done his work well, without overestimate of the great importance of his father's works. A letter from Sir William Bowman contains this summary of Prof. Parker's temperament: "He was a bright,

happy, loving man, full of reverence, intensely feeling the pure pleasure of the contemplation and investigation of Nature, who greatly advanced knowledge because apparently he could not help doing it, the joy was so pervading."

BOOKS OF THE WEEK.

Angell, G. T. Autobiographical Sketches and Personal Recollections. American Humane Society.
Besant, Walter. The Rebel Queen. Harpers. $1.50.
Bonner, John. A Child's History of France. Harpers. $2.
Boyle, Virginia F. The Other Side: An Historic Poem. Memphis, Tenn.: A. R. Taylor. $1.
Bradley, F. H. Appearance and Reality. London: Sonnenschein; New York: Macmillan. $2.75.
Bunner, H. C. "Made in France": French Tales retold with a United States Twist. Keppler & Schwarzmann.
Burke, J. M. "Buffalo Bill": from Prairie to Palace. Rand, McNally & Co. 50 cents.
Cahun, Léon. La Tueuse. 1241. [Romans Historiques.] Paris: Armand Colin & Cie.
Campbell, W. W. The Dread Voyage: Poems. Toronto: William Briggs. $1.
Chase, F. H. The Old Syriac Element in the Text of Codex Bezae. Macmillan. $2.50.
Coppee, François. True Riches. Appletons.
First Three Republican National Conventions. Minneapolis: C. W. Johnson. $2.
Gardener, Helen H. Facts and Fictions of Life. Chicago: C. H. Kerr & Co.
Gautier, Judith. Le Dragon Impérial. [Romans Historiques.] Paris: Armand Colin & Cie.
Grey, Maxwell. An Innocent Impostor. Appletons. $1.

# HENRY HOLT & CO., New York,

*Have Published During the Past School Year:*

**Barker's Physics** (Advanced Course, American Science Series). By GEORGE F. BARKER, Professor in the University of Pennsylvania. x+902 pp., 8vo. Teachers' price $3.50; postage 28 cents additional.
A comprehensive text book for higher college classes, rigorous in method, and thoroughly modern in its treatment of the subject as distinctively the science of energy. The London *Chemical News* pronounces it "the best truly modern manual of physics in our language."

**Baldwin's Elements of Psychology.** By JAMES MARK BALDWIN, Professor in Princeton College. xvi+372 pp. 12mo. Teachers' price $1.50; postage 11 cents additional.
Presents the essentials of the science, including the latest results of experimental psychology, in a single compact volume. While based on the author's larger "Handbook of Psychology," whole sections have sometimes been rewritten and even whole chapters recast. The exposition has been simplified throughout and more illustrative facts and explanations added.

**Falckenberg's History of Modern Philosophy.** Translated by A. C. ARMSTRONG, Jr., Professor of Philosophy in Wesleyan University. xvi+655 pp. 8vo. Teachers' price $3.50; postage 25 cents additional.
A comprehensive view of the history of modern philosophy from Nicolas of Cusa to the present time. Full and appreciative in its treatment of British and of general nineteenth century philosophy.

**Beresford-Webb's German Historical Reader.** Edited with an introduction, connecting passages, and notes, by CHARLES R. BERESFORD-WEBB. 240 pp. 12mo. Teachers' price 90 cents; postage 8 cents additional.
Selections from German historians, mostly of a popular order, which, taken together, present a fair outline of the history of German and continental affairs down to the present century.

**Fischer's Practical Lessons in German.** By A. ALBIN FISCHER. Fourth edition. viii+156 pp. Teachers' price 75 cents; postage 7 cents additional.
This book, new to the list of its present publishers, has been found to be a successful modification of the natural method, insuring great thoroughness.

**Jagemann's Materials for German Prose Composition.** With notes and vocabulary. By H. C. G. VON JAGEMANN, Assistant Professor of German in Harvard University. vi+288 pp, 12mo. Teachers' price 90 cents; postage 8 cents additional.
Easy connected prose, chiefly narrative and historical. The notes consist chiefly of references to the author's "Elements of German Syntax," which is intended to accompany this book. The vocabulary is especially complete, and discriminates between synonyms.

**Riehl's Burg Neideck.** With introduction and notes by ARTHUR H. PALMER, Professor of the German Language and Literature in Yale University. x+66 pp. 12mo, boards. Teachers' price 30 cents; postage 3 cents additional.
One of Riehl's brightest and most pleasing historical genre-pictures, using the period of the Seven Years' War as a background.

**Daudet's Contes de Daudet.** With introduction and notes by A. GUYOT CAMERON, Assistant Professor of French in the Sheffield Scientific School, Yale University. xx+299 pp. 16mo. Teachers' price 80 cents; postage 7 cents additional.
Eighteen tales, including *La Belle Nivernaise*, representing the different types under which Daudet's short stories may be grouped. Dialectal and other difficulties are carefully explained in the notes. The introduction is unusually full and adequate.

**Daudet's La Belle Nivernaise.** With Notes by A. GUYOT CAMERON. 79 pp. 12mo, boards. Teachers' price 25 cents: postage 3 cents additional.
Taken bodily from the foregoing volume, with the same notes and references.

**Joynes's Minimum French Grammar and Reader.** By EDWARD S. JOYNES, Professor in South Carolina College. vi+269 pp. Teacher's price, 75 cents; postage 6 cents additional.
Combines in a single brief volume the essentials of grammar, with ample exercises, and graded selections for easy reading, with notes and vocabularies. The object is to reduce preliminary grammatical study to the minimum consistent with due method and completeness.

**Goodell's Greek Lessons.** Part I. The Greek in English. Part II. The Greek of Xenophon. By THOMAS D. GOODELL, Professor in Yale University. x+376 pp. 16mo. Teachers' price $1.25; postage 8 cents additional.
This volume, an enlargement of the author's "Greek in English" (which is still published separately), forms a continuous course preparatory to the Anabasis. As far as possible, the exercises of Part II. consist of connected speech, and are based on the Anabasis.

**McLaughlin's Literary Criticism for Students.** With an Introduction and Notes by EDWARD T. MCLAUGHLIN, late Professor in Yale University. xx+236 pp. 12mo. Teachers' price $1.00; postage 10 cents additional.
Selections from the leading writers of English criticism with double reference to the study of good prose models and the discussion of general traits of style and important facts in literary history. Prof. Brander Matthews of Columbia College says: "It is very well done, and it was well worth doing. It seems to me just the kind of book to recommend to advanced students, just the kind of book which will help to open their minds."

**Pancoast's Representative English Literature.** By HENRY S. PANCOAST. xiii+514 pp. Large 12mo. Teachers' price $1.60; postage 15 cents additional.
Described by Samuel Thurber of the Boston Girls' High School, as "an excellent primer of English literary history, combined with an excellent selection of literary specimens" [complete texts]. The *Nation* says: "The style is more than respectable, the text accurate, the method excellent." Prof. Carpenter of the Massachusetts Institute of Technology, calls it "an excellent text-book both in method and in subject-matter. Although it is specially adapted for use in secondary schools, I shall use it next year with the Sophomore class."

**ten Brink's History of English Literature.** Vol. II. Part I. Wyclif, Chaucer, Earliest Drama, Renaissance. Translated by W. CLARKE ROBINSON, Ph.D. 339 pp. Large 12mo. Teachers' price $1.60; postage 13 cents additional.
Uniform with Vol. I. of the same work, published at the same price. The lamented author left materials for a third volume which will finish the work.

**Clark's Art of Reading Aloud.** By J. SCOTT CLARK, Professor in the Northwestern University. 159 pp. 16mo. Teachers' price 60 cents; postage 5 cents additional.
The essentials of elocution illustrated by direct application in the reading of Dickens's "Christmas Carol."

**Scudder's Brief Guide to the Commoner Butterflies.** By SAMUEL H. SCUDDER. xi+206 pp. 12mo. Teachers' price $1.00; postage 9 cents additional.
Contains all the apparatus necessary for the identification of the commoner butterflies of the Northern States, and a short introduction to the study of butterflies in general.

# EIGHT GREAT DICTIONARIES

## FOR SCHOOLS AND PRIVATE LEARNERS.

### Liddell and Scott's Greek Lexicon.

Revised and Enlarged. A Greek-English Lexicon. Compiled by HENRY GEORGE LIDDELL, D.D., and ROBERT SCOTT, D.D. With Co-operation of HENRY DRISLER, Jay Professor of Greek in Columbia College, New York. pp. xiv., 1776. Seventh Edition, Revised and Augmented throughout. 4to, Sheep, $10 00.

### Liddell and Scott's Intermediate Greek Lexicon.

An Intermediate Greek-English Lexicon, founded upon the Seventh Edition of Liddell and Scott's Greek-English Lexicon. pp. iv., 910. Small 4to, Cloth, $3 50; Linen, $3 75; Sheep, $4 00.

"I have seen so much evil from the use of the little abridged lexicon by college students, and have had so much difficulty in persuading all to use the large lexicon, that I shall be glad to exert my influence in favor of the 'Intermediate Greek Lexicon' for ordinary college students."—T. D. SEYMOUR, *Professor of Greek, Yale College.*

### Liddell and Scott's Greek Lexicon. Abridged.

A Lexicon Abridged from Liddell & Scott's Greek-English Lexicon. The *Twentieth Edition*, carefully Revised throughout. With an Appendix of Proper and Geographical Names, prepared by the Rev. JAMES M. WHITON, Ph.D. pp. 832. Small 4to, half leather, $1 25.

### Harper's Latin Dictionary.

Founded on the translation of "Freund's Latin-German Lexicon." Edited by E. A. ANDREWS, LL.D. Revised, Enlarged, and in great part Rewritten, by CHARLTON T. LEWIS, Ph.D., and CHARLES SHORT, LL.D. pp. xiv., 2020. Royal 8vo, Sheep, $6 50; Full Russia, $10 00.

### Lewis's Latin Dictionary.

A Latin Dictionary for Schools. By CHARLTON T. LEWIS, Ph.D. pp. 1192. Large 8vo, Cloth, $5 50; Sheep, $6 00.

"This dictionary is not an abridgment, but an entirely new and independent work, designed to explain every word or phrase in the Latin literature commonly read in schools, viz., the complete works of Cæsar, Terence, Cicero, Livy, Nepos, Virgil, Horace, Ovid, Juvenal, Phædrus, and Curtius, the Catiline and Jugurtha of Sallust, the Germania and Agricola of Tacitus, and a few words found in some extracts of Florus, Eutropius, and Justinus. The original meaning of every word is first given, and then the modifications which it underwent in usage."—*From Preface.*

### Lewis's Elementary Latin Dictionary.

An Elementary Latin Dictionary. By CHARLTON T. LEWIS, Ph.D. pp. 952. Small 4to, half leather, $2 00.

"I have put it to the test of constant use over the range of authors now read by my classes, Cicero, Horace, Tacitus, Plautus, Terence, and Juvenal, and have found it ample. The definitions are clear, and the interpretation of passages often very happy."—J. HOWARD STOUGH, *Professor of Latin, Midland College.*

### Thayer's Greek-English Lexicon.

Greek-English Lexicon of the New Testament; being Grimm's Wilke's Clavis Novi Testamenti, Translated, Revised, and Enlarged by JOSEPH HENRY THAYER, D.D., Bussey Professor of New Testament Criticism and Interpretation in the Divinity School of Harvard University. pp. 746. 4to, Cloth, $5 00; Half Roan, $6 00; Sheep, $6 50.

"Altogether the volume is one of great value, and the eminent scholars who have been concerned in its production should have the thanks of all who love the study of the New Testament in the Greek tongue."—*Presbyterian, Philadelphia.*

### Yonge's English-Greek Lexicon.

An English-Greek Lexicon. By C. D. YONGE. With Many New Articles, an Appendix of Proper Names, and Pillon's Greek Synonymes. To which is prefixed an Essay on the Order of Words in Attic-Greek Prose, by CHARLES SHORT, LL.D. Edited by HENRY DRISLER, LL.D. pp. 894. Royal 8vo, Sheep, $4 50.

"This work is not a mere collection of Greek words which may be equivalents of certain English words, thrown carelessly together without system, but a carefully arranged lexicon, in which a scholar can see the *nature* of the word he is employing, whether it is poetic or specially Homeric, or philosophic, or peculiar to comedy, or colloquial. The work is certainly a great accession to our apparatus of classical instruction."—W. W. GOODWIN, Ph.D., *Eliot Professor of Greek Literature in Harvard College.*

☞ *The above books may be had of all booksellers, or will be sent by the publishers, on receipt of price. If ordered sent by mail, 10 per cent. should be added to the price to pay postage.*

**HARPER & BROTHERS, Publishers, Franklin Square, New York.**

## Recent Text-Books

## Elements of Physics.

By HENRY S. CARHART, University of Michigan, and HORATIO N. CHUTE, Ann Arbor High School.

12mo, cloth, 388 pages. Price, $1.20.

The basis of the whole book is the introductory statement that physics is the science of matter and energy, and that nothing can be learned of the physical world save by observation and experience, or by mathematical deductions from data so obtained. The authors do not believe that immature students can profitably be set to rediscover the laws of Nature at the beginning of their study of physics, but that they must first have a clearly defined idea of what they are doing, an outfit of principles and data to guide them, and a good degree of skill in conducting an investigation.

## An Academic Algebra

By Professor J. M. TAYLOR, LL.D., Colgate University.

16mo, cloth, 338 pages. Price, $1.00.

This work presents the subject of Elementary Algebra in a clear, scientific and attractive form The order of presentation has been determined mainly by three considerations.

First, to introduce as early as possible the equation, of which Algebra is the science

Second, to show how each subject bears directly on the end in view, namely, the solution and use of equations.

Third, to eliminate as far as possible any unnecessary difficulties of the science

The book is adapted to beginners of any age, and covers sufficient ground for admission to any American college or university.

## ALLYN & BACON, Publishers,

**Boston, Mass.**

*An Indispensable Companion to the New U. S. Pharmacopœia.*

### A Manual of Weights and Measures.

By OSCAR OLDBERG, Pharm. D., Member of Revision Committee, New Edition, U. S. Pharmacopœia. Third Edition Revised, 12mo., cloth, $1.50 net, postpaid.

FROM THE MEDICAL RECORD.

"It is a standard work on the subject treated, a fair index of which appears in its title. The adoption of the Metric System of weights and measures in the Pharmacopœia, to the exclusion of all others, renders a thorough knowledge of that system imperative."

FROM THE MEDICAL NEWS.

"To those already familiar with the useful little book, it is unnecessary to speak well of it, and to those who are not fortunate enough to possess it, we would earnestly recommend its purchase, particularly if they are engaged in pursuits which bring them in contact with the metric system or with accurate measurements. The very large number of books intended to provide for similar wants may, perhaps, be useful, but Prof. Oldberg has surpassed them, as much that is usually uninteresting is presented in so clear a manner that one cannot fail to understand what he reads on a single reading, while the tables are models of completeness."

## THE W. T. KEENER CO.,

Medical, Dental, and Pharmaceutical Booksellers,

# The Evolution of Mechanics.

*Just Out.*

THE SCIENCE OF MECHANICS. A Critical and Historical Exposition of Its Principles. By Dr. ERNST MACH, Professor of Physics in the University of Prague, Austria. Translated from the second German Edition by Thomas J. McCormack. 1 vol., half mor., gilt top, 538 pages, 250 illustrations and cuts, $2.50.

The aim of this work is to exhibit the evolution of mechanical science, and to present its principles from the point of view of the theory of knowledge, freeing it from all metaphysicism. In the original it has attracted, by the simplicity, clearness, and profundity of its views, the attention of thinkers in all parts of the world.

# The Religion of Science.

*Just Out.*

THE RELIGION OF SCIENCE. (Religion of Science Library, No. 1.) By Dr. PAUL CARUS. Extra souvenir edition. 112 pp., paper, 50 cents.

# The Primer of Philosophy.

*In Press.*

THE PRIMER OF PHILOSOPHY. By Dr. PAUL CARUS. 220 pp., cloth, $1.00.

AN EXAMINATION OF WEISMANNISM. By G. J. ROMANES. (Ready in September.)

## THE OPEN COURT PUBLISHING CO.

*770 Monon Building, 320 Dearborn St.,*

CHICAGO, ILL.

# RECENT IMPORTANT PUBLICATIONS.

### The Empire of the Tsars and the Russians.

By ANATOLE LEROY-BEAULIEU. Translated with annotations from the third French edition by Z. A. Ragozin.

Part I. (complete in itself), "The Country and Its Inhabitants." 8vo, with maps printed in colors, $3 00.

"This work contains some of the best informed, most strikingly written, most wisely sympathetic, discussion, as well as soundest critical judgments of Russia and her people that we have seen."—*New York Times.*

"Beaulieu's work will be found of a surpassing interest, combining the triple excellences of complete preparation, unbiased judgment, and the piquancy of Gallic expression."—*Chicago Tribune.*

### The Wilderness Hunter.

With an Account of the Big Game of the United States, and its Chase with Horse, Hound, and Rifle. By THEODORE ROOSEVELT, author of "Hunting Trips of a Ranchman," "History of the Naval War of 1812," etc. With Illustrations by Remington, Frost, Sandham, Eaton, Beard, and others. 8vo, $3.50.

"A book which breathes the spirit of the wilderness and presents a vivid picture of a phase of American life which is rapidly passing away, with clear, incisive force."—*New York Literary News.*

"For one who intends to go a-hunting in the West this book is invaluable. One may rely upon its information.

"But it has better qualities. It is good reading for anybody, and people who never hunt and never will are sure to derive pleasure from its account of that part of the United States, relatively small, which is still a wilderness."—*New York Times.*

### The Trees of Northeastern America.

By CHAS S. NEWHALL. With an Introductory Note by Nath. L Britton. With illustrations made from tracings of the leaves of the various trees. 8vo, $2.50.

"We believe this is the most complete and handsome volume of its kind, and on account of its completeness and the readiness with which it imparts information that everybody needs and few possess, it is invaluable. No lover of country scenery and rambles should be without this volume, for with it observations which have been amusing and refreshing will become entertaining and highly instructive."—*Binghamton Republican.*

### The Leaf-Collector's Hand-book and Herbarium.

By CHAS. S. NEWHALL. An aid in the preservation and in the classification of specimen leaves of the trees of Northeastern America. New portfolio edition. Illustrated. $2.50.

"The idea of the book is so good and so simple as to recommend itself at a glance to everybody who cares to know our trees or to make for any purpose a collection of their leaves."—*N. Y. Critic.*

### The Shrubs of Northeastern America.

By CHARLES S. NEWHALL, author of "The Trees of Northeastern America," "The Leaf Collector's Handbook," etc. Fully illustrated. 8vo, $2.50.

"This volume is beautifully printed on beautiful paper, and has a list of 116 Illustrations calculated to explain the text. It has a mine of precious information, such as is seldom gathered within the covers of such a volume."—*Baltimore Farmer.*

### Outlines of Roman History.

By HENRY F. PELHAM, Professor of Ancient History in the University of Oxford. Large 12mo, with Maps, $1.75.

"I shall take great pleasure in putting it into the hands of my classes."—*Geo. L. Burr, Professor of Ancient History, Cornell University.*

"For advanced students it is the best guide that I know of for the study of the political and constitutional History of Rome. Prof. Pelham has most admirably succeeded in producing a book for higher-grade students."—*Wm. P. Holcomb, Professor of History, Swarthmore College.*

"Admirably suited as a guide to more advanced students I have recommended the work to my classes and shall make use of it in the future."—*Herman V. Ames, Professor of History, University of Michigan.*

### A Literary Courtship.

**Under the Auspices of Pike's Peak.**

By ANNA FULLER author of "Pratt Portraits." 12mo, illustrated, $1.00.

"An altogether charming little story."—*Cleveland Plain Dealer.*

"The brightest, breeziest, most satisfactory bit of fun and romance which has come to our notice in many a day."—*Chicago Interior.*

"It is a book to read and enjoy either alone or with pleasant companions, and to make the reader glad that the author has given us such a charming combination of humor, naturalness, and originality."—*Public Opinion*, Washington, D. C.

### The Silver Situation in the United States.

By Prof. F. W. TAUSSIG, author of "The Tariff History of the United States." (Questions of the Day Series, No. 74.) 8vo, Cloth, 75c

"We do not hesitate to say that this book is in all respects as excellent as it is opportune It is extremely concise in statement, but everything that is necessary is here. The book deserves to be read by the learned as well as by the ignorant, and the times should insure it the widest circulation."—*N. Y. Evening Post.*

"At a time when currency problems are attracting attention in Europe, Asia, and America the appearance of a treatise from Prof. Taussig's pen is peculiarly opportune."—*London Times.*

### The Making of a Newspaper.

Experiences of certain Representative American Journalists, related by themselves and edited by MELVILLE PHILLIPS 12mo, cloth, $1.50.

"For the person who knows of a newspaper only what he reads on its pages, and for the one whose life work is connected with its publication, there will be much that is fascinating in this neat little book."—*Philadelphia Book News.*

### The Meaning and the Method of Life.

A Search for Religion in Biology. By GEO. M GOULD, M A, M D. 12mo, $1 75.

"A genuine biologist's religion is set forth in the book before us; it is truly a religion and no sham. . . . We cannot but grant that the doctrine does truly spring by methods of thought analogous to those of natural philosophy, out of observations of nature. Dr Gould believes in his God without one shade of doubt, and with a fervid joy that would render his book delightful reading even if it were not filled with interesting suggestions, gracefully and strikingly expressed. He really makes his doctrine decidedly attractive "—*New York Evening Post.*

"Philosophic completeness of insight, combined with exact scientific information: the tone is devout and reverential, and the influence of the work is stimulating."—*N. Y. Outlook.*

*** Notes on New Books, a quarterly bulletin, prospectus of the Knickerbocker Nuggets, Heroes, and Story of the Nations Series sent on application.*

Our boys going to the Athletic Field after their day's work—but some get left sometimes.

# THE SIGLAR SCHOOL,

## Newburgh-on-Hudson, N. Y.

You have a little boy whom by and by you expeet to send to college. This is for you; and now is the time to read it, while he is a little boy. I actually propose that you send me that boy at eight.

"What! to prepare for college?"

No; to bring up, to let him grow as he ought to grow, till the time comes when he ought to prepare for college. You think him a baby yet; his mother, especially, calls him her darling and smothers him. His father is too busy to do much for him; couldn't anyhow. Both with the best of intentions. You are doing the best you know how, but you are wasting your boy. American boys are notoriously ill-mannered and backward. Everybody sees it in everybody else's children.

"Do you think my boy is going to leave his mother at eight years of age?"

I think, if he don't, he will lose the good growth of both body and mind that belongs to the age of eight to fifteen; but he will grow. You can't keep a boy from growing; if he don't grow right, he grows wrong; and you probably think he is doing well when he is only growing sappy.

"I don't agree with you. My boy needs a mother's love. I don't approve of straining the mind so young."

You are begging the question. Letting him grow as he ought to grow, and guiding him, helping him, is not straining his mind; it is training both mind and body; doing it right. A mother's love does nothing but harm to a boy when misdirected; when wisely directed, it gives him the soil and culture to grow in and with.

My school is not nearly so good as it might be; there are better in some resp cts, but I know of no other that does the best things for a boy so well. The five best things I can think of for every boy are: (1) to keep him well; (2) happy; (3) growing right, mind and body; (4) getting the use of both, and (5) learning what belongs to his age. Some schools do the softer parts; some do the harder parts. I know of no other that seems to do all five so well. I want to do them still better; I hope to create a demand for better bringing-up of children than can be got in any home.

But I can't argue the question here; I do in my pamphlet. If you want to know what we do with boys and why we do it, send for that pamphlet. You may not agree with it—no harm done. My rate is $600 a year; no extras. We begin Sept. 12. HENRY W. SIGLAR.

# MAYNARD, MERRILL & CO.,

# OLMSTED'S COLLEGE PHILOSOPHY.

## FOURTH REVISION. BY SHELDON.

An Introduction to Natural Philosophy. Designed as a Text-Book in Physics for the Use of Students in College. By DENISON OLMSTED, LL.D., revised by E. S. SNELL, LL.D., and R. G. KIMBALL, Ph.D. *Fourth Revised Edition*, by SAMUEL SHELDON, Ph.D. (Würzburg), Professor of Physics and Electrical Engineering, Polytechnic Institute of Brooklyn. 8vo, pp. xiii., 466. Price, for introduction, $2.50; by mail, $2.75. Copies for examination mailed to Professors upon receipt of Two Dollars.

The Third Revision of Olmsted's Natural Philosophy was published in 1882. Since that date many changes have been made in the technical nomenclature of Physics, many improvements in the methods of presentation of complicated portions of the science have been published by experienced educators, and, above all, the whole subject of Electricity and Magnetism has outgrown its former apparel. For the Fourth Revision the whole book has been carefully gone over, the requisite changes made, and several chapters entirely rewritten.

Many new engravings from drawings made expressly for this edition have been inserted.

The experience of those who have used this Revision since its publication in the autumn of 1891 is proof of its value as a text-book in Physics adapted to the requirements of a college course. As now presented it is believed to contain all that is necessary for this department of a liberal education.

---

From **Prof. V. O. Peterson,** Augustana College (Ill.). Aug. 8, 1893
I have decided to introduce it as a text-book in my classes the coming school year.

From **Prof. J. M. Sullivan,** Centenary College (La.). March 20, 1893
On examining the Fourth Revision I find it so well adapted to the needs of the ordinary college course that I intend to adopt it for the use of next year's classes

From **Prof. Alfred N. Cook,** Amity College (Iowa). Jan. 16, 1893
I believe Sheldon's Olmsted is one of the best books published for college use. The book has not yet been adopted here, but I think we shall do so.

From **Prof. S. H. Miller,** Thiel College (Pa.). July 5, 1893
After an examination of every part I must say that I am exceedingly well pleased with the book.

From **Prof. Theo. Sterling,** Kenyon College (Ohio). June 3, 1893
Its long and successful use by the best teachers demonstrates its value, and its frequent careful revisions have kept it abreast of the sciences of which it treats.

From **Prof. C. J. Rollefson,** St. Olaf's College (Minn.). May 15, 1893
I like it better than any other text-book in Physics that I have examined. I think I shall introduce it next year.

From **Prof. J. M. Hussey,** Western Normal College (Iowa). April 24, 1893
I am much pleased with it. Shall try to use it here next year.

From **Prof. S. J. Saunders,** Hamilton College (N. Y.). April 3, 1893
I am not yet sure that I shall use the Philosophy as a text-book next year; it is the best I have seen yet.

From **Prof. D. J. McAdam,** Washington and Jefferson College (Pa.). April 8, 1893
We already use Sheldon's edition with the Juniors Have just introduced its use in the Sophomore Class.

From **B. Byron Lower,** State Supt Public Schools (Idaho). March 24, 1893
I can assure you that in my judgment as a text-book in Physics there is none its superior or even its equal.

From **Prof. A. R. Whitehill,** West Virginia University. March 20, 1893
I am very much pleased with the work, and may possibly find a place for it in one of my classes next year. It is a good work for the students who have the mathematical training necessary for its use.

From **Prof. S. M. Kirkwood,** Macalester College (Minn.). Feb 27, 1893
It gives me pleasure to state that at the opening of the year Olmsted's College Philosophy was introduced in our course, and proved very satisfactory.

From **Prof. J. F. Eastwood,** Georgetown College (Ky.). Sept. 17, 1892
I have taught several different books on the subject, and like yours better than any other.

From **Prof. W. A. Bartlett,** Tabor College (Iowa). March 20, 1893
From what I have seen of it I believe it is what we want, and shall probably adopt it next year.

From **Prof. Wm. McCracken,** Geneva College (Pa.). Nov. 19, 1892
I am so much pleased with the work that I shall introduce it in my classes this year.

From **Prof. S. G. Jenks,** Kalamazoo College (Miss.). Sept. 7, 1892
I have decided to use it in my class this present year. This is equivalent to saying it is the best book I find for a general college course.

From **Dr. Geo. M. Phelps,** State Normal School (Pa.). March 22, 1893
I believe that we shall presently be able to use it here.

From **Prof. J. F. Sellers,** Mississippi College. Sept. 23, 1893
It is just the book I need for my work.

From **Prof. T. J. Deupree,** S. W. Bapt. University (Tenn.). Aug. 12, 1893
I am very much pleased with Sheldon's Olmsted.

From **Prof. H. J. Clements,** New Orleans University (La.). June 20, 1893
I am convinced of the merits of this revision, and in many respects its superiority over any other.

From **Prof. W. S. Hartshorn,** Bates College (Me.). May 31, 1892
I have been using Sheldon's Revision during the past year, and am much pleased with it.

From **Prof. L. A. Johnson,** Trinity University (Tex.). July 3, 1892
The Physics has been adopted as the text-book in the college course. It suits us better than anything else we have seen.

From **Prof. Geo. G. Hitchcock,** Washington Ag. College (W.). July 21, 1892
I am greatly pleased with it, and glad that it maintains its high standard of excellence. I shall introduce it soon.

From **Prof. B. P. Gaillard,** No. Ga. Ag. College (Ga.). June 12, 1892
I adopted it and used it as a text-book in my Junior Class. I am very much pleased with it. It suits my purpose better than any other book on that subject I am acquainted with.

From **Prof. M. J. Elrod,** Illinois Wesleyan University (Ill.) Jan. 13, 1892
I thank you for it, and think I shall be able to plan my work so as to use it next year.

From **Prof. W. S. Ryland,** Bethel College (Ky.). May 28, 1892
I am using it as a text-book for my Senior Class. All things considered, it is the best for my use I know of.

From **Prof. L. C. Haynes,** Greenville and Tusculum College (Tenn.) June 10, 1892
We used Sheldon's Olmsted with our class last year, and with great satisfaction to both teacher and class. The work of revision has been well done. Electricity and Magnetism, the part rewritten by Prof. Sheldon, deserves special mention.

From **Prof. J. S. Dawson,** Georgetown College (D. C.) May 28, 1892
I have examined the new edition, and have proposed to the President and Directors of the College to use it.

From **Prof. J. H. Montgomery,** Allegheny College (Pa.). April 11, 1892
I have received the copy which you sent me, and think I will introduce it next year into my classes.

From **Prof. J. T. Lovewell,** Washburn College (Kans.). Feb. 20, 1892
I am so well pleased with it that I shall probably introduce it into my next class.

From **Prof. J. P. Looney,** Portland University (Ore.) Feb. 13, 1892
I have examined it thoroughly. I feel safe in saying it is the best work on the subject I have seen. I shall use it in the University.

From **Prof. W. W. Hamilton,** Bethel College (Tenn.). Jan. 16, 1892
I like it so that I expect to put it in our own course.

From **Prof. C. E. Barr,** Albion College (Mich.). Jan. 13, 1892
The book is now, to my mind, the most desirable in its general method of treatment of any before the public.

From **Prof. W. W. Hooper,** U. S. Grant Univ., Chattanooga (Tenn.). Jan. 9, 1892
The copy of Sheldon's Revision was duly received and examined. I formed a class in it last fall and am well pleased with the work.

From **Prof. J. C. Adair,** Tarkio College (Mo.). Dec. 29, 1891
I think it an admirable work. If we can arrange so as to have an introductory course I will use it in my higher class work.

From **Prof. J. T. Coleman,** S. C. Military Academy. Oct. 31, 1891
Olmsted's College Philosophy, edited by Sheldon, is, in my opinion, a representative college text-book. It is enough for the student to learn, and, when supplemented by active practice in the laboratory, will be an ideal course.

From **Prof. Peter Engel,** St. John's University (Minn.). Nov. 27, 1891
I have always considered Olmsted's Philosophy an excellent text-book for students sufficiently advanced in mathematics, and think this edition in several respects superior to the former ones.

From **Prof. Isaac S. Hopkins,** Ga. School of Technology (Ga.). Nov. 25, 1891
I think enough of Olmsted's Philosophy to use it with my classes. For clearness of statement, method of treatment, discretion of selection in the mass of material I know nothing equal to it as a college text-book.

From **Prof. A. W. Kelley,** Battle Creek College (Mich.). Nov. 16, 1891
I have received the copy and am well pleased with it. We will order the new edition before we take up the work again.

From **Prof. Charles Fairman,** Shurtleff College (Ill.). Oct. 30, 1891
I find the alterations very greatly increase the value of the work for educational purposes. I shall probably use Sheldon's Revision as a text-book next year.

From **Prof. B. S. Winchester,** Whitman College (Wash.). Oct. 31, 1891
We are using Dr. Sheldon's Revision and are much pleased with it.

From **Prof. M. L. Lipscomb,** University of the State of Mo. (Mo.). Nov. 23, 1891
I have been using Sheldon's Revision in my Freshman Class for twelve weeks, and am delighted with it. It is just the book I have been in need of for a long time. I heartily commend it as a work of high grade on general physics.

From **Prof. G. H. Colton,** Hiram College (Ohio), Nov 7, 1891
I find that the revision has been careful and thorough The result is a most excellent college text-book. The clearness and conciseness of the original work have not been sacrificed, while the matter added and the rewritten paragraphs have placed the work fully abreast of the times,

From **Prof. A. A. Bennett,** Iowa College (Iowa). Nov. 14, 1891
The Revision is a great improvement over the preceding edition, and brings it up to the present condition of the science. In my opinion it is the best college text-book, taking into account its limits, that is published.

From **Prof. G. W. Shaw,** State Ag. College (Ore.). Nov. 16, 1891
After a critical examination of the book I am satisfied of its superior excellence. For the grade of work for which it is designed I do not know of its equal for the class-room.

# NEW TEXT-BOOKS FOR SCHOOLS

*Published by HARPER & BROTHERS.*

## The Foundations of Rhetoric.

PRICE, $1.00. BY MAIL, $1.10.

THE FOUNDATIONS OF RHETORIC, by Prof. Adams Sherman Hill of Harvard University, is a model text-book for the use of the student or the private learner in the study of the English language. A writer in the *Cincinnati Commercial Gazette* commends it as follows: "I wish I could persuade every one who writes for the press or who delivers public addresses to begin at once the study of *The Foundations of Rhetoric*. . . . I recommend it to experienced writers as well as to beginners; to the learned not less than to those of limited education. . . . I invite the attention of all who desire to acquire the art of writing English correctly, and of all who desire to preserve the ability to write it correctly, to this invaluable work." A sample copy for examination will be sent postpaid to any instructor on receipt of 80 cents.

## The Principles of Ethics.

PRICE, $1.75. BY MAIL, $1.92.

This work, by Prof. Borden P. Bowne of the Boston University, is an introduction to fundamental moral ideas and principles rather than a detailed discussion of specific duties and virtues. It is an ideal text-book of Moral Philosophy, and bears upon its pages the impress of a true scholar and metaphysician. It has already been introduced into Smith College, Northampton, Mass.; Wesleyan University, Middletown, Conn.; DePauw University, Greencastle, Ind.; Ohio Wesleyan University, and many other leading institutions. A sample copy will be sent postpaid to any instructor wishing it for examination on receipt of $1.46.

## The Elements of Deductive Logic.

PRICE, $ .90. BY MAIL, $1.00.

This work, by Prof. Noah K. Davis of the University of Virginia, is designed as a text-book for undergraduates. It comprises the body of approved logical doctrine, so that in a limited time a student may acquire a rounded knowledge of the fundamental forms of thought and be prepared for the pursuit of the philosophical sciences. "In an experience of more than thirty years as a student of logic and as a teacher of the subject to college classes, I have not before seen a treatise so valuable as this."—*J. T. Murfee, Supt. Marion Military Institute, Marion, Ala.* A sample copy for examination will be sent, postpaid, to any instructor on receipt of 75 cents.

## Supplementary Reading.

PRICE, $ .30 EACH. BY MAIL, $ .33.

The publication of HARPER'S SCHOOL CLASSICS places within the reach of teachers of English Literature a number of the best authors in a convenient form for class use. All the numbers are bound in cloth in uniform style, and are printed in clear type on good paper. The following volumes have thus far been published, many of them annotated for class purposes, and others are soon to follow: Lawrence's PRIMER OF AMERICAN LITERATURE, Lawrence's ENGLISH LITERATURE PRIMER—Romance Period, Lawrence's ENGLISH LITERATURE PRIMER—Classical Period, Lawrence's ENGLISH LITERATURE PRIMER—Modern Period, Conant's PRIMER OF GERMAN LITERATURE, Conant's PRIMER OF SPANISH LITERATURE, Macaulay's LIFE AND WRITINGS OF ADDISON, Macaulay's LORD CLIVE, Macaulay's WILLIAM PITT, Macaulay's JOHN HAMPDEN–LORD BURLEIGH, Macaulay's MACHIAVELLI–WALPOLE, Knatchbull-Hugessen's OLIVER CROMWELL, Addison's SIR ROGER DE COVERLEY, Cowper's TASK, and Eginhard's LIFE OF CHARLEMAGNE. The following volumes will be ready in a few weeks: Saintsbury's PRIMER OF FRENCH LITERATURE, AMERICAN BALLADS, Macaulay's WARREN HASTINGS, Macaulay's SAMUEL JOHNSON, LL.D., Macaulay's LORD BACON, Macaulay's FREDERICK THE GREAT, Charles Lamb's ADVENTURES OF ULYSSES, Thackeray's FOUR GEORGES, Besant's GASPARD DE COLIGNY (Marquis de Chatillon), TALES FROM THE ODYSSEY, Thackeray's ENGLISH HUMORISTS—Vols. I. and II., TALES FROM EURIPIDES, Whipple's RUFUS CHOATE.

*The above books may be had of all booksellers, or will be sent by the publishers on receipt of price as quoted. Harper's Illustrated Bulletin of School and College Text-Books, Numbers One, Two, and Three, will be sent free to any address on request.*

**HARPER & BROTHERS, Publishers, Franklin Square, New York.**

# Macmillan & Co.'s Announcements

OF

# NEW BOOKS BY ENGLISH AUTHORS

TO BE PUBLISHED

## DURING THE AUTUMN OF 1893.

*By MISS L. N. BADENOCK.*

**The Romance of the Insect World.**

With Illustrations. Crown 8vo.

*By Hon. JAMES BRYCE, M.P.*

**The American Commonwealth.**

An entirely new and revised edition.
VOL I. NOW READY. VOL. II. SHORTLY.

*By W. BOYD CARPENTER, D.D., D.C.L., Bishop of Ripon.*

**Fancies by the Way.**

*By LEWIS CARROLL.*

**Sylvie and Bruno.**

SECOND PART. With illustrations by HARRY FURNISS.

*By CHAUCER.*

**Chaucer's Canterbury Tales.**

Edited by A. W. POLLARD. 2 Vols.

*By EDWARD H. COOPER.*

**Richard, Lord Stratton.**

A NOVEL.

*By HENRY CRAIK, C.B., LL.D.,*

**English Prose Writers.**

Passages of English Prose selected on the Plan of "Ward's English Poets," by various Writers, with Short Introductions, edited with a general Introduction by HENRY CRAIK.
In 5 volumes.
VOL. I. NOW READY. VOL. II. IN THE PRESS.

*By ADOLPH ERMAN.*

**Life in Ancient Egypt.**

Described by ADOLPH ERMAN. Translated by H. M. TIRARD, with numerous Illustrations and Maps. Super Royal 8vo.

*By Dr. MICHAEL FOSTER, M.A., M.D., LL.D., F.R.S.*

**A Text-Book of Physiology.**

PART I Sixth Edition. Revised. IN THE PRESS.

*By Dr. MICHAEL FOSTER and Dr. L. E. SHORE.*

**Physiology for Beginners.**

WITH ILLUSTRATIONS.

*By ALICE STOPFORD GREEN.*

**The English Town in the Fifteenth Century.**

2 vols. 8vo.

*By FREDERICK GREENWOOD.*

**The Lover's Dictionary.**

*By P. GILES, M.A.*

Fellow of Gonville and Caius College, Reader in Philology in the University, Cambridge.

**A Short Manual of Philology for Classical Students.**

*** Intended to act as an introduction to the methods and conclusions of recent Philology.

While giving their fair share of treatment to questions of Sound and Inflexion in a form suitable for beginners, this book will differ from others of the same class in devoting a large amount of attention to general principles, and in including with the Inflexion a short account of the comparative Syntax of the Noun and the Verb.

*By Prof. HEINRICH HERTZ of Bonn.*

**Researches on the Propagation of Electrical Force.**

Authorized translation by Professor D. E. JONES, B.Sc. Illustrated, 8vo.

*Illustrated by CHARLES E. BROCK.*

**The Humorous Poems of Thomas Hood.**

With a Preface by ALFRED AINGER, and 130 illustrations by CHARLES E. BROCK. Crown 8vo, cloth gilt, or edges uncut, $2.00.

*** Also an Édition de Luxe, Super Royal 8vo, hand-made paper.

*Illustrated by GEORGE E. BOUGHTON.*

**Rip Van Winkle, and the Legend of Sleepy Hollow.**

*By WASHINGTON IRVING.*

With 50 illustrations, and a Preface by GEORGE H. BOUGHTON, A.R.A. Crown 8vo, cloth gilt, or edges uncut, $2.00.

*** Also an Édition de Luxe, Super Royal 8vo, hand-made paper, cuts printed on Japan paper.

*By WILLIAM A. KNIGHT, LL.D.,*

Professor of Moral Philosophy at St. Andrews.

**Aspects of Theism.**

*Illustrated by HUGH THOMSON.*

**Our Village.**

By MARY RUSSELL MITFORD.
With a preface by ANNE THACKERAY RITCHIE, and 100 illustrations by HUGH THOMSON. Crown 8vo, cloth gilt, or edges uncut, $2.00.

*** Also an Édition de Luxe, limited, Super Royal 8vo, hand-made paper, uniform with "Cranford."

*By MRS. MOLESWORTH.*

**Mary.**

With illustrations by LESLIE BROOKE.

*By Prof. JOHN SHIELD NICHOLSON.*

**A History of Political Economy.**

In 2 vols 8vo. IN THE PRESS.

*By SAMUEL PEPYS, F.R.S.*

**The Diary of Samuel Pepys, F.R.S.**

With LORD BRAYBROOKE'S Notes. Edited, with Additions, by HENRY B. WHEATLEY, F.S.A. VOL. I., $1 50. NOW READY. VOL. II., IN THE PRESS.

*** Also a large-paper limited edition, $5 00. This edition sold only in sets.

*By EDMUND SHERIDAN PURCELL,*

Member of the Roman Academy of Letters

**The Life of Henry Edward Manning,**

CARDINAL ARCHBISHOP OF WESTMINSTER.
2 vols, Demy 8vo, with portraits.

*By SIR HENRY ROSCOE, LL.D., F.R.S.*

**Inorganic Chemistry for Beginners.**

*By CHRISTINA G. ROSSETTI.*

**Goblin Market.**

With Eighteen Page Illustrations and other decorations by LAWRENCE HOUSMAN.

*** Also an Édition de Luxe, Super Royal 8vo hand-made paper.

*By ALFRED LORD TENNYSON.*

**Completion of the Library Edition of the Works of Tennyson.**

3 VOLS.

*** These three volumes with the seven volumes already published complete the Library Edition of Lord Tennyson's works.

*** Also an Édition de Luxe on hand-made paper.

*By WILLIAM WATSON.*

**Poems.**

A new edition, revised and enlarged, with a new photogravure portrait from a recent drawing.

*Book Reviews, a Monthly Journal devoted to New and Current Publications. Price, 5 cents. Yearly Subscription, 50 cents.*

NEW YORK, THURSDAY, AUGUST 31, 1893.

## The Week.

THE discussion of the silver question in the House closed in a most creditable manner on Saturday, the speeches by Reed, Cockran, and Wilson being especially able and forcible. The fortnight's debate had greatly strengthened the cause of repeal of the Purchase Act, and the free-coinage men lost ground every day. The passage of the Repeal Bill by the House on Monday had been assured for some time, and the only curiosity was as to the size of the majority on that side. Bland himself admits that "the bill will pass the Senate without much delay." Indeed, he goes so far as to say that he "would not be astonished to see it slip through without fric tion almost any day." He explains that "the same pressure is being brought to bear upon the Senate that has proved so effective in the House, and the result is likely to be the same." Mr. Bland is quite right. The "pressure" in question is that of the public opinion of the United States, and it must prove as irresistible with the Senate as with the House.

---

Mr. Bourke Cockran's speech of Saturday in the House was very effective in his analysis of the "debtor and creditor" argument in the free-coinage controversy. No single point raised by the friends of silver has in the past obtained greater hold on the minds of ignorant and credulous constituents. In listening, during the long years of "cheap money" agitation, to the fulminations of Congressional and platform orators against the wrong of forcing debtors to pay in the money in which their debts were originally contracted, one might suppose that the country was crowded with weak borrowers, every one of them ground down under the exactions of the capitalists. Wall Street in particular has been selected as the type of such exaction, and it is safe to say that the uninstructed citizens of the West have believed for years that Wall Street is one vast hive of creditors, to whom the nation as a whole owes money out of which the hardest terms are wrung. What is the truth? Mr. Cockran demonstrated clearly that whoever does constitute the debtor class, the laboring man does not. By the nature of his occupation, he is a constant creditor. If the money in which he pays be debased, there surely can result no gain to him. Nor is this all. The savings bank is an institution designed to make the laboring man, to the extent of his money savings, an actual lender. Last week there was a sudden contraction in the Wall Street loans; caused by what? Simply by the withdrawal, present or prospective, of small deposit funds from savings banks, such process making necessary the calling in of the same money in bulk from Wall Street debtors. Nothing could be more clear than this. But the question may be carried further. Who are the heaviest debtors of the country and especially the debtors whose obligations fixed on long time, would be peculiarly affected by a debasement of the standard of value? Has any free-coinage orator ever fairly answered this? Here are the figures. The railway corporations, which in the popular mind are often lumped in haphazard with the "money sharks" of Wall Street, are debtors in the stupendous sum of $6,168,378,481, all of which amount is due and payable at stipulated dates. The great manufacturing corporations would add, by their gross indebtedness, probably 25 per cent. to this huge total. A few essential facts of this character, given proper publicity, would disperse in a moment the mists that so long have overhung the popular intelligence.

---

Among the speeches made in the House on the silver question, we are glad to signalize one that was in favor of the single gold standard as being the best and the fairest monetary system attainable, and the one most conducive to the prosperity of nations. The author of this speech was Mr. Tom L. Johnson of Ohio. Mr. Johnson is perhaps the one member of the House who most nearly represents the Labor party. His first nomination to Congress came from the labor unions of Cleveland, and although he is now classified as a Democrat in the party divisions of the day, his political pedigree is derived from the workingmen's organizations. Mr. Johnson has a refreshing habit of frankness. Accordingly, when Mr. Snodgrass of Tennessee, with wonder and astonishment, asked Mr. Johnson whether he really meant that the country should be "*reduced* to a single gold standard," Mr. Johnson replied that the country was now on that standard and had been so ever since 1834, except during the war and the greenback era, and that he (Johnson) was opposed to a change. "You offer no reason for it," he continued. "You tell us that prices will go up. What of it? We are not here to deal with prices. We are here to maintain a unit (or, if it were an original proposition, to select one) which will operate honestly as between these two conflicting classes." Mr. Johnson's speech was logical and excellent from beginning to end, and was the only one that we have observed which pronounced in favor of the single gold standard as against all competing devices. Mr. Johnson is still a young man. Within a few years he will find the country on his side with substantial unanimity.

The past three years have wrought a change, amounting to a revolution, in the attitude of the Democratic party on the silver question. Its extent may best be measured by comparing the vote of Monday on the 16 to 1 ratio with the votes on the same ratio in 1890 and 1892. On June 5, 1890, 102 Democrats went on record in favor of Bland's free-coinage amendment, and only 13 against it. On March 24, 1892, when the vote on the same bill was a tie in the House, 81 Democrats voted against it, 9 of this number having voted for free coinage two years before. On July 13, 1892, when Bland asked for an order to take up the Free-Coinage Bill which had passed the Senate, there were 94 Democrats against it, showing 8 more individual conversions to the cause of sound money since the 24th of March previous. On Monday for the first time an actual majority of Democrats was against free coinage, 114 voting against Bland to 100 for him; 20 further cases of individual changes having occurred since July 13, 1892. To sum up the whole, three years of discussion and the firm stand of the party's President have raised the Democratic vote against free coinage from 13 to 114, and have brought about a reversal of position in 37 Democratic Congressmen who have voted on the question in the last three Congresses.

---

The six youngest States of the Union, in the Northwest—the two Dakotas, Montana, Idaho, Wyoming, and Washington—and Nevada, which has a smaller population (only 45,761) than any one of these six, were solid on the silver side in Monday's vote, except that North Dakota's one Representative was for repeal, and one of the two from Washington. Their attitude counts for little in the House, since the seven States have only nine Representatives in all out of a total of 356 in the body; but it is a very different thing in the Senate. In that body these seven thinly settled States have almost one-sixth of all the seats filled by the forty-four States in the Union, instead of only about one-fortieth, as in the House; or would have, but for the three vacancies caused by the failure of Legislatures to elect in Montana, Wyoming, and Washington, and the refusal of the Senate to admit the appointees of the Governors. As it is, there will be eighty-five Senators qualified to vote upon the question of repeal, and, besides those from the six newest States, and Nevada, and Colorado, there will hardly be twenty-five on the silver side.

---

Senator Hoar gave the silverites a resounding blow on Tuesday week by presenting to the Senate a letter, written by Ernest Seyd to Hon. Samuel Hooper in 1872, ar-

guing strongly *against* that section of the Coinage Act then pending which dropped the silver dollar from the list of coins. In other words, this letter was an argument very much in the strain and tenor of a speech by Mr. Bland or Senator Stewart, except that it contained fewer errors. Mr. Seyd's letter was called out by Mr. Hooper, who had caused a copy of the Coinage Bill to be sent to him as an expert for his criticism. Mr. Seyd had published a work entitled 'Bullion and the Foreign Exchanges,' which contained a vast deal of information of a technical sort, and which led Mr. Hooper and the Committee on Coinage of that day to take him into consultation as to these matters of detail. Mr. Seyd replied, under date of London, February 17, 1872, in a letter of thirty foolscap pages, going over the bill in all its minutiæ. When he came to section 15 (the one which dropped the silver dollar from the list of coins), he argued strongly against it on the grounds usually taken by the bimetallists. Of course the object of Mr. Hoar in bringing out and publishing this letter is to nail the falsehood that has been so many times repeated in Congress, and on the stump, and in public platforms, that Mr. Seyd came to this country in 1872 with a corruption fund raised in London to bribe Congressmen to vote for the demonetization of silver. This lie was repeated at Chicago the other day in one of the preambles of the silverite platform, in these words:

"Whereas, The debates in Congress show that the parentage of the measure was in part ascribed by friends of the bill to one Ernest Seyd, a London banker, who, it is claimed, was sent over to Washington by the moneyed classes of the Old World to secure its passage by secret and corrupt means," etc.

It has been repeatedly shown by the other writings of Seyd that he was a bimetallist, but it has never till now been shown exactly what view he took of our Coinage Act of 1873. The letter now published ought to satisfy even Bland and Stewart that they have been sacrificing one of their own allies and friends all these years, besides putting an undeserved stigma on the reputation of an honest man. But we doubt whether either of them will ever do justice to the memory of Ernest Seyd.

---

The decision of the Senate in the Lee Mantle case puts an end to a constitutional question in which precedents could be cited on both sides, and about which able lawyers differed. The result is to establish a precedent, which will probably not be called in question hereafter, that the failure of a Legislature to elect does not create a "vacancy" in the sense intended by the Constitution when it gives the Governor power to appoint a Senator to fill a vacancy. This must now be taken to be good law, and it also must be admitted to be good sense. It is a Legislature's business to elect a Senator, and it is well to fix on it the responsibility for leaving its State unrepresented in the Senate. The decision will have a distinct tendency to discourage partisan squabbles and personal intrigues in Senatorial elections, persisted in for the purpose of throwing the appointment into the hands of the Governor, and so, in many cases, giving victory to a candidate who could not have won in the usual way. It speaks well for the integrity of the Southern free-silver Senators who voted against Mantle, that they did not allow their desire to swell the free-silver vote in the Senate to override their convictions on the law of the case. How knotty a constitutional point was involved may be inferred from the fact that the two eminent constitutional lawyers who represent New York in the Senate took opposite sides. Senator Peffer's easy waiving of his constitutional convictions was taken as a tribute to free silver, but was it not really a tribute to Hill? The latter voted to admit the three free-silver Senators, and how could Peffer do less? The alliance of the two is thus shown to be firmly cemented, and the fact that Peffer follows Hill's lead as often as Hill follows Peffer's.

---

The resolution introduced by Senator Peffer of Kansas and supported by Senator Hill of New York asks the Secretary of the Treasury to inform the Senate "whether, and in what respect, the national banks, or any of them, in the cities of Boston, New York, and Philadelphia, are being now conducted in violation of law; whether said banks are paying depositors' checks promptly in lawful money, and whether said banks, or any of them, are demanding rates of interest higher than those provided by law for the loan of money or in discounting notes and bills." The apparent object of the resolution is to shut up all the national banks in the country, to put them into the hands of receivers, and to have their assets distributed to their depositors and other creditors in the course of five or ten years. This policy would require the forced payment under legal proceedings of all the bills receivable of the bank. A receiver would have no power to grant extensions, or to do anything but wind up the business, although the Comptroller of the Currency might exercise his discretion to allow a bank to reopen if it could show a fair promise of meeting its obligations on demand. Section 5191 of the Revised Statutes provides that the banks shall keep a certain amount of reserve as against deposits, and provides that whenever the reserve falls below the percentage fixed by the law, the Comptroller *may* notify the bank to make it good within thirty days, and that if the bank fails to do so, then the Comptroller *may*, with the concurrence of the Secretary of the Treasury, appoint a receiver to wind up the business of the bank. This is the only way in which the authorities at Washington can take original jurisdiction of a bank's failure to pay its deposits on demand, and even here it is left to the discretion first of the Comptroller, and afterwards of the Secretary, to take extreme measures or not. Hence if the Peffer resolution should be adopted by the Senate, it would be of no direct effect. But it might have a very serious indirect effect. It might alarm the country and lead to a race of diligence among depositors. In other words, it might lead to runs on the banks generally.

---

Gov. Boies of Iowa seems to have secured much the same sort of hold upon the people of Iowa as Gov. Russell upon those of Massachusetts, and his renomination by acclamation in last week's Convention, despite his desire to retire at the end of his second term, was made in response to a manifest popular demand. The platform of the Convention shows a distinct gain in the party on the financial question. In the last Gubernatorial campaign the Iowa Democrats "demanded the free coinage of silver, and that it be made a full legal tender for all debts, public and private." Now they "demand the immediate repeal of the silver-purchase clause of the Sherman Act," and leave the question of further coinage of silver to the future. Gov. Boies is undoubtedly the strongest candidate whom the Democrats could nominate, and it is possible that he may again carry the State. Much depends upon whether the contest turns chiefly upon State or upon national issues, and much also upon the development of the revolt already started in the Republican party against the policy adopted by the recent State Convention of surrendering prohibition.

---

Some of the Republican organs, the New York *Tribune* among them, are trying to raise the sectional issue over the constitution of the House committees, because a majority of the chairmanships go to members from the South. The reason is not simply because a majority of the Democratic members come from the South, but also because so large a proportion of the Southern Representatives are old members, who thus have superior claims over men with only brief terms of service. The same sort of complaint used to be heard from Western Republicans against the great influence of New England in the committees of the Senate, which was due to her custom of reëlecting Senators term after term, until mere length of service entitled them to priority. The real question is not whether Illinois or West Virginia gets the Chairmanship of the Ways and Means, or Indiana or Texas that of Appropriations, but whether Wilson is a better choice than Springer for the one, and Sayres better than Holman for the other. As even the *Tribune* does not dispute either of these propositions, it is obvious that no partisan advantage can be secured by this weak attempt to raise the sectional issue.

We find in the *Manufacturers' Record*, a protectionist weekly of Baltimore, an amusing exposure of one batch of the high-tariff "statistics" with which Mr. Robert P. Porter, late Superintendent of the Census, is stuffing the daily issues of the *Press* of this city. He is in the habit of placing at the head of his editorial columns what he calls "Tariff Pictures," and it is upon one of these that the *Manufacturers' Record* pounces. The text of the picture was as follows: "The first six months of 1892 saw twenty-one new textile factories started in the Southern States. The corresponding period of 1893, with free trade in prospect, saw only nine." The *Record* asks "where the *Press* obtained these figures," which is a totally superfluous question. Porter made them, as he is in the habit of doing when he needs a new "picture." That he did not go to any authoritative source for them is shown by the *Record*, which says that instead of twenty-one new textile companies having been started in the South in the first half of 1892, the true number was thirty-one, and that instead of only nine in the first half of 1893 the true number was forty-eight. It gives the name and location of each of the forty-eight, and says of Porter's figures that they are "entirely absurd," and that the "textile industries of the South are not suffering from free-trade prospects or any other cause." It ventures to hope that "the *Press* will be kind enough to correct its unfortunate mistake and at the same time reveal the source of its misinformation." The idea! How could the "Tariff Picture" business be kept up on such a ridiculous system as that?

---

On May 12, 1893, the cruiser *Atlanta* sailed from New York for Nicaragua, under command of Capt. Higginson. On May 16 the Secretary of the Navy issued an order detaching Capt. Higginson from his ship, on the ground that he had been dilatory in putting to sea, and that he had reported the *Atlanta* to be in need of repairs, although it was known at Washington that she was in good condition and fit to "go round the world." The charge of delay in coaling and provisioning the ship was at once disproved by the testimony of the Brooklyn Navy-yard officials, who said the work had been done with all possible speed. The *Atlanta* has since returned to this country and been examined by a board of inspection. They report her to have long been in a "deplorable and disgraceful condition," and state that the "accumulations of rust and other material that threatened her usefulness" had been concealed from the Secretary of the Navy, former boards of inspection having done their work in a "purely perfunctory" manner.

---

The outgivings of the News Bureau of the Navy Department, in view of these revelations, are highly instructive. Secretary Herbert is thoroughly indignant at the way he has been misled. The publication of the report on the *Atlanta* was directed by him "as a partial censure of officers derelict in their duties," and there are strong hints of a court martial for some of them. But there is not a syllable about the outrage inflicted on Capt. Higginson for asserting in May what the Secretary has had proved to him in August to have been the exact truth. There is not a word in confession of the fact that the information the Department relied upon when it disciplined Capt. Higginson so severely was, in fact, entirely untrustworthy, nor is there any suggestion of an apology and amends to the wronged officer. To make such apology and amends would be the way one gentleman would treat another, but that is not the way the Navy Department treats the men whom it puts in command of American men-of-war. They have to be condemned unheard, are denied a public inquiry after condemnation, and have to depend for service and salary and reputation upon the whim of their superior officer as absolutely as if they were under the Turkish Government. We trust, however, that Secretary Herbert will not stop with chastising the men who deceived him, but will yet exonerate, as openly as he disgraced, on the strength of inaccurate information, an officer whose only fault was telling the truth about the condition of his ship.

---

Mr. Blount has returned from Honolulu and laid his report on Hawaiian affairs before the State Department, having nothing to say to the newspapers. Meanwhile, Japan has supplanted England as a bugbear to frighten the American people into annexing Hawaii. Some time ago a clerical writer in the *Independent* informed us that if the United States did not annex Hawaii, Japan would do so, and since then there have been various rumors and rumblings about the intentions and machinations of the Japanese in the Islands. All of these have collapsed on investigation, and there is no evidence that Japan is less indifferent to the political fate of Hawaii than is Great Britain. Yet there is no doubt that she has one substantial grievance against the Hawaiian Government, if she chose to urge it. In 1871 she concluded a treaty with Hawaii, under which her citizens were guaranteed "the same privileges as may have been, or may hereafter be, granted to the citizens or subjects of any other nation." Yet by the amended Hawaiian Constitution of 1887 the right of suffrage was bestowed on "male residents of Hawaiian, American, or European birth," but not of Japanese birth, although Japanese had previously exercised the franchise and were certainly as much entitled to it, under their treaty, as were Europeans. It is needless to point out what would have happened had such a discrimination been made against Americans.

The Pope took occasion, shortly before the French general election, to reaffirm his wish that the Catholics of France should accept the republic. In a letter to the Cardinal Archbishop of Bordeaux, published ten days before the election took place, he greatly disapproved of the audacious conduct of certain men, who, calling themselves Catholics and boasting of their attachment to the religion of their fathers, were violently attacking the leaders of the Church in France, and even the Supreme Pontiff, all for the sake of party success and in opposition to the peace of the country. This was aimed pretty straight at the Royalists, who had to suffer another blow from the church authorities in the shape of a pastoral letter sent to all the churches in Paris by Cardinal Richard on August 13, ordering prayers for the country, on occasion of the approaching elections, and saying: "The sons of the Church will listen to the voice of the Sovereign Pontiff directing them to accept without reservation, and with the perfect loyalty which becomes a Christian, our existing institutions." The Royalists well know whom to thank for the heavy losses they suffered on August 20.

---

Like the United States, Italy is afflicted with a dearth of currency, although in her case it is to be feared that the Government is upon the verge of insolvency, while in ours the trouble is not due to inability to meet our obligations. A well-known house in Milan has gone so far as to issue money upon its own account, stamping its name upon coins of base metal with the value at which they are redeemable. These coins have been paid to the employees of the house, and the tradesmen of the city have generally accepted them. The small silver coin of Italy, it seems, has been exported to a great extent to France, just as our dimes and quarters withdrew to Canada when the stress of the civil war induced our Government to give up specie payments. At Milan, also, the expedient of making checks drawn upon the banks do service as money in paying wages, with which we are becoming familiar, seems to have been tried with success. Another device suggested is that of cutting notes for ten francs and five francs into quarters, but this is a counsel of despair. Equally futile is the attempt to keep the precious metals in the country by punishing the men who make a trade of exporting coins to France and Switzerland. The increase of the bronze coinage and the issue of one-franc paper notes will be to a certain extent effective. Having no intrinsic value, they will not be exported, but they will, on the other hand, expel from circulation what silver coin is still left. The financial outlook is extremely bad, and very radical changes must be made in the policy of the Government before it can improve.

### *EXIT SILVER.*

THE overwhelming majority by which the Silver-Purchase Law was repealed in the House, a majority of more than two to one, is indicative of the movement of public opinion during the present year, and especially during the past two months. If there ever was any doubt about the ultimate passage of the bill in the Senate, the impressive majority in the House would remove it. But in fact there never was a doubt about the passage of the bill after the President had called Congress together in extraordinary session and sent in his admirable message on the public finances. The victory is in one sense a victory for Mr. Cleveland, but in a larger sense it is a victory of the people over a plausible and widespread delusion. To gain this victory has cost them, in their joint and corporate capacity, about four hundred million dollars. The delusion has cost many individuals their entire fortunes through the recent panic. It has brought poverty and desolation temporarily upon the silver-mining States. It is doubtful if the law has been of benefit to any human being, since it is doubtful whether the artificial demand of our Government for silver bullion has not been overbalanced by the lessened demand of other governments and peoples, who have seen from the beginning that this artificial demand must some day come to an end with disastrous results. Fortunately, the country can afford to lose four or five hundred million dollars. It lost ten times that sum (North and South together) during the war, and yet recovered in a surprisingly short space of time.

There will probably be some who will say, with Mr. Bland, that they intend to keep up the fight. It makes little difference what they do. They were stronger on Monday than they will ever be again. They have had their Waterloo, and they are now going to their St Helena. There was a certain plausibility in the buying and coining of silver on Government account. It had the appearance of adding to the supply of money, and that is always attractive to the multitude, who are not accustomed to close reasoning and are not skilled in detecting half-truths. But all that delusion has passed away. The great majority of the common people can see now that the speedy and regular exchange of property—of goods for goods, of service for service—depends upon confidence in the standard of value, and that when this confidence is undermined the whole fabric of industry is shaken. This lesson has been learned sufficiently for the present generation. We have really been on the gold standard all the time. We have been there *de jure* as well as *de facto*, but there has been a dispute as to whether we should remain there. That dispute has been settled in favor of the gold standard, and nobody will be able in our time to reopen the question.

The effects of this vote on the business of the country will be healing and restorative. Those who are actually down will not immediately get on their feet. There has been too much dislocation of machinery to put all in working order again at once. But we anticipate a much speedier revival and return to normal conditions than has ever been observed after a panic as severe and widespread as this has been. There was some cause for panic conditions aside from lack of confidence in the standard of value, but it was not sufficient, in our judgment, to produce a panic in which the banks would be obliged to club their resources in the form of loan certificates, still less to cause a premium on currency over bankable funds. We now look for the early disappearance of this premium, which will be evidence of the cessation of hoarding.

We must not shut our eyes, however, to the fact that the revenues of the Government have fallen off heavily, while its expenditures remain the same as before. This is the explanation of the sinking of the Treasury gold reserve at a time when we are not exporting gold, but on the contrary importing it largely. It means that the Treasury has no available balance except the gold reserve, and that the difference between daily income and outgo is necessarily taken from this reserve. But, with the Silver-Purchase Act out of the way, this will not be a cause for alarm. The Government will have to borrow until a balance is established in the budget, but its credit will now be good. All the bonds that it issues will necessarily be gold bonds, whether so specified or not.

### *THE OPPOSITION IN ENGLAND.*

IT is inevitable under any form of popular government that there should be incessant pandering to the electors. What we call party government is merely government by a combination of men who yield some of their convictions for the sake of enforcing others. Under this necessity only men of great wisdom and sturdy honesty can successfully maintain their independence. To use a physical metaphor, they may be said to be of such mass as to cause others to gravitate towards them, while smaller men yield to the attraction of others. The common run of politicians are incapable of conceiving any enlightened and comprehensive policy and working steadily towards its attainment. They are concerned above all things to find out what the people want, and to appear to anticipate their wishes. If any considerable number of the American people were to declare that the Government ought to stop the earth from turning towards the east and set it spinning towards the west, there is little doubt that the platforms of both parties would very soon contain planks expressing profound respect and friendliness for westward rotation, and declaring the party intention to be to pass wise laws looking in that direction as soon as practicable.

This anxiety to gratify popular desires, with which we are so familiar in this country, has been painfully manifest, as we have from time to time shown, in the career of the present French Republic. It has been the glory of English politics to have had comparatively little of such humiliating leadership, and its annals are full of splendid examples of statesmanlike definitions of policy and statesmanlike independence of conduct. But England is changing from aristocracy to democracy, and with the advantages attending this change there must come some losses. The candidate of the future, if he cannot rely upon the prestige of his rank, and is not himself of commanding character, will be tempted to commend himself to his constituents by subserviency to popular demands.

The tendency in this direction is, we think, deplorably manifested in the present attitude of the Opposition in England. Having failed to succeed upon the issue of home rule for Ireland, they are now failing in determining the general policy of the new Conservative party. This failure does not seem to be due to any special incompatibility between the opinions of the Liberal-Unionists and those of the Tories. It is true that the old Tories are protectionists, but protection is as impracticable in England as a return to the Stuart dynasty, and whatever regard for it is from time to time professed is purely sentimental. The Liberal Unionists came from the moderate, not from the radical, wing of the Liberal party, and they have fared peaceably enough with their new associates. There are many differences of opinion in such a conglomeration, but so far these differences have not seemed to be so vital as to threaten the permanency of the present Liberal-Conservative alliance. Nothing in the nature of the parties to this alliance should prevent their agreeing upon a wise and truly conservative policy.

Unfortunately they have shown little capacity to appreciate the necessities of the situation. They have tried to delay the passage of the Home-Rule Bill by much speaking, and when their course made the application of closure necessary they have complained of being choked off. It is true that closure is not in accordance with the precedents of Parliamentary government, but neither is it in accordance with these precedents to talk indefinitely so as to block legislation. This is not discussion, but obstruction, and the party resorting to it is primarily responsible for the lowering of Parliamentary standards. Outside of Parliament there are other manifestations of inability to conceive and expound a statesmanlike policy. The nature of these manifestations is indicated by the programme of an association formed by the so-called Conservative party called "The London League," the purpose of which is to draw

voters from the Liberal party by offering them whatever they are supposed to desire. To attract the radical element, the very use of the word "moderate" in London politics is to be discouraged, and all the demands of the Socialists are to be sympathetically considered.

The extent to which this "conservative" league is prepared to go in bidding for the votes of a class that is in a way to cause a good deal of mischief to England, is apparent from the details of the programme. More municipal officers are to be appointed, great schemes of public works for the employment of "surplus labor" are to be undertaken, and, of course, whatever wages are fixed by the trade-unions are to be paid. To meet the expense, special taxes are to be imposed upon the estates of deceased Londoners and upon the incomes of the living. Tolls are to be levied, and an octroi is to be collected upon the provisions brought to the metropolis. The whole matter of leasing houses is to be regulated by municipal authority, and in general London is to be governed very much on the lines which the Municipal Council of Paris would like to follow in that city. It is unnecessary to comment upon the imbecility and wickedness of these proposals. If the Conservative party is to win with such a platform as this, its return to power will be a sad day for England's greatness.

We cannot but regard Mr. Balfour's recent speech in favor of silver as in effect a bid for the votes of the believers in cheap money. It is true that he disclaimed all official responsibility for his sentiments and professed to be merely expressing his individual convictions. But, as was pointed out by the London *Times*, it is impossible for a man in Mr. Balfour's position to separate himself from his representative character. The question of bimetallism may become a legislative question, and it would be absurd to maintain that the choice of voters would not be affected by their knowledge of the private opinions of candidates. There was no occasion whatever for Mr. Balfour's silver speech, as he himself declared, except the display of academic oratory, and, although the motive may not have been distinctly present to his mind, it is hard to believe that he was unaware that the expression of his sentiments would attract a certain element to the support of the Conservative party. It is not a statesmanlike way of outlining a public policy. We do not think that Mr. Balfour is a demagogue; but if a demagogue wished to learn what the people wanted before committing himself to the support of positive measures, we conceive that he would do about as Mr. Balfour has done.

---

*THE CONGRESS OF SOCIALISTS.*

THE international gathering of Socialists which recently held its sessions at Zurich, although not an event of extreme importance, is yet deserving of a passing notice. The increase of the Socialistic vote in Germany and of the Socialistic outcry elsewhere necessarily draws increased attention to the theories and measures of this element, and governments dependent upon popular support are not disposed to keep themselves in ignorance of what is alleged to be desirable by any considerable number of the people. So far as the governments of Europe are concerned, however, they need not disquiet themselves over the recent Congress. No new demands were formulated, and, owing to modifications that took place in the membership, the tone of the resolutions finally adopted was unexpectedly subdued.

These modifications were caused by certain acute differences of opinion developed in discussing the platform to be adopted. The more radical delegates were unwilling to commit themselves to a declaration in favor of "political activity," as they hold existing political institutions in abhorrence, and they protested against the suppression of their views. In spite of their appeals to the motto, "Proletarians of all countries, unite!" which adorned the walls of the building where the Congress met, these radicals were finally ejected, but with no more serious consequences than a few bloody noses and torn coats. They organized a kind of side-show, of inferior dimensions but of superior unanimity, and adopted a full anarchistic programme, denouncing the Congress which they had quitted as no better than the worst of bourgeois tyrannies. The more moderate delegates, however, were of the opinion expressed by one of their number, that liberty of speech was a good thing, but should be kept within proper limits, and proceeded to the discussion of international solidarity and universal peace in a cloud of tobacco-smoke contributed by both male and female members.

Although sixteen nations were nominally represented in the Congress, one-fourth of the 412 delegates were from Switzerland, 92 from Germany, 65 from England, and 34 from Austria; and these delegates, with those from Italy, practically controlled the proceedings. The French, Belgian, and Dutch delegates, who in general acted together, were steadily voted down, not without unpleasant references to the "triple alliance" and to "brutal Germans and English savages." In fact, so far from promoting international solidarity, the Congress seems to have aroused strong national feeling. The Germans stood for what may be called parliamentary socialism, the French for the revolutionary type. The tendency of the speeches of the German delegates was to favor the attainment of the socialistic aim by making use of existing political institutions, to secure Socialism by getting a majority of the people to be Socialists. The tendency of the opposing faction was to scorn such a policy of compromise as this, and to bring on the conflict with "capitalism" at once by resistance to its oppression. As to the ultimate end, there seems to have been substantial agreement: the government of the middle classes is to be overthrown, and international peace to be obtained through the rule of the proletariat.

It was in regard to the attitude to be taken towards military service that the most significant differences of opinion were developed. As to war in itself, while it was admitted that it might be necessary to do some fighting in order to obtain the Socialistic ideal, yet no mercy was shown to it, one set of resolutions offered explicitly declaring that war was to be henceforth abolished. But the proposition of the French delegates and those of the Low Countries, that all workmen should respond to any declaration of war by refusing to do military duty and by a general strike, failed of adoption. It was urged with great force in its favor that such a measure would paralyze any army that attempted mobilization. The telegraphs and the railways would become useless, and if the Government tried to suppress the mutiny by force, the prisons could not contain those who would have to be arrested. But a delegate from Russian Poland emphatically warned the Congress that "the hideous vampire of Russia," in the event of the armies of other nations being demoralized, would swoop down upon Europe, and instead of being under the reign of socialism and progress the proletariat would find itself under a Cossack despotism. This practical consideration did not admit of any satisfactory reply on the part of the revolutionary element, and their opponents urged that the true way to paralyze militarism was to fill the barracks and the parliaments with the socialistic spirit. Eventually it was resolved that the "International-Revolutionary-Socialist-Democracy" should in every country and with all the forces in its power rise up against the chauvinistic appetites of the dominant classes; that it should draw closer the bonds of solidarity between the workmen of every land; that it should work without cessation to conquer capitalism, which had divided humanity into two hostile camps and ranged peoples against each other. With the suppression of the classes, war would disappear. The overthrow of capitalism would mean universal peace. Finally, as a practical measure, it was recommended that Socialistic Deputies should refuse to vote for military expenditures and should demand disarmament.

Concerning the universal eight-hour day and the character of the observance of the first day of May, there was a like difference of opinion among the delegates. Those who demanded the eight-hour day (without any reduction of wages) and the abolition of piece-work were outvoted, and were obliged to content themselves with a mild recommendation that the governments of the world should be appealed to to hold an international conference upon the subject. It was decided also that the 1st

of May should not be celebrated either by a universal strike or by a universal cessation of labor, the English delegates contending that in their country workmen who abandoned their work did not always get it back again, and the Germans adding that with them the Government had made oppressive laws which inflicted penalties upon workmen for breaking their contracts. A judicious compromise ordained the demonstration upon the 1st of May, with cessation of work wherever it was possible. With this resolution the work of the Congress was in effect completed, and it adjourned for three years, to meet then in London. Upon the whole, its proceedings, although hampered by the diversity of tongues and the necessity of oral translations, were orderly, largely owing to the enforcement of time limits upon speakers. This very orderliness, however, foreshadows disunion, for the resolutions of the Congress are too tame to satisfy ardent radicals. Such a programme would transform the Socialists into a "bourgeois" party, and the revolutionary element cannot be expected to content itself long with what is but conservatism in disguise.

## *THE LIBRARIANS AT CHICAGO.*

THE Chicago meeting of the American Library Association had two sides, one summing up the past, the other promising much for the future. According to the wise plan of the President, Mr. Dewey, the subjects were so assigned and the papers so written as to form when collected together a hand-book of library economy, treating every important branch of the subject, and exhibiting a résumé of the results that have thus far been reached by the discussions of librarians at previous meetings and in their organ, the *Library Journal*. Great stress was laid upon this requirement, that the points of agreement and the questions still remaining debatable should be exhibited. The advice of the President was generally followed and the outcome will be a book, to be published by the Bureau of Education, that may well stand side by side with the instructive report issued by the same Bureau in connection with the Philadelphia Exhibition of 1876. Moreover, the Association had voted to make as complete a comparative exhibition as possible of library methods and appliances, and to show a model library, chosen, arranged, catalogued, and put on the shelves according to the best accepted ideas of the time. This, as our readers are aware, has been done. There is always a throng in the library corner of the Government Building, consisting in some measure of trustees and others interested in libraries, examining and questioning and making notes. No doubt the exhibit will bear fruit in the adoption of better methods throughout the country, and in a greater interest taken in the subject by the intelligent public; perhaps also it will lead to the founding of more libraries. There is something very attractive in the aspect of the "A. L. A. Library." The books are new, they are neatly arranged, when examined they are found to be all worth having, and one can hardly conceive that any inhabitant of a library-lacking town should go away without a longing to see those six book-stacks duplicated in his own village. In this country such longings are apt to receive satisfaction sooner or later.

So much for the past. As to the future, it was not intended that any of the papers should bring forward new plans; but it is hard to repress the inventiveness of Americans. Mr. Iles's suggestion, and indeed promise, of a weekly index to periodicals, kept up by means of the linotype, opens a most attractive prospect not to librarians alone. There have been weekly indexes before, but they had the defects of their qualities. The frequency of their issue did indeed keep them reasonably near date, but also made the looking up of anything more than a month old wearisome beyond endurance. An index which each week includes all the previous indexes of the quarter will be a blessing to searchers.

Another promise for the future is to be found in the Rudolph Indexer. It may be remembered that when the Association returned from California, it brought home rumors of a great discovery which was as yet a secret, but was expected to reduce the cost of cataloguing by half or three-quarters, and to do away with the need of brains in it altogether. When the secret came out a year later, it appeared that cataloguers would have as much need of attention and judgment and knowledge as ever, and that the invention was rather a way of presenting the catalogue to the public than a new method of making it. Even this, however, appears, from the specimens shown in the A.L.A. Comparative Exhibit, to be of importance enough to justify the Californian excitement. When the card catalogue ousted the book catalogue thirty or forty years ago, it justified its claims to the exclusive possession of the field by the fact that it could be kept up to date by daily or even hourly additions in a way that was impossible to its predecessor. Yet there have always been those who preferred the printed or written page to the written or printed card because it gave them the satisfaction of seeing many titles at the same time, and did not compel them to pick over the cards one by one to find a desired title. They would even consider the cost of printing and the trouble of looking through the inevitable supplements slight in comparison with the handling of those provoking bits of cardboard. To them the Rudolph system is a boon, for it has the great merit of the book—simultaneous view of many titles—with what was previously the exclusive merit of the card catalogue, viz., absolute contemporaneity. It is exhibited in three forms (suited to different ends)—drawers, books, and a machine. The first shows two long pages at once, the second four, and the third five pages. In quickness of adjustment and of use it is far ahead of the Leyden, the Sacconi, and other card-book attempts to do away with the defects of the card catalogue; and it shows at once ten times as many titles as they can do. Like them, however, and like the card catalogue itself, it has one great inferiority to the printed catalogue: it must be used in the library and not taken home. But for every other purpose it deserves to be called, as it was by one of the librarians, "the coming catalogue."

The Indexer Company, however, are not content with this, it appears, but wish to satisfy the claim made for the contrivance at first, that it would relieve the brains of the cataloguer. They now think of establishing a central cataloguing and classifying bureau, by which titles of new books can be furnished to libraries as soon as the books are published, possibly with descriptive or characterizing notes, and certainly with the classification according to the three systems most in vogue, the "dictionary," "decimal," and "expansive." With most commendable liberality, they propose to print the titles not merely on slips for the "Indexer," but also on cards which can be used in its rival, the card catalogue, by those libraries who prefer their present way of putting titles before the public or shrink from the cost of a change. The scheme also includes the preparation of a large stock of titles of the most common books, so that a library just starting would find its catalogue ready-made by selection from this stock. These older titles, we should suppose, would be printed only on the slips, on the supposition that no new library would now commence with a card catalogue. Large libraries no doubt will always keep their force of cataloguers, for their work must be more elaborate than this is intended to be; but when the Rudolph system is in full operation, there seems to be no reason why, in libraries of thirty thousand volumes or less, there should be any cataloguers at all; or, if they should still be found necessary, their work would be much simplified and aided by the bureau.

The Association have long been talking of the need of coöperative, or, more properly speaking, central cataloguing. It is a commonplace to insist on the wastefulness of a thousand persons in a thousand libraries all cataloguing and classifying the same book instead of having it done by one person once for all. Various schemes have been suggested, but no one has had the nerve and the money to carry them out. Once a feeble attempt was made, but it came to nothing. It needs great perseverance fully to establish such a work. It is not enough to convince the public that the scheme is good. The libraries, whose inertia is very great, must be made to believe that it will succeed, must in fact see it in successful operation, before they will feel justified in taking hold and helping it to succeed. But if the movement can survive the period of delay and discouragement, there can be no doubt that it will render very great services to all the smaller libraries, which sometimes cannot afford and sometimes cannot obtain competent assistance; and it will not be useless even to the larger ones. To new libraries, unhampered by traditions and by already having catalogues constructed and books arranged on the old methods, it would be invaluable. It would furnish lists of books to buy from, and, even before the books were in the library, the cards would be ready for the catalogue. Ordinarily a new library waits weeks and even months while a busy corps of writers is cataloguing and arranging the stock of books with which it starts. No need for that if this bureau were at hand. We hope that the scheme will not fall through, and that its promoters will be able to face the certain discouragements that await them.

## THE COLUMBIAN EXPOSITION.—V.

### FINE ARTS: THE FRENCH PICTURES AND THE LOAN COLLECTION.

CHICAGO, July, 1893.

THE collection of French pictures is not as good a one as might have been brought to Chicago if men like Cazin, Puvis de Chavannes, and Dagnan-Bouveret, who are not represented at all, had some of their good works here, and if others, such as Gervex and Aimé Morot, who have pictures, had instead sent better ones that have been left at home. If the French, too, had included in their exhibition works by men who have died recently, as the British, the Americans, and others have done, we might have had pictures by Delau-

nay, Baudry, and Meissonier, but it was more logical to leave them out. It looks very much as if Old Salon men had had the most influence in Paris when the collection was got together, and the change in the fine-arts commissionership (made when Mr. Antonin Proust resigned on account of his connection with the Panama scandal) disarranged plans at a late day, and probably had a good deal to do with the incompleteness of the French *envoi*. Its incompleteness is apparent, and the division of the Paris artists into two camps four years ago is largely the cause of it. Such as it is, however, it is by far the best exhibition made by any of the foreign nations. The seriousness of purpose and the general excellence of the work from the technical point of view, especially the thorough knowledge of construction shown in both the figure and landscape pictures, make it superior to the American exhibition in these respects. As has been said before, the artists of the United States show more diversity of aim and individuality of expression than any others.

The French maintain their supremacy as painters of portraits. The realistic, uncompromising way in which Bonnat depicts Renan may not please a great many people, but there can be no two opinions about the power of the work. His "Portrait of Cardinal Lavigerie," an imposing full-length figure clad in red and black robes and placed seated squarely in the middle of the canvas, is also realistic, and so well done that criticism finds nothing to seize upon unless one quarrels with Bonnat's methods in their entirety. I see no reason why any one should, but the fashion of the day seems to be for so-called sympathetic painting and against everything that is vigorous and hardy. There is plenty of science in Bonnat's work, but it will be well to look elsewhere for the tenderer qualities. They will scarcely be found in the three portraits by Carolus-Duran, which are most cleverly painted and rather effective in their color schemes, nor in Debat-Ponsan's excellent study of a lady in black, "In My Greenhouse," though it is wonderfully well observed and not unsympathetically painted; but "Parisian at a Ball at the Élysée" by Duez, a full-length figure of a lady in white standing in a garden lit with Chinese lanterns, is refined in the good sense of the word and charming in aspect. There is sympathetic painting, also, in Roll's portrait of two young girls—much more of it than one might expect to find in the work of so sturdy a realist as he. Another portrait by Roll, "Trotting," a large canvas showing a boy on his pony speeding through the woods, is one of the best things in all the French galleries. Courtois's "Portrait of Madame Gauthereau" is said to have had a notable success in Paris, by one of those strange turns which popular opinion is subject to, for a portrait of the same lady by Sargent, painted before this, and to which this one by Courtois bears an extraordinary resemblance in arrangement and pose of the figure, provoked the most hostile criticism when it was shown at the Salon. Mr. Courtois's portrait is very delicately drawn, but painted in a cold, careful way, quite lacking in the *entrain* that distinguished Mr. Sargent's work. An excellent portrait of an etcher before his table by Mathey, one of a lady in a gown of figured stuff by Doucet, and Yvon's official "Portrait of Carnot, President of the French Republic" are a few other notable portraits in the French galleries. One more that is sure to attract great attention from its subject, and is deserving of great praise for its artistic treatment and its masterly interpretation of character, is "Portrait of His Holiness Pope Leo XIII.," by Chartran. One need only look at another portrait of the Pope, by Lenbach, in the German section, in which the head and hands of the sitter are shown in a similar conception of the subject, to see how good Chartran's is.

French painters are generally very good draughtsmen. In the schools they are thoroughly taught, and all through their artistic career the importance of drawing is upheld by themselves and their critics. What they do with their skill in drawing, once it is acquired, is another matter; but very few pictures by men even of comparatively modest position are ever seen to which the reproach of bad drawing or ill understood construction may be applied. Mr. Collin is quite as skilful a draughtsman as Mr. Bouguereau, but his work never looks insincere; he possesses great facility, but manages in spite of it to retain a sufficient amount of naïveté to invest his pictures with some of that sort of charm that is inherent in all painting in which truth has been sought for, not glibly noted as an old story. The large picture, "On the Sea Coast," which represents a group of nude young women dancing a round on the sands, while it is painted with the greatest cleverness, bears an aspect of sincerity which shows that the painter's skill has not run away with him. This picture, which is painted in a very light key and is full of delicate color, evokes an instructive comparison with Mr. Harrison's "Bathers" in the American section. The two artists have undertaken similar tasks, and it is interesting to see what each of them has made out of his subject.

Painting religious subjects (generally scenes in the life of Christ) with a modern setting and figures clad in the clothes men wear in our day, was begun some few years ago by the German painter Fritz von Uhde, and in the French galleries there are three such pictures. "The Host," by Jacques Émile Blanche, is commonplace enough, and the figure of Christ at the table, in a gown of blue and white stuff, surrounded by a family group, seems incongruous. The picture is well painted, but the artist has somehow fallen short of success; indeed, while the type of "The Host" is not an unpleasing one, there is something in the work that makes a repelling impression. Lhermitte's "The Friend of the Lowly" gives no such impression, but his picture is not interesting. Not much has been made out of the types of character in the peasant man and woman and the child who are in the group, and the figure of Christ is ordinary and expressionless. It is a very good composition, but the tone of the canvas is brown and dull. "The Descent from the Cross," by Jean Béraud, with the scene laid on the heights of Montmartre, Paris lying wrapped in hazy mistiness below and a group of people at the foot of the cross, among whom are workingmen and some women, is about as lifeless in color as Lhermitte's picture, but, unlike it, is distinctly impressive. Monotone, or something nearly approaching it, seems to be thought requisite by the artists in painting these religious pictures, for, besides the two works here by Béraud and Lhermitte, Von Uhde's "Last Supper," exhibited at Paris in 1889, and much talked about, is sombre and dingy.

Great variety of subject is found in the pictures in the French section, from Bouguereau's "Our Lady of the Angels" and Maignan's "William the Conqueror" to Raffaelli's somewhat eccentric characterizations. The last-named painter is in vogue at present, and his peculiar style is exemplified in three pictures. "The Grandfather" is a very good bit of painting, but "The Peasants of Plougasnou, Brittany," is positively ugly with its harsh, scratchy technique; and "In the Plain, Horses on the Road," is black, wriggling in *facture*, and disjointed in effect. A much better picture than either of these is "The Absinthe Drinkers" in the Loan Collection. Good genre pictures are Friant's "Shadows Lifted," Bramtot's "The First Communion," Richemont's "Sacrifice," Binet's "The Lovers," and Lhermitte's "Repose." Jules Breton's "The Pardon of Kergoat" shows traces of failing powers, and Besnard's "Two Ponies Harassed by Flies" by no means well represents one of the ablest and most original of modern painters. Jean Paul Laurens's "The Seven Troubadours" and "Christopher Columbus," solidly painted, well composed, and sober and reserved in color; Tissot's four low-toned canvases depicting the story of the Prodigal Son; a good military picture, "Combat in a Village," by Émile Boutigny; "The Ribbon Maker," by Ernest Bordes; and a vast canvas, "Flowery Spring," by P. Franc Lamy, with nude figures in a garden—an ambitious conception, hardly justified in its execution and rather cold in color—are other notable works. Fourié's "Spring," with nymphs chasing a satyr through a wood, is big and bad—the one conspicuously bad picture, indeed, in the French galleries in which painting of the nude is the *raison d'être*. Two delightful small pictures are "Venice" and "In Sicily," by Aman-Jean, the first a head of a woman drawn with great subtlety and charm, and refined in color.

The presence of good pictures among the landscapes by men who were unknown only a short time ago is remarkable in the French section. It is a fact worth noting also in the work by figure-painters, and shows that the exhibition includes more of what has been produced in the last two or three years in Paris than "standard works," such as Great Britain, for example, sends in great numbers, although many of them were seen at Paris in 1889, and some even in 1878. The French collection is more up to date, and, in so far as it is representative at all, is more truly representative of the actual status of the fine arts in France at the present moment than those sent by some of the other nations are of theirs. Guillemet, Pelouse, Zuber, Dameron, Montenard, and Vuillefroy are among the well-known names of landscape or cattle-painters whose works are here; Harpignies, Cazin, Français, Bernier, Rapin, and Busson some of those that are absent. Two of Jan-Monchablon's remarkably faithful transcriptions of wide stretches of country, full of minute detail but broad in effect; poetical evening motives by Lagarde; a strong sunset by Diéterle; delicately observed street scenes by Billotte and Pujol; a fine early morning effect, though a trifle too icy for autumn frost, by Balouzet; an excellent sunset over marshlands by Damoye; evening and morning effects by Pointelin; and cattle-pieces by Barillot and Marais, are some of the best pictures by newer men. While the landscapes in the French galleries reveal no preëminent talent, there is a manifest improvement in the tendencies shown by the younger painters over what appeared at Paris in 1889 in restricting the size of their canvases to reasonable dimensions, and in the effort to obtain color quality as well as form and truth of values. The French need some of the color feeling that the Americans already possess, and the Americans are lacking in the strong sense of form which characterizes all the French work. When these qualities are attained, we may expect to see masters on either side of the water.

The Loan Collection of Foreign Masterpieces owned in the United States does not deserve its title. There are great names in the catalogue and fine pictures in the gallery, but in most cases the artists are not represented by masterpieces. There are some, however, to which the term applies in the fullest sense of the word. The great majority of the pictures are by French painters, and the works from other schools may be quickly enumerated: "A Reading from Homer," by Alma Tadema, landscapes by Bonington, Constable, and George Morland, three animal pictures by John M. Swan, and "Portrait of Joachim," by G. F. Watts, from the English school; "The Beach at Portici," by Fortuny, from Spain; "Springtime and Love," by Michetti, from Italy; "The Bookstall," by Baron Leys, and "You Are Welcome," by Jan van Beers, from Belgium; "A Country Festival" and "The Potato Harvest," by Knaus, and "A Sewing Bee in Holland," by Von Uhde, from Germany; "Canal in Holland," by Jacques Maris, "The Flock," by Mauve, and "A Frugal Meal," by Israels, from the Dutch school; and "Interior of a Brewery," by Zorn, from Sweden. About all that needs to be noted concerning these works is that "A Country Festival" is one of Knaus's best pictures, that "Shepherd and Flock—Dedham Church in the Distance" is a small but very good Constable, that the Israels shows that this painter is or has been capable of painting a good picture sometimes, and that "A Sewing Bee in Holland" is one of Uhde's most pleasing and excellent canvases. "You Are Welcome" is a picture by Van Beers that should not have been included in the collection, and a large picture by Harry Thompson, an English artist who has long lived in France and has no affiliation with the British school, "The Shepherdess," scarcely deserves the considerable space it occupies. There are two great masterpieces in the collection: Millet's "Peasant Leaning on His Hoe," and Manet's "Dead Toreador." Corot's "Orpheus" is one of his most celebrated works, but it is not one of his very best, like the "Biblis," which was recently brought to the United States but could not, unfortunately, be secured for this exhibition; and, with the "Orpheus" and eleven other works, none of them very good, except a small landscape (No. 2889), there is quantity rather than quality in the group that represents him. In the case of Millet almost no other picture than the "Peasant Leaning on his Hoe," save "The Gleaners," which is now in the Louvre, would serve so well to show what a great artist he was; and "The Pig Killers," the "Shepherdess," and five other pictures here are all worthy. Manet's "Dead Toreador" is unique. It is unlike anything else he ever painted—better, possibly, than any other picture, unless "The Boy with the Sword," in the Metropolitan Museum, the "Olympe," in the Luxembourg, or "The Little Fifer" may be compared to it, and none of these possesses such distinction of color, such depth of tone and nobility of aspect as the "Toreador." "The Cooper's Shop" is a fine Daubigny, and "The Banks of the Oise" a small landscape that was one of the best of his works in the Barye Exhibition in New York in 1889, is here. There are several landscapes by Monet that are fairly good if not of his best, and good examples of Troyon, Jules Breton, Cazin, Degas, Renoir, and Puvis de Chavannes. Two small pictures by Dagnan-Bouveret, and "Revery" and "The Thames," by Bastien-Lepage, though unimportant, are of excellent quality. Rousseau, Decamps, Diaz, Delacroix, and Fromentin are indifferently represented, and the single Courbet in the collection, "Dogs and Hare," is an inferior work. But, in spite of its shortcomings, the Loan Collection makes an interesting exhibition, and credit is due to those who organized it. It is no easy matter to borrow valuable pictures for world's fairs.

WILLIAM A. COFFIN.

## DEMOCRACY IN MINIATURE.

SWITZERLAND, July, 1893.

THOSE who visit Switzerland not merely for health and change of scene, but to study its political and social systems, will find in the smaller and more primitive cantons an interesting field for their inquiries. Most writers on Switzerland treat of it as one country, subject to the same laws throughout, with the same political and social organization and customs. Travellers thoroughly familiar with the general features of the country overlook the fact that the Swiss Confederacy is an agglomeration of sovereign democratic republics, consisting of nineteen entire and six half-cantons, whose individual independence and sovereignty have been curtailed only to the extent of such sovereign rights and exclusive competence as they have themselves transferred to the hands of the Confederation "to insure the independence of the country, and to increase the common prosperity."

The Canton of Glarus in northeast Switzerland, with an area of less than 200,000 acres and a population of 34,000 souls, is one of the best organized of the smaller Swiss States. In it pedestrians and mountaineers will find, within a small district, as many beautiful walks and difficult ascents as can be found in any similar area in Switzerland. Although none of the mountain peaks exceeds 12,000 feet in height, the greater part of the country is extremely rugged, the valleys are walled with precipitous cliffs, and a large part of the Canton consists of high pastures, rocks, snow, and glaciers. The lowland consists of two narrow valleys in the form of the letter Y, whose streams deliver themselves into the Wallensee and thence into the Lake of Zurich; the mountains overhanging these valleys both appear to be and are in a state of unstable equilibrium. The word "landslip" hardly conveys an idea of the catastrophes that have occurred over and over again: the mountains themselves have fallen down, and so recently as 1881 114 persons were killed by the fall of a mountain mass overhanging the village of Ehn. The beds of the two main valleys are filled with a string of busy villages, the chief buildings in which are cotton-spinning, weaving, and printing-factories, in which about 8,500 persons find employment. The factory hands, as in other parts of Switzerland, are usually small freeholders enjoying a right to fuel and pasture on the communal lands, and this mixture of agricultural and industrial pursuits tends not only to material prosperity, but to personal independence and intelligence.

The supreme legislative authority is the Landesgemeinde, or entire body of electors. Every male citizen over eighteen years enjoys the franchise, and may propose laws or decrees at the meetings of the Landesgemeinde, which are held in the open air at the town of Glarus. The total number of electors is 8,200, a somewhat cumbrous parliament if all members attended. Though any elector may bring forward proposals for laws, and discuss bills submitted for approval, in practice laws and decrees are usually prepared by the Cantonal Council of 117 members, representing the different communes or villages. An Executive Council of nine attends to the current business of government. All officials hold office for three years only. They are appointed and may be reëlected by the Landesgemeinde, by whom nearly all appointments are made, or must be confirmed. There are five courts of justice—(1) the Supreme Court of Appeal; (2) a civil-bill court; (3) a court dealing with local affairs, boundaries of property, etc., which often holds its sittings in the open air on the spot involved in the cause; (4) a matrimonial court; (5) a criminal court.

Taxation, levied on the capital value of real and personal property, is graduated, a certain amount being exempted, and the percentage of the tax increasing with the value of the estate. Household furniture and trade implements to the value of $600 are exempt from taxation. Estates under $5,000 value are taxed on only 60 per cent. of the value. Estates between $20,000 and $800,000 value are divided into twenty classes, on which the percentage of tax increases from 4 up to 10 per cent.; the same principle is applied to legacy and succession duties. The taxed value of real estate in the Canton is about $26,000,000; the ordinary revenue amounts to $170,000, or about $5 per head of population, and half of this is derived from taxation of real estate. According to the latest returns about $75,000 a year is spent on education, chiefly on primary schools, in which there were, in 1892, 5,690 scholars under 88 teachers. The cost of each pupil in the primary schools was $10.5, and the expense to taxpayers $1.5 per inhabitant. Almost everything in Switzerland seems to be insured against calamity and loss, but the amount paid per head for insurance in Glarus, $2.5, is considerably in excess of the average for all Switzerland. Fire insurance is compulsory, and is really a tax levied by the Canton on all buildings and goods liable to destruction by fire. In addition there are arrangements and ample facilities for insurance of life both of men and cattle, against storm, hail, accidents, cattle plague, and loss of goods in carriage.

Four-fifths of the Glarnerfolk are Protestants, the remaining fifth is Catholic, but religious toleration exists to the fullest extent. This has been the practice and tradition of the Canton since 1550, when, after years of bitter animosities and quarrels, the influence of Valentin Tschudi, one of the leading ecclesiastics, prevailed to secure peace and toleration. History relates that during the latter part of his life he ministered to both sects, serving mass to the Catholics and preaching to the Protestants. History is confirmed by the existence to-day of the handsome and spacious church at Glarus, founded by him, though since rebuilt, which is used by both Catholics and Protestants. The altar, the lights, the crucifix, the pictures of Virgin and Saints give this "Simultankirche" the appearance of a Catholic church, yet the majority of those who use it are Protestants. As a non-Catholic, used to the intolerant and narrow-minded bigotry of my fellow-countrymen in England and Ireland, I felt more surprised that Protestants should conduct their services in the presence of Catholic emblems than that Catholics should use a building partly appropriated to Protestant worship. Up to last year, Irish national schools in purely Catholic districts were deprived of the grants given to all other schools if teachers belonging to the Catholic religious orders kept any of their religious emblems displayed on the walls.

The cantonal boundary between Glarus and the adjoining Canton of Uri is a hurdle fence in the middle of a wide mountain valley, and

a touching story is told as to how it came to be fixed there instead of at some natural boundary. There had been many disputes as to the occupation of this valley, which lies on the Glarus side of the range; to end the controversy it was agreed that at cockcrow one man should start from Altdorf in Uri and another from Glarus, and that where the runners met the boundary should be fixed. The Glarus cock was overfed, and crowed late, so the runner from Altdorf got a long start (the distance is about 20 miles over a range 8,000 feet high). He had passed the valley in dispute and had arrived at the last steep descent when he met the rival runner. The Glarus man, overwhelmed with shame at his Canton's loss, begged the other to give him back as much ground as he could cover carrying him on his shoulders; the Altdorfer, having won far more ground than he expected, agreed. The Glarus man, with his rival on his back, climbed the steep ascent, traversed half the valley, and then fell dead where the fence now stands, having won a barren pasture for his Canton at the cost of his life.

When the French in 1798 occupied Switzerland, the Cantons of Glarus, Uri, and Schwyz, with a population of less than 100,000, attempted to maintain their independence and refused to join the Helvetic Confederation. Their resistance was quickly overcome, but not until they had put every man in Glarus between fifteen and fifty-five under arms, and their army had been defeated at Wollerau. It seems almost impossible that this remote and rugged country should have been the battlefield of great armies, but in the following year the Russian General Suvaroff marched through the Canton with an army of 25,000 men, closely pursued by the French. He escaped into the Rhine Valley over the difficult Panixer Pass, but lost a large part of his army from exposure and hardship on the mountains. After the brief subjection of Switzerland to French influence, Glarus regained its position as a sovereign State. The Glarus cock now crows earlier than that of Uri, and in all that constitutes modern civilization it is far ahead of the adjoining forest Cantons. M. O. B.

## THE CONSTITUTIONAL STRUGGLE IN NORWAY.

CHRISTIANIA, August 1, 1893.

NORWAY as a modern State dates only from 1814. As a province of Denmark she had lost her individuality and played no rôle in European politics. Her summary cession to Sweden by the Treaty of Kiel (January 4, 1814), however, fanned into life again the merely dormant spirit of nationality, and the resolve that was then taken by the Norwegians not to acknowledge the Treaty of Kiel and the transfer of the Norwegian crown, but to consider themselves by its surrender by the Danish King rehabilitated in their original right as a nation, was self-reliant and determined. The succeeding historical events of 1814 are well known. A national convention met at Eidsvold that same year, framed a Constitution, and elected Prince Christian Frederik, the Danish Viceroy of Norway, King. Sweden, on her part, however, did not propose so easily to relinquish her claims, and Bernadotte, the Swedish Crown Prince, speedily asserted them by force of arms. The result was that Christian abdicated his Crown to the Storthing, which had been assembled, by agreement with Sweden, under the so-called Treaty of Moss (August 14), when Bernadotte, as the King's representative, promised that "Norway should retain the Eidsvold Constitution in everything that did not conflict with the union with Sweden," and that "Norway herself should participate with her free consent in negotiations with Sweden concerning the further conditions of the Union." The Storthing, thereupon, after a prolonged conference with the Swedish Commissioners, agreed to a somewhat modified form of the Eidsvold Constitution, and on the 4th of November elected Charles XIII. of Sweden King of Norway.

The Constitution is a compact between the Storthing and the King, as is expressly affirmed at the end of the instrument itself. The conditions of the union are as follows: According to the first article, "The kingdom of Norway shall be a free, independent, indivisible, and inalienable State, united with Sweden under one king." Each kingdom, however, has its own laws. The supplementary Act of Union (*Rigs Akt*) of 1815 uses the phrase, "Under one king, but with different administrative laws." In the Government of Norway, accordingly, the executive authority belongs to the King. It is his right, furthermore, "to declare war and conclude peace, to enter into and dissolve treaties, to despatch and receive ambassadors." He has the appointment, besides, of all officials, civil, ecclesiastical, and military, but in such appointments must take the opinion of his Norwegian Council. The responsibility of the King rests with a Council, appointed by him, composed of two Ministers of State and at least seven other members. One Cabinet Minister and two Privy Councillors are with the King in Sweden, the others, the actual Norwegian Government, are in Christiania. Affairs of State concerning Norway must be submitted in Sweden to a joint Cabinet, made up of the Swedish Council and the members of the Norwegian Council appointed to be with the King. The legislative authority is the prerogative of the Storthing, composed of the elected representatives of the people. To the Storthing belongs the right, according to the Constitution, of legislation and taxation, contracting loans, controlling the finances, making appropriations, fixing the civil list and appanage of the King, inspecting State papers as well as conventions and treaties with foreign Powers, and revising the pension list and the budget.

It will be readily seen from the foregoing that the union with Sweden is a personal union. Sweden and Norway, to be sure, are united under one king, but each has its own government independent of the other; and the mutual attitude of the two States, so far at least as internal affairs are concerned, is that of two coordinated nations with complete freedom of action, each governed by its own laws and controlled by its own interests. There are, nevertheless, under the Union certain joint conditions that are not to be lost sight of. As at present constituted, the actual details are as follows: Both kingdoms have a common Minister for Foreign Affairs who is a Swede, amenable only to the Swedish States Council (Rigsdag). There are besides a common diplomatic and consular service, the diplomatic amenable only to Sweden. Norway, at the present time, pays toward the support of this service five-seventeenths of the whole. The consuls (since 1836) are created in the joint Cabinet, consisting of the Swedish Cabinet and the Norwegian members with the King in Stockholm, as already described. Toward the support of this service Norway contributes three-sevenths of the whole. As an offset to the joint Cabinet in Sweden, be it mentioned, if a joint Cabinet is held in Christiania, its personnel is the whole Norwegian Cabinet with three members of the Swedish Cabinet. Peace and war, furthermore, are in common. The King is commander in-chief of the army and navy, but he is at well-nigh all points amenable to the Storthing. An attack upon either kingdom is to be regarded as an attack upon both. For common purposes of defence outside of Norway but a little over 15,000 men—troops, according to the terms of the Constitution, belonging to the "line"—are available; in point of fact the number would be much less. The Norwegian war marine is at the disposal of the common service. Lastly, the two kingdoms have a common State religion, the Lutheran, of which the King is the head.

That an equality of the two kingdoms was intended at the outset is apparent from the utterance of the King, Charles XIII., before the Swedish States Council in the discussion pending the promulgation of the Act of Union, where he says that it is the intention to establish between them "a complete equality as regards the nation's common rights," and is unmistakably acknowledged by the act itself. But Sweden has never been willing to concede perfect equality to Norway within the Union, either in theory or in practice, and in all but a few cases has persistently maintained existing conditions until fairly forced to relinquish them. Down to 1886, when an available record ends, there had been from the beginning no less than 279 resolutions before the Storthing, some of them, of course, emanating from the King, to amend the Constitution; only fourteen, however, of the number were carried through.

One struggle arose early in the history of the Union and has been bitterly fought, respecting the King's right of veto. According to the Constitution, the King has a suspensive veto, only, upon projects of law; if a bill is passed unchanged by three successive Storthings, it becomes law without the royal sanction. The old orders of nobility were abolished in this way by the Storthing in 1821. The matter of a change of suspensive veto into absolute veto was made a direct issue first in 1824, when it was rejected by the Storthing, and again in 1836, when it was laid upon the table without action. In regard to changes of the Constitution, in which matter there is no express provision, the King has claimed an absolute veto. This the Storthing has strenuously denied. The question has come up several times—first, between 1824 and 1833, in connection with the proposed abolition of the Governor-General's office, and again, from 1872 to 1884, in the bitter fight that was waged between the King and the Storthing in regard to the attendance of members of the Cabinet upon its proceedings. The matter, however, has never been decided, although the Storthing, in the last phase of the subject, still asserted its right to change the Constitution without the sanction of the Crown.

A second constitutional struggle grew out of the attempt on the part of the Storthing to abolish the office of Governor-General, who, according to provision, could be either a Norwegian or a Swede. The matter came up as early as 1818. After 1829 no Swede held the office. In 1859, the Storthing voted to abolish the office, but the King vetoed the measure and obstinately held to his point. The resolution was again adopted by the Storthing in 1873, the year after the accession of the present King, and was finally sanctioned.

Of all the contests between King and Legislature, perhaps the most acrimonious, certainly the most persistent, was that in regard to the compulsory participation of the members of

the Cabinet in the proceedings of the Storthing. The Constitution had not expressly determined the matter, but had evidently not intended it. The new resolution simply cleared the way for making the Ministry controllable by the Legislature, and was by far the most radical change in the Constitution that had yet been attempted on the part of the Norwegians. The proposition was adopted by the Storthings of 1872, 1874, and 1877, but was successively vetoed by the King. In 1880 it was again adopted. The matter, in the meantime, had evoked the most bitter hostility between the Radicals and the Conservatives in the Storthing, and by extension throughout the country, which seemed on the brink of civil war. The feeling against the Crown rose so high that threats were openly made by the Radical party of absolute separation from Sweden. At the new election, in 1882, the Radicals obtained a large majority, and upon the assemblage of the Storthing, the following year, the prosecution was ordered of the Conservative Cabinet, which had insisted, against the Radicals, that the resolution, not having obtained the royal sanction, was not law. In the trial before the Rigsret which followed, Selmer, the Minister, with seven other members of the Cabinet, were adjudged to have forfeited their eligibility and were accordingly expelled from office; three others were dismissed with a fine. The matter was not settled until the succeeding year, when a compromise was finally agreed upon, adopted by the Storthing and sanctioned by the King, who had ultimately conceded almost every point.

The latest phase of this never-ending conflict is in regard to the joint relation of Sweden and Norway in international affairs, and again threats are heard of separation, and excitement throughout the country has run almost as high as during the period just described. This time, too, a definite constitutional provision, so far, at least, as the Minister for Foreign Affairs and the diplomatic service are concerned, has been openly attacked, but not, as before, with a covert intention. In foreign affairs the first question that came up for adjustment was in relation to the flag. The matter was called up as early as 1831. In 1836 the complaint was made by the ever-watchful Storthing that Norwegian vessels were obliged to hoist the Swedish ensign in foreign ports, where such vessels were also entered as Swedish. The matter was finally disposed of in 1838, when it was decided that Norway should use her own merchant flag everywhere. A Norwegian "Union flag" in the national colors, but with the Union mark in the right upper corner, was made the war flag in 1844. The radicals at the present time are, however, dissatisfied with this disposition of the matter, and in the Storthing just ended the removal of the Union sign was made the subject of action. Connected with the matter of the flag was the stipulated discontinuance of the use in combination, on Swedish coins and seals, of the Norwegian escutcheon, and the decision that in all documents specifically Norwegian, Norway should precede Sweden in titular phrases. The jealous use on the coinage and elsewhere on the part of Norway of "Norwegian and Swedish," as opposed to the forced punctiliousness in Sweden alone of "Swedish and Norwegian," has its amusing side. Oscar II., in this way, is in Norwegian phraseology "King of Norway and Sweden," in Swedish "King of Sweden and Norway."

The question of the flag in its main features was easily disposed of, but the common consular and diplomatic service with the single (Swedish) Minister for Foreign Affairs remains still the great thorn in the side of Norway. In regard to the diplomatic service several courses have been proposed: the conservative and logical one of allowing the eligibility of a Norwegian as well as a Swede to the Ministry and of constituting a council of three Norwegian and three Swedish members which shall have jurisdiction in affairs concerning both kingdoms, or the extremist one of cutting loose from Sweden in diplomatic affairs altogether, and making two ministers and two diplomatic corps. The consular service as at present constituted dates from 1858. According to its provisions, cases concerning both kingdoms fall under the jurisdiction of the Minister for Foreign Affairs. Norway, accordingly, though she pays for the support of the service, as has already been stated, a due proportion, has no control over its conduct, although the consuls-general, the consuls, and the salaried vice-consuls are appointed in the joint council. It is, perhaps, no wonder that Norway, with the third largest merchant marine in the world (three times larger than that of Sweden), should be restive under an arrangement which does not give her the equality in the Confederation to which she is by fact entitled. What she might demand, and what would be conceded, under certain circumstances, by Sweden, is a more carefully coordinated system, in whose administration she should have due representation. I cannot find, in looking over the diplomatic history of the Union, with the exception of a single possible case, that there is anything to be found fault with in the management of foreign affairs, or that any such fault has been found. One great objection, I suspect, in the whole present arrangement is that red rag to the Norwegian radical, the use in diplomatic correspondence of "the Kingdoms of Sweden and Norway," and the presence even in the Norwegian State-Calendar of "Swedish and Norwegian" applied to diplomats and consuls. Be this as it may, the Storthing just ended, which witnessed on the 22d of April, on this very question, the resignation of the Steen Radical ministry, and the rehabilitation on the 2d of May of a Conservative ministry under Stang, after cutting down the appanage of the King and Crown Prince to show its good will, has "cast the die," as a Swedish journal puts it, and decided by a bare majority of 56 to 55 that the common consular service shall cease on the 1st of January, 1895. This vote does not, of course, represent the whole Liberal strength in the Storthing. Of the total number of 114 members, three were absent; six members of the Left voted with the Right.

In the country at large, the actual voters of the two political parties (the few "moderates" being reckoned in with the Right), were at the last election, in 1891, very evenly divided. The country districts, with a total population of one and a half millions of people, polled at that time for the electors of their quota of 76 members of the Storthing as follows: Right 35,800, Left 40,300 votes. The town districts, with a population of but half a million, polled for their 38 members: Right 14,282, Left 11,504. The total is, accordingly, for the Right 50,082, for the Left 51,804 actual voters. It will be seen from the foregoing, furthermore, that the country has not only a preponderance of members, two to one, over the towns, but that it is Liberal and the towns Conservative—in other words, that the peasant vote is at the present time dominant in Norwegian politics. The country in Norway is the great source of radicalism and of separation as well. The towns, with their wider commercial interests and broader political education, see more clearly the advantages of the Union and the dangers that would arise from its dissolution.

There is but little immediate danger of such a violent outcome. Norway, with a standing army of perhaps a thousand men and a militia incapable of speedy mobilization, without a single first-class man-of-war or a single modern fortification, is not going to rush blindly into a conflict that could have for her but one ultimate result, the loss of her autonomy altogether. There is no strong party in the State that desires a dissolution of the Union, and no strong voice that advocates it. Björnson, who, pending the election of 1882, in his speech at Stiklestad, openly advised disruption, has avowedly taken a far more moderate position, and, from his present place of residence in Denmark, watches the conflict without any active participation in it whatsoever. Ullmann, once schoolmaster and now president of the Storthing (ex-pedagogue and present demagogue), whose voice at least is loudest, has, since the end of the session on the 22d of last month, gone off to America—it is said, to make propaganda among the Norsemen in the West for the further prosecution of the Radical programme. In the meantime, Norway's interests are still where they are safest, under the Union where she has had eighty years of peaceful development. That the country has been prosperous under the Confederation no one can deny. Her shipping interests have increased almost beyond precedent, industrial conditions have improved, the educational system has been vastly extended, and the burdens of State, thanks to a most careful administration, are incredibly small. That this is entirely the result of the Union is not alleged, but in good part it unquestionably is. By virtue of this very progress and increased importance, Norway should, undoubtedly, in many respects occupy a more equal place with Sweden within the Union than is now accorded her. The logical direction of Norwegian politics is neither towards subordination, which nobody in Norway suggests, nor towards separation, which is proposed only by a hot-headed few. For protection and defence, if nothing more, there must be, as there is, a Scandinavian Union, a single State in which, without the loss of self-respect, each member can still maintain, if it chooses, its own national identity and live its own individual life. W. H. C.

## WOMEN GRADUATES OF THE UNIVERSITY OF CALIFORNIA.

To the Editor of The Nation:

Sir: In your issue of last week, just received here, you mention as an interesting educational "straw" the large number of women who received fellowships at the close of the first year of Chicago University, and named over the colleges and universities of which these women were graduates. By some oversight, the mention of the University of California as the Alma Mater of two of these fellows was omitted, though one of them was mentioned as a Ph.M. of Chicago University. Miss Alice Pratt, who takes a special travelling fellowship in literature and a Ph.M. degree this year from Chicago University, and Miss Sarah Hardy, who is about to enter Chicago University with a fellowship in the department of history and economics, both re-

ceived the Ph.B. degree from California, with exceptionally high rank.

This correction, of course, increases still further the high proportion of women from coeducational institutions among the winners, to which you call attention.

Yours sincerely, J. B. REINSTEIN,
President Alumni Association U. C.

SAN FRANCISCO, August 17, 1893.

## HARVARDIANA.

TO THE EDITOR OF THE NATION:

SIR: In a notice of Dr. Hale's 'A New England Boyhood' in a late *Nation* I notice one or two slight inaccuracies which I venture to point out.

The classmate of Mr. Hale was the grandson, not the son, of the founder of the house in Bowdoin Square, an Englishman from Derby. It was converted, somewhere in the forties, into the Revere House by the addition of two stories and by building over the garden on one side and the stables on the other. Your historian has skipped a generation, Kirk Boott second deserving a place in his annals, having been one of the founders of Lowell, in association with John Lowell and Patrick T. Jackson. His father obtained for him a commission in Wellington's army, and he served in the Peninsula until the breaking out of the war of 1812, when he returned to Boston. The town of Lowell was set off from Chelmsford about 1822.

The comparison between Prof. Webster's lectures and Emerson's, and the popularity assumed for the former, have a humorous sound to the survivors of those days. Webster's lectures on chemistry were thought of so little importance that few students took them seriously. Emerson was not connected with the college as a lecturer, but read his essays in Boston, where some of the students went to hear him; but few crossed Cambridge bridge for this purpose with the enthusiasm that J. R. Lowell felt, according to his reminiscences. The most popular lectures of the time at Harvard were those of Prof. Farrar on Natural Philosophy.

While on Harvard topics I may be allowed to ask the author of an interesting article in the last *Harvard Graduates' Magazine*, called "Undergraduate Life Sixty Years Ago," if there is not an omission in his account of the exercises at President Quincy's inauguration in 1829. He makes no mention of an English oration by Mr. William Newell, afterwards pastor for some years of the First Church in Cambridge. I was present, and remember not only the fact, but also a passage which produced a certain effect on the audience and has clung to my memory ever since. Turning to the new President, the orator apostrophized him in the words of *Hamlet:* "Be thou pure as snow, thou shalt not escape calumny." This was with reference to Mr. Quincy's predecessor, the "well-beloved Kirkland," who, it was thought, had been unfairly treated. I am open to correction, or, rather, I should be. But, as old men are more apt to forget than to remember, I can't help thinking my positive evidence better than any amount of negative testimony.

One thing more. Is not the editor of a Harvard magazine hurting the reputation of the University by allowing such divisions of words into syllables as *physiol-ogy, sys-tem, promising, pres-ent, reg-ister, rep-resent?*

H. U., '31.

[Usage in the division of words is, we think, far too unsettled and confused to warrant any censure of the University for the system adopted in the *Magazine*, even were that an official publication and printed at a University press.—ED. NATION.]

## THE MOST PICTURESQUE PLACE IN THE WORLD.

TO THE EDITOR OF THE NATION:

SIR: Will you kindly allow us space to express the pleasure and regret caused us by the letters, published in the *Nation* and elsewhere, referring to our article in the July *Century*?—pleasure, because we are generous enough to be glad that, after all, "The Most Picturesque Place in the World" is known to a few besides ourselves; regret, that the American, despite his reputation for humor, must take even us in our lightest moments so seriously, and that, in his eagerness to rush into print, he does not weigh his words more carefully. Our "Most Picturesque Place" may be Le Puy, but Le Puy is not in the Auvergne, while, for the fame of that town of many charms, it would be better could "its colossal bronze statue of the Virgin" be forgotten.—We are, yours truly,

J. and E. R. PENNELL.

LAON, August 18, 1893.

## "SLANG."

TO THE EDITOR OF THE NATION:

SIR: For *slang*, substantive or attributive, in all the shades of sense, one excepted, which have attached to it, the subjoined quotations will, with reference to my immediate purpose, be deemed sufficient:

"Foote. Have you not seen the bills?
"Harry Scamper. What, about the lectures? Ay; but that's all *slang*, I suppose. No, no." Foote, *The Orators* (1762), Act I.

"The personages have, mostly, the manners and language of elegant middle life, removed alike from the rant of tragedy or the *slang* of farce." William Taylor, of Norwich, in the *Monthly Review*, vol. xx., p. 543 (1796).

"'To cut an acquaintance' is not quite unexceptionable; because it is not perfectly common or intelligible, and has hardly yet escaped out of the limits of *slang* phraseology." William Hazlitt, *Table-talk, On Familiar Style* (1822).

"I met, not long since, with a speech by a leading member of the Scotch General Assembly, declaring his 'conviction that the truths of Christianity could not be received by men in so rude a state as the East Indians, and that it was necessary to give them first a relish for the habits and comforts of civilized life, before they could embrace the truths of the Gospel.' The same *slang* (for it is nothing more) I have seen repeated in divers pamphlets, and even heard it in conversations at Calcutta." Bishop Heber, *Letter* (March, 1824), in *Narrative of a Journey*, etc. (ed. 1828), vol. iii., p. 350.

These quotations are from among those I have got together; and the kindness of Dr. Murray enables me to speak of others, all of them dating earlier than 1840, in which, precisely as at present, *slang* is used by Miss Maria Edgeworth (1813), Dr. Henry Mackenzie (1822), Miss Mary R. Mitford (1824), Sir Robert Peel (1828), and Henry Hallam (1838–39).

Grose, in his *Classical Dictionary of the Vulgar Tongue*, which appeared in 1785, knows the substantive *slang* only as signifying "a fetter." Under the verb *slang* he has: "To defraud a person of any part of his due is called *slanging* him; also, to cheat by false weights or measures, or other unfair means."

In a work, often cited, bearing the date of 1758, where, so far as has been pointed out, we first meet with *slang*, namely, in "the Slang patter," the expression denotes the special dialect of thieves. But no evidence has been produced that it was ever so restricted in popular acceptation. As the thief has his *slang*, so the turfite, the bruiser, the costermonger, the college-don, and even the Archbishop of Canterbury, may have his. Broadly, diction by which one is disagreeably reminded of a particular occupation, class, or sect, is *slang*. Being dictated, if not by a desire of mystification, by vulgarity of taste or by a contracted cast of mind, *slang* is one with both the *flash* and, for the most part, the multivocal *cant* of former days.

Very misleading, therefore, is the annexed definition, that of the Rev. Dr. Henry Christmas, given in his supplement to a well-known work by Samuel Pegge:

"*Slang* is a language of itself; it consists of bad English, as a basis, mixed with Romanee or gipsy words, and others of arbitrary invention; it is not figurative, save in very few instances, and conveys no ideas at all to the mind of him who has not a thieves' lexicon to refer to. . . . *Slang*, in a word, is a dialect used by persons engaged in criminal pursuits; and its object is concealment." *Anecdotes of the English Language* (ed. 1844), p. 292.

Prof. Brander Matthews, in the latest number of *Harper's New Monthly Magazine*, writes as follows:

"*Slang* was, at first, the *cant* of thieves; and this seems to have been its only meaning until well into the present century. In *Redgauntlet*, for example, published in 1824, Scott speaks of 'the thieves' Latin called *slang*.' Some time during the middle of the century, *slang* lost this narrow limitation, and came to signify a word or a phrase used with a meaning not recognized in polite letters, either because it had just been invented or because it had passed out of memory."

Little of this challenges acceptance. Literature should have instructed Sir Walter Scott that there was many another *slang* than "thieves' Latin." Was Washington Irving, in 1807 or 1808, thinking of the jargon of thieves when he ventured *slangwhanger*, whence the *slangwhangery* of writers in the *Saturday Review* and elsewhere? As to what is asserted to have taken place at that curiously chronological period, "some time *during* the middle of the century," it has been refuted above. For the rest, when and where has the epithet *slang* been applied either to a neoterism or to an archaism, simply as such?

"The amateur philologist" Prof. Matthews refers to as a sort of sciolist not in esteem with him. He might have added that dry facts elicted by plodding research are greatly preferable, as ground for speculation, to the conjectures and intuitions, whether masked or explicit, of linguistic autocracy. F. H.

MARLESFORD, ENGLAND, July 30, 1893.

P. S. The verb *predicate*, lately shown to have been misused by Mr. Lowell, is matched, I find, by his misuse, in 1861, of *predicable:*

"The non-slaveholding States . . . pay far more than the proportion, *predicable* on mere preponderence in numbers, of the expenses of a government supported mainly by a tariff on importations." *Political Essays* (1888), p. 60.

Regarding *predicate*, for *predict*, I also inquired: "Has it yet crossed the Atlantic?" The question can now be answered:

"The presence of qualities from which success could then have been *predicated*." Mr. John Bigelow, *William Cullen Bryant* (1890), p. 71.

## DEFECTS OF PATENT BALLOT-BOXES.

TO THE EDITOR OF THE NATION:

SIR: The Australian ballot system is so far sustained in theory; but with experience in

the few States where patent ballot boxes have been used, there have come into prominence certain defects which relate only to the practical working of the theory. The liability to get out of working order which has beset the boxes in question has been due in a measure to a departure from the mechanical principle of simplicity. The registering apparatus has, in some cases, failed to count accurately because of needless complexity. Too many parts, that is, have been introduced where fewer were practicable. In these boxes, too, the liability to the gumming of oil, the corrosion of metal, the warping, shrinking, or swelling of wood, have had their play in those disturbances of the register which have perplexed and provoked the counting officials, sometimes to the excess of downright condemnation of boxes and system together.

The box, as known thus far, is a piece of machinery too delicate for handling under the conditions of city or town management. It is in hands that do not understand mechanism. When not in use, it is, until needed again, laid away in some room or closet, and when called for is brought out by the janitor, and, without adequate examination, is set up and expected to go. Meanwhile, however, the gumming, corrosion, warping, shrinking, and swelling have had play, and it will not go. Breakage, too, has been the frequent consequence of the rough handling. Against these accidents ingenuity should be exercised in the devising of a box that may be thrown up on any heap of rubbish about the hall and yet be ready for use next time. If no American mechanic can devise such a machine for the retention of the Australian system, it is suggested that darkest Africa might furnish an inventor.

Another provoking difficulty at the polls is the premature filling of the box with ballots. A filled-up box after the casting of only 300 ballots at a polling precinct where 1,000 votes are to be cast, is something too much for the serenity of the officials. The law provides for the opening of the box and the removing of the ballots, during the voting, in large towns, but there is no such provision made for the voting precincts of the cities. In the cities, then, the provocation is great, while in towns the frequent opening of the box to crowd down the ballots is undesired by the honest official, and affords his opportunity to tamper to the dishonest one. One cause may be that the box is not large enough; but, too, it may be large enough to hold 1,000 ballots and yet be filled with 300. The fault lies with the rollers that are used in all the known boxes for drawing in the ballot. The rollers seize the ballot by its end and deposit the ballot without laying it flat. The layers, instead of being uniform, lie in the box in all irregular ways. An improvement on this method ought to be within reach.

These imperfections in the boxes have suggested a resort to devices for voting without ballots, but so far the latter have been of a kind against which no strictures can be too severe; for by them the voter, however well instructed, cannot have the testimony of his eyesight, or other sense, to inform him beyond question that he has voted. Among these voting-machines are included devices with push-buttons to operate a concealed register, and also machines by which the voter marks with a lead pencil or other instrument, through a slot or a series of slots. After all that can be said in favor of these machines, returned and spoiled ballots show the one insurmountable objection remaining, that if a voter makes a mistake, he cannot set it right; he is deprived of his franchise.

No device can probably take the place of a ballot-box, acting perfectly, and a stamp in the hand of the voter to take the place of the lead pencil. The latter is objectionable because the counting official uses one also. If he is disposed to be fraudulent, he can, with the pencil, tamper with the vote, whereas the stamp could be put in the voter's hand and be forbidden to the counter. W. W. Tufts.

Arlington, Mass., August 15, 1893.
